<p style="text-align: right;">Page 6</p> <p>1 VIDEOGRAPHER: We are now on 2 the record. 3 My name is Jacob Arndt. I'm a 4 videographer for Golkow Litigation 5 Services. 6 Today's date is December 19, 7 2018, and the time is 9:12 a.m. 8 This deposition is being held 9 in St. Louis, Missouri, In Re: Johnson 10 & Johnson Products Marketing Sales 11 Practices, for the United States 12 District Court for the District of 13 New Jersey. 14 The deponent is Dr. Laura 15 Plunkett. 16 Will counsel please identify 17 themselves? 18 MR. MEADOWS: Ted Meadows for 19 plaintiffs. 20 MS. PARFITT: Michelle Parfitt 21 for the plaintiffs. 22 MR. BEATTIE: Ryan Beattie for 23 plaintiffs. 24 MR. TISI: Chris Tisi for 25 plaintiffs.</p>	<p style="text-align: right;">Page 8</p> <p>1 DIRECT EXAMINATION 2 QUESTIONS BY MS. BRANSCOME: 3 Q. All right. Good morning, 4 Dr. Plunkett. I introduced myself right 5 before we started, but my name is Kimberly 6 Branscome, and I am here on behalf of Johnson 7 & Johnson. 8 Is it your understanding today 9 that you are giving your deposition for the 10 purpose of a Daubert analysis in the MDL 11 related to Johnson's baby powder? 12 A. That's my understanding, yes. 13 (Plunkett Exhibit 1 marked for 14 identification.) 15 QUESTIONS BY MS. BRANSCOME: 16 Q. I want to start by handing you 17 what I will mark as Plunkett Deposition 18 Exhibit 1. 19 Do you recognize the document 20 that I just handed you? 21 A. Yes. 22 Q. Okay. Have you seen this 23 document before? 24 A. Yes. 25 Q. All right. When was this</p>
<p style="text-align: right;">Page 7</p> <p>1 MR. GOLOMB: Richard Golomb for 2 plaintiffs. 3 MR. LOCKE: Tom Locke for the 4 Personal Care Products Council. 5 MS. TINSLEY: Caroline Tinsley 6 for PTI Union, LLC, and PTI Royston, 7 LLC. 8 MR. SULLIVAN: Ryan Sullivan 9 for Imerys. 10 MS. BOCKUS: Jane Bockus for 11 Imerys. 12 MR. SMITH: William Smith for 13 Johnson & Johnson. 14 MS. BRANSCOME: Kimberly 15 Branscome for Johnson & Johnson. 16 VIDEOGRAPHER: Thank you. 17 The court reporter is Carrie 18 Campbell and will now swear in the 19 witness. 20 LAURA PLUNKETT, Ph.D., DABT, 21 of lawful age, having been first duly sworn 22 to tell the truth, the whole truth and 23 nothing but the truth, deposes and says on 24 behalf of the Defendant Johnson & Johnson, as 25 follows:</p>	<p style="text-align: right;">Page 9</p> <p>1 document provided to you? 2 A. Either earlier this -- this 3 week or late last week. I don't recall if it 4 was Friday or Monday. 5 Q. Okay. For the purposes of the 6 record, could you just identify what the 7 document is that I just handed you as 8 Plunkett Deposition Exhibit Number 1? 9 A. It's a notice of oral and 10 videotaped deposition for myself, dated -- I 11 don't see the date, but probably on the very 12 last -- do you need that or just -- is that 13 enough of an identification? 14 Q. That's all right. 15 Now, contained within the 16 deposition notice there is a reference to a 17 request for materials that are identified in 18 more detail in Schedule A. 19 Do you see that? 20 A. Yes. 21 Q. Have you reviewed Schedule A? 22 A. Yes. 23 Q. Did you bring any documents 24 with you in response to the request in 25 Schedule A?</p>

Confidential - Pursuant to Protective Order

Page 10	Page 12
<p>1 A. The only thing that I believe 2 that I had to bring that had not already been 3 provided was additional billing since the 4 time of my last deposition. 5 Q. Okay. And is it my 6 understanding that the documentation related 7 to additional billing that you have done 8 since your prior deposition was produced 9 yesterday at the deposition in the Forrest 10 case? 11 A. That's correct. 12 Q. All right. And the information 13 contained in the documents produced at the 14 Forrest deposition yesterday, do those 15 contain an up-to-date record of the billing 16 that you have submitted for your work in 17 connection with the litigation against 18 Johnson & Johnson? 19 A. Yes, with the understanding 20 that I haven't submitted a bill for December 21 yet. 22 Q. Okay. How much time have you 23 spent working in connection with your 24 opinions in the case against Johnson & 25 Johnson related to its baby powder in the</p>	<p>1 but I'll bill separately for the time I spent 2 yesterday right before the deposition and 3 then at the deposition, so... 4 Q. What did you do to prepare for 5 your deposition today? 6 A. I reviewed my reports, the 7 three reports that I filed in the litigation. 8 I had a meeting with attorneys on Monday, and 9 then we had a short meeting yesterday evening 10 because some attorneys arrived that were not 11 here on Monday. 12 And essentially went through 13 some of the documents that -- went through 14 some of the documents that I had cited in the 15 report in certain paragraphs, just to refresh 16 my memory of what they were. So if you want 17 me to tell you which paragraphs, I can do 18 that. 19 Q. I will in just a moment. Okay. 20 A. Want me to repeat that? I'm 21 sorry. 22 Q. That's all right. 23 Dr. Plunkett, you referenced 24 the fact that you reviewed specific 25 paragraphs of your expert reports in</p>
Page 11	Page 13
<p>1 month of December? 2 A. So I'm -- on all the cases that 3 I am involved in that are pending, not just 4 this deposition? 5 Q. I'll ask first all cases and 6 then we'll narrow it to the deposition. 7 A. So in all -- 8 Q. I mean to the MDL, I'm sorry. 9 A. Okay. So in all cases this 10 month, probably eight hours so far, maybe 11 ten. 12 Q. Does that include the time that 13 you've spent attending deposition? 14 A. No, that's not including 15 yesterday's deposition time. I apologize. I 16 forgot about that. 17 Q. And how much of the eight to 18 ten hours that you have spent this month 19 working on these cases against Johnson & 20 Johnson, setting aside the time you spent in 21 deposition yesterday, relate to the MDL 22 specifically? 23 A. So it will probably be 24 billed -- it will be one bill for the 25 preparation time because the prep overlapped,</p>	<p>1 preparation for today's deposition. 2 Could you identify those 3 paragraphs for me? 4 And it's helpful to you, we can 5 go ahead and mark your three expert reports, 6 if you're referring to all three. 7 A. I'm going to refer just to the 8 MDL report because that's what we're here to 9 talk about. I mean, if you want to talk 10 about what I did to get ready for yesterday 11 separately or -- 12 MR. MEADOWS: Might be helpful 13 to go ahead and mark them. 14 MS. BRANSCOME: Why don't we go 15 ahead and just mark the three reports, 16 and then we can walk through. 17 (Plunkett Exhibits 2, 3 and 4 18 marked for identification.) 19 QUESTIONS BY MS. BRANSCOME: 20 Q. So, Dr. Plunkett, do you have a 21 copy of your three reports in front of you? 22 A. Yes, I do. 23 Q. Do those contain any markings, 24 highlightings or flags? 25 A. No, they don't.</p>

4 (Pages 10 to 13)

Confidential - Pursuant to Protective Order

<p style="text-align: right;">Page 14</p> <p>1 Q. Okay. Do you mind if we mark 2 your copies as the official records? 3 A. No, that's fine. 4 Q. So we will mark -- well, let's 5 do this in chronological order. So I am 6 marking as Plunkett Deposition Exhibit 7 Number 2 the expert report of Dr. Plunkett 8 dated October 5, 2016. 9 Could you confirm, 10 Dr. Plunkett, that that's what I marked as 11 Deposition Exhibit Number 2? 12 A. Yes, it is. 13 Q. And then we will mark as 14 Deposition Exhibit Number 3 supplemental 15 expert report of Dr. Laura Plunkett dated 16 August 29, 2018. 17 Dr. Plunkett, could you confirm 18 that I marked that as Exhibit Number 3? 19 A. Yes, that's correct. 20 Q. And then Exhibit Number 4, we 21 will mark the expert report dated 22 November 16, 2018, by Dr. Plunkett that was 23 produced in the MDL. 24 Could you confirm that I marked 25 that as Deposition Exhibit Number 4?</p>	<p style="text-align: right;">Page 16</p> <p>1 are also cited in paragraph 39 as well, some 2 of those same ones that are... 3 And then in Section 5 of my 4 report where I'm talking about exposure, I 5 looked again at Parmley and Woodruff. I 6 looked again at Vetner and Iturrulde and Egli 7 and Newton last night. 8 And the only other thing I 9 looked at is not cited in this report because 10 it came out after the report was filed, and 11 that was -- and I did bring a copy of that. 12 That was the risk assessment that was done in 13 Canada. Some people refer to it as -- by the 14 first author's last name, Taher, T-a-h-e-r. 15 And I may be pronouncing that wrong, but... 16 (Plunkett Exhibit 5 marked for 17 identification.) 18 QUESTIONS BY MS. BRANSCOME: 19 Q. All right. And I see that you 20 brought a copy of that document with you. 21 Just for the purposes of the record, let's 22 mark that as Plunkett Deposition Exhibit 23 Number 5. 24 Are there any markings, 25 highlightings or notations on that document?</p>
<p style="text-align: right;">Page 15</p> <p>1 A. Yes, that's correct. 2 Q. All right. And so now back to 3 the question of you referenced the fact that 4 you looked at specific paragraphs of your 5 expert report in preparation for today's 6 deposition. If you could, using Deposition 7 Exhibit Number 4, identify which paragraphs 8 you looked at specifically in preparation for 9 the deposition. 10 A. So it wasn't the paragraphs. 11 There were certain documents in paragraphs, 12 so that's what I was referring to, so... 13 So starting in paragraph 38 14 where I'm talking about sort of the timeline 15 of information about human health hazards and 16 talc dust. So I just went back and refreshed 17 on a few of the older papers. 18 I looked again at the patent 19 documents that are cited in the first bullet. 20 I looked again at a paper by 21 Eberl, 1948, which is in the last bullet. 22 The patent documents are also there as well. 23 And that -- so that would be 24 all I pulled in that paragraph. 25 I believe that those documents</p>	<p style="text-align: right;">Page 17</p> <p>1 A. No, there's not. 2 And then the other document I 3 looked at that was not cited in the report, 4 there is a printout from the government of 5 Canada website that talks about some 6 statements on talc, and so I printed that out 7 as well. This was published at the same time 8 that the risk assessment was published. 9 (Plunkett Exhibit 6 marked for 10 identification.) 11 QUESTIONS BY MS. BRANSCOME: 12 Q. All right. We'll mark that for 13 purposes of the record as Plunkett Deposition 14 Exhibit Number 6. We might come back to 15 those documents. 16 So returning briefly to the 17 deposition notice and the requests in 18 Schedule A, the billing information you 19 produced yesterday and then we just discussed 20 additional information with respect to that, 21 are there any other documents that you have 22 in your possession that are responsive to 23 requests identified in Schedule A that have 24 not been produced? 25 A. I don't believe so, no.</p>

Confidential - Pursuant to Protective Order

Page 18	Page 20
<p>1 Everything -- I do believe that there were 2 some objections filed to this, so there's 3 some things that I did not provide based on 4 that. 5 Some of the things I don't 6 have, too. I think you asked for -- maybe 7 you didn't ask for that. Usually people ask 8 for copies of old depositions, and I don't 9 keep those. And maybe you didn't ask for 10 that, but that's usually a request. 11 Let me see. 12 Q. Okay. Now, you mentioned that 13 you met with attorneys on Monday. And who 14 was present at that meeting? 15 A. So on Monday it was 16 Mr. Meadows, sitting here. Ms. Tucker, 17 Mr. Beattie, were at the meeting on Monday. 18 Q. All right. And how long did 19 that meeting last? 20 A. Probably six hours, I guess, 21 six hours with them, and then I also did some 22 other work on my own, but... 23 Q. Okay. And then you mentioned 24 that you had another meeting last night. 25 Who was present at that</p>	<p>1 Q. All right. And then you 2 produced a supplemental report earlier this 3 year, on August 29, 2018, and that's been 4 marked as Deposition Exhibit Number 3, 5 correct? 6 A. Yes. 7 Q. When did you begin work on the 8 supplemental report that you produced at the 9 end of August in 2018? 10 A. I want to say -- let's see. I 11 want to say sometime in the summer. Maybe as 12 early as May, but I believe May -- May, June 13 time frame of 2018. 14 My billing would reflect that, 15 so, again, we can pull my billing. And I 16 would have called it preparation of the 17 supplemental report in my billing. 18 Q. Okay. Why did you choose to 19 draft a supplemental expert report? 20 A. So over the time I had worked 21 on different trials here in St. Louis 22 particularly, additional documents that were 23 not cited in my original report became 24 reliance materials based on their 25 presentation at trial. So there were enough</p>
Page 19	Page 21
<p>1 meeting? 2 A. So that was probably about an 3 hour, and that would have been Mr. Tisi -- or 4 maybe two hours. Mr. Tisi joined us 5 yesterday afternoon. And Mr. Golomb, too, 6 I'm sorry. 7 Q. All right. Okay. Now, looking 8 at the three reports that you have produced 9 in the litigation involving Johnson's baby 10 powder, I wanted to get an understanding of 11 how those three reports relate to one 12 another. 13 So you have the first report 14 that you produced that was dated October 5, 15 2016. I believe that was originally produced 16 in the Uhl case; is that correct? 17 A. I'm not sure the name of the 18 first case, but it was in the -- some of the 19 St. Louis cases, yes. 20 Q. All right. And when did you 21 begin work on that report? 22 A. You'd have to look at my 23 billing record, which I know was an exhibit 24 to yesterday's deposition. I believe they 25 started in 2015.</p>	<p>1 of those that I thought it was important to 2 add to the original report with additional 3 documents that I had reviewed over time. 4 Since October of 2016 through, 5 let's say, the summer of 2018, there were a 6 variety of additional documents that I had -- 7 I had seen. 8 It was also my understanding 9 that during that time period Johnson & 10 Johnson had provided additional documents 11 that weren't provided or available to me in 12 2016, so additional discovery that was now 13 available to look at. So some of this is a 14 matter of additional evidence that wasn't 15 available when I wrote my initial -- my 16 initial report. 17 Q. All right. Now when you say 18 the additional documents became reliance 19 materials in trial, what do you mean by that? 20 A. So additional documents that we 21 refer to in trial that I use to support 22 opinions that weren't necessarily 23 specifically cited within the body of my 24 report or described within the body of my 25 report. They were likely on my larger</p>

6 (Pages 18 to 21)

Confidential - Pursuant to Protective Order

Page 22	Page 24
<p>1 reliance list, but they weren't things that 2 were cited. 3 In other words, if you look at 4 my original report in -- when I say the body, 5 the paragraphs. I always put a reference 6 list and then I'll have Bates numbers. So 7 during trial, things that were from my larger 8 reliance list that weren't specifically 9 discussed in my report became support for 10 different opinions that -- based on questions 11 at trial. 12 Q. Okay. When you say these were 13 documents that "we" refer to at trial, you're 14 referring to yourself and attorneys 15 representing the plaintiffs? 16 A. Yes, that's correct. 17 Q. Okay. And understanding that 18 the purpose of today's deposition is focused 19 specifically on the MDL, then you produced a 20 report specific to the MDL on November 16, 21 2018, that we've marked as Exhibit 4, 22 correct? 23 A. Yes. 24 Q. When did you begin work on the 25 report that you produced specifically in the</p>	<p>1 ask who the -- who was involved in the 2 drafting of the report that was produced in 3 the MDL? 4 MR. MEADOWS: Hold on just one 5 second. 6 Ask the question one more time. 7 I want to make sure we're not 8 venturing into attorney work product 9 realm here. 10 QUESTIONS BY MS. BRANSCOME: 11 Q. Dr. Plunkett, do you consider 12 the report that you have issued in the MDL 13 which is identified as Exhibit 4 to be 14 attorney work product? 15 MR. MEADOWS: Objection. Don't 16 answer that. That calls for a legal 17 conclusion, and at this point I'm 18 going to instruct you not to answer 19 questions about how the report came 20 into be. 21 MS. BRANSCOME: Are you 22 instructing her to refuse to answer 23 any questions that involve the 24 development of her expert report? 25 MR. MEADOWS: I'm instructing</p>
Page 23	Page 25
<p>1 MDL? 2 A. Sometime right after -- I would 3 say early fall of 2018, sometime after 4 this -- the supplemental report was filed. 5 Probably right after that. 6 Q. Okay. So is it fair to say 7 that you began work on your MDL report after 8 completing the supplemental expert report 9 that has been marked as Exhibit 3? 10 A. Yes, that's correct. 11 Q. Okay. Who was involved in the 12 drafting of the report that's been identified 13 as Exhibit 4? 14 MR. MEADOWS: Objection. Hang 15 on a second. 16 Are you asking about 17 communications between attorneys and 18 Dr. Plunkett? 19 QUESTIONS BY MS. BRANSCOME: 20 Q. Dr. Plunkett, none of the 21 questions I will ask you here today are 22 intended to elicit information that's 23 protected by the attorney-client privilege. 24 So setting that aside, anything 25 that you understand to be privileged, I can</p>	<p>1 her not to answer your last question. 2 QUESTIONS BY MS. BRANSCOME: 3 Q. Are you following your 4 attorney's instructions, Dr. Plunkett? 5 A. Yes. 6 MS. BRANSCOME: At this point I 7 would like to go off the record, 8 please. 9 VIDEOGRAPHER: Okay. We are 10 going off the record at 9:30 a.m. 11 (Off the record at 9:30 a.m.) 12 VIDEOGRAPHER: We are back on 13 the record at 9:32 a.m. 14 QUESTIONS BY MS. BRANSCOME: 15 Q. Dr. Plunkett, other than 16 attorneys, if attorneys were involved -- I am 17 not asking questions about that -- were there 18 any individuals who assisted you in preparing 19 the report that has been marked as Exhibit 4? 20 A. There was no one that actually 21 assisted in writing the report. I do -- when 22 I did my literature searches, I had my 23 husband help me retrieve articles that I 24 identified for retrieval, but certainly there 25 was no -- he doesn't participate in the</p>

Confidential - Pursuant to Protective Order

Page 26	Page 28
<p>1 actual review of articles or in drafting of</p> <p>2 the report. That's all my work.</p> <p>3 Q. Okay. And when you say that</p> <p>4 your husband retrieved articles, was this</p> <p>5 simply -- what information did you provide</p> <p>6 him in order to enable him to retrieve a</p> <p>7 particular article?</p> <p>8 A. So we use a service in Houston</p> <p>9 called Loansome Doc, which is affiliated with</p> <p>10 our local medical library system and also</p> <p>11 with the National Library of medicine and NIH</p> <p>12 libraries. So I give him an online search</p> <p>13 that I put into a clipboard. He takes that,</p> <p>14 makes the request or retrieves -- some of</p> <p>15 them will be free, and so he'll actually go</p> <p>16 to the websites for the -- and then put them</p> <p>17 into a folder for me.</p> <p>18 So he does that physical part</p> <p>19 of it through the computer, but he doesn't --</p> <p>20 he doesn't do the searches or decide which</p> <p>21 ones to retrieve. I do that.</p> <p>22 Q. Okay. Did you have any</p> <p>23 discussions with your husband about the</p> <p>24 substantive content of the report that's</p> <p>25 identified as Exhibit 4?</p>	<p>1 been marked as Exhibits 2, 3 and 4 to each</p> <p>2 other, what is your -- what is your position</p> <p>3 with respect to opinions that you have stated</p> <p>4 or language you have used in Exhibits 2 and 3</p> <p>5 that may not appear in Exhibit 4?</p> <p>6 A. I don't think I understand what</p> <p>7 your -- what you mean by my position. Are</p> <p>8 you asking --</p> <p>9 MS. PARFITT: And I'll object</p> <p>10 to that question.</p> <p>11 THE WITNESS: Are you asking me</p> <p>12 to describe -- I mean, I could</p> <p>13 describe for you the overlap. I mean,</p> <p>14 there's not complete overlap. Is that</p> <p>15 what you're asking me or --</p> <p>16 QUESTIONS BY MS. BRANSCOME:</p> <p>17 Q. I am. Why don't you take a</p> <p>18 shot at it and then I may narrow my question,</p> <p>19 but I'm just trying to understand how the</p> <p>20 reports relate to one another.</p> <p>21 MR. MEADOWS: Objection.</p> <p>22 THE WITNESS: So they relate to</p> <p>23 each other, I would say, based on</p> <p>24 timing first, because obviously the</p> <p>25 first report was two years ago, and</p>
Page 27	Page 29
<p>1 A. No.</p> <p>2 Q. Does he do any evaluation --</p> <p>3 for example, if you were to provide him a</p> <p>4 search and it generates multiple documents by</p> <p>5 a given author, does he identify additional</p> <p>6 articles that you might want to consider?</p> <p>7 A. Only -- he has done that, but</p> <p>8 only with the streams of letters to the</p> <p>9 editor. So I ask him always if I'm pulling</p> <p>10 an article. Happens a lot at the New England</p> <p>11 Journal of Medicine or some of the other</p> <p>12 medical journals where there's pretty active</p> <p>13 letter to the editor correspondence that</p> <p>14 happens.</p> <p>15 So I always say to him, "If</p> <p>16 there's any citation to this through the</p> <p>17 letter to the editor comments, would you</p> <p>18 please retrieve those," and so he will do</p> <p>19 that search to look for that.</p> <p>20 Q. Okay.</p> <p>21 A. And I'm not sure that that</p> <p>22 happened in any of these articles, but I'm</p> <p>23 talking my general process that we use.</p> <p>24 Q. Okay. In terms of the</p> <p>25 relationship of the three reports that have</p>	<p>1 then many more documents. So that's</p> <p>2 how the 1 and 2 relate -- or Exhibit 2</p> <p>3 and 3 relate to each other.</p> <p>4 In the MDL litigation, I was</p> <p>5 asked to address very specific topics</p> <p>6 and things because there's a -- it's a</p> <p>7 different -- I don't know all of them,</p> <p>8 but there's a different set of experts</p> <p>9 that work in different litigations.</p> <p>10 So my role in the MDL, I</p> <p>11 believe, is set out based on this</p> <p>12 report, whereas in the original</p> <p>13 reports I may have had -- I did have a</p> <p>14 broader role in some of those cases.</p> <p>15 QUESTIONS BY MS. BRANSCOME:</p> <p>16 Q. Okay. Can you describe for me</p> <p>17 your understanding of your role in the MDL?</p> <p>18 A. It's my understanding that I</p> <p>19 have been asked to provide opinions related</p> <p>20 to the -- generally the toxicology of talcum</p> <p>21 powder products, including all the individual</p> <p>22 constituents that make up that product; to</p> <p>23 look historically back in time about what was</p> <p>24 known and when about the toxic effects of</p> <p>25 talc and different constituents within talc.</p>

Confidential - Pursuant to Protective Order

Page 30	Page 32
<p>1 And that was sort of the -- that's been -- 2 I consider that sort of the meat of what I've 3 been asked to do. 4 But separate from that, another 5 part important part of my testimony or things 6 I was asked to provide was an overview of the 7 regulatory process for cosmetics and then the 8 information that accumulated scientifically, 9 how that related to what a company is 10 required to do under the regulations in order 11 to provide consumers with appropriate 12 information about the safety of the product. 13 So kind of the regulatory opinions, I guess 14 you want to call it, that area. 15 I have sections on that, and I 16 think you can see that by the different 17 sections in my report where I set out 18 different general topics. 19 And then I was also asked to 20 address some of the issues related to how the 21 information on the safety of talc has been 22 disseminated publicly and also based on my 23 review of different internal company 24 documents, both from Johnson & Johnson -- or 25 from Johnson & Johnson, Imerys, as well as</p>	<p>1 the companies had, in fact, influenced the 2 regulators or PCPC? 3 MR. MEADOWS: Objection. 4 THE WITNESS: Not in my -- not 5 when I first started this process. So 6 that is -- those opinions actually go 7 back into my original report. So 8 that's not something, I don't believe, 9 that was not covered in my original 10 report or even in my supplemental 11 report. I just have different -- some 12 additional documents that I have 13 reviewed. 14 QUESTIONS BY MS. BRANSCOME: 15 Q. Okay. 16 A. And this is something when I 17 first evaluated the case and first started 18 looking at the documents, those are opinions 19 that I had formed based on my review. 20 Certainly by the time I drafted 21 the MDL report, I think if you listened to 22 my -- read my trial testimony, you understand 23 I had those opinions at the time I started 24 writing this report. 25 Q. Now, what I'd like to</p>
Page 31	Page 33
<p>1 the PCPC, which is the Personal Care Products 2 Council, formerly known as the CTFA, to look 3 at those interactions and how those companies 4 set about to influence the process around the 5 safety assessment of talc over the years. So 6 different activities that happened with 7 respect to the ISRTP meetings in the '90s, 8 with respect to the NTP process at different 9 points in time. 10 The CIR process, I think I 11 cover, and I also talk a little bit about 12 IARC, I believe, as well. 13 So the interactions of the 14 industry with the science and then how that 15 science ends up getting described within -- 16 either to regulators or to bodies that are 17 reviewing the science related to the 18 products. 19 Q. You mentioned as one of the 20 categories that you were asked to opine about 21 in the MDL that you were looking to set about 22 the influence that companies may have exerted 23 over the regulatory process or PCPC. 24 When you began that analysis, 25 did you start with the predicate belief that</p>	<p>1 understand next is, are there -- of the 2 topics that you just identified that you 3 understand that you're offering opinions 4 about in the MDL, which, if any, of those 5 topics are in your view new as compared to 6 the opinions that you have offered that are 7 contained in Exhibits 2 and 3? 8 MS. PARFITT: Objection. 9 THE WITNESS: So I don't think 10 any of the MDL opinions are new. 11 QUESTIONS BY MS. BRANSCOME: 12 Q. Okay. 13 A. I think that they may have -- 14 they may -- they may cite to additional 15 documents that haven't been cited to in the 16 first two reports, but I believe there's a 17 significant overlap even on the documents 18 that are cited. 19 Q. And you mentioned that your 20 role in the MDL is more narrow than the role 21 you've served in other cases. 22 What topics have you opined 23 about in other cases that you are not 24 intending to opine about in the MDL? 25 A. So I am not doing general</p>

Confidential - Pursuant to Protective Order

Page 34	Page 36
<p>1 causation in the MDL, although I am indeed</p> <p>2 providing opinions on certain aspects of the</p> <p>3 cause and effect relationship such as -- you</p> <p>4 know, I talk about biologic plausibility,</p> <p>5 underlying knowledge about different</p> <p>6 toxicities of the compounds over time, but</p> <p>7 I'm not doing a full causation analysis in my</p> <p>8 MDL report, and hopefully you see that when</p> <p>9 you read the report.</p> <p>10 Q. So as you sit here today,</p> <p>11 Dr. Plunkett, you are not intending to offer</p> <p>12 the opinion in the MDL that Johnson's baby</p> <p>13 powder causes ovarian cancer; is that</p> <p>14 correct?</p> <p>15 A. Not in those words. I think if</p> <p>16 you read my report, I talk about the</p> <p>17 fact that Johnson -- it's my opinion that</p> <p>18 Johnson's baby powder increases the risk of</p> <p>19 cancer -- ovarian cancer, which is a</p> <p>20 different assessment than the way you stated</p> <p>21 it.</p> <p>22 Q. All right. And it is -- as you</p> <p>23 sit here today, Dr. Plunkett, it is your</p> <p>24 understanding that you are not being offered</p> <p>25 to give a, as you termed it, a general</p>	<p>1 principles of, first, is there a hazard, is</p> <p>2 the first step. Is there a hazard that would</p> <p>3 be relevant to human health.</p> <p>4 Then looking at the data and</p> <p>5 determining whether that -- that body of data</p> <p>6 allows you to either quantify risk in some</p> <p>7 way or to qualitatively shows you that</p> <p>8 there's a change in risk based on exposure to</p> <p>9 the product.</p> <p>10 So your statement may be as</p> <p>11 simple as there's an increased risk, or you</p> <p>12 can take data in a risk assessment and do a</p> <p>13 quantification such as in a -- a cancer risk</p> <p>14 assessment based on an animal data set. You</p> <p>15 might actually calculate a cancer potency</p> <p>16 factor, for example. Those kinds of things.</p> <p>17 That's another application of risk</p> <p>18 assessment. Same basic process but focusing</p> <p>19 just, for example, on one study.</p> <p>20 My human health risk assessment</p> <p>21 or safety assessment, like the causation</p> <p>22 analysis, does look across all kinds of data,</p> <p>23 but my goal was not to analyze the data under</p> <p>24 the Hill considerations, which is what I</p> <p>25 would typically do, in order to go through</p>
Page 35	Page 37
<p>1 causation opinion in the MDL, correct?</p> <p>2 A. That's my understanding, yes.</p> <p>3 Q. Now, you mentioned that the</p> <p>4 analysis as to whether a substance increases</p> <p>5 the risk of a particular outcome is different</p> <p>6 than a causation analysis.</p> <p>7 Can you explain to me what you</p> <p>8 meant by that?</p> <p>9 A. So I discussed this yesterday</p> <p>10 in my deposition. There's -- there's a</p> <p>11 process called risk assessment. Sometime --</p> <p>12 in the area of consumer products you can also</p> <p>13 refer to it as safety assessment. And then</p> <p>14 there's the process of what I call general</p> <p>15 causation analysis, or full causation</p> <p>16 analysis.</p> <p>17 So even though the types of</p> <p>18 information that are considered may overlap</p> <p>19 between those two, the outcome or the</p> <p>20 statements or the -- the way you go about</p> <p>21 assessing the information is a bit different.</p> <p>22 Q. Explain to me how they're</p> <p>23 different.</p> <p>24 A. So in a risk assessment, the</p> <p>25 process starts with setting out some basic</p>	<p>1 the process of making that final opinion that</p> <p>2 indeed baby powder -- exposure to baby powder</p> <p>3 through genital application is a cause of</p> <p>4 ovarian cancer in women. That's -- to me,</p> <p>5 that's a different way to go about thinking</p> <p>6 about the question that you have to answer.</p> <p>7 And also the -- some of the</p> <p>8 data that you evaluate is evaluated a bit</p> <p>9 differently. So, for example, in my</p> <p>10 increase -- in my issue of increased risk, I</p> <p>11 use the epidemiology as supporting evidence,</p> <p>12 but I'm really focused on -- on -- more on</p> <p>13 the underlying sort of the biologic</p> <p>14 information that we have that identifies</p> <p>15 hazard and risk. So looking at the animal</p> <p>16 data, the exposure potential for the product,</p> <p>17 and then using that along with what we know</p> <p>18 with the human experience to characterize</p> <p>19 risk.</p> <p>20 Q. Is there a different level of</p> <p>21 certainty required to render a causation</p> <p>22 opinion than to render an opinion that</p> <p>23 there's an increased risk?</p> <p>24 A. I don't know that I'd describe</p> <p>25 it quite that way but -- because to me it's a</p>

Confidential - Pursuant to Protective Order

Page 38	Page 40
<p>1 different process. I certainly have to be 2 just as certain about what I say about risk 3 when I do a risk assessment as I do about -- 4 as I do when I'm doing a causation analysis. 5 I don't -- maybe you mean 6 something else, so maybe you can -- I mean, 7 I -- I certainly use the same basic standards 8 in my mind, how I weigh evidence to do the 9 different processes, but I go about them in a 10 little bit different way when I do a risk 11 assessment versus -- versus a causation 12 analysis. 13 Q. In your view, does the strength 14 of the evidence have to be greater in order 15 to determine that an agent causes a disease, 16 for example, than it does simply to say that 17 an agent increases the risk of a particular 18 outcome? 19 MR. MEADOWS: Objection. 20 THE WITNESS: I don't think 21 I've ever thought about it that way. 22 I would say to you that strength -- 23 the strength of the association is a 24 consideration under Hill that you 25 apply the epidemiology data mainly, so</p>	<p>1 statistical test you would apply, or 2 what are you asking? 3 QUESTIONS BY MS. BRANSCOME: 4 Q. So understanding that for the 5 most part if you're looking at statistical 6 significance, you're looking whether the 7 confidence interval crosses 1. 8 Are you following? 9 A. Yes, I know that, yeah. 10 Q. All right. And so when you're 11 evaluating, though, whether a particular 12 substance, in this case Johnson's baby 13 powder, increases the risk of an outcome, 14 again, in this case ovarian cancer, would it 15 be sufficient for you if that increase was 16 .01 percent, for example? 17 MR. MEADOWS: Objection. 18 THE WITNESS: That doesn't make 19 sense to me, an increase of .01 20 percent, but maybe I can answer it 21 this way for you based on what you've 22 laid out there. 23 Certainly when I do a risk 24 assessment and I make it -- if I'm 25 going to make the conclusion that I</p>
Page 39	Page 41
<p>1 that is a different consideration 2 under causation than you do -- as you 3 would do it in a risk assessment. 4 But the strength of the 5 evidence, it's still a judgment based 6 on your experience and training as far 7 as whether or not there is enough 8 information to be able to say that you 9 believe that there is -- enough 10 information to say that the risk is 11 increased based on that exposure and 12 those conditions and whatever the 13 toxicity profile of that compound is. 14 QUESTIONS BY MS. BRANSCOME: 15 Q. Okay. We'll get into this more 16 a little bit later, but when you say that a 17 risk is increased, is there a threshold level 18 of increase that you need to see in order to 19 render an opinion in a court of law that an 20 agent increases the risk of a particular 21 outcome? 22 MR. MEADOWS: Objection. 23 THE WITNESS: So I need you to 24 define what you mean by threshold. 25 Are you asking me a specific</p>	<p>1 believe that it's my opinion to a 2 reasonable degree of scientific 3 certainty that exposure to baby powder 4 in women increases the risk of cancer, 5 I'm having to rely on -- I do rely on 6 data that allows me to draw 7 conclusions because either there's a 8 statistical significant finding found 9 or the -- there's a consistency among 10 the pattern of the data that shows 11 there's information that fits together 12 consistently. And maybe -- you want 13 me to explain what I mean by that? 14 No? 15 Whereas I think what you're 16 asking is when an epidemiologist 17 applies -- looks at a body of -- in a 18 causation analysis looks at a body -- 19 and I do this, too -- looks at a body 20 of epidemiological studies and you 21 weight the studies, obviously you're 22 weighting the studies differently 23 based on whether they have shown 24 statistical significance or not, 25 right?</p>

Confidential - Pursuant to Protective Order

Page 42	Page 44
<p>1 And it isn't that it's a one to 2 one. If you have one positive and one 3 negative, that isn't how you may 4 decide to finally weight that 5 evidence, but certainly you have to 6 consider whether or not what was seen 7 or reported is showing you something 8 reliable -- or you can make a 9 statement reliably about whether or 10 not that finding was biologically 11 significant. And biologically 12 significant would typically be linked 13 to a finding that has statistical 14 significance in an epi study unless 15 the study was not designed to be able 16 to answer the question properly. 17 So -- and I've discussed that a 18 little bit yesterday with Mr. Smith on 19 the issue of power to detect. So 20 that's something you do consider in 21 epi. 22 But, yes, statistical 23 significance certainly goes into your 24 weight of the evidence there. 25</p>	<p>1 company evaluating compliance with FDA 2 regulations with respect to cosmetics? 3 A. Yes. 4 Q. Okay. What is your experience 5 with respect to that? 6 A. So that's -- one of the clients 7 that I currently work for where I am asked to 8 provide input on advertising, promotion and 9 labeling of some of the products and then 10 also some of the ingredients that are being 11 promoted for use to -- to produce cosmetic 12 products. So it's the idea of providing that 13 advice over my understanding of the 14 regulations what can be said and can't be 15 said about certain ingredients. 16 This company is involved in 17 making both ingredients but also some 18 finished products now based on -- it's a 19 large company that owns a lot of little 20 subsidiaries. 21 Q. My question, though, 22 Dr. Plunkett, was, have you ever been in a 23 decision-making position for a company 24 evaluating compliance with FDA regulations 25 with respect to cosmetics?</p>
Page 43	Page 45
<p>1 QUESTIONS BY MS. BRANSCOME: 2 Q. Okay. You talked about you're 3 intending to offer an opinion with respect to 4 what a company is required to do under the 5 regulations; is that correct? 6 A. Yes. 7 Q. Okay. What regulations are you 8 specifically referring to? 9 A. So cosmetic regulations that 10 exist within -- so it's the entire process as 11 I describe how cosmetic -- what -- are 12 cosmetics subject to regulation by FDA? Yes. 13 What are the types of things that companies 14 have to do before they're marketed, what does 15 the company have to do once the product is on 16 the market, those kinds of things. 17 Q. Have you ever worked directly 18 for any regulatory agency? 19 A. No, I have not. 20 Q. And suffice it to say you have 21 never been in a decision-making position 22 within a regulatory agency, correct? 23 A. That's correct, I have not. 24 Q. Have you ever been in a 25 decision-making position with respect to a</p>	<p>1 MS. PARFITT: Objection. Asked 2 and answered. 3 THE WITNESS: So that's what 4 I'm saying. They're relying on my 5 input to make a decision on what will 6 go in the materials. 7 QUESTIONS BY MS. BRANSCOME: 8 Q. Do you have decision-making 9 authority within that company or, as you 10 described it, are you providing advice and 11 input? 12 A. I'm providing advice, but the 13 things I'm advising on are the things that 14 happened. So in other words, they don't have 15 anybody in the company that understands the 16 process of what they can say. So I -- I 17 advise them that you need to remove this 18 language or that this is more appropriate 19 language. They make those changes, and then 20 that is what is done. 21 So I agree, I'm not an employee 22 of that company. I am a consultant working 23 with the company, but it is a little 24 different than some of the work that I do 25 where I -- what I -- the advice that I'm</p>

12 (Pages 42 to 45)

Confidential - Pursuant to Protective Order

Page 46	Page 48
<p>1 giving is actually something that I know 2 actually happened. Sometimes you give advice 3 to companies, but it doesn't -- we have no 4 idea whether the company actually follows our 5 advice. 6 Q. My question is slightly 7 different, Dr. Plunkett. 8 If you were to give advice to 9 the company that you've referenced as having 10 experience with cosmetic regulation 11 compliance that that company chose not to 12 follow, that company has the ability to 13 ignore your advice, correct? 14 A. Yes, I would imagine that they 15 could do that. 16 Q. Okay. Have you ever drafted 17 regulations that relate to cosmetics? 18 A. Actually drafted a regulation? 19 No, I have not. 20 Q. All right. You reference in 21 your report language out of 21 CFR 740.1, and 22 specifically -- you reference it in a few 23 places. And I can direct you specifically to 24 paragraph 22 in Exhibit 4. 25 A. Yes. I'm there.</p>	<p>1 A. So it's -- first off, you would 2 use the common English language definition. 3 I don't believe that those -- I haven't seen 4 a definition separate within the regulations. 5 Sometimes there will be. 6 So based on that and my 7 experience and the looking into what others 8 have described about this, this is the idea 9 of considering how the product is used, is 10 one of the -- one of the concerns that you 11 have, and whether or not the -- based on how 12 the product is used and how the product is 13 being sold, that in order to prevent a health 14 hazard, a warning hazard -- a warning 15 statement would be needed. 16 Q. Can you cite to me any language 17 within the regulation or even supporting 18 documentation, a comment, something of that 19 nature, that would define "whenever necessary 20 or appropriate" with respect to how the 21 product is used? 22 MS. PARFITT: Objection. 23 THE WITNESS: I don't think I 24 understand your question. 25 Are you asking me to cite to a</p>
Page 47	Page 49
<p>1 Q. All right. And do you see here 2 you have replicated language from 21 CFR 3 740.1 that reads, "The label of a cosmetic 4 product shall bear a warning statement 5 whenever necessary or appropriate to prevent 6 a health hazard that may be associated with 7 the product"? 8 Do you see that? 9 A. Yes. 10 Q. And you added emphasis on 11 particular portions of this sentence, 12 correct? 13 A. Yes, I did that, exactly. 14 Q. All right. Now there's a 15 clause in this sentence that states, 16 "Whenever necessary or appropriate." 17 Do you see that? 18 A. Yes. 19 Q. You did not emphasize that 20 language; is that correct? 21 A. That's correct, I did not. 22 Q. What is your understanding 23 as -- what you describe as an FDA regulatory 24 specialist of the meaning of "whenever 25 necessary or appropriate" in 21 CFR 740.1?</p>	<p>1 reference or a part of the regulation 2 where they explain it, or what are you 3 asking me? Guidance document or -- 4 QUESTIONS BY MS. BRANSCOME: 5 Q. Yes. Can you point me to 6 anything other than your personal view of the 7 interpretation of this language that would 8 tie the requirement "whenever necessary or 9 appropriate" to how a product is used? 10 MS. PARFITT: Objection. Form. 11 THE WITNESS: I'll have to go 12 look for you whether there's a 13 guidance that states it that way. 14 This is based on my experience in 15 dealing with the products in the past. 16 I think that's also consistent 17 with what is described, I would say to 18 you, within -- it's consistent -- what 19 I'm describing to you, it's consistent 20 as well with how the CIR standard for 21 safety assessment is done, looking at 22 the issue of the -- of the -- of the 23 use. 24 QUESTIONS BY MS. BRANSCOME: 25 Q. When you say that you're basing</p>

Confidential - Pursuant to Protective Order

Page 50	Page 52
<p>1 your interpretation of the clause "whenever 2 necessary or appropriate" on your personal 3 experience, can you point me to something 4 specific? 5 MS. PARFITT: Objection. 6 THE WITNESS: Are you asking 7 me -- are you asking me if I've ever 8 had a company that I worked for that 9 that particular clause in here was 10 extremely important to how we 11 interpreted it? I don't think I can 12 point you to that. I don't recall 13 ever having to do that specifically. 14 Or is it something different 15 you're asking me? 16 QUESTIONS BY MS. BRANSCOME: 17 Q. Dr. Plunkett, I asked you what 18 your basis was for interpreting the language 19 "whenever necessary or appropriate" means 20 that it's related to how a product is being 21 used, and the answer that you provided was 22 that it was based off of your personal 23 experience. 24 So I'm asking you, what is that 25 personal experience that gives you the basis</p>	<p>1 look at my documents in order -- the 2 first part of your question, I'd have 3 to go back and look. Off the top of 4 my head, I can't tell what I would 5 point you to. 6 On the second one, I think I 7 was telling you, is I don't -- I've 8 never -- I don't have a client that 9 I've worked for where that part of the 10 language was the only issue that I had 11 to deal with when I'm looking at 12 whether or not the product needs a 13 warning or not. 14 So typically -- I'm just 15 telling you that when I have looked at 16 labeling for products and looked at 17 the issue of does it need a warning 18 statement, when I'm reading it as 19 "whenever necessary or appropriate," 20 I'm looking at whether or not the 21 ingredient that I'm concerned about 22 within the product, how that is used 23 or what the exposure pattern would be, 24 route of exposure, how those things 25 might relate to how I would assess the</p>
Page 51	Page 53
<p>1 for that specific interpretation? 2 MR. MEADOWS: Objection. 3 MS. PARFITT: Objection. 4 THE WITNESS: So it's in my 5 experience in dealing with companies 6 that make products and what types of 7 warnings are put or not put onto -- or 8 not -- or on labeling. So I don't 9 know how else to answer it other than 10 that. 11 I can go back and look at the 12 guidance documents to see if that is 13 described in another way, but I don't 14 recall that. 15 QUESTIONS BY MS. BRANSCOME: 16 Q. So as you sit here today, 17 you're not able to provide me either with a 18 third-party document or an independent 19 document interpreting "whenever necessary or 20 appropriate" as you've suggested today, nor 21 can you give me specific example from your 22 personal experience; is that correct? 23 MS. PARFITT: Objection. 24 THE WITNESS: Well, I 25 certainly -- I'd have to go back and</p>	<p>1 safety issue at hand. And so that's 2 what I'm trying to tell you. 3 QUESTIONS BY MS. BRANSCOME: 4 Q. Okay. You also have -- 5 changing topics a little bit, in this -- in 6 your report marked as Exhibit 4, if you could 7 turn to paragraph 10. 8 On page 7, you state on the 9 first paragraph on page 7, "In other 10 instances I have directed others to perform 11 searches on my behalf," and this is with 12 respect to identifying documents for review 13 in forming your opinions. 14 What did you mean by that? 15 A. So in addition to doing my own 16 searches of the database, sometimes I -- I 17 have called the attorney's office and asked 18 them to -- to do a search for certain things 19 that I'm looking for to add to. So in other 20 words, I have a document I've identified. 21 I'm looking for other documents like that in 22 the large millions and millions of documents 23 that are available. And so sometimes I will 24 ask attorneys to do -- to look in the 25 database for other documents like the ones</p>

14 (Pages 50 to 53)

Confidential - Pursuant to Protective Order

Page 54	Page 56
<p>1 that I've identified.</p> <p>2 Q. And without getting into</p> <p>3 anything that would be -- that would call for</p> <p>4 information protected by the attorney/client</p> <p>5 privilege or attorney work product, what</p> <p>6 percentage of the overall searches for</p> <p>7 relevant documents from these particular</p> <p>8 databases that are discussed in paragraph 10</p> <p>9 would you say that you have done yourself as</p> <p>10 opposed to directed others to do?</p> <p>11 A. Well, initially when I first</p> <p>12 started searching, those were my own searches</p> <p>13 exclusively. I would say that more recently,</p> <p>14 in the last year, since I haven't added any</p> <p>15 real new areas but there's new documents that</p> <p>16 have become available, so anything -- any of</p> <p>17 the searches probably in the last year that</p> <p>18 dealt with new discovery that was produced, I</p> <p>19 would have asked the attorneys to do some of</p> <p>20 the searching in that for me. Like I'm</p> <p>21 looking for documents that are similar to</p> <p>22 this document that I cited in my original</p> <p>23 report around this same frame that may be</p> <p>24 discussing this same topic area.</p> <p>25 So in the last year I have</p>	<p>1 A. So that might cross over into</p> <p>2 work product because it's not my database,</p> <p>3 but I don't know how to answer that. I mean,</p> <p>4 I'm sure -- it's very possible that in the</p> <p>5 database you can track that, but I -- I don't</p> <p>6 know.</p> <p>7 MR. MEADOWS: Okay.</p> <p>8 THE WITNESS: I don't have</p> <p>9 anything saved on my computer that</p> <p>10 way, but when you go to the database</p> <p>11 itself, it's possible you could track</p> <p>12 that. I just don't have a record on</p> <p>13 my computer in my office.</p> <p>14 QUESTIONS BY MS. BRANSCOME:</p> <p>15 Q. When you made the decision at</p> <p>16 some point in time -- it may have been even</p> <p>17 prior to you issuing your first report --</p> <p>18 that you wanted to look at company documents,</p> <p>19 did you set out specific categories of</p> <p>20 documents that you wanted to review?</p> <p>21 A. Not so much categories but key</p> <p>22 words. So -- and areas. I guess areas is</p> <p>23 what I -- yes, I was focusing, for example,</p> <p>24 in my initial report on documents that</p> <p>25 described what was known -- what the company</p>
Page 55	Page 57
<p>1 asked them to do that more than I have done</p> <p>2 it, but initially it was what I did</p> <p>3 initially.</p> <p>4 Q. Okay. Do you keep any records</p> <p>5 of the various document searches either that</p> <p>6 you have performed or you have asked to be</p> <p>7 performed?</p> <p>8 A. No, I don't. My record would</p> <p>9 be -- the initial -- the record would have</p> <p>10 been what I listed in my reliance list for</p> <p>11 you in the initial report, but since then it</p> <p>12 would just be what is going to be changing</p> <p>13 within my reliance list, looking at</p> <p>14 additional documents. That's the only way I</p> <p>15 could identify for you. That would be my --</p> <p>16 my trail to know what was new and what was</p> <p>17 not.</p> <p>18 Q. My question is slightly</p> <p>19 different. Understanding that you have</p> <p>20 provided to some extent a record of the</p> <p>21 documents, my question is: Do you have any</p> <p>22 type of record for the nature of the</p> <p>23 searches, what it was that you set out to</p> <p>24 identify in the database and how did you go</p> <p>25 about finding those documents?</p>	<p>1 was discussing about cancer, ovarian cancer,</p> <p>2 cancer generally. So that was a key word</p> <p>3 used.</p> <p>4 And then I also was linking</p> <p>5 that in different searches with different</p> <p>6 time periods such as the NTP review process</p> <p>7 and dates. You can, you know, narrow down by</p> <p>8 dates or by the CIR process. Those kinds of</p> <p>9 things.</p> <p>10 So I did start with that,</p> <p>11 trying to understand what -- what is -- what</p> <p>12 was in the company files or in the files I</p> <p>13 had access to, the database, that dealt with</p> <p>14 those kinds of things because those aren't</p> <p>15 things that I could get to publicly.</p> <p>16 Obviously in the literature. So I had to --</p> <p>17 if I wanted to understand what the company</p> <p>18 knew, I had to go into their database to find</p> <p>19 out, you know, what they knew -- what they</p> <p>20 knew or were discussing over time about the</p> <p>21 ovarian cancer issue or about asbestos in</p> <p>22 talc or about CIR process, things like that.</p> <p>23 Q. Using the reports that you have</p> <p>24 produced, Exhibits 2, 3 and 4, really, and</p> <p>25 the full -- the entirety of the materials</p>

15 (Pages 54 to 57)

Confidential - Pursuant to Protective Order

<p style="text-align: right;">Page 58</p> <p>1 that you have produced in the MDL, is there</p> <p>2 any way that someone reviewing those</p> <p>3 documents, and those documents alone, could</p> <p>4 replicate the searches that you have</p> <p>5 conducted in the company databases?</p> <p>6 MR. MEADOWS: Objection.</p> <p>7 THE WITNESS: I don't know.</p> <p>8 That's a good question. I've never</p> <p>9 thought about whether you could</p> <p>10 replicate or not.</p> <p>11 I mean, I think I've told you</p> <p>12 what I did. My strategy was to focus</p> <p>13 on topic areas. So I think you</p> <p>14 might -- by topic areas, if you use</p> <p>15 the same kinds of topics areas as</p> <p>16 described, I think you would come up</p> <p>17 with documents that -- what it focused</p> <p>18 down to.</p> <p>19 For example, I also would</p> <p>20 sometimes, as linking those words, I</p> <p>21 might put in J&J documents only or</p> <p>22 Imerys documents only, because the</p> <p>23 database has a variety -- and the</p> <p>24 PCPC. There's some different ways by</p> <p>25 the Bates numbers that you can</p>	<p style="text-align: right;">Page 60</p> <p>1 reliance list, that you read, but then once</p> <p>2 you started reading decided weren't relevant</p> <p>3 to the opinions that you were offering?</p> <p>4 A. I would have to look to answer</p> <p>5 that for you. I don't know. If you want me</p> <p>6 to do that, I'd have to look.</p> <p>7 Q. I ask you more as a process</p> <p>8 matter.</p> <p>9 A. Oh.</p> <p>10 Q. If you pull an article and you</p> <p>11 start reading it and you realize that it is</p> <p>12 not relevant to the opinions that you offered</p> <p>13 in this case, the example that you just gave,</p> <p>14 is it something that you would include in</p> <p>15 your reliance list?</p> <p>16 A. Yes, I -- I have given you</p> <p>17 everything I retrieved. So if I retrieved</p> <p>18 it, you would have, yes, absolutely.</p> <p>19 Q. Okay. So it's fair to say of</p> <p>20 the articles that are on your reliance list,</p> <p>21 you could not say as you sit here today that</p> <p>22 you have read each and every word of each and</p> <p>23 every one of them, correct?</p> <p>24 A. That's correct. And I could</p> <p>25 probably tell you -- I could give you a</p>
<p style="text-align: right;">Page 59</p> <p>1 segregate documents as well. But I</p> <p>2 don't know other than that. That's</p> <p>3 all I can tell you.</p> <p>4 QUESTIONS BY MS. BRANSCOME:</p> <p>5 Q. You would agree with me that</p> <p>6 your report does not contain a complete</p> <p>7 explanation of the process by which you</p> <p>8 identify company documents to review,</p> <p>9 correct?</p> <p>10 A. I haven't laid out my search</p> <p>11 structure, that is true.</p> <p>12 Q. All right. Now, the articles</p> <p>13 that you have listed on your reliance list,</p> <p>14 have you read each and every one of those</p> <p>15 articles?</p> <p>16 A. Unfortunately, yes, over time I</p> <p>17 have. Some of them I have only read parts of</p> <p>18 them. For example, if I started reading a</p> <p>19 document and I felt that it was something I</p> <p>20 pulled that really wasn't directly on point</p> <p>21 for an area I'm covering, I may not have read</p> <p>22 every word, but certainly I have been through</p> <p>23 each of those, yes.</p> <p>24 Q. Are there any articles in your</p> <p>25 reliance list, that you maintained on your</p>	<p style="text-align: right;">Page 61</p> <p>1 little guidance in that possibly if I went to</p> <p>2 my list, I could try to pull some out that I</p> <p>3 recognize, but that's all I would be able to</p> <p>4 do for you.</p> <p>5 Q. Okay. How did you go about</p> <p>6 identifying what articles you wanted to</p> <p>7 review in forming your opinions in the MDL?</p> <p>8 A. So first off, I went back to</p> <p>9 what I already had. So my MDL report is a --</p> <p>10 is a compilation of a lot of material that's</p> <p>11 in my first few reports. That was the basis</p> <p>12 for some of the things that went into it.</p> <p>13 So I didn't -- I did do,</p> <p>14 though, a updating on literature searches for</p> <p>15 the MDL report, looking for anything new, for</p> <p>16 example, in the area, especially the area of</p> <p>17 cancer data or reports of dealing with</p> <p>18 ovarian cancer either -- or any articles</p> <p>19 dealing with the link between inflammation</p> <p>20 and cancer, ovarian cancer, generally.</p> <p>21 That's one of the areas I updated looking at.</p> <p>22 And then I did -- I don't think</p> <p>23 I did any large, new searches, however,</p> <p>24 because honestly the areas covered here are a</p> <p>25 little narrower than what was covered here.</p>

Confidential - Pursuant to Protective Order

Page 62	Page 64
<p>1 I don't believe that there was any from the</p> <p>2 published -- the publicly available medical</p> <p>3 literature. There wasn't a need to do a</p> <p>4 whole new area of search. It was more</p> <p>5 updating the things that I've done in the</p> <p>6 past.</p> <p>7 So it's a real easy search to</p> <p>8 update because you can just put in talc and</p> <p>9 cancer and just look at -- get lots, but you</p> <p>10 can then just start chronologically and look</p> <p>11 what was published in the last year, for</p> <p>12 example.</p> <p>13 Q. Okay. Earlier when we were</p> <p>14 discussing the fact that you in some</p> <p>15 instances have asked your husband to pull</p> <p>16 articles, have you maintained any records of</p> <p>17 the searches that you have done with respect</p> <p>18 to scientific literature, including the</p> <p>19 searches that you have asked your husband to</p> <p>20 do?</p> <p>21 A. I have not. It's possible that</p> <p>22 there are records on billing from the library</p> <p>23 that tells you how many I ordered at</p> <p>24 different times, but that is the only</p> <p>25 records, because we do have to pay the</p>	<p>1 referring to the reliance list, are you</p> <p>2 referring to the list of articles that begins</p> <p>3 on page 40 of Exhibit 4, or is there a</p> <p>4 separate document?</p> <p>5 A. There's a separate document.</p> <p>6 So it -- that's -- I usually call reliance</p> <p>7 list the separate document. I call this</p> <p>8 references cited. So I apologize for that</p> <p>9 confusion.</p> <p>10 So these, I have read every</p> <p>11 word. If it's in my reference list, those</p> <p>12 are not an issue of not having read every</p> <p>13 word, and these should all be cited somewhere</p> <p>14 in the report.</p> <p>15 Q. Okay. If you could turn to</p> <p>16 paragraph 21 in your initial report.</p> <p>17 A. Yes, I'm there.</p> <p>18 Q. Okay. So we're looking at</p> <p>19 paragraph 21 in Exhibit 2. This is on</p> <p>20 page 10.</p> <p>21 Do you see there is a sentence</p> <p>22 here that refers to -- it's referring</p> <p>23 generally to the topic of the ability of talc</p> <p>24 to migrate from the site of application to</p> <p>25 the ovaries.</p>
Page 63	Page 65
<p>1 library for the retrieval.</p> <p>2 Q. Okay. And if I understood what</p> <p>3 you said earlier correctly, you indicated</p> <p>4 that any article you have ever pulled for</p> <p>5 review, you have listed on your reliance</p> <p>6 list; is that correct?</p> <p>7 A. Yes. And when I -- and let's</p> <p>8 just make sure we're talking about the same</p> <p>9 thing.</p> <p>10 So, you know, in my reports I</p> <p>11 typically have articles cited in the report</p> <p>12 separate from the reliance list. So I'm</p> <p>13 talking about the reliance list, right?</p> <p>14 Okay.</p> <p>15 So -- because I do -- I do</p> <p>16 usually -- I don't know whether I did that in</p> <p>17 this report, but I typically have a list of</p> <p>18 articles cited at the back called references,</p> <p>19 that is, things that you're actually seeing</p> <p>20 in the report body, and then there should be</p> <p>21 a separate reliance list sent to you as an</p> <p>22 appendix. I don't know what the appendix</p> <p>23 was.</p> <p>24 Q. Well, so then let's clarify</p> <p>25 that. So, Dr. Plunkett, when you're</p>	<p>1 Do you see that?</p> <p>2 A. Yes.</p> <p>3 Q. And then the next sentence</p> <p>4 states, "This issue was discussed by</p> <p>5 scientific and regulatory bodies that review</p> <p>6 the toxicokinetics of talc."</p> <p>7 Do you see that?</p> <p>8 A. Yes.</p> <p>9 Q. And in parentheses it</p> <p>10 identified EPA 1992, IARC 2010, and CIR 2013.</p> <p>11 Do you see that?</p> <p>12 A. Yes.</p> <p>13 Q. Okay. And then if you could</p> <p>14 turn to Exhibit 4, which is your MDL report,</p> <p>15 at paragraph 43. It's on page 28.</p> <p>16 Are you with me?</p> <p>17 A. Yes, I am.</p> <p>18 Q. You see that the exact same</p> <p>19 sentence appears -- well, not the exact same.</p> <p>20 It's been slightly modified to combine the</p> <p>21 first two sentences. But here you cite only</p> <p>22 to EPA 1992 and IARC 2010.</p> <p>23 Why did you remove CIR 2013?</p> <p>24 A. Because of my further</p> <p>25 evaluation since my initial report in 2016 of</p>

17 (Pages 62 to 65)

Confidential - Pursuant to Protective Order

Page 66	Page 68
<p>1 the process that was involved in the drafting</p> <p>2 of the CIR and the actual production of the</p> <p>3 report.</p> <p>4 Q. Is it your position that the</p> <p>5 migration of talc was not evaluated as part</p> <p>6 of CIR 2013?</p> <p>7 A. No. That's not my position,</p> <p>8 no.</p> <p>9 Q. Okay. And so would the</p> <p>10 sentence that's contained in paragraph 43 in</p> <p>11 Exhibit 4, which is your MDL report, if you</p> <p>12 cited to CIR 2013 in the parenthetical there,</p> <p>13 would that not be an accurate citation?</p> <p>14 A. I believe it would not be an</p> <p>15 accurate citation because I have formed</p> <p>16 opinions about the reliability of that</p> <p>17 document at this point in time.</p> <p>18 So it has to do with -- I'm</p> <p>19 citing to authorities here that I believe are</p> <p>20 reliable as far as the discussion that I see,</p> <p>21 and it's a different -- I have a different</p> <p>22 opinion now about the CIR report, which I lay</p> <p>23 out in pretty detail, I think.</p> <p>24 In fact, if you go to my</p> <p>25 section following this now in -- you'll</p>	<p>1 another question. In paragraph 43, you added</p> <p>2 two studies from your prior -- that were --</p> <p>3 that did not appear in your prior report, and</p> <p>4 it was Gardner 1981 and Edelstam 1997. This</p> <p>5 related to animal studies showing that in</p> <p>6 some species talc can migrate from the lower</p> <p>7 to the upper genital tract?</p> <p>8 A. Yes.</p> <p>9 Q. Okay. Were those studies that</p> <p>10 you were aware of before drafting your prior</p> <p>11 reports?</p> <p>12 A. I don't know that they -- I</p> <p>13 can't answer that without looking at my</p> <p>14 reliance materials for the original report.</p> <p>15 I did identify additional articles, and</p> <p>16 there's also additional articles cited here</p> <p>17 in earlier paragraph 43 that were not cited</p> <p>18 in my original report as well. I don't think</p> <p>19 I had the -- the Kunz article then cited.</p> <p>20 I'd have to go back and look.</p> <p>21 So it's possible that they were</p> <p>22 in my -- when I say my reliance materials, my</p> <p>23 original report also had a larger list of</p> <p>24 literature I didn't cite. So I'd have to</p> <p>25 look. I can't tell you whether I had them or</p>
Page 67	Page 69
<p>1 understand one of the issues I had was the --</p> <p>2 the difference in the evidence that was</p> <p>3 actually available once you dig into it a</p> <p>4 little further versus what they actually</p> <p>5 reviewed. That's one of the issues.</p> <p>6 Q. And I'll follow up with some</p> <p>7 more questions about the CIR, but my question</p> <p>8 here is, the sentence in your report simply</p> <p>9 states, "The migration of talc internally</p> <p>10 after perineal application was discussed by</p> <p>11 scientific and regulatory bodies that review</p> <p>12 the toxicokinetics of talc."</p> <p>13 Would it be inaccurate to say</p> <p>14 that as part of the CIR 2013 process that</p> <p>15 body did, in fact, discuss the migration of</p> <p>16 talc internally after perineal application?</p> <p>17 A. It is true that they did</p> <p>18 discuss it. I just have an issue with the</p> <p>19 reliability of their findings.</p> <p>20 Q. And so you made the decision to</p> <p>21 just remove it from the citation; is that</p> <p>22 correct?</p> <p>23 A. Yes, at this point -- at this</p> <p>24 point, at this report, that's exactly right.</p> <p>25 Q. All right. And then I had</p>	<p>1 I did not.</p> <p>2 Q. Okay. With respect to Edelstam</p> <p>3 1997 study, do you happen to know the title</p> <p>4 of that article? Even an approximation would</p> <p>5 work.</p> <p>6 A. It'll be -- should be back</p> <p>7 here. Just a second. If it's not here,</p> <p>8 that's a mistake.</p> <p>9 Oh, here it is. "Retrograde</p> <p>10 migration of starch in the genital tract of</p> <p>11 rabbits."</p> <p>12 Q. So you are citing that article</p> <p>13 for the proposition that animal studies have</p> <p>14 demonstrated that talc can migrate from the</p> <p>15 lower to upper genital tract?</p> <p>16 A. Yes, I'm citing it because it's</p> <p>17 relevant to the issue of particle migration,</p> <p>18 which talc is a particle. So, yes, that's</p> <p>19 correct.</p> <p>20 Q. Okay. But that study did not</p> <p>21 specifically deal with talc migration,</p> <p>22 correct?</p> <p>23 A. No. Well, it -- it's relevant</p> <p>24 to talc migration, but you're exactly right,</p> <p>25 they looked at the starch migration, yes. Or</p>

Confidential - Pursuant to Protective Order

Page 70	Page 72
<p>1 particles that were starch, yes.</p> <p>2 Q. We'll cover this in more</p> <p>3 detail, but is it your opinion that all</p> <p>4 particles have similar characteristics with</p> <p>5 respect to their ability to migrate in the</p> <p>6 genital tract?</p> <p>7 A. It's my -- I don't know if I'd</p> <p>8 state it quite that way. What I would say is</p> <p>9 that the evidence shows that particles</p> <p>10 generally have the ability to move up the</p> <p>11 reproductive tract in women, yes, and that if</p> <p>12 a particle is one that is similar to talc or</p> <p>13 some of the other ones where the information</p> <p>14 has been collected, I would characterize that</p> <p>15 as being within that, quote/unquote,</p> <p>16 relevance of particles.</p> <p>17 That doesn't mean all</p> <p>18 particles, but certainly in the ones that I</p> <p>19 have looked at and the data I've relied upon,</p> <p>20 there's a variety of different types of</p> <p>21 particles or substances that have been</p> <p>22 studied and shown to be able to migrate.</p> <p>23 Q. So let's take Edelstam 1997 as</p> <p>24 an example.</p> <p>25 Did you do any analysis that</p>	<p>1 genital tract?</p> <p>2 MS. PARFITT: Objection.</p> <p>3 THE WITNESS: Again, I haven't</p> <p>4 done an in-depth analysis. I mean, as</p> <p>5 a toxicologist, there are differences</p> <p>6 between starch and talc, absolutely.</p> <p>7 For example, starch would -- I would</p> <p>8 expect to be more easily solubilized</p> <p>9 within fluids, and so that could</p> <p>10 affect the ability of them to actually</p> <p>11 not migrate as well as a talc</p> <p>12 particle, which would be less soluble</p> <p>13 than the starch would be.</p> <p>14 And there's -- I even --</p> <p>15 there's a paper I have in here, and I</p> <p>16 can look for it if you want, that</p> <p>17 talks about that difference, and it's</p> <p>18 one of the issues of cornstarch versus</p> <p>19 talc, on whether or not you would</p> <p>20 expect to get the long-term chronic</p> <p>21 responses with the difference between</p> <p>22 those two substances.</p> <p>23 So I do think there's</p> <p>24 difference, absolutely, as</p> <p>25 toxicologists generally. And the only</p>
Page 71	Page 73
<p>1 you can point me to that establishes that</p> <p>2 starch would have a similar migration pattern</p> <p>3 as talc?</p> <p>4 A. So I would say that the paper</p> <p>5 itself shows -- talks about the movement of</p> <p>6 starch, but are you asking something</p> <p>7 different?</p> <p>8 Are you asking me have I done a</p> <p>9 specific analysis of any differences that may</p> <p>10 occur between the migration pattern of starch</p> <p>11 and talc? Is that what you're asking me?</p> <p>12 Q. That is what I'm asking you.</p> <p>13 A. I certainly didn't do an</p> <p>14 in-depth analysis of the differences, no, but</p> <p>15 based upon my review of the literature, I</p> <p>16 believe that that paper is relevant to the</p> <p>17 overall question of migration of particulate</p> <p>18 through the reproductive tract, including</p> <p>19 particles of talc.</p> <p>20 Q. Regardless of whether or not it</p> <p>21 was an in-depth analysis, can you point me to</p> <p>22 anything other than just your belief after</p> <p>23 having read these articles that starch and</p> <p>24 talc would have similar migratory</p> <p>25 characteristics in the human or animal</p>	<p>1 reason I'm citing this paper is</p> <p>2 because I'm trying to be complete</p> <p>3 about people that have looked at this</p> <p>4 issue. And certainly it was a study</p> <p>5 that looked at this issue and talks</p> <p>6 about the movement.</p> <p>7 But I wouldn't expect starch</p> <p>8 and the talc to have the same</p> <p>9 liabilities, and I also wouldn't</p> <p>10 expect them to move exactly the same</p> <p>11 speed maybe. That's very true.</p> <p>12 QUESTIONS BY MS. BRANSCOME:</p> <p>13 Q. So you would agree with me that</p> <p>14 Edelstam is not a study demonstrating that</p> <p>15 talc can migrate from the lower to upper</p> <p>16 genital tract, correct?</p> <p>17 MS. PARFITT: Objection. Form.</p> <p>18 THE WITNESS: I wouldn't say it</p> <p>19 that way. What I would say instead is</p> <p>20 that Edelstam is a study that forms</p> <p>21 the overall weight of the evidence for</p> <p>22 the ethics -- for the studies that are</p> <p>23 available that address the issue of</p> <p>24 migration, but certainly it is not</p> <p>25 studying talc. So I don't disagree</p>

Confidential - Pursuant to Protective Order

Page 74	Page 76
<p>1 with you there.</p> <p>2 Unfortunately, the majority of</p> <p>3 the information that I have relied</p> <p>4 upon, and others such as the FDA in</p> <p>5 making their statements about</p> <p>6 migration, is not all directed studies</p> <p>7 just to talc. It's looking at the</p> <p>8 issue of particle movement.</p> <p>9 QUESTIONS BY MS. BRANSCOME:</p> <p>10 Q. Now, in terms of doing your</p> <p>11 risk assessment -- well, let me get back. We</p> <p>12 covered this earlier, and I want to return to</p> <p>13 it for a moment. Just to confirm: For your</p> <p>14 work in the MDL, you did not do a Bradford</p> <p>15 Hill analysis, correct?</p> <p>16 A. I did not sit down and do a</p> <p>17 Bradford Hill analysis when I started writing</p> <p>18 this report. I have done a Bradford Hill</p> <p>19 analysis in the past, which is in my original</p> <p>20 reports, but I certainly did not redo a</p> <p>21 Bradford Hill when I sat down to draft my MDL</p> <p>22 report, that is true.</p> <p>23 Q. Okay. Let me be more precise.</p> <p>24 In the report that you have</p> <p>25 produced that contains a description of your</p>	<p>1 assessment.</p> <p>2 Q. Okay. What publication would</p> <p>3 you direct me to that has used the same</p> <p>4 methodology that you have used to reach your</p> <p>5 opinions in Exhibit 4?</p> <p>6 A. I think I cite you to -- cite</p> <p>7 you to some of those. You could -- well, the</p> <p>8 directly relevant one would be looking at the</p> <p>9 chapter on risk -- toxicology in the</p> <p>10 reference manual on scientific evidence.</p> <p>11 You can also go to the NRC</p> <p>12 report where they -- it lays out the</p> <p>13 different steps that you use when you kind of</p> <p>14 break data apart into exposure versus</p> <p>15 response information.</p> <p>16 And then I cite to -- there are</p> <p>17 some guidance documents that I cite to, and</p> <p>18 this is in paragraph 13. And I'd have to</p> <p>19 pull them out again to tell you which ones</p> <p>20 relate to different pieces because some of</p> <p>21 these are -- some of these documents are</p> <p>22 specific to only, for example, maybe one part</p> <p>23 of what I did.</p> <p>24 But certainly the risk</p> <p>25 assessment process at IARC is -- they do what</p>
Page 75	Page 77
<p>1 opinions in the MDL, you have not set forth a</p> <p>2 Bradford Hill analysis in that document which</p> <p>3 is identified as Exhibit 4, correct?</p> <p>4 A. That is true, yes.</p> <p>5 MS. PARFITT: Objection.</p> <p>6 QUESTIONS BY MS. BRANSCOME:</p> <p>7 Q. And in fact, the paragraph that</p> <p>8 you -- or paragraphs that you have in your</p> <p>9 prior reports that reference a Bradford Hill</p> <p>10 analysis, those have not -- those have</p> <p>11 actually not been replicated in any form in</p> <p>12 Exhibit 4, correct?</p> <p>13 A. Yes, because, again, it was not</p> <p>14 my role to do general cause.</p> <p>15 Q. Okay. So then when we look at</p> <p>16 the methodology that you employed in reaching</p> <p>17 your opinions that are contained here in</p> <p>18 Exhibit 4, how would you characterize the</p> <p>19 methodology?</p> <p>20 A. As I have in the report. I</p> <p>21 talk about it being a risk assessment or a</p> <p>22 safety assessment, that you could use those</p> <p>23 terms interchangeably here. And then I've</p> <p>24 also used a weight of the evidence as a tool</p> <p>25 to go through the different steps of the risk</p>	<p>1 I call a hazard assessment. They identify</p> <p>2 hazard and they couldn't quantify risk, but</p> <p>3 the steps they go through are essentially the</p> <p>4 same types of steps that I went through as</p> <p>5 far as gathering data on not just response</p> <p>6 but also the potential for exposure and how</p> <p>7 that relates to the response.</p> <p>8 And then also the data that</p> <p>9 I've collected on the biologic effects of</p> <p>10 talc, toxicology of talc, are also discussed</p> <p>11 within that document as well.</p> <p>12 Q. Okay. Focusing specifically on</p> <p>13 the weight of the evidence tool, as you</p> <p>14 describe it, is there a particular document</p> <p>15 or publication that I would go to that could</p> <p>16 lay out the same process that you used for</p> <p>17 how you weighted certain pieces of evidence?</p> <p>18 A. So the documents that I've</p> <p>19 cited for you in paragraph 13 talk about what</p> <p>20 weight of the evidence is generally, but if</p> <p>21 you read what it is, it's essentially a</p> <p>22 process that each scientist brings their</p> <p>23 experience, training and judgment to.</p> <p>24 So I try to lay out for you in</p> <p>25 my discussion of the literature my thought</p>

Confidential - Pursuant to Protective Order

Page 78	Page 80
<p>1 process as I review each piece of</p> <p>2 information, and that is what you do as part</p> <p>3 of weight of the evidence. You gather all of</p> <p>4 the relevant information that you can find</p> <p>5 that address the question you're trying to</p> <p>6 answer, and since I'm looking at both</p> <p>7 exposure and response, I gather different</p> <p>8 pools of information.</p> <p>9 Q. You would agree that there are</p> <p>10 ways to do a weight of the evidence</p> <p>11 assessment of published literature that</p> <p>12 assign, for example, quantitative values to</p> <p>13 particular pieces of evidence, correct?</p> <p>14 A. Certain individuals have put</p> <p>15 together, but there's no one general accepted</p> <p>16 process that everyone uses. So I -- that's</p> <p>17 the issue. Again, there are certain --</p> <p>18 certain cases where I've seen that done, and</p> <p>19 then there are many -- most cases that it's</p> <p>20 not what's done.</p> <p>21 Q. Okay.</p> <p>22 A. Another body, by the way, that</p> <p>23 I -- it's new. It's not in paragraph 13. I</p> <p>24 just want to make sure I tell you that so</p> <p>25 we're clear. If you look at the Canadian</p>	<p>1 Q. Okay. As you were forming your</p> <p>2 opinions, Dr. Plunkett, about whether or not</p> <p>3 there is a risk associated with the use of</p> <p>4 Johnson's baby powder with respect to ovarian</p> <p>5 cancer, how do you keep track of the pieces</p> <p>6 of scientific evidence that you have reviewed</p> <p>7 and the respective weight that you give to</p> <p>8 them?</p> <p>9 Presumably you did not read</p> <p>10 everything in one day, for example?</p> <p>11 A. No. That's correct. So I</p> <p>12 typically will -- I typically will save the</p> <p>13 papers -- when I read the papers, I will</p> <p>14 often highlight in yellow information that I</p> <p>15 think is going to -- will be extremely</p> <p>16 relevant. I don't put notes on the document.</p> <p>17 I highlight in yellow on the PDF file to use</p> <p>18 that to write.</p> <p>19 And I also start drafting</p> <p>20 report very early, which then gets</p> <p>21 overwritten and actually ends up looking like</p> <p>22 an outline that eventually becomes the</p> <p>23 report.</p> <p>24 So one of the ways I keep track</p> <p>25 of things is I may put a paragraph name that</p>
Page 79	Page 81
<p>1 document, they also -- in fact, a lot of what</p> <p>2 they have, you'll see the same literature</p> <p>3 described within my assessment as well.</p> <p>4 Q. So using the Canadian</p> <p>5 assessment as an example, for instance, in</p> <p>6 that assessment there were actually values</p> <p>7 assigned to particular pieces of literature,</p> <p>8 correct?</p> <p>9 A. Mainly the epidemiological</p> <p>10 literature, that is true. Again, but I'm not</p> <p>11 doing causation, so I didn't approach it that</p> <p>12 way.</p> <p>13 But certainly if you look at</p> <p>14 what I did, it's consistent with that because</p> <p>15 I talk about the differences between the</p> <p>16 limitations of a case-control versus a</p> <p>17 prospective study. I talk about both the</p> <p>18 positives and the negatives within the</p> <p>19 database, but I don't lay it out in a table</p> <p>20 like they do. But it's certainly the same</p> <p>21 basic process.</p> <p>22 I was actually quite surprised</p> <p>23 at how similar the database of information</p> <p>24 that they reviewed was to what I honed in on</p> <p>25 as well.</p>	<p>1 I know I'm going to write, such as exposure</p> <p>2 migration, and then I -- as I'm reading a</p> <p>3 paper, I'll type in a paper -- the ones that</p> <p>4 I believe are important to my overall</p> <p>5 assessment. So I will do that as I'm -- as</p> <p>6 I'm going through the evidence.</p> <p>7 So that's one of the tools I</p> <p>8 use, but I don't keep notes. I just kind of</p> <p>9 use that as a living document that eventually</p> <p>10 becomes a report.</p> <p>11 Q. Do your opinions ever change as</p> <p>12 you read additional pieces of scientific</p> <p>13 evidence?</p> <p>14 A. Yes, it does. It may change.</p> <p>15 And it often -- often the changes, though,</p> <p>16 are not that I believe -- with the exception</p> <p>17 of epidemiology. In other areas.</p> <p>18 Epidemiology is a little bit different issue</p> <p>19 when you're reviewing studies.</p> <p>20 But on toxicology I always</p> <p>21 start with reviews and regulatory</p> <p>22 authorities, looking at what others have said</p> <p>23 generally about the toxicology. And so even</p> <p>24 though I may refine opinions differently or I</p> <p>25 might change, I certainly wouldn't agree to</p>

21 (Pages 78 to 81)

Confidential - Pursuant to Protective Order

Page 82	Page 84
<p>1 work on a project to start with if my initial</p> <p>2 reviews on hazard, for example, didn't</p> <p>3 convince me that I believe that there is a</p> <p>4 hazard. But you refine it from there.</p> <p>5 That's exactly right.</p> <p>6 So there are cases, however,</p> <p>7 where I'm asked to work on a project where</p> <p>8 there is no review or regulatory authority or</p> <p>9 any kind of assessment over a period of</p> <p>10 years, and in those cases there are times</p> <p>11 when I start working on a project and I stop</p> <p>12 and say, "I can't do this." Because that</p> <p>13 happens, yes.</p> <p>14 So opinions do change sometimes</p> <p>15 based on review of additional information.</p> <p>16 Q. Is there any documentation that</p> <p>17 you've produced either in your report or</p> <p>18 otherwise in the MDL that would allow someone</p> <p>19 reviewing the material to understand the</p> <p>20 order in which you reviewed materials or the</p> <p>21 specific weight that you assign them?</p> <p>22 A. So order of review, no. I</p> <p>23 don't think you would know that other than --</p> <p>24 you will note order of review if you look at</p> <p>25 the differences in the literature cited in my</p>	<p>1 your report that have been criticized by</p> <p>2 others at some point in time, correct?</p> <p>3 A. Yes, that's true.</p> <p>4 Q. Okay. Now, in some instances</p> <p>5 you state that you then give little weight to</p> <p>6 those studies, correct?</p> <p>7 A. Yes.</p> <p>8 Q. But in other instances you find</p> <p>9 the criticized study to be helpful and</p> <p>10 informative, correct?</p> <p>11 A. That's true. Because, again,</p> <p>12 judgment -- as anybody does weight of the</p> <p>13 evidence, different scientists can have</p> <p>14 different judgment.</p> <p>15 Mainly, I think, when I look at</p> <p>16 the differences in that -- in that regard, I</p> <p>17 think you should pay attention to what the</p> <p>18 person is. So as a toxicologist, I may view</p> <p>19 a certain type of -- piece of data very</p> <p>20 differently than an epidemiologist may view</p> <p>21 it, as far as the reliability or the</p> <p>22 relevance, because we're coming at it from a</p> <p>23 different training and experience and</p> <p>24 judgment -- set of judgment on what is</p> <p>25 important to a toxicologist when I'm talking</p>
Page 83	Page 85
<p>1 original report versus in the MDL.</p> <p>2 So in my original reliance</p> <p>3 list, if there were documents that weren't</p> <p>4 there and they're now here, obviously that</p> <p>5 tells you it was a review.</p> <p>6 On the issue of a -- of the</p> <p>7 weight of the evidence process, the only</p> <p>8 answer I can give you for that is that</p> <p>9 articles that I believe are -- are reliable,</p> <p>10 are relevant and are -- those are kind of</p> <p>11 the -- you look at the reliability of the</p> <p>12 studies, whether they're peer-reviewed or not</p> <p>13 or if they have proper controls put into</p> <p>14 place, things like that, whether or not</p> <p>15 the -- they're relevant to the question at</p> <p>16 hand. That you can get from looking at how I</p> <p>17 discuss them in the document. But certainly</p> <p>18 there's no, like, summary of that.</p> <p>19 But certainly -- I think you</p> <p>20 understand -- you should understand when you</p> <p>21 read my report what weight I'm giving based</p> <p>22 on how I'm describing those -- those</p> <p>23 materials. I mean, it's --</p> <p>24 Q. Well, for example, you do have</p> <p>25 different studies that you've identified in</p>	<p>1 about risk versus how an epidemiologist might</p> <p>2 talk about risk.</p> <p>3 Q. Could two different</p> <p>4 toxicologists review the same piece of</p> <p>5 literature and give it very different weight?</p> <p>6 A. I don't know about different</p> <p>7 weight, but they certainly -- I know people</p> <p>8 come to different conclusions based on their</p> <p>9 overall assessments. That happens,</p> <p>10 definitely. I mean, there are always going</p> <p>11 to be individuals that look at things</p> <p>12 differently.</p> <p>13 I know in this case there are</p> <p>14 people -- I've seen defense experts that</p> <p>15 reports in -- not in the MDL but in other</p> <p>16 cases, where people disagree with some of my</p> <p>17 opinions, and I disagree with their opinions.</p> <p>18 That happens.</p> <p>19 Q. Okay. And so if I were --</p> <p>20 well, let me just ask something. You have</p> <p>21 not provided any sort of quantitative</p> <p>22 assessment of the weight that you gave</p> <p>23 different pieces of evidence that you cite in</p> <p>24 forming your opinions in the MDL, correct?</p> <p>25 MS. PARFITT: Objection.</p>

22 (Pages 82 to 85)

Confidential - Pursuant to Protective Order

Page 86	Page 88
<p>1 Misstates her testimony.</p> <p>2 MR. MEADOWS: Objection.</p> <p>3 THE WITNESS: So I don't report</p> <p>4 for you a table where I quantify that,</p> <p>5 that is correct, but certainly that</p> <p>6 is -- because, again, based upon</p> <p>7 looking at the way that I was trained</p> <p>8 and the documents that I'm talking --</p> <p>9 I'm pointing you to to describe how to</p> <p>10 do weight of the evidence, it is</p> <p>11 not -- it is not a numerical exercise,</p> <p>12 how many here, how many there, this</p> <p>13 one gets 5 points because of this or</p> <p>14 6 points because of this.</p> <p>15 It's more an issue, again, of</p> <p>16 judgment. It's the idea of looking</p> <p>17 across all of the available</p> <p>18 information and determining whether or</p> <p>19 not, based on that, it's your opinion</p> <p>20 that there -- that, for example,</p> <p>21 talc -- talc's toxicity profile</p> <p>22 includes cancer. That's one of the</p> <p>23 judgments -- weight of the evidence</p> <p>24 judgments you make, for example.</p> <p>25</p>	<p>1 you're looking at.</p> <p>2 The robustness of the data.</p> <p>3 For example, the NTP GLP quality</p> <p>4 animal study, very high quality in the</p> <p>5 weight of the evidence. And I talked</p> <p>6 to you about that. In fact, it --</p> <p>7 even though people criticize that</p> <p>8 study, that study is very valuable for</p> <p>9 looking at biologic changes that are</p> <p>10 consistent with a carcinogenic</p> <p>11 mechanism being initiated.</p> <p>12 So even though you may say that</p> <p>13 you can't quantify risk from that</p> <p>14 animal study as far as calculating a</p> <p>15 cancer potency factor, what you can do</p> <p>16 is use that study of high quality to</p> <p>17 make judgments within a weight of the</p> <p>18 evidence for risk.</p> <p>19 QUESTIONS BY MS. BRANSCOME:</p> <p>20 Q. Dr. Plunkett, you understand I</p> <p>21 have seven hours today, and I -- while I'm</p> <p>22 very interested in the answers that you give,</p> <p>23 if we could just -- we will get to things</p> <p>24 like NTP when we get there, if you could just</p> <p>25 attempt to answer the question that I've</p>
Page 87	Page 89
<p>1 QUESTIONS BY MS. BRANSCOME:</p> <p>2 Q. So -- but, Dr. Plunkett, just</p> <p>3 to be clear, you do not provide a numerical</p> <p>4 value to the particular pieces of evidence</p> <p>5 that you have considered as part of your</p> <p>6 weight of the evidence assessment in the MDL,</p> <p>7 correct?</p> <p>8 MS. PARFITT: Objection. Form.</p> <p>9 THE WITNESS: So I do not</p> <p>10 provide a numerical value as you see</p> <p>11 it laid out, for example, in the</p> <p>12 Canadian table, but certainly I do</p> <p>13 judge articles that I include in my</p> <p>14 weight of the evidence based on a</p> <p>15 system that includes different</p> <p>16 considerations such as -- like I said,</p> <p>17 peer-reviewed or not, that makes an</p> <p>18 issue.</p> <p>19 Whether or not the study that's</p> <p>20 being reported is the only one -- the</p> <p>21 first or is this something that is --</p> <p>22 that is describing an assessment</p> <p>23 that's been done by someone else and</p> <p>24 so you see a repetition or a</p> <p>25 consistency among the studies that</p>	<p>1 asked.</p> <p>2 I simply asked the question:</p> <p>3 Are there numerical values assigned to the</p> <p>4 particular pieces of evidence that you have</p> <p>5 considered as part of your weight of the</p> <p>6 evidence assessment in reaching your opinions</p> <p>7 in the MDL; yes or no?</p> <p>8 A. And I said to you, not in the</p> <p>9 way that it's done -- I assume you're</p> <p>10 referring to something like what was done --</p> <p>11 what's in the Canadian epidemiology table. I</p> <p>12 have not done that, no.</p> <p>13 Q. Okay.</p> <p>14 A. That's exactly right.</p> <p>15 Q. Have you provided a qualitative</p> <p>16 chart, for example, of the evidence that you</p> <p>17 have considered in forming your opinions in</p> <p>18 the MDL?</p> <p>19 MS. PARFITT: Objection. Form.</p> <p>20 THE WITNESS: I don't know what</p> <p>21 you mean by qualitative chart. I</p> <p>22 certainly have -- I certainly, I</p> <p>23 believe, have given you qualitative</p> <p>24 descriptions of my weight within my</p> <p>25 discussions of each study, yes, I have</p>

23 (Pages 86 to 89)

Confidential - Pursuant to Protective Order

Page 90	Page 92
<p>1 done that.</p> <p>2 QUESTIONS BY MS. BRANSCOME:</p> <p>3 Q. You mention in response to the</p> <p>4 prior question that you have a system for</p> <p>5 weighting the pieces of evidence that you</p> <p>6 have reviewed.</p> <p>7 Can you point me to paragraphs</p> <p>8 in your report marked Exhibit 4 that would</p> <p>9 outline in detail the system that you used to</p> <p>10 apply different weight analysis to different</p> <p>11 pieces of evidence?</p> <p>12 MS. PARFITT: Objection. Form.</p> <p>13 THE WITNESS: And I think I</p> <p>14 answered that, that there's no system</p> <p>15 written down by anyone. But what</p> <p>16 there is, instead, is if you read</p> <p>17 these -- if you read these</p> <p>18 descriptions of use of weight of the</p> <p>19 evidence that I've cited in</p> <p>20 paragraph 13 as well as the discussion</p> <p>21 of methodology in the Canadian</p> <p>22 document, that is consistent with what</p> <p>23 I do. It's the idea that you start</p> <p>24 with a literature search for</p> <p>25 peer-reviewed, publicly available</p>	<p>1 published afterwards, and what I</p> <p>2 thought I said to you was that if you</p> <p>3 look at that document -- it's not in</p> <p>4 paragraph 13, but if you look at that</p> <p>5 document, it lays out a process. And</p> <p>6 I wouldn't call it a system. It's a</p> <p>7 process. It's a process by which you</p> <p>8 screen information for relevance to</p> <p>9 the question being asked and how,</p> <p>10 then, based on that, you look at</p> <p>11 characteristics of that information</p> <p>12 such as -- and I tried to give you</p> <p>13 some of those.</p> <p>14 And I've said this before in</p> <p>15 depositions in these cases. You know,</p> <p>16 you look at the issue of whether or</p> <p>17 not the study was peer-reviewed,</p> <p>18 whether or not there was</p> <p>19 statistically -- statistical</p> <p>20 significance or at least statistics</p> <p>21 applied to the data. What was the</p> <p>22 quality of the study as far as the</p> <p>23 size in order to be able to answer the</p> <p>24 question being asked. Those are the</p> <p>25 kinds of things that you look at.</p>
Page 91	Page 93
<p>1 information. You look at the quality</p> <p>2 of the studies, the statistically</p> <p>3 significant findings. Those are all</p> <p>4 things that are discussed within these</p> <p>5 documents I'm pointing you to.</p> <p>6 QUESTIONS BY MS. BRANSCOME:</p> <p>7 Q. Now, you --</p> <p>8 A. But it's -- it's -- I don't</p> <p>9 know of anyone who has written down a</p> <p>10 specific system that applies in all</p> <p>11 circumstances, no.</p> <p>12 Q. Okay. Have you written down a</p> <p>13 system that applies specifically in this</p> <p>14 case?</p> <p>15 A. I think I have tried to do that</p> <p>16 for you when I describe what I did.</p> <p>17 Q. Okay. You just referenced the</p> <p>18 fact that your system can be found in the</p> <p>19 Canadian document.</p> <p>20 You agree that the Canadian</p> <p>21 analysis was actually published or produced</p> <p>22 after you had completed your report in the</p> <p>23 MDL, correct?</p> <p>24 MS. PARFITT: Objection. Form.</p> <p>25 THE WITNESS: Certainly it was</p>	<p>1 And then also the question --</p> <p>2 when you're looking at a specific</p> <p>3 question, you may pull in -- like you</p> <p>4 asked me about the starch particle.</p> <p>5 You may pull in things that you give</p> <p>6 less weight because obviously that's</p> <p>7 not just talc, that's starch, and you</p> <p>8 have to consider that. So that is</p> <p>9 part of the process.</p> <p>10 QUESTIONS BY MS. BRANSCOME:</p> <p>11 Q. Dr. Plunkett, the question I</p> <p>12 asked you simply was: The paper that you</p> <p>13 reference that contains some detail about the</p> <p>14 Canadian analysis, that was published after</p> <p>15 you completed your report that's marked here</p> <p>16 as Exhibit 4; is that correct?</p> <p>17 MR. MEADOWS: Objection.</p> <p>18 THE WITNESS: Yes, and I</p> <p>19 believe I answered that at the start.</p> <p>20 I usually try to answer your question,</p> <p>21 and then I try to explain further some</p> <p>22 details I think are important context</p> <p>23 on my answer.</p> <p>24 QUESTIONS BY MS. BRANSCOME:</p> <p>25 Q. I understand that,</p>

24 (Pages 90 to 93)

Confidential - Pursuant to Protective Order

Page 94	Page 96
<p>1 Dr. Plunkett. You have given many 2 depositions. You understand I can ask you 3 for more detail if that would be helpful to 4 me. 5 If you could, just focus on the 6 question that I asked, and we can explore 7 additional areas if that's something I'm 8 interested in doing. 9 Okay? 10 MR. MEADOWS: Objection. 11 She's -- 12 MS. BOCKUS: Break? 13 MR. MEADOWS: After I finish my 14 objection. 15 She's going to answer the 16 question as thoroughly as she feels 17 like she needs to answer the question 18 based on the way you ask it. 19 Want to take a break now? 20 MS. BRANSCOME: We can go off 21 the record. 22 VIDEOGRAPHER: We're going off 23 the record at 10:41 a.m. 24 (Off the record at 10:41 a.m.) 25 VIDEOGRAPHER: We are back on</p>	<p>1 panel; is that correct? 2 A. Yes. 3 Q. And so is it your view that a 4 study or an analysis that reaches a 5 particular conclusion should be assigned 6 little weight if it fails to consider all 7 relevant scientific evidence to the issue 8 that it's evaluating? 9 MS. PARFITT: Objection. 10 THE WITNESS: I think it 11 depends on the situation, but that 12 could be the case, yes. It depends 13 on -- on the -- depends on -- I think 14 it would depend on each case, the 15 question being asked, and what was 16 omitted. But, yes, I think it could. 17 QUESTIONS BY MS. BRANSCOME: 18 Q. Okay. And in this situation 19 you identify -- I believe you claimed that 20 eight human studies were not considered by 21 the CIR 2013 panel; is that correct? 22 A. Let me look at the number, but 23 that sounds about right. Yes. 24 Q. All right. And returning, 25 actually, to your prior answer, you said that</p>
Page 95	Page 97
<p>1 the record at 10:56 a.m. 2 QUESTIONS BY MS. BRANSCOME: 3 Q. All right. Dr. Plunkett, we 4 started talking a little bit about the CIR 5 analysis that was done in 2013. 6 Am I correct you no longer 7 consider that reliable? Is that your 8 opinion? 9 A. Yes. 10 Q. Okay. And you identify in your 11 report marked as Exhibit 4, I believe it's 12 paragraph 56? 13 A. Yes, that's correct. And I 14 think I talked about it later on as well, but 15 definitely I do here. 16 Q. Okay. And in paragraph 56, you 17 state that the CIR panel failed to account 18 for all the studies that informed on the 19 issue of migration of particles such as talc 20 upwards through the reproductive tract. 21 Is that your opinion? 22 A. Yes. 23 Q. Okay. And then you state that 24 because of that you assign, quote, little 25 weight to the conclusions reached by the CIR</p>	<p>1 the failure to consider all relevant 2 scientific evidence on a topic would lead you 3 to assign little weight to a particular 4 conclusion. You said that that could happen. 5 Under what circumstances would 6 you assign a conclusion little weight for 7 failing to consider what you consider to be 8 all relevant pieces of scientific literature? 9 A. Well, I think it depends -- 10 well, the reason I specifically addressed 11 that in this case is because that was -- the 12 conclusions about migration is the main 13 reason why the CIR panel then draws 14 additional conclusions later on. 15 So my issue is, migration was 16 key to what -- the decisions they made about 17 the safety issues of talc. And so in that 18 particular case, this -- this failure to 19 consider all the evidence was extremely 20 important, in my view, and I gave it little 21 weight. 22 There might be a situation 23 where some -- for example, you may only look 24 at six or eight studies, even though there 25 may be dozens out there. You may have a</p>

Confidential - Pursuant to Protective Order

Page 98	Page 100
<p>1 reason for why you only looked at six or 2 eight, or it may be -- and as a result you 3 may lay that out and, therefore, you may 4 still give weight to conclusions drawn. Or 5 it may be that the six or eight are -- 6 studies that you discuss are not -- the 7 weight is not affected by what you've 8 omitted.</p> <p>9 I believe that the weight is 10 affected by what is omitted when you look at 11 some of the articles being review articles, 12 which give you an understanding of what was 13 generally accepted within the scientific 14 community when you get to reviews, those 15 kinds of things. So it really is a 16 case-by-case basis.</p> <p>17 But certainly I do believe that 18 it is possible that in another circumstance 19 where things are omitted you would come to 20 the same conclusion, that you give those 21 conclusions less weight.</p> <p>22 Q. Is there a way, if someone were 23 try to replicate the weighting of particular 24 evidence based upon your process, for them to 25 know whether or not the omission of a</p>	<p>1 QUESTIONS BY MS. BRANSCOME: 2 Q. Okay. Of the eight studies 3 that you identify on page 37 of your report 4 that you contend the CIR panel did not 5 account for, do any of those eight studies 6 specifically discuss the migration of talc in 7 human subjects? 8 A. No, I don't believe they do, 9 but there are a couple of these studies that 10 I found to be extremely important if you want 11 me to explain that to you. 12 Q. Do you break out in your report 13 in any other paragraphs which of these eight 14 articles you consider to be extremely 15 important? 16 And if you could just point me 17 to paragraph numbers, that's good enough if 18 you have, in fact, broken them out. 19 A. I have. I -- this whole 20 section I break -- I talk about each one 21 individually. So I think you can tell by 22 what I read -- what I'm discussing what I 23 thought was important and informative about 24 each of those. 25 Q. Do you rank the eight studies</p>
Page 99	Page 101
<p>1 citation of certain studies means that a 2 study should be given little weight or 3 whether it wouldn't affect the weighting of 4 that scientific article?</p> <p>5 MS. PARFITT: Objection. Form. 6 THE WITNESS: So I think this 7 is the issue of judgment, training and 8 experiencing that is applied to all 9 such assessments, and this is why 10 different scientists may come to 11 different conclusions. But certainly 12 it is -- it was important to my 13 assessment on this issue because of 14 the prominent role that the CIR report 15 gives to their conclusions here for 16 why they then drew conclusions about 17 safety. And so that link was 18 extremely important.</p> <p>19 MS. BRANSCOME: Can we pause 20 for just a moment? 21 VIDEOGRAPHER: We are going off 22 the record at 11:00 a.m. 23 (Off the record at 11:00 a.m.) 24 VIDEOGRAPHER: We are back on 25 the record at 11:01 a.m.</p>	<p>1 in any way by their importance to you? 2 A. Not with any numerical rank, 3 no, but certainly I think I do that for you 4 when I talk about the studies. I give you an 5 understanding of ones that I think are 6 particularly informative and ones that are 7 not.</p> <p>8 So, for example, I weight the 9 human data -- I think I tell you that -- more 10 than the animal data because of the 11 differences between the reproductive tracts 12 of humans versus animals generally, upright 13 versus -- upright and habits and things that 14 humans do that relate to insertions in and 15 out of the reproductive tract, I guess is a 16 nice way to describe it, versus an animal, 17 that those can have, and then also the 18 differences between animals and humans in 19 terms of bursal sac around the ovary, those 20 kinds of things.</p> <p>21 So I do -- that -- I guess that 22 ranking I do give you here. I tell you that 23 I think these -- I think that the most 24 relevant are going to be the human studies 25 versus the animal studies.</p>

Confidential - Pursuant to Protective Order

Page 102	Page 104
<p>1 Q. Right.</p> <p>2 So my question specifically is,</p> <p>3 where would you point me to in your report to</p> <p>4 understand the weight that you gave each of</p> <p>5 these particular eight studies?</p> <p>6 A. At my descriptions of those</p> <p>7 studies and what I describe. That's all I</p> <p>8 can tell you.</p> <p>9 Q. And I'm just asking,</p> <p>10 Dr. Plunkett, can you point me in the report</p> <p>11 to where that discussion takes place?</p> <p>12 A. It takes place -- I have a</p> <p>13 discussion for each study, and I would -- and</p> <p>14 if you read what I say about each study, I</p> <p>15 try to go through what the strengths and</p> <p>16 weaknesses of those studies are.</p> <p>17 And so those -- that would be,</p> <p>18 let's see -- you want me to give you the</p> <p>19 starting paragraph?</p> <p>20 Q. So, for example, Parmley and</p> <p>21 Woodruff. Can you point me to where in your</p> <p>22 report you discuss Parmley and Woodruff, such</p> <p>23 that I can understand the weight that you</p> <p>24 gave that particular study?</p> <p>25 A. So the year of it is...</p>	<p>1 So what I do is, when I'm</p> <p>2 discussing about these -- all of these papers</p> <p>3 here contribute to my weight of the evidence.</p> <p>4 And if it's a human study, I'm giving those</p> <p>5 more weight than I'm giving animal studies.</p> <p>6 And that's described.</p> <p>7 And then within papers I'm</p> <p>8 pulling out information that contributes to</p> <p>9 what I think is important about what the</p> <p>10 study says, and that -- and the importance of</p> <p>11 what is described within the study</p> <p>12 contributes to my weight.</p> <p>13 And I don't know how else to</p> <p>14 describe it to you. That is the process that</p> <p>15 scientists go through when they evaluate</p> <p>16 data.</p> <p>17 Q. And so my question to you:</p> <p>18 Earlier you said of these eight studies, some</p> <p>19 of them were particularly important to you.</p> <p>20 How would I, using only what's</p> <p>21 written in your report, understand which of</p> <p>22 those eight studies was of particular</p> <p>23 importance to you?</p> <p>24 A. So it would have to do with</p> <p>25 what I discuss about the study. So I'm</p>
Page 103	Page 105
<p>1 So I think I discuss it in</p> <p>2 paragraph 44, and so I describe for you what</p> <p>3 important information is in there, which is</p> <p>4 the information that I take as forming part</p> <p>5 of my weight of the evidence.</p> <p>6 So one of the most important</p> <p>7 things is what -- they have a figure they</p> <p>8 show, and they're showing -- which is one of</p> <p>9 the unique figures in all of the published</p> <p>10 literature. But it talks about the</p> <p>11 differences between the female reproductive</p> <p>12 tract and the male reproductive tract, and it</p> <p>13 shows the actual -- it talks about a</p> <p>14 discussion of movement from substance in the</p> <p>15 environment through -- into the vagina, into</p> <p>16 the fallopian tubes. So it's a paper that</p> <p>17 addresses that very specific issue.</p> <p>18 Q. So my question to you, though,</p> <p>19 is, where do you have a discussion of the</p> <p>20 weight that you give to these particular</p> <p>21 articles?</p> <p>22 A. So the discussion of the weight</p> <p>23 has to do with the information described. I</p> <p>24 don't give them a numerical ranking. I told</p> <p>25 you that.</p>	<p>1 telling you, when I -- if you look through</p> <p>2 this entire section, this is the Parmley and</p> <p>3 Woodruff paper. It is important because it</p> <p>4 addresses the specific issue of movement of</p> <p>5 environmental substances from the outside to</p> <p>6 the inside. So I'm giving that importance in</p> <p>7 my evaluation because of what that author is</p> <p>8 actually discussing.</p> <p>9 I don't know how else to</p> <p>10 describe that. I apologize. I mean, to me,</p> <p>11 weight of the evidence is a process that</p> <p>12 scientists use bringing their training and</p> <p>13 experience and judgment, and it's not a</p> <p>14 numerical process across the board, it just</p> <p>15 is not, based on the way weight of the</p> <p>16 evidence is used within science.</p> <p>17 Q. Now, Dr. Plunkett, though, you</p> <p>18 would acknowledge that if you wanted to</p> <p>19 assign numerical values to the studies, that</p> <p>20 has been something that has been done by</p> <p>21 other authors and other authors on whom you</p> <p>22 rely, correct?</p> <p>23 MS. PARFITT: Objection. Form.</p> <p>24 THE WITNESS: I don't believe</p> <p>25 that's true. I'll need to look -- I</p>

27 (Pages 102 to 105)

Confidential - Pursuant to Protective Order

Page 106	Page 108
<p>1 don't believe that's true with respect 2 to the biological information. I 3 believe it may be true with respect to 4 the epidemiology studies. 5 You want me to look real quick 6 to confirm that? I can do that really 7 quick, but... 8 QUESTIONS BY MS. BRANSCOME: 9 Q. I'm simply saying, could you 10 assign a numerical value if you chose to do 11 so? 12 MR. MEADOWS: Objection. 13 Objection. Form. 14 THE WITNESS: And I'm -- what 15 I'm trying to say to you is I think 16 that I -- that there is no one set of 17 rules that you would assign in order 18 to do that for all the types of 19 studies that you weigh. 20 I would agree that I have seen 21 it routinely done -- well, not 22 routinely, but I've seen it done 23 within the epidemiological community 24 when they go through the epi data. 25 But not -- it's not something that</p>	<p>1 Q. All right. And you are aware 2 that there is, in fact -- called PDQs, 3 correct? 4 A. That's the abbreviation, yes. 5 Q. Right. And you're aware that 6 the National Cancer Institute has in fact 7 published a PDQ that addresses a potential 8 connection between talc and ovarian cancer, 9 correct? 10 A. I'm aware of several that have 11 been done over the years, but, yes, I'm aware 12 of that. 13 Q. And have you reviewed those? 14 A. Yes, I have. 15 Q. Are they listed on your 16 reliance list? 17 A. No, but they're listed within 18 the materials as discussed within my 19 depositions, and I thought -- and my 20 testimony. I thought that was part of my 21 reliance list. I believe that it -- it was 22 in my reliance list, is encompassing all of 23 the testimony as well as the actual 24 documents. Maybe I'm mistaken, but that was 25 my understanding.</p>
Page 107	Page 109
<p>1 I've seen done when you talk about 2 weight of the evidence as part of a 3 human health risk assessment. That is 4 not something that scientists 5 typically do as far as giving 6 numerical rankings. 7 QUESTIONS BY MS. BRANSCOME: 8 Q. You're familiar with the 9 National Cancer Institute, correct? 10 A. Yes, I am. 11 Q. All right. They are considered 12 to be the nation's leader in cancer research, 13 correct? 14 MS. PARFITT: Objection to 15 form. 16 THE WITNESS: The National 17 Cancer Institute? 18 Yes, they are. I don't know if 19 they're "the" leading, but they're one 20 of the leading, that's true. 21 QUESTIONS BY MS. BRANSCOME: 22 Q. Okay. And you're familiar with 23 publications that they issue called physician 24 data queries? 25 A. Yes, I am.</p>	<p>1 Q. Okay. If they are not on your 2 reliance list, should they be? 3 A. I believe that they are on my 4 reliance list by it having been pointed to as 5 part of the testimony that I have given and 6 the documents that I have relied upon during 7 testimony. 8 Q. Okay. And you are aware that 9 they have issued a PDQ that -- on the website 10 as of today, correct? 11 A. I haven't looked today, so I'm 12 sure -- but I know that -- I don't believe it 13 has been removed, so I believe that there is 14 something there, yes. 15 Q. All right. And what is your 16 understanding of the position stated in the 17 PDQ with respect to a possible link between 18 talc and ovarian cancer? 19 A. So I'd have to look at the one 20 today to tell you what it says, but it's 21 evolved over time and it's changed over time, 22 and I have specific opinions that I've 23 expressed at trial about that issue. 24 Do you want me to go into that 25 details or I mean --</p>

Confidential - Pursuant to Protective Order

Page 110	Page 112
<p>1 Q. I'm not asking about your 2 opinions about what their position is. I'm 3 simply asking you, Dr. Plunkett, the most 4 recent NCI PDQ that you have reviewed, what 5 is the position that the National Cancer 6 Institute has taken with respect to the 7 relationship between talc and ovarian cancer? 8 A. So I would want to pull it out 9 to give you the specific statement of their 10 position, but their position has changed such 11 that later in time they've weakened the 12 link -- their statements about the link 13 between ovarian cancer and genital talc use. 14 So it used to be seen as a 15 cause, and now I believe it's not seen as a 16 cause. I don't know the exact language, 17 though. I'd have to look at it as -- maybe 18 risk factor is the better word to use. 19 And I need to look at the most 20 recent one. And that would be the best way. 21 Let's just see what it says. 22 Q. Okay. 'Cause is it your 23 position as you sit here today that the 24 National Cancer Institute has ever issued a 25 statement that talc causes ovarian cancer?</p>	<p>1 any -- whatever portion of this is helpful to 2 you. 3 And then if you could answer my 4 question, Dr. Plunkett, of what is the 5 position as stated in Deposition Exhibit 6 Number 7 of the National Cancer Institute 7 with respect to the relationship between talc 8 and ovarian cancer? 9 A. So I would be looking at the 10 section on page 12 of 18, and maybe you're 11 looking somewhere else, but that's where they 12 actually talk about perineal talc exposure. 13 And it's under the section where they have 14 now moved into factors with an adequate 15 evidence of an association and they describe 16 it here. So they're calling it an 17 association where the weight of the evidence 18 is not adequate to support that association. 19 Q. All right. And so the first 20 sentence of the section under perineal talc 21 exposure states, "The weight of the evidence 22 does not support an association between 23 perineal talc exposure and an increased risk 24 of ovarian cancer." 25 Did I read that correctly?</p>
Page 111	Page 113
<p>1 A. I believe it was listed as a 2 risk factor for ovarian cancer in the older 3 PDQs. 4 (Plunkett Exhibit 7 marked for 5 identification.) 6 QUESTIONS BY MS. BRANSCOME: 7 Q. I do have a copy here. Just 8 for the sake of the record, we will mark this 9 as Plunkett Deposition Exhibit Number 7. 10 Handing a copy to you, 11 Dr. Plunkett, do you recognize the document 12 that I just handed you that's marked as 13 Exhibit 7? 14 MR. LOCKE: What's the date of 15 that? 16 MS. BRANSCOME: This was 17 printed on December 14, 2018. 18 THE WITNESS: It's -- the 19 updated date is June 22, 2018, if that 20 helps. 21 MR. LOCKE: Yes, thank you. 22 THE WITNESS: I have seen this 23 one, yes. 24 QUESTIONS BY MS. BRANSCOME: 25 Q. All right. And you can review</p>	<p>1 A. You did read that correctly. 2 Q. All right. And it indicates 3 that "results from case-control and cohort 4 studies are inconsistent." 5 Did I read that correctly, 6 Dr. Plunkett? 7 A. You did. 8 Q. And the question that I would 9 ask simply is, do you discuss the National 10 Cancer Institute PDQ in the report that 11 you've issued in the MDL, which is identified 12 as Exhibit 4? 13 A. I don't specifically discuss 14 this document, no, I do not. 15 Q. Okay. And you understand that 16 the NCI PDQ did a weight of the evidence 17 analysis that followed a formal evidence 18 ranking system, correct? 19 MS. PARFITT: Objection. 20 THE WITNESS: So I -- it's not 21 laid out here, but they do have a 22 process they use. 23 Is that what you're asking me? 24 QUESTIONS BY MS. BRANSCOME: 25 Q. Yes.</p>

Confidential - Pursuant to Protective Order

Page 114	Page 116
<p>1 A. Yes. And again, they're 2 ranking the epidemiological data, and so I 3 understand that that is there, yes. 4 Q. Now, you've said a few times 5 that you could qualitative -- you could give 6 a quantitative weight to an epidemiological 7 study, somehow suggesting that it is 8 different from other types of studies. 9 What is it about a 10 toxicological study, for example, that would 11 prevent someone from giving a quantitative 12 weight in a weight of the evidence analysis? 13 A. Because it is just what is 14 typically done and not done. There are 15 certain practices within the community, what 16 is kind of -- I would say that scientists use 17 routinely, or scientists have used. Not all 18 scientists give numerical rankings to 19 epidemiological data either, because even 20 within a Bradford Hill assessment, when you 21 use the considerations, there's no 22 requirement for ranking studies in order to 23 meet the requirements of use of that 24 methodology. 25 Q. Okay.</p>	<p>1 of epidemiological evidence? 2 A. If by -- you mean prevent, was 3 someone stopping me from doing that, no. But 4 if you ask what would be standard practice 5 based on my experience, I would not be doing 6 that. 7 Q. Has anyone -- and I'm not 8 referring in this case to any attorneys. But 9 has anyone reviewed your -- the weighting 10 that you gave specific pieces of evidence as 11 essentially a form of a peer review process? 12 A. If by that you mean have I 13 submitted my opinions for publication, no, I 14 have not done that. Part of -- that's partly 15 driven by my understanding of the evidence 16 that I reviewed, that some of it may not be 17 something that I should be discussing 18 necessarily in a public form outside of the 19 cases I'm working in. 20 But certainly I have not 21 submitted it for publication, if that's what 22 you mean. No, I have not done that. 23 Q. Okay. Has the methodology that 24 you have used in the MDL, has that been -- 25 have you submitted any type of analysis using</p>
Page 115	Page 117
<p>1 A. But I have seen it done in the 2 epidemiology community, and that is the most 3 common place I see it. I do not see other 4 toxicologists that are assessing animal 5 studies and in vitro studies doing it that 6 same way. 7 When you do a human health risk 8 assessment, that isn't routine practice to do 9 numerical rankings on studies. 10 Q. Okay. 11 A. At least in my experience and 12 in my training, and I was trained in the use 13 of risk assessment by one of the individuals 14 who actually invented the process. 15 Q. Okay. Okay. But do you 16 consider the epidemiological evidence as part 17 of your risk assessment in the MDL? 18 A. I do, because I'm looking at it 19 in the context of what is out there and 20 what's available. I don't always have human 21 data when I do risk assessments, but in this 22 one I do. So I do consider them, yes. 23 Q. Okay. Did anything prevent you 24 from doing a quantitative assessment of the 25 weight that you were giving different pieces</p>	<p>1 that methodology for publication even outside 2 of particularly looking at Johnson's baby 3 powder, for example? 4 A. Yes, in -- if you look at my 5 publications that describe risk assessments 6 that I have done. So the one that would come 7 to -- to play that's similar as far as the 8 scope of the weight of the evidence would -- 9 at least with the animal and the in vitro 10 studies, would be the paper that I published 11 on copper, looking at the database of copper 12 and identifying points of departure and 13 target organs and risk -- risk issues based 14 on copper use in humans, trying to set a -- 15 understand what a safe exposure level could 16 be to copper in water. And that was 17 published -- that actually was one of the 18 papers that's published with Dr. Krewski, who 19 is one of the authors of this risk assessment 20 in Canada. 21 Q. And is it your position that 22 you follow the same methodology in what 23 you've reported in the MDL with respect to 24 Johnson's baby powder that you did in your 25 analysis of copper?</p>

Confidential - Pursuant to Protective Order

Page 118	Page 120
<p>1 A. Yes, with the process of going 2 through all of the publicly available 3 information, putting it together based on its 4 relevancy and reliability. 5 We did a process where we 6 grouped it based on animal versus human, just 7 like I've done here. And we call it the 8 bins, but it's the same idea. I have a bin 9 of human data, I have a bin of animal data 10 and a bin of in vitro data. And so, yes, the 11 process was very, very similar. 12 Q. Okay. Returning back to some 13 documents that you chose not to cite in your 14 report, you do not discuss the Gonzales 2016 15 study in your report for the MDL, correct? 16 MS. PARFITT: Objection. Form. 17 THE WITNESS: I'll have to 18 look. It is not cited in the 19 reference list to my report, that is 20 true. So that means it would not be 21 mentioned specifically in the body of 22 the report. 23 QUESTIONS BY MS. BRANSCOME: 24 Q. You're familiar with the 25 Gonzalez 2016 study, correct?</p>	<p>1 include something like the Gonzales 2016 2 study, but yet you will disagree the 3 2013 -- the CIR 2013, you will give it little 4 weight for not discussing particular studies? 5 A. So that's a very different 6 exercise. You want me to explain my thinking 7 on that? I can do that for you, but I 8 believe that's apples and oranges question. 9 My reasons for giving little 10 weight to the CIR overall assessment versus 11 my weight or the assessment I make of an 12 individual piece of data, that's different. 13 And that's what you're describing for me. 14 And I believe Gonzales is in my 15 overall reliance list, so I have read 16 Gonzales. It is something that I have 17 considered; it's not something that I've 18 cited in my paragraphs. So it doesn't mean 19 it didn't go into my weight of the evidence, 20 because I do have it and I have reviewed it. 21 I just don't recall the details on it. 22 Q. Is it your position as you sit 23 here today that you know for sure that the 24 CIR panel did not -- was not aware of or even 25 considered any of the eight studies that you</p>
Page 119	Page 121
<p>1 A. If you want me to talk about 2 it, you'd have to pull it out for me, but I 3 know the name, yes. 4 Q. Okay. And it was looking at an 5 association between the perineal use of talc 6 and ovarian cancer, correct? 7 A. That, I'd have to look at it to 8 tell you. I believe it was a human study 9 that would be consistent with that, but I 10 need to pull it out to look at it. 11 Q. All right. Do you, as you sit 12 here today, do you know why you did not 13 discuss it in your report? 14 A. I wasn't doing a full causation 15 analysis in this report, so as a result I'm 16 not trying to characterize every piece of 17 human data. But I certainly am looking at 18 the consistency across the studies, and 19 that's what I've done. 20 And I mention it here. I do 21 think I mention here that there are studies 22 that came to different conclusions than the 23 ones that I'm specifically describing. 24 Q. Okay. And so why is it that -- 25 why is it acceptable for you to choose not to</p>	<p>1 contend the omission of which makes it of 2 little weight? 3 MS. PARFITT: Objection. Form. 4 THE WITNESS: I would say I'm 5 99.9 percent sure, based on the 6 process that is -- that goes in. And 7 if you want me to explain, I'll tell 8 you why I feel that level of surety. 9 You know, I can always say that 10 maybe there was someone that came to 11 the panel that did a search on their 12 own, but that is not what's done. The 13 individuals that come to the panel are 14 given a body of information provided 15 to them in written form that they 16 review. So it's not like they -- they 17 have access to anything that isn't 18 cited in the actual report. 19 QUESTIONS BY MS. BRANSCOME: 20 Q. Okay. The eight articles that 21 you discuss that are not mentioned in the CIR 22 panel's work, they are publicly available 23 pieces of scientific literature, correct? 24 A. Yes, which was why it's 25 interesting to me that those were not grabbed</p>

Confidential - Pursuant to Protective Order

Page 122	Page 124
<p>1 and included within -- within the assessment 2 done by the -- by the PCPC's group that 3 handles CIR -- handled the CIR process here. 4 Q. Okay. We received just before 5 your deposition, a few days in advance, a 6 list of materials that have been added to 7 your reliance list since you produced your 8 report in this case. 9 Did you provide that list of 10 materials to counsel to -- are you aware of 11 the materials that were identified? 12 A. Yes, I am. They're ones that I 13 have reviewed since my report and -- yes, 14 which would have been, I believed, important 15 for you to know about, because obviously you 16 wouldn't know if I hadn't provided that to 17 you, and fair game for you to ask me about. 18 Q. On that list was contained a 19 number of news articles. 20 A. Uh-huh. 21 Q. Are news articles pieces of 22 scientific information that you typically 23 consider in performing a risk assessment? 24 A. No, they're not part of my risk 25 assessment, but they -- but they were</p>	<p>1 section on the role of the industry in 2 Section 7. 3 Q. Okay. So the newspaper 4 articles are not something that you are 5 considering as part of your analysis of 6 whether there is a risk of ovarian cancer 7 from Johnson's baby powder, correct? 8 A. No, that's a separate issue 9 because it's not -- it's not scientific data, 10 per se. 11 Q. Okay. All right. Now, if you 12 could turn to paragraph 31 in your report. 13 Okay. You discuss the 14 biological effects of talc in this paragraph 15 and in others, correct? 16 A. Yes, I would call this my 17 introductory paragraph to transition into a 18 specific topic, yes. 19 Q. Okay. And you talk here about 20 the structure and size of talc affecting its 21 properties. 22 What do you mean by that? 23 A. So whether it's fibrous enough, 24 platy, fibrous. Whether it is particle sizes 25 of less than 10 microns, less than 5 microns,</p>
Page 123	Page 125
<p>1 relevant to -- they were relevant to my 2 overall assessment of the issue of what the 3 company is doing with regard to public 4 dissemination of information. 5 So it's not the risk assessment 6 part. It's more on the issue of the -- when 7 I talk about the different influences of the 8 company on public dissemination of 9 information, I went through the different 10 specific issues. So this would be a specific 11 issue related to a news report that someone 12 comes out with, the Reuters report, and then 13 looking at what the company is saying in 14 addition to that. 15 So it's understanding -- for 16 example, the documents that Reuters 17 discusses, many of those I'm sure I have 18 seen, although I don't have access to -- I 19 wasn't able to go on websites and download 20 everything that they cite. But certainly 21 they looked familiar, some of the ones I did 22 see. 23 So it's that issue of -- the 24 last part of my report, I think. Want me to 25 tell you the section? It would be in the</p>	<p>1 greater than 75 microns. There's 2 different -- certain pieces of literature 3 deal with different size ranges of talc. The 4 smaller the size range, the more toxic it is, 5 for example, to lung tissue; the more likely 6 it is to be able to move, based upon the 7 size, versus being engulfed by a macrophage 8 if it's a larger particle, things like that. 9 Q. So focusing specifically on 10 ovarian cancer, what role does size and 11 structure of a talc particle play with 12 respect to a risk of ovarian cancer in your 13 opinion? 14 A. I don't think I formed a 15 opinion that it has to be a specific size or 16 structure, because the -- my opinions are 17 related to the fact that we have a complex 18 mixture of ingredients within the body 19 powder, and my assessment's been on the 20 overall consumer product, not on any one 21 particular ingredient only within it. 22 So it's the idea of just 23 understanding that size and structure of 24 these particles are general principles that 25 affect toxicology. So a larger particle or a</p>

Confidential - Pursuant to Protective Order

Page 126	Page 128
<p>1 fibrous particle may have a different tissue 2 toxicity response than a smaller particle. 3 So in other words -- I think I 4 discuss this later in a paragraph about 5 pleurodesis, the idea that you can get acute 6 versus chronic inflammation, or respiratory 7 distress or not. So it's just this idea of a 8 general principle that outlines how you would 9 think about particles generally as a 10 toxicologist. 11 Q. Well, okay. So you said that 12 your assessment is based on the overall 13 consumer product. That would be Johnson's 14 baby powder or SHOWER TO SHOWER®, correct? 15 A. Yes. 16 Q. All right. 17 A. Or Shimmer. I think that's the 18 other name. There's a third product. 19 Q. Okay. But my question to you 20 is, you actually cite a number of pieces of 21 literature in the section about the alleged 22 toxicity of talc that don't relate to the 23 overall consumer products at issue in this 24 case, correct? 25 MS. PARFITT: Objection. Form.</p>	<p>1 known to affect tissue toxicity as far as 2 adverse events like inflammation and/or 3 irritation. 4 Q. Okay. So that's -- that's what 5 I'm trying to understand in more detail. 6 What is your opinion with 7 respect to -- let's take size to start with. 8 Is there a particular size talc particle that 9 is more or less likely to cause inflammation, 10 in your opinion? 11 A. It depends whether you're 12 talking about acute or chronic. I would say 13 for acute inflammation the larger particles, 14 such as some of the particle sizes that are 15 used in the pleurodesis products, are more 16 likely to initiate an acute inflammatory 17 response due to the fact that they're large 18 enough that the body will recognize them with 19 a fairly robust foreign body response. 20 Q. What is your definition of 21 large? 22 A. So the literature varies, but 23 certainly particles that are above -- some of 24 the literature talks about particles that are 25 in the range of 25 to 75. Some of them talk</p>
Page 127	Page 129
<p>1 THE WITNESS: No, I would 2 disagree with that when you use the 3 word "relate." Relate to me means is 4 it relevant to the assessment, and 5 they are, even if they're not just on 6 the finished product. 7 But if what you mean is that 8 there are studies that did not test 9 the consumer product but individual 10 ingredients or -- that is true, yes, 11 but all of that is relevant or relates 12 to the overall risk assessment. 13 QUESTIONS BY MS. BRANSCOME: 14 Q. Okay. So given your view that 15 information about the individual constituents 16 is relevant to evaluating the overall 17 toxicity of the ultimate consumer products, 18 then my question to you is: How does the 19 structure and size of the component talc 20 particles play a role in toxicity with 21 respect to ovarian cancer? 22 A. Just generally -- it's not 23 just -- well, with respect to ovarian cancer, 24 we start with irritation, inflammation 25 potential. Size of particles and shape are</p>	<p>1 about larger particles even than that. 2 It has to do with the fact 3 that -- this is complicated by the fact that 4 any consumer product -- or any talc sample 5 will have a range of sizes because they don't 6 select for one size. They select for smaller 7 than. So a 200 mesh, a 400 mesh, that has do 8 with what will filter through. 9 So pleurodesis, they try to 10 avoid for those products the really small -- 11 large amounts of less than 10 because that 12 leads to respiratory distress, whereas many 13 of the consumer talc products are using much 14 smaller, finer particles to get that feel and 15 performance they want from the consumer body 16 powders. 17 Q. Have you reviewed -- focusing 18 specific on Johnson & Johnson's products, 19 have you reviewed the documents that relate 20 to the specifications for the Johnson's 21 products with respect to the size of the 22 plate particles? 23 A. I have seen those, yes. I 24 can't tell you what each of them says without 25 pulling them out, but, yes, that is certainly</p>

Confidential - Pursuant to Protective Order

Page 130	Page 132
<p>1 documents I have seen and relied upon.</p> <p>2 Q. Is it consistent with your</p> <p>3 understanding that it was Johnson & Johnson's</p> <p>4 intention to select large platy talc</p> <p>5 particles for its products?</p> <p>6 MS. PARFITT: Objection to</p> <p>7 form.</p> <p>8 QUESTIONS BY MS. BRANSCOME:</p> <p>9 Q. Have you seen that in the</p> <p>10 documents?</p> <p>11 A. I don't know that it's</p> <p>12 described quite that way, but they certainly</p> <p>13 were doing a 200 mesh selection. So -- for</p> <p>14 their body powders products. So -- and they</p> <p>15 were trying -- and they did make attempts to</p> <p>16 look for sources that were more platy talc</p> <p>17 than other forms, but that doesn't ensure</p> <p>18 that everything is platy talc.</p> <p>19 Q. Are you familiar with the term</p> <p>20 "fines"?</p> <p>21 A. Yes, generally, but I'm not --</p> <p>22 but I'm not an expert in the processing of</p> <p>23 talc as far as how you would go about</p> <p>24 choosing an ore or a mine. There's others</p> <p>25 that will be addressing that. That's not my</p>	<p>1 effects that beneficiation can have on the</p> <p>2 level of the component -- the components in</p> <p>3 talc and what ultimately ends up in one of</p> <p>4 Johnson & Johnson's consumer products?</p> <p>5 MR. MEADOWS: Objection.</p> <p>6 THE WITNESS: So I'm not -- I'm</p> <p>7 not familiar with all the details, but</p> <p>8 I am familiar that it is a process</p> <p>9 they're using to attempt to result in</p> <p>10 a product that has characteristics</p> <p>11 that would be desirable for a consumer</p> <p>12 product.</p> <p>13 Again, there is my</p> <p>14 understanding that others are going to</p> <p>15 be discussing the geology or the</p> <p>16 processing, and that is not something</p> <p>17 I'm looking at.</p> <p>18 The literature as it relates to</p> <p>19 what has been tested in the public</p> <p>20 literature in particular, and that</p> <p>21 would be either an ingredient or a --</p> <p>22 or a consumer product or a -- they may</p> <p>23 discuss exposure occupationally to</p> <p>24 mining or milling, which is -- which</p> <p>25 is an issue that you can consider when</p>
Page 131	Page 133
<p>1 area.</p> <p>2 Q. What is your understanding of</p> <p>3 the term "fines"?</p> <p>4 A. My understanding of the term</p> <p>5 "fines" has to be looking for a sample or a</p> <p>6 group that has been processed such that it</p> <p>7 has certain characteristics.</p> <p>8 Other than that, I would refer</p> <p>9 you to the individuals in litigation that are</p> <p>10 going to be dealing with the processing.</p> <p>11 Q. Okay. Have you taken into</p> <p>12 account in your analysis in any way the</p> <p>13 beneficiation process that occurs between the</p> <p>14 time that the talc is mined and it ends up in</p> <p>15 one of the consumer products that is relevant</p> <p>16 to your analysis?</p> <p>17 MR. MEADOWS: Objection.</p> <p>18 THE WITNESS: So what do you</p> <p>19 mean by taking it into account? Am I</p> <p>20 aware that they have something that's</p> <p>21 in place for that? Yes.</p> <p>22 But take into account, what do</p> <p>23 you mean by that?</p> <p>24 QUESTIONS BY MS. BRANSCOME:</p> <p>25 Q. Are you familiar with the</p>	<p>1 you're reviewing that literature as</p> <p>2 well.</p> <p>3 QUESTIONS BY MS. BRANSCOME:</p> <p>4 Q. Okay. And so when you cite --</p> <p>5 for example, you have a significant number</p> <p>6 of -- I'm trying to find the right paragraph.</p> <p>7 You have a section in your</p> <p>8 report where you discuss a number of</p> <p>9 different articles that relate to talc, and</p> <p>10 in parentheses you identify that the talc</p> <p>11 source might be cosmetic, it might be</p> <p>12 industrial, things of that nature, correct?</p> <p>13 A. Yes, I do that on purpose</p> <p>14 because I wanted -- I did look at the</p> <p>15 literature to understand what they were --</p> <p>16 what they were -- what type of exposure they</p> <p>17 were describing.</p> <p>18 Q. Okay. And so understanding</p> <p>19 that some of those products are not</p> <p>20 representative of what ultimately is in</p> <p>21 Johnson's baby powder, do you have anything</p> <p>22 in your report that explains how you did or</p> <p>23 did not give weight to those particular</p> <p>24 studies?</p> <p>25 MS. PARFITT: Objection. Form.</p>

Confidential - Pursuant to Protective Order

Page 134	Page 136
<p>1 THE WITNESS: Let me look and 2 see what I say. 3 If the question has to do with 4 numerical rankings, no, I did not do 5 that. But you're asking something 6 else, right, broader than that, 7 correct? 8 QUESTIONS BY MS. BRANSCOME: 9 Q. The question that I have is, 10 how did -- is there somewhere in this report 11 that I can understand the weight that you 12 assigned to say a study that related to 13 industrial talc as opposed to information 14 about cosmetic talc, for example? 15 MR. MEADOWS: Objection. 16 THE WITNESS: So I -- I'm -- I 17 believe I address that. I don't know 18 it's exactly answering your question, 19 but I lay out for you the 20 characteristics of the literature in 21 paragraph 37, and I point out that the 22 scientific literature varies. 23 And the fact -- and I point -- 24 and I admit -- I'm not admitting. I'm 25 stating the fact that in some cases</p>	<p>1 something that ever ended up in Johnson's 2 products, correct? 3 MR. MEADOWS: Objection. 4 THE WITNESS: I don't think I 5 can answer that yes or no. I haven't 6 done an assessment to see whether it 7 ever ended up in the products. That's 8 a different question. 9 I certainly am aware of the 10 fact that was not a primary source of 11 their talc, that is true. I do know 12 that. 13 In other words, I don't have 14 records from -- going back from 1894 15 on what the source of their talc was. 16 So I can't tell you over time. 17 What I do know, what's been put 18 into depositions and testimony of 19 company employees more recently, where 20 it's my understanding that the 21 principal sources over the years were 22 either the Vermont mine, the Italian 23 mine or the Chinese mine. And there 24 were different interruptions in time 25 where different mines were used,</p>
Page 135	Page 137
<p>1 the authors will not describe it 2 specifically as the type of talc, but 3 just talc, whereas -- with no 4 description of purity or state, for 5 example. But in cases where the 6 literature does, I did consider that 7 in my weight of the evidence. 8 So, for example, when I -- when 9 I lay it out here in these bullets 10 where I'm putting for you tremolite 11 mining industrial grade cosmetic, it 12 certainly is something that I weighed. 13 And obviously as much information as I 14 can get on cosmetic-grade talc is 15 going to be most important in the 16 assessment, but that doesn't mean the 17 other information isn't relevant. 18 You want me to explain why? 19 QUESTIONS BY MS. BRANSCOME: 20 Q. Well, so, for example, you 21 describe the Dreessen article that related to 22 trimellitic talc that's mined out of 23 New York. 24 You would agree that 25 trimellitic talc from New York is not</p>	<p>1 depending on sourcing. 2 QUESTIONS BY MS. BRANSCOME: 3 Q. So as part of your expert 4 analysis where you are evaluating articles 5 that relate to different types of talc from 6 different sources of talc, have you done an 7 analysis of how those particular types of 8 talc do or do not relate to what is in the 9 consumer product manufactured by Johnson & 10 Johnson? 11 MS. PARFITT: Objection. Form. 12 THE WITNESS: The first part of 13 your question, again? I'm sorry. 14 MS. BRANSCOME: Would you read 15 it back? 16 THE WITNESS: Could you read it 17 back to me again? I didn't mean to 18 wander, but the first few words I 19 missed. 20 (Court Reporter read back 21 question.) 22 THE WITNESS: Okay. So I 23 certainly did, which is why I'm 24 breaking this out here for you this 25 way.</p>

Confidential - Pursuant to Protective Order

Page 138	Page 140
<p>1 So I am -- I am certainly</p> <p>2 recognizing, and I analyzed on the</p> <p>3 paper -- through the papers what type</p> <p>4 of product, if available, that the</p> <p>5 data is on.</p> <p>6 But if you read my report in</p> <p>7 the process of risk assessment, all of</p> <p>8 these categories of papers are</p> <p>9 relevant to telling you something</p> <p>10 about what talc can do. And then when</p> <p>11 you talk about drawing final</p> <p>12 conclusions, I'm looking for</p> <p>13 information, if I can, and I have it,</p> <p>14 that is on point to the product that</p> <p>15 was sold.</p> <p>16 So certainly the studies that</p> <p>17 give me information on cosmetic-grade</p> <p>18 talc are extremely important to my</p> <p>19 assessment, and they're ones that I've</p> <p>20 discussed or we've even used in trial</p> <p>21 before when we've talked about putting</p> <p>22 together a timeline.</p> <p>23 That's what this is about, by</p> <p>24 the way. This discussion here, I'm</p> <p>25 starting to lay out what information</p>	<p>1 that to draw conclusions based upon</p> <p>2 what was available for me to assess.</p> <p>3 QUESTIONS BY MS. BRANSCOME:</p> <p>4 Q. Okay.</p> <p>5 A. I don't know how else to answer</p> <p>6 it for you. That's what the section is meant</p> <p>7 to do, and that's why I broke it out that</p> <p>8 way. You know, I recognize that there is</p> <p>9 data on different things.</p> <p>10 What's interesting about even</p> <p>11 the data on different things, there's a</p> <p>12 common mechanism that is involved with the</p> <p>13 type of tissue toxicity you get, and that's</p> <p>14 irritation and inflammation. Regardless of</p> <p>15 whether it is of a certain grade or not, you</p> <p>16 get certain types of adverse reactions. May</p> <p>17 be a more sustained reaction with a</p> <p>18 industrial grade versus cosmetic grade, but</p> <p>19 they all have the capability to produce that</p> <p>20 type of adverse effect.</p> <p>21 Q. Dr. Plunkett, where can you</p> <p>22 point me to in your report that you discuss</p> <p>23 the weight that you give studies that relate</p> <p>24 to talc from New York as opposed to studies</p> <p>25 that relate to cosmetic talc that ultimately</p>
Page 139	Page 141
<p>1 was available over time, and that's</p> <p>2 simply what this is. It's a survey of</p> <p>3 the literature that talks about</p> <p>4 adverse effects of talc, and if I can,</p> <p>5 I separate it into different qualities</p> <p>6 or purities.</p> <p>7 QUESTIONS BY MS. BRANSCOME:</p> <p>8 Q. Dr. Plunkett, respectfully, I</p> <p>9 don't believe you answered my question.</p> <p>10 Can you point me to anywhere in</p> <p>11 your expert report that's been produced in</p> <p>12 this MDL where you do an analysis of how the</p> <p>13 different talc types and sources that you are</p> <p>14 citing as support for the toxicity of talc</p> <p>15 generally relate to the products manufactured</p> <p>16 by Johnson & Johnson?</p> <p>17 MR. MEADOWS: Objection.</p> <p>18 THE WITNESS: So I don't know</p> <p>19 how else to answer that but to tell</p> <p>20 you I think that's what this whole</p> <p>21 section is about. I step you</p> <p>22 through -- I identify different types</p> <p>23 of evidence. I identify for you what</p> <p>24 was tested in those different pieces</p> <p>25 of evidence, and then I step through</p>	<p>1 ended up in Johnson's baby powder?</p> <p>2 MS. PARFITT: Objection. Form.</p> <p>3 THE WITNESS: I've tried to</p> <p>4 answer that for you. The weight that</p> <p>5 I'm giving -- the weight that I'm</p> <p>6 giving is part of my assessment. So,</p> <p>7 again, I don't give numerical</p> <p>8 rankings. I've answered that for you.</p> <p>9 I don't do that.</p> <p>10 What I instead do is I'm</p> <p>11 looking at everything that's relevant,</p> <p>12 everything that's available. I do</p> <p>13 categorize it, so I am selecting -- I</p> <p>14 am identifying or analyzing the</p> <p>15 information for what it describes.</p> <p>16 And then if you go further on down, I</p> <p>17 try to tell you what I think is</p> <p>18 important about that information.</p> <p>19 The overall conclusions I'm</p> <p>20 drawing in the report, though, when I</p> <p>21 cite to specific studies in the risk</p> <p>22 assessment, the majority of those</p> <p>23 studies I believe that I'm citing for</p> <p>24 you, outside of notice, have to do</p> <p>25 with -- that's more of a warnings</p>

Confidential - Pursuant to Protective Order

Page 142	Page 144
<p>1 issue -- have to do with the issue of</p> <p>2 cosmetic talc. Because the human</p> <p>3 studies are describing cosmetic talc.</p> <p>4 The NTP studies is a pure talc. Many</p> <p>5 of the in vitro studies and other</p> <p>6 animal studies are looking at,</p> <p>7 quote/unquote, a talc that is not an</p> <p>8 industrial grade or from a mine that</p> <p>9 would have -- be looked at in that</p> <p>10 way. So --</p> <p>11 QUESTIONS BY MS. BRANSCOME:</p> <p>12 Q. You understand that there are</p> <p>13 different types of cosmetic talc, correct?</p> <p>14 A. Yes, I am aware.</p> <p>15 Q. And cosmetic talc can be mined</p> <p>16 from a number of different mines globally,</p> <p>17 correct?</p> <p>18 A. That's correct.</p> <p>19 Q. And some of the studies that</p> <p>20 you cite in your report are testing cosmetic</p> <p>21 talc from other consumer products, for</p> <p>22 example, Cashmere Bouquet, correct?</p> <p>23 A. Some. The majority of them are</p> <p>24 not, but I would agree that some do, yes.</p> <p>25 Q. Okay. Have you done an</p>	<p>1 QUESTIONS BY MS. BRANSCOME:</p> <p>2 Q. I was simply asking: Did you</p> <p>3 do an analysis that would allow you to</p> <p>4 compare the ingredients in another product,</p> <p>5 like consumer Cashmere Bouquet, before you</p> <p>6 rendered an opinion with respect to Johnson's</p> <p>7 baby powder based on tests of Cashmere</p> <p>8 Bouquet? Did you do that analysis?</p> <p>9 MR. MEADOWS: Objection.</p> <p>10 THE WITNESS: I do not have</p> <p>11 access to internal company documents</p> <p>12 for the manufacturers of Cashmere</p> <p>13 Bouquet, so I certainly couldn't do</p> <p>14 the analysis in the same way that I</p> <p>15 can do it here, where I can identify</p> <p>16 what Johnson & Johnson and Imerys</p> <p>17 describe as sources of the talc that</p> <p>18 was used for the Johnson & Johnson</p> <p>19 baby powder, without --</p> <p>20 QUESTIONS BY MS. BRANSCOME:</p> <p>21 Q. So you have no way of knowing</p> <p>22 one way or the other whether that talc is</p> <p>23 similar, correct?</p> <p>24 MR. MEADOWS: Objection.</p> <p>25 MS. PARFITT: Objection.</p>
Page 143	Page 145
<p>1 analysis of how the talc that is used in</p> <p>2 Cashmere Bouquet, for example, relates to the</p> <p>3 talc that is used in Johnson's baby powder?</p> <p>4 Is that an analysis that you</p> <p>5 have done before relying on that information</p> <p>6 in your report?</p> <p>7 MR. MEADOWS: Objection.</p> <p>8 MS. PARFITT: Objection.</p> <p>9 THE WITNESS: My analysis -- I</p> <p>10 did do an analysis to look at what was</p> <p>11 described, what products are</p> <p>12 described, but I certainly -- I</p> <p>13 certainly did not throw out studies</p> <p>14 that described Cashmere Bouquet</p> <p>15 because I would -- I still believe as</p> <p>16 a toxicologist and a risk assessor</p> <p>17 that those types of products are</p> <p>18 important to the overall weight of the</p> <p>19 evidence about the hazard and the</p> <p>20 risks posed by talc.</p> <p>21 You know, I just -- I just -- I</p> <p>22 guess I disagree with you if you're</p> <p>23 saying they're irrelevant. I don't</p> <p>24 believe that they are.</p> <p>25</p>	<p>1 THE WITNESS: Well, I think I</p> <p>2 do know it's similar, if you look on</p> <p>3 the bottle as far as what is described</p> <p>4 it being, but if you're asking me --</p> <p>5 if you're asking did we fingerprint it</p> <p>6 to only a particular mine, this is the</p> <p>7 beauty of the data. The data shows</p> <p>8 that regardless of the type of product</p> <p>9 you're looking at, there's consistency</p> <p>10 across the study.</p> <p>11 So -- but I did not try to</p> <p>12 segregate out studies that only dealt</p> <p>13 with Cashmere Bouquet, no, I did not</p> <p>14 do that.</p> <p>15 QUESTIONS BY MS. BRANSCOME:</p> <p>16 Q. Okay. As you sit here today as</p> <p>17 a toxicologist, is it your position that</p> <p>18 industrial-grade talc that might contain up</p> <p>19 to 70 percent tremolite presents the same</p> <p>20 level of toxic effect as cosmetic talc that</p> <p>21 may contain no tremolite or tremolite at a</p> <p>22 very, very low level?</p> <p>23 MS. PARFITT: Objection. Form.</p> <p>24 THE WITNESS: I haven't formed</p> <p>25 that opinion, no.</p>

Confidential - Pursuant to Protective Order

Page 146	Page 148
<p>1 QUESTIONS BY MS. BRANSCOME:</p> <p>2 Q. Okay. And so have you formed</p> <p>3 an opinion that I could find in your report</p> <p>4 that discusses in any way the relative</p> <p>5 toxicity of different types of talc?</p> <p>6 A. That, you may find. I need to</p> <p>7 go back and look how I set it out, but I</p> <p>8 think I -- I talked with you about the</p> <p>9 difference between fibrous versus platy. I</p> <p>10 do discuss that.</p> <p>11 And I talk about the problems</p> <p>12 when you have a complex mixture that has</p> <p>13 added to it things like asbestos and heavy</p> <p>14 metals, because I talk about the additivity</p> <p>15 issue that can come to play. So that -- in</p> <p>16 other words, increased risk when you have a</p> <p>17 complex mixture with additional components</p> <p>18 that all share the same toxic properties as</p> <p>19 far as target organs or types of effects or</p> <p>20 mechanisms that are triggered in the body.</p> <p>21 That's what I point you to.</p> <p>22 I -- I don't -- that's the only</p> <p>23 way I can answer that for you, I think, based</p> <p>24 on what I know I have in here.</p> <p>25 Q. Okay. You talk about the term</p>	<p>1 identified characteristics.</p> <p>2 There's -- within the</p> <p>3 asbestos -- the asbestos literature</p> <p>4 there's -- it's one of the forms -- forms of</p> <p>5 asbestos that's described. For example, in</p> <p>6 IARC, they describe all of the ones that have</p> <p>7 carcinogenic properties. It's one of them.</p> <p>8 Within the literature within</p> <p>9 Johnson & Johnson's documents, there's</p> <p>10 tremolite discussed as -- I assume them</p> <p>11 referring to asbestos tremolite, asbestos in</p> <p>12 a tremolite characteristic. I have seen</p> <p>13 tremolite talc also mentioned in the</p> <p>14 literature.</p> <p>15 If you want a specific</p> <p>16 discussion of each of those, again,</p> <p>17 there's -- I understand there's experts that</p> <p>18 are going to describe the distinguishing</p> <p>19 characteristics of each of those.</p> <p>20 I'm only setting out this is</p> <p>21 what I have seen, talked about, in the</p> <p>22 literature.</p> <p>23 Q. So you are not an expert on the</p> <p>24 differences between fibrous talc, asbestiform</p> <p>25 talc, non-asbestiform talc and tremolite as</p>
Page 147	Page 149
<p>1 "asbestiform talc."</p> <p>2 You talk about asbestiform</p> <p>3 talc.</p> <p>4 Are you familiar with that?</p> <p>5 A. I do mention that in my report,</p> <p>6 yes.</p> <p>7 Where are you?</p> <p>8 Q. At paragraph 30. It's on</p> <p>9 page 19 of your report.</p> <p>10 A. Yes, I'm here.</p> <p>11 Q. Okay. And the first sentence</p> <p>12 in paragraph 30 you state, "In the published</p> <p>13 medical literature, there is often discussion</p> <p>14 of talc using terms such as fibrous talc,</p> <p>15 asbestiform talc, non-asbestiform talc or</p> <p>16 tremolite."</p> <p>17 Do you see that?</p> <p>18 A. Yes, I do.</p> <p>19 Q. Okay. Is it your opinion that</p> <p>20 tremolite is a form of talc?</p> <p>21 A. So tremolite is a -- is a -- is</p> <p>22 a type of fiber or a -- tremolite is a -- is</p> <p>23 a substance or an entity that has been</p> <p>24 identified as a specific morphology, I guess,</p> <p>25 identified characteristics of a -- it has</p>	<p>1 it relates to toxicity. Is that your opinion</p> <p>2 today?</p> <p>3 A. No, that's not what I'm saying.</p> <p>4 I'm saying that if you want me to -- I'm --</p> <p>5 if you want me to describe the</p> <p>6 characteristics and the morphology of each of</p> <p>7 those individually, that's something a</p> <p>8 geologist would do.</p> <p>9 But certainly as far as the</p> <p>10 toxicity assessment I did, each of these</p> <p>11 types of -- each of these words, I guess, or</p> <p>12 names have been applied in the literature</p> <p>13 when they talk about toxicity of talc. Some</p> <p>14 of the literature talks about fibrous talc or</p> <p>15 just -- other literature just talks about</p> <p>16 talc. Some of it, for example, the IARC</p> <p>17 monographs, distinguish between asbestiform</p> <p>18 talc and non-asbestiform talc in their</p> <p>19 assessments of the cancer risk.</p> <p>20 And then tremolite is discussed</p> <p>21 as a component of talc. And I have seen</p> <p>22 papers that talk about tremolite --</p> <p>23 nontremolite talc or tremolite-containing</p> <p>24 talc. That's how you most often see it.</p> <p>25 So it's the idea that it is a</p>

Confidential - Pursuant to Protective Order

Page 150	Page 152
<p>1 constituent of certain mines that -- and 2 that's my understanding of it. But if you 3 want -- and they all -- they all certainly do 4 show that the toxicity can be affected, 5 whether it's a fiber or a platy particle. So 6 tremolite being a fiber would certainly 7 affect my overall assessment of risk. The 8 more tremolite that you would have would 9 make -- would make it more likely to be 10 reactive in terms of a foreign body response, 11 depending on the size. 12 Q. What's your basis for saying 13 that? 14 A. That's based on a fibrous form 15 versus a platy particle form. That's the 16 issue of -- I have that paragraph where I 17 talk about what macrophages look for, can 18 engulf or not engulf. So those are all 19 things that are important to a toxicologist 20 to understand exist. 21 But certainly within my 22 assessment I have to include literature from 23 all of those because of the fact that all of 24 those are relevant to the toxicity profile, 25 since I know that the cosmetic baby powders</p>	<p>1 Q. Okay. And so when you're 2 looking at a complex mixture, you would agree 3 as a toxicologist it would be important to 4 understand the constituent elements of that 5 mixture, correct? 6 A. Yes, it is important to 7 understand that this is -- what is in the 8 mixture, and that's -- that's part of what I 9 try to do. 10 Q. Okay. And it would be 11 important before drawing conclusions from one 12 study that might have different constituent 13 components, it's important to understand the 14 relative toxicity of individual constituent 15 elements, correct? 16 A. Depends if you can or not. I 17 mean, there's certain types of studies you 18 can, where in the published literature that's 19 been described. That's why I'm pointing this 20 out. It's the idea that within the 21 literature, when you go through, it's 22 important to understand what you can say 23 about the consistency across the literature 24 where maybe different types of talc are 25 discussed.</p>
Page 151	Page 153
<p>1 and the data I've seen shows detection of 2 something called fibrous talc. 3 I see detection of tremolite 4 within certain samples of baby powder. 5 And then I have just the 6 general category of asbestiform versus 7 non-asbestiform when I consider the way, for 8 example, IARC has reviewed the 9 carcinogenicity. 10 So those are -- those are terms 11 that I'm laying out because I think they are 12 something you need to understand exists in 13 the literature. 14 Q. Okay. But I'm trying to 15 understand, not helping me understand the 16 literature. I'm trying to understand your 17 opinions with respect to toxicity. 18 Is it, for example, your 19 opinion that fibrous talc has the same toxic 20 potential -- let's focus specifically with 21 respect to ovarian cancer -- as tremolite? 22 A. I haven't formed that opinion, 23 but, again, I would -- my opinion has been 24 formed on the fact that we have complex 25 mixture that includes all of these things.</p>	<p>1 And that's what I -- I think I 2 lay out for you. I tell you there's 3 consistency in certain toxic effects that are 4 seen. Regardless of the form that you're 5 looking at, talc has certain properties, and 6 all of these things are -- been shown to be 7 in the complex mixture, so I have -- as a 8 result, all of that literature has relevance 9 to at least the hazard part of my assessment, 10 and certainly have relevance to -- when you 11 want to talk about warning and the final risk 12 assessment, they're definitely relevant, but 13 certainly the -- when I go through this 14 process, I am trying to focus as much as I 15 can on a product that is most similar to the 16 one I'm assessing. 17 So obviously that's why -- 18 that's one of the reasons I do look at the 19 human data, because the human data is 20 involving a consumer product use, which is 21 what I'm talking about here. 22 Q. Is it using specifically 23 Johnson's baby powder? 24 A. Many of them are, yes. 25 Q. Okay.</p>

Confidential - Pursuant to Protective Order

Page 154	Page 156
<p>1 A. Based on my understanding of 2 what I see discussed within the literature. 3 Q. Did you identify in your report 4 specifically which report -- which studies 5 have used a consumer product manufactured by 6 Johnson & Johnson? 7 A. I haven't laid them out 8 individually, no, but I am aware of 9 discussions of this general issue within some 10 of the documents I've seen, and essentially 11 Johnson's body powders products were the 12 overwhelming share of the market. 13 Q. But you would agree that 14 studies that did not involve the consumer 15 product manufactured by Johnson & Johnson 16 should be given less weight when analyzing 17 whether or not there are risks associated 18 specifically with Johnson & Johnson's 19 products? 20 MS. PARFITT: Objection. Form. 21 MR. MEADOWS: Objection. 22 THE WITNESS: It depends on the 23 question being asked within the 24 assessment, the risk assessment. It 25 really does, I mean, because each of</p>	<p>1 across the studies that are dealing 2 with not the consumer product but 3 other descriptions, there is a 4 consistency in the types of effects 5 you see. 6 And since I'm not quantifying 7 the risk but identifying it as being 8 increased or not, in other words, is 9 it more likely than not that someone 10 exposed in this way could be at a risk 11 of ovarian cancer, that's what I'm 12 talking about. 13 So again, it's -- if I was 14 trying to identify differences in 15 cancer potency factors for different 16 types, then, yes, if I had an animal 17 study on each of those, I could 18 compare potency for cancer, but that 19 hasn't been done. 20 QUESTIONS BY MS. BRANSCOME: 21 Q. Okay. 22 A. So instead, what I have to do 23 is rely on what is available to me. And 24 based on my judgment, that's how I review the 25 studies.</p>
Page 155	Page 157
<p>1 these studies brings a piece of 2 evidence to the risk assessment. 3 And so the question is -- for 4 each one, you consider it on a 5 case-by-case basis. It is possible, 6 yes, that you would give less weight. 7 It's also possible that you would not, 8 dependent upon what you know about 9 that study and how it relates to other 10 studies that are out there. 11 QUESTIONS BY MS. BRANSCOME: 12 Q. So methodologically, how would 13 I understand from your report marked as 14 Exhibit 4 under what circumstances to give a 15 study that relates to, for example, 16 industrial talc less weight than a study that 17 actually used Johnson's baby powder? 18 MR. MEADOWS: Objection. 19 THE WITNESS: Well, I've tried 20 to tell you that. That's what I said 21 for you. That's why I am doing it. I 22 certainly am trying to focus in on 23 studies that deal with the consumer 24 product. 25 But what I find when I look</p>	<p>1 Q. And so for the opinions that 2 you are offering in the MDL, you agree that 3 you are not quantifying the risk associated 4 with Johnson's baby powder, SHOWER TO SHOWER® 5 or Shimmer with respect to the potential for 6 causing ovarian cancer? 7 MS. PARFITT: Objection. Form. 8 THE WITNESS: In terms of a 9 cancer potency factor, that is true, I 10 am not. Instead, what I am doing is I 11 am quantifying whether or not I 12 believe that the risk is increased 13 above a background risk. 14 That has to do with -- that's 15 where I bring in, in my risk 16 assessment, the human data, because 17 the human data is showing 18 statistically significant increases in 19 risk in populations using the consumer 20 product. 21 So I have a quantification 22 where I'm using the word "increased," 23 and I believe to a reasonable degree 24 of medical certainty that indeed the 25 risk is increased. So I'm quantifying</p>

Confidential - Pursuant to Protective Order

Page 158	Page 160
<p>1 in that way, but I'm not giving it a 2 number. I'm not saying that the 3 cancer potency factor is such that you 4 increase the risk from one in a 5 million to 10 in a million to 1 in a 6 thousand. That I have not done 7 because I don't have the data, the 8 studies. The company has not done 9 studies on each of these to allow me 10 to do that.</p> <p>11 QUESTIONS BY MS. BRANSCOME: 12 Q. Okay. The reference that you 13 made to the human data that you believe shows 14 a statistically increased risk in populations 15 using the consumer product, have -- which -- 16 have you identified in your report which of 17 those studies are specifically using a 18 product that was manufactured by Johnson & 19 Johnson?</p> <p>20 A. I don't lay that out for my 21 report, I do not, but certainly it is 22 something that for some of the studies I 23 believe you can -- you might be able to get 24 some of that information from. But certainly 25 I have not laid that out individually in my</p>	<p>1 QUESTIONS BY MS. BRANSCOME: 2 Q. In reaching your opinion in the 3 MDL that there is an increased risk above 4 background of ovarian cancer from the use of 5 products manufactured by Johnson & Johnson, 6 have you made an attempt to identify 7 specifically which studies, the human studies 8 on which you rely, test or look at people who 9 have used Johnson & Johnson's products?</p> <p>10 MS. PARFITT: Objection. Form. 11 THE WITNESS: It's my -- my 12 review of the study indicates that I 13 would say for the vast majority of 14 them you cannot do that.</p> <p>15 But you can take what is 16 reported and look at things such as 17 market share and those kind of things 18 to get an idea of what you believe the 19 exposure would have been.</p> <p>20 But certainly I have not -- I 21 have not tried to apply some kind of a 22 numerical value to how many people in 23 the study may have used Johnson's baby 24 powder or not, no, that has not been 25 done. I don't think anybody -- any of</p>
Page 159	Page 161
<p>1 report, no. 2 Q. And you would agree that for 3 some of those studies there is no information 4 as to the specific type of consumer talc that 5 the individuals who are being studied used, 6 correct?</p> <p>7 MS. PARFITT: Objection. Form. 8 THE WITNESS: I would agree 9 that in some of those studies they're 10 not saying, but that is why you look 11 at the evidence overall.</p> <p>12 And what's important to look at 13 in terms of now -- if you wanted to go 14 to Bradford Hill, that's why you look 15 at things such as consistency. So 16 what do the studies show. We see a 17 certain level of increased risk across 18 studies, regardless of who did the 19 study or what population was being 20 looked at.</p> <p>21 So that's the best way I can 22 answer that for you. That is -- that 23 is part of the -- of the assessment 24 that you look at. 25</p>	<p>1 the bodies that have looked at this 2 have done that.</p> <p>3 QUESTIONS BY MS. BRANSCOME: 4 Q. You have not done a market 5 share analysis, correct?</p> <p>6 A. No, I've seen this in documents 7 only. I have not done my own. There are 8 company documents that talk about their 9 market share.</p> <p>10 Q. Okay. Have you made an attempt 11 to examine the levels of fibrous talc or 12 asbestiform talc that are in different 13 consumer products, aside from Johnson's baby 14 powder or SHOWER TO SHOWER® or Shimmer?</p> <p>15 A. So for that are you referring 16 to things such as -- other types of cosmetics 17 like foundations or lipsticks or --</p> <p>18 Q. I'll rephrase. 19 Have you made any attempt to 20 examine whether other cosmetic talc body 21 powders have a different percentage of 22 fibrous, or what you refer to as asbestiform 23 talc, from the Johnson & Johnson products?</p> <p>24 Have you done any analysis to 25 make that comparison one way or the other?</p>

Confidential - Pursuant to Protective Order

Page 162	Page 164
<p>1 MS. PARFITT: Objection. Form.</p> <p>2 THE WITNESS: I certainly</p> <p>3 haven't done -- I certainly didn't do</p> <p>4 a directed analysis to try to</p> <p>5 determine that, but there is</p> <p>6 information, I believe, in -- I think</p> <p>7 if you look at some of Dr. Longo's</p> <p>8 work, that may be there.</p> <p>9 And I believe in Dr. Blount's</p> <p>10 published paper there may be a</p> <p>11 discussion of the type of powder</p> <p>12 product used, where she was looking</p> <p>13 for -- at least for asbestiform --</p> <p>14 asbestos within the talc. It may be</p> <p>15 tremolite as well, but -- if you want</p> <p>16 me to look, I can do that. I just</p> <p>17 don't recall whether -- I think she</p> <p>18 did talk about sources of the talc,</p> <p>19 where it came from, so...</p> <p>20 QUESTIONS BY MS. BRANSCOME:</p> <p>21 Q. Okay. But as you sit here</p> <p>22 today, you can't point me to any analysis</p> <p>23 that you did or an analysis that you relied</p> <p>24 on that would relate different brands of</p> <p>25 cosmetic talc body powders with respect to</p>	<p>1 that I state for you that it's my</p> <p>2 opinion that Cashmere Bouquet has this</p> <p>3 specific pattern of constituents as</p> <p>4 compared to Johnson & Johnson's. No,</p> <p>5 I have not done that.</p> <p>6 QUESTIONS BY MS. BRANSCOME:</p> <p>7 Q. Okay. And that would be true</p> <p>8 for any other brand of cosmetic talc, body</p> <p>9 powders, Jean Nate, Lily of the Valley, not</p> <p>10 just Cashmere Bouquet, correct?</p> <p>11 MS. PARFITT: Objection.</p> <p>12 THE WITNESS: That is correct,</p> <p>13 I don't have access to that</p> <p>14 information.</p> <p>15 QUESTIONS BY MS. BRANSCOME:</p> <p>16 Q. Have you done any analysis of</p> <p>17 the constituent components of talc and how</p> <p>18 they have changed even within Johnson's --</p> <p>19 Johnson & Johnson's manufactured products,</p> <p>20 how the constituents of the consumer products</p> <p>21 may or may not have changed over time?</p> <p>22 A. I've done some of that, yes,</p> <p>23 and I laid that out, I think, for you, when I</p> <p>24 talk about the differences in the products</p> <p>25 that are described within the documents, the</p>
Page 163	Page 165
<p>1 their constituent components?</p> <p>2 MS. PARFITT: Objection.</p> <p>3 Completely misstates her testimony.</p> <p>4 She mentioned Dr. Blount. She</p> <p>5 mentioned others.</p> <p>6 THE WITNESS: So I think what I</p> <p>7 started with, I said I haven't done a</p> <p>8 directed analysis to try to determine</p> <p>9 specifically how this product versus</p> <p>10 this product versus this product may</p> <p>11 have looked over time, because I don't</p> <p>12 have access to a full data to do that.</p> <p>13 But what I do have is data that</p> <p>14 has -- I do see published data, for</p> <p>15 example, Blount and maybe some of the</p> <p>16 other published studies, that looked</p> <p>17 at this issue, at least of asbestos</p> <p>18 presence in talc. And I believe</p> <p>19 Dr. Longo also had things that weren't</p> <p>20 just Johnson's. I believe he had</p> <p>21 Cashmere Bouquet, for example, samples</p> <p>22 in some of the things he looked at.</p> <p>23 So I can point you to those</p> <p>24 things that I have reviewed, but I</p> <p>25 haven't -- there's nowhere in here</p>	<p>1 company documents, from the '70s versus the</p> <p>2 '80s versus later on, as far as the changes</p> <p>3 that were made to specifications of the</p> <p>4 product, for example. That's something --</p> <p>5 and I think I've talked about that a bit at</p> <p>6 trial as well.</p> <p>7 Q. Okay. And is it your view that</p> <p>8 the risk potential for Johnson & Johnson's</p> <p>9 manufactured products have changed at all</p> <p>10 over time with respect to ovarian cancer?</p> <p>11 MS. PARFITT: Objection.</p> <p>12 THE WITNESS: I have not -- I</p> <p>13 have not attempted to differentiate a</p> <p>14 risk potential at only one point in</p> <p>15 time.</p> <p>16 What I have done over points of</p> <p>17 time is looked at the issue of</p> <p>18 warnings and what should be warned</p> <p>19 about.</p> <p>20 But my analysis related to the</p> <p>21 hazard or the risk assessment of the</p> <p>22 products is considering all of the</p> <p>23 available information, which would be</p> <p>24 all of that information over time.</p> <p>25</p>

Page 166	Page 168
<p>1 QUESTIONS BY MS. BRANSCOME:</p> <p>2 Q. Okay. You talk about, in</p> <p>3 paragraph 35 primarily -- we'll talk about</p> <p>4 the fragrance components in more detail, but</p> <p>5 you talk about the idea of chemicals being a</p> <p>6 potential irritant.</p> <p>7 Are you familiar with that?</p> <p>8 A. Yes, that's correct.</p> <p>9 Q. Is it your position that any</p> <p>10 product that contains chemicals that could be</p> <p>11 an irritant should be labeled with a health</p> <p>12 warning?</p> <p>13 MS. PARFITT: Objection.</p> <p>14 MR. MEADOWS: Okay.</p> <p>15 THE WITNESS: I don't think</p> <p>16 that's -- no, I don't think I've</p> <p>17 formed that specific opinion.</p> <p>18 But the opinion that I think</p> <p>19 I'm expressing here is that when you</p> <p>20 have a -- the information that I have,</p> <p>21 which unfortunately the company hasn't</p> <p>22 given us percentages or actual levels,</p> <p>23 instead, what I do as a toxicologist,</p> <p>24 I look at what is there. And when I</p> <p>25 see over a hundred chemicals there,</p>	<p>1 you with specific percentages, and so I'm</p> <p>2 asking you, is that something that as a</p> <p>3 toxicologist would be important information</p> <p>4 to you?</p> <p>5 A. Depends. Certainly with the</p> <p>6 fragrance -- and I'm talking about the</p> <p>7 conversation about this paragraph is focusing</p> <p>8 on the fragrance components.</p> <p>9 So, yes, I mention that it</p> <p>10 would be nice to know, it would be good to</p> <p>11 know, if we could, exactly what was in there,</p> <p>12 because I could quantify the hazard or</p> <p>13 quantify the risk, actually. So instead, I</p> <p>14 have -- I identify it as a hazard, but I</p> <p>15 can't quantify it without those levels.</p> <p>16 But does that change -- make a</p> <p>17 difference in the overall conclusions I draw?</p> <p>18 No, it doesn't affect the overall conclusions</p> <p>19 that I have drawn, but it adds that other</p> <p>20 piece of the puzzle that deals with the fact</p> <p>21 that we have a complex mixture that have a</p> <p>22 combination of ingredients that target</p> <p>23 irritation.</p> <p>24 And irritation and the</p> <p>25 potential to produce an inflammatory</p>
Page 167	Page 169
<p>1 that 70 percent of them have been</p> <p>2 linked as an irritant hazard, there is</p> <p>3 the issue of toxicological additivity</p> <p>4 to consider.</p> <p>5 So certainly as a risk</p> <p>6 assessor, when I have that many</p> <p>7 potential sources of irritation as far</p> <p>8 as chemicals going into a complex</p> <p>9 mixture, certainly I think I have</p> <p>10 formed the opinion that I think that</p> <p>11 is something that needs to be</p> <p>12 considered when you're talking about</p> <p>13 providing information to consumers,</p> <p>14 yes.</p> <p>15 QUESTIONS BY MS. BRANSCOME:</p> <p>16 Q. As a toxicologist, would it be</p> <p>17 important to you to understand the exact</p> <p>18 percentages of all of the constituent</p> <p>19 components of, say, Johnson's baby powder,</p> <p>20 for example?</p> <p>21 A. Are you talking about just the</p> <p>22 fragrance or are you talking about everything</p> <p>23 that's in it?</p> <p>24 Q. Dr. Plunkett, you referenced</p> <p>25 the fact that the company has not provided</p>	<p>1 response, in my -- if you've read my report,</p> <p>2 you understand that I think that's a key</p> <p>3 factor in increasing the risk for ovarian</p> <p>4 cancer.</p> <p>5 Q. Understanding the percentages</p> <p>6 of the constituent components, is that</p> <p>7 limited only to fragrance, or would it also</p> <p>8 be important to understand the percentages</p> <p>9 for the heavy metals that you contend are in</p> <p>10 Johnson's baby powder?</p> <p>11 A. So if I was trying to define</p> <p>12 the hazard of each component, I would</p> <p>13 certainly want one to know that. As a</p> <p>14 result, what I'm doing instead is looking at</p> <p>15 the complex mixture. In other words, this is</p> <p>16 a mixture of all these things.</p> <p>17 I break out those individual</p> <p>18 components, or constituents, to tell you</p> <p>19 about the hazard that is brought to play or</p> <p>20 the toxicity profiles that exists. And</p> <p>21 what's important about that in my overall</p> <p>22 evaluation of the end product, which is what</p> <p>23 my risk assessment is based on, the end</p> <p>24 product, shows that I have multiple</p> <p>25 components with similar types of effects.</p>

Confidential - Pursuant to Protective Order

Page 170	Page 172
<p>1 And as a toxicologist, when you do that, that</p> <p>2 affects the conclusion that you can draw</p> <p>3 about a body of literature.</p> <p>4 Q. Okay. You do understand that</p> <p>5 there is testing data available about the</p> <p>6 percentages of the constituent components</p> <p>7 with respect to heavy metals, et cetera, that</p> <p>8 have been in Johnson's baby powder over time,</p> <p>9 correct?</p> <p>10 A. There is some information.</p> <p>11 Unfortunately, the information is not</p> <p>12 complete as to every lot or every sample, as</p> <p>13 far as what I have seen. And also, there's</p> <p>14 some -- some of the sampling is reported as</p> <p>15 more of a limit versus an actual</p> <p>16 quantification. So it depends upon which --</p> <p>17 which result, study result or document,</p> <p>18 you're looking at.</p> <p>19 There is some there, yes, and</p> <p>20 that's one of the reasons why I identified</p> <p>21 these as part of my risk assessment, because</p> <p>22 I look for a pattern of these metals that are</p> <p>23 known to carry a hazard and whether or not</p> <p>24 these are ones I'm seeing detected time and</p> <p>25 time again.</p>	<p>1 using a word such as an increase -- an</p> <p>2 increased risk.</p> <p>3 Is that a specific number? Am</p> <p>4 I telling you that it's increased by two</p> <p>5 times or four times or six times? No. The</p> <p>6 data available did not allow us to do that,</p> <p>7 with the exception of the epidemiological</p> <p>8 data. And the epidemiological data can show</p> <p>9 you that in that piece of evidence there</p> <p>10 appears to be a 30 percent increased risk</p> <p>11 above background.</p> <p>12 Q. Did you make an attempt to</p> <p>13 quantify the risk with the data that you had</p> <p>14 available to you with respect to the final</p> <p>15 consumer product?</p> <p>16 A. I could not, based on the data</p> <p>17 I had, because I didn't have a</p> <p>18 well-controlled animal study to be able to</p> <p>19 pull that out that way.</p> <p>20 Instead, what I -- in this type</p> <p>21 of weight of the evidence, you look at what</p> <p>22 you might be able to quantify based on the</p> <p>23 human data. And certainly the human data</p> <p>24 showing the statistically significant</p> <p>25 consistent findings across studies for that</p>
Page 171	Page 173
<p>1 Q. But you made no attempt to</p> <p>2 quantify the risk with respect to any of</p> <p>3 those components or use that data in any way,</p> <p>4 correct?</p> <p>5 MS. PARFITT: Objection. Form.</p> <p>6 THE WITNESS: No, I used</p> <p>7 that -- that data as part of -- my</p> <p>8 risk assessment as part of my hazard</p> <p>9 assessment, absolutely. It's part of</p> <p>10 the hazard assessment.</p> <p>11 But as far as quantifying them</p> <p>12 individually, no. I am quantifying</p> <p>13 the risk and looking at the risk of</p> <p>14 the entire product, not of just one</p> <p>15 individual component of the product.</p> <p>16 QUESTIONS BY MS. BRANSCOME:</p> <p>17 Q. Well, we already discussed</p> <p>18 you're not quantifying the risk with respect</p> <p>19 to the entire product, correct?</p> <p>20 A. Well, I'm quantifying it in</p> <p>21 terms of an increase above background, which</p> <p>22 I'm not giving you a -- I told you I wasn't</p> <p>23 giving you a cancer potency factor. That is</p> <p>24 true. That I am not doing.</p> <p>25 But I am quantifying it by</p>	<p>1 30 percent increased risk, that is part of my</p> <p>2 overall weight of the evidence for me making</p> <p>3 the statement the risk is increased.</p> <p>4 But you'll notice I don't say</p> <p>5 increased risk of 30 percent, because I don't</p> <p>6 believe that I can state that with certainty</p> <p>7 in the way I do a risk assessment. But</p> <p>8 certainly as any one individual -- any one</p> <p>9 individual piece of evidence or any one body,</p> <p>10 like the epi data, others have made -- other</p> <p>11 bodies who have looked at the -- talked about</p> <p>12 the consistency of the increased risk signal</p> <p>13 in the epi studies as being in the range of</p> <p>14 30 percent.</p> <p>15 Q. Okay. But you would agree that</p> <p>16 based on the methodology that you applied in</p> <p>17 this case, you could not say to a reasonable</p> <p>18 degree of scientific certainty that there is</p> <p>19 an increased risk of, for example, 30 percent</p> <p>20 with respect to use of Johnson's baby powder</p> <p>21 and ovarian cancer, correct?</p> <p>22 MR. MEADOWS: Objection.</p> <p>23 THE WITNESS: I have not done</p> <p>24 that. And I'm not saying that</p> <p>25 somebody else couldn't do that. I</p>

44 (Pages 170 to 173)

Page 174	Page 176
<p>1 have not -- I have not chosen to do 2 that based on my evaluation of the 3 data. 4 QUESTIONS BY MS. BRANSCOME: 5 Q. And the same would be true if I 6 asked that question and substituted any 7 particular number, a 10 percent increased 8 risk, a 20 percent increased risk, correct? 9 MR. MEADOWS: Objection. 10 THE WITNESS: I haven't given a 11 specific number in my final opinions, 12 that is true. 13 QUESTIONS BY MS. BRANSCOME: 14 Q. Okay. 15 A. I've tried to explain to you 16 what evidence I do think is there, however. 17 Q. Now, we've talked about 18 different types of talc that might have 19 different constituent components, but you 20 also look at exposure to talc in an 21 occupational setting. 22 Do you recall that? 23 A. Some of the studies that I've 24 relied upon, yes, some of them were 25 occupational.</p>	<p>1 Q. Is it your opinion as you sit 2 here today that someone could develop ovarian 3 cancer through -- exclusively through the 4 inhalation of Johnson's baby powder? 5 MS. PARFITT: Objection. 6 THE WITNESS: I haven't formed 7 that opinion at this point in time. 8 QUESTIONS BY MS. BRANSCOME: 9 Q. Have you done any analysis or 10 can you point me to any analysis in your 11 report that makes a comparison of the 12 exposure levels that might be seen in an 13 occupational setting to what would be seen by 14 a consumer? 15 A. Are you asking me for a piece 16 of evidence that does that comparison, or is 17 there evidence that allows you to do that 18 comparison? 19 Q. Have you cited or discussed any 20 of the evidence or done an analysis in any 21 way that would compare exposure levels in an 22 occupational setting to what you would 23 anticipate a consumer using Johnson's baby 24 powder might be exposed to? 25 A. I don't think I did it as a</p>
Page 175	Page 177
<p>1 Q. Okay. And you understand that 2 in an occupational setting, you would agree 3 that the exposure, particularly via 4 inhalation, would be much higher than it 5 would be through the use of a consumer 6 product, correct? 7 A. It depends on the occupation, 8 but, yes. For example, I would agree a miner 9 would be expected to have that, but there are 10 certain, quote/unquote, occupational studies 11 where the exposure levels that -- for 12 example, there are -- I believe there's at 13 least one study that looked at application of 14 talc powders in -- maybe in a material, 15 coating materials in a factory. Those kinds 16 of studies would be different than a mining 17 study. 18 But, certainly, yes, I 19 understand that occupational studies, the 20 inhalation exposure is the pathway that would 21 be predominant versus in the consumer body 22 powder use, I'm talking about the predominant 23 exposure pathway in my opinion is going to be 24 through perineal use, even though inhalation 25 exposure can occur.</p>	<p>1 separate analysis, but as part of my analysis 2 I considered evidence that showed -- provided 3 me with such data. So, for example, if you 4 want, I can point you to a -- I have an 5 inhalation paragraph, I think. 6 Let me look for it real quick. 7 See if I can find it quickly for you. I 8 don't want to waste your time. 9 Q. Sure. 10 A. So there's -- I don't see it 11 cited here, but there's at least one document 12 I reviewed where the company themselves made 13 a comparison, and I have seen that, of 14 inhalation exposure to talc suspended in air 15 with diapering. Dr. Longo has done a 16 measurement of exposure in air with perineal 17 application of talc. So I'm aware of those 18 studies. 19 And then I certainly am aware 20 of the fact that those numbers are different, 21 or smaller, than many of the numbers I see 22 reported in some of the occupational studies. 23 But I can't say that's true for all. 24 I would certainly, though, say 25 that if you're just talking inhalation, I</p>

Confidential - Pursuant to Protective Order

Page 178	Page 180
<p>1 certainly would expect a miner or a miller to</p> <p>2 have a greater potential for inhalation</p> <p>3 exposure than routine use of the consumer</p> <p>4 product, with the exception of the studies --</p> <p>5 the reports of large amounts of exposure in</p> <p>6 children where the inhalation -- where they</p> <p>7 were inhaling large amounts of powder.</p> <p>8 And so that's a different</p> <p>9 story. That's sort of an acute overdose</p> <p>10 exposure, I guess, versus the typical daily</p> <p>11 exposure through occupational or consumer</p> <p>12 use.</p> <p>13 Q. And that raises an interesting</p> <p>14 question. You discuss health hazards</p> <p>15 associated with talc being known, and in some</p> <p>16 cases deaths had been reported.</p> <p>17 You're aware that those relate</p> <p>18 to asphyxiation deaths, correct?</p> <p>19 A. Or long-term injury to lungs.</p> <p>20 Maybe not an immediate asphyxiation, but lung</p> <p>21 damage produced by large amounts -- some of</p> <p>22 the children would go to the hospital and be</p> <p>23 sick for a while and then die. So they</p> <p>24 didn't asphyxiate immediately, right? But</p> <p>25 some of them did. You're exactly right.</p>	<p>1 QUESTIONS BY MS. BRANSCOME:</p> <p>2 Q. Okay. Now, you would agree</p> <p>3 that -- so let's set aside inhalation.</p> <p>4 You agree that for talc -- for</p> <p>5 Johnson's baby powder or another one of</p> <p>6 Johnson & Johnson's consumer talc products to</p> <p>7 reach an individual's ovaries, it must pass</p> <p>8 from the perineum, through the vagina and the</p> <p>9 cervical canal, move across the uterus -- and</p> <p>10 again, it's the ciliary motion of the</p> <p>11 fallopian tubes -- cross the peritoneal space</p> <p>12 between the fimbriae and ovaries, escape</p> <p>13 phagocytosis in the peritoneal space, and</p> <p>14 then attach to the surface of the ovaries,</p> <p>15 correct?</p> <p>16 MS. PARFITT: Objection. Form.</p> <p>17 MR. MEADOWS: Okay.</p> <p>18 THE WITNESS: If the issue is</p> <p>19 attaching to the surface, yes.</p> <p>20 There's also some information</p> <p>21 indicates the site of attack may be</p> <p>22 actually at the fallopian tube exit to</p> <p>23 the peritoneum. But, yes, that's</p> <p>24 correct, there's been some discussion</p> <p>25 in the literature on ovarian cancer</p>
Page 179	Page 181
<p>1 Both of those things occur, and</p> <p>2 I address that also in my warning section</p> <p>3 about the fact that that warning didn't --</p> <p>4 was not put on the product for a long period</p> <p>5 of time even though those types of reports</p> <p>6 were coming in early.</p> <p>7 Q. You would agree that that is a</p> <p>8 completely different biologic mechanism than</p> <p>9 what you are proposing the biological</p> <p>10 mechanism is for ovarian cancer to develop</p> <p>11 with respect to talc use, correct?</p> <p>12 MR. MEADOWS: Objection.</p> <p>13 THE WITNESS: I would agree</p> <p>14 that it's an acute response versus</p> <p>15 chronic, yes, that I agree with.</p> <p>16 It's not entirely different in</p> <p>17 some cases because some of the tissue</p> <p>18 reactions you saw were indicative of</p> <p>19 irritation when some of the lung</p> <p>20 samples were looked at. But</p> <p>21 certainly, yes, that's acute exposure</p> <p>22 versus chronic exposure, and I'm</p> <p>23 focusing on ovarian cancer on chronic</p> <p>24 exposure scenarios.</p> <p>25</p>	<p>1 about whether the tumors are arising</p> <p>2 in the tubes versus the ovaries.</p> <p>3 But I would agree, I think</p> <p>4 both -- I think both of those</p> <p>5 things -- those things -- there is a</p> <p>6 passage that has to happen, regardless</p> <p>7 of whether the end point is at the</p> <p>8 fallopian tube or at the ovary.</p> <p>9 QUESTIONS BY MS. BRANSCOME:</p> <p>10 Q. Okay. Is it your view that the</p> <p>11 consensus has been reached that ovarian</p> <p>12 cancer can be caused by talc landing in the</p> <p>13 fallopian tubes?</p> <p>14 A. I haven't formed that opinion,</p> <p>15 though I do believe this will be discussed by</p> <p>16 some of the other experts.</p> <p>17 Q. Okay. Have you personally</p> <p>18 conducted any tests or experiments to confirm</p> <p>19 the theory that talc migrates from</p> <p>20 application at the perineum to the ovaries?</p> <p>21 A. If by that you mean something</p> <p>22 where I performed a laboratory test myself,</p> <p>23 no, I have not done that.</p> <p>24 Q. As a toxicologist, are you</p> <p>25 capable of doing that?</p>

Confidential - Pursuant to Protective Order

Page 182	Page 184
<p>1 A. Yes, I believe if asked I</p> <p>2 could -- I could attempt to design something</p> <p>3 to look at that issue.</p> <p>4 Q. Okay.</p> <p>5 A. But I would argue that I think</p> <p>6 it doesn't make a lot of sense to revisit</p> <p>7 based upon what we already know from the</p> <p>8 scientific literature and the review papers</p> <p>9 from the gynecological community. I believe</p> <p>10 it's -- it's understood that it can migrate.</p> <p>11 Q. In your opinion, has an animal</p> <p>12 model been successfully developed that would</p> <p>13 allow the testing of talc migration in humans</p> <p>14 from the perineum to the ovaries?</p> <p>15 A. I think I tell that you in my</p> <p>16 report. I believe that the human data is the</p> <p>17 relevant data to look at this issue.</p> <p>18 So it would be very difficult</p> <p>19 to design a study to do this based on the</p> <p>20 typical laboratory species that are used in</p> <p>21 toxicology testing. Even -- even the monkeys</p> <p>22 have issues, and the biggest issues with</p> <p>23 monkeys is the ethicality of using a monkey</p> <p>24 to settle -- to address a question that I</p> <p>25 believe is settled within the gynecological</p>	<p>1 And then on top of that, you</p> <p>2 have the review articles that talk about</p> <p>3 migration of particles in the female</p> <p>4 reproductive tract and are describing it as</p> <p>5 an event that is known to occur. So it's</p> <p>6 those things weighed together.</p> <p>7 But certainly routine could be</p> <p>8 supported by the observations where the</p> <p>9 majority of the patients in the studies were</p> <p>10 showing movement of inert particles.</p> <p>11 Q. Is it your opinion that every</p> <p>12 perineal application of cosmetic talc powder</p> <p>13 results in talc being deposited on the</p> <p>14 ovaries?</p> <p>15 A. I have not formed that opinion,</p> <p>16 no.</p> <p>17 Q. Have you formed an opinion as</p> <p>18 to with what frequency -- so let's say</p> <p>19 someone uses a cosmetic talc on a perineal</p> <p>20 application ten times. Out of those ten</p> <p>21 times, have you formed an opinion as to how</p> <p>22 many of those instances would talc deposit on</p> <p>23 the ovaries?</p> <p>24 MS. PARFITT: Objection.</p> <p>25 THE WITNESS: I haven't formed</p>
Page 183	Page 185
<p>1 and scientific community.</p> <p>2 Q. Now, you state in your report</p> <p>3 that talc that's applied through perineal</p> <p>4 use -- I believe the term you use --</p> <p>5 routinely migrates to the ovaries.</p> <p>6 Is that your opinion?</p> <p>7 A. Are you reading from my report?</p> <p>8 MR. MEADOWS: To the extent</p> <p>9 that question is still lingering, I</p> <p>10 object to it.</p> <p>11 QUESTIONS BY MS. BRANSCOME:</p> <p>12 Q. On paragraph 43 on page 29.</p> <p>13 A. So I think as I've stated it,</p> <p>14 the studies that I have reviewed demonstrate</p> <p>15 that inert particles routinely move from the</p> <p>16 lower female reproductive tract up into</p> <p>17 fallopian tubes and towards the ovaries.</p> <p>18 Q. What do you mean by routinely?</p> <p>19 A. It's the percentages of</p> <p>20 movement that are reported in the patients.</p> <p>21 In other words, if you look at some of the</p> <p>22 individual studies -- if you want we can pull</p> <p>23 them out, but, you know, eight of ten</p> <p>24 patients, nine of ten patients, all the</p> <p>25 patients showed movement of the particles.</p>	<p>1 an opinion in that particular way, no.</p> <p>2 I think what I've -- I've tried to</p> <p>3 describe to you in my report is that I</p> <p>4 believe it is known that inert</p> <p>5 particles have the ability to migrate.</p> <p>6 And based on that, I form the opinion</p> <p>7 that it's my opinion to a reasonable</p> <p>8 degree of scientific certainty, which</p> <p>9 would be a more likely than not</p> <p>10 standard, that particles of talc would</p> <p>11 be migrating when women are using them</p> <p>12 perineally. But I haven't told you</p> <p>13 that it has to be a specific number,</p> <p>14 no.</p> <p>15 QUESTIONS BY MS. BRANSCOME:</p> <p>16 Q. Have you done any analysis to</p> <p>17 establish over a lifetime use of cosmetic</p> <p>18 talc where the app -- the perineal</p> <p>19 application, with what frequency during a</p> <p>20 lifetime the talc may have been deposited on</p> <p>21 that individual's ovaries?</p> <p>22 A. So I certainly looked for</p> <p>23 information to allow me to assess that, but</p> <p>24 unfortunately those kinds of studies would be</p> <p>25 unethical to do. Because that would be a</p>

Confidential - Pursuant to Protective Order

Page 186	Page 188
<p>1 matter of sampling women during -- using them</p> <p>2 and then taking biopsies, and that's</p> <p>3 something that would be difficult to do. I</p> <p>4 would say impossible to get approval to do</p> <p>5 under human testing guidelines.</p> <p>6 Q. Okay. So it's your opinion</p> <p>7 that it is possible for talc that is applied</p> <p>8 through a perineal application to reach the</p> <p>9 ovaries, but you cannot say with what</p> <p>10 frequency that occurs?</p> <p>11 MS. PARFITT: Objection. Form.</p> <p>12 Misstates her testimony.</p> <p>13 THE WITNESS: That's not --</p> <p>14 what I'm telling you is, I think it --</p> <p>15 that to a reasonable degree of</p> <p>16 scientific certainty that it migrates,</p> <p>17 and that would be the standard of more</p> <p>18 likely than not. I think it's more</p> <p>19 likely than not that the talc is</p> <p>20 reaching the ovaries when people are</p> <p>21 using it perineally.</p> <p>22 I did form the opinion -- and</p> <p>23 I've talked about this at trial and</p> <p>24 yesterday. I have formed the opinion</p> <p>25 that this is a issue of chronic or --</p>	<p>1 MS. BRANSCOME: Okay. Can we</p> <p>2 just go off the record for a second?</p> <p>3 VIDEOGRAPHER: We are going off</p> <p>4 the record at 12:23 p.m.</p> <p>5 (Off the record at 12:23 p.m.)</p> <p>6 VIDEOGRAPHER: We are back on</p> <p>7 the record at 12:24 p.m.</p> <p>8 QUESTIONS BY MS. BRANSCOME:</p> <p>9 Q. As you sit here today, how</p> <p>10 would you characterize the biological</p> <p>11 mechanism by which you claim Johnson's baby</p> <p>12 powder, their other cosmetic talc products,</p> <p>13 present a risk of ovarian cancer?</p> <p>14 A. So I outline this for you in</p> <p>15 the MDL report. I think I have a section</p> <p>16 on -- let's see if I can -- you want me to</p> <p>17 tell you where or...</p> <p>18 So paragraph 65, I think I set</p> <p>19 out part of this argument or part of this.</p> <p>20 And then also in paragraph -- I believe in</p> <p>21 67.</p> <p>22 Q. All right. Well, let me take a</p> <p>23 step back.</p> <p>24 Is it your opinion that the</p> <p>25 biological mechanism by which talc, cosmetic</p>
Page 187	Page 189
<p>1 or use of the products. In other</p> <p>2 words, people aren't just using it</p> <p>3 once, but people are using it -- you</p> <p>4 can use the word "routinely," as a</p> <p>5 habit, in their daily life perineally.</p> <p>6 And that would be consistent with the</p> <p>7 studies that have been done that have</p> <p>8 looked at the issue of dose response.</p> <p>9 And I discuss that in my</p> <p>10 report, too.</p> <p>11 QUESTIONS BY MS. BRANSCOME:</p> <p>12 Q. Okay. But you have not made an</p> <p>13 attempt to quantify, nor have you seen it in</p> <p>14 the literature, the overall dose of talc that</p> <p>15 someone might be exposed to in terms of</p> <p>16 contact with the ovaries throughout their</p> <p>17 lifetime, chronic use of cosmetic talc?</p> <p>18 MS. PARFITT: Objection. Form.</p> <p>19 THE WITNESS: Those -- that's</p> <p>20 the kinds of studies that have not</p> <p>21 been done and I believe could not be</p> <p>22 done based upon ethics of human</p> <p>23 testing. But certainly I -- that --</p> <p>24 that data is not available that I'm</p> <p>25 aware of.</p>	<p>1 talc, can in your view cause ovarian cancer,</p> <p>2 is that something that has been definitively</p> <p>3 established?</p> <p>4 A. What do you mean by</p> <p>5 definitively? I mean, I think -- I believe</p> <p>6 more likely than not that -- so I believe I</p> <p>7 have reached a conclusion that I think what</p> <p>8 the most likely biologically plausible</p> <p>9 mechanism, but maybe you're ask -- meaning</p> <p>10 something else.</p> <p>11 Q. Okay. Well, let's start with</p> <p>12 specifically you discuss a number of</p> <p>13 different potential mechanisms in your</p> <p>14 report. So if you believe you have reached</p> <p>15 an opinion more likely than not about the</p> <p>16 specific biological mechanism by which</p> <p>17 cosmetic talc and specifically Johnson &</p> <p>18 Johnson's products can cause ovarian cancer,</p> <p>19 can you describe that for me?</p> <p>20 A. So it's a chronic inflammatory</p> <p>21 process, and so -- but like all compounds,</p> <p>22 constituents, even drugs that we look at, we</p> <p>23 don't know each individual step within the</p> <p>24 molecular mechanism.</p> <p>25 Instead, what we know is that</p>

Confidential - Pursuant to Protective Order

Page 190	Page 192
<p>1 there are certain components to the process 2 of cancer that are consistent with the 3 effects produced by talc, and we know that 4 talc can produce a chronic inflammatory 5 process. 6 And so that's why I was 7 pointing you to the paragraph 65 and I think 8 67. 9 Q. Is it your opinion that 10 consensus has been reached in the scientific 11 community that cosmetic talc can cause 12 ovarian cancer through a chronic inflammatory 13 response? 14 MS. PARFITT: Objection. 15 THE WITNESS: I don't know that 16 that's exactly the opinion I've 17 formed. 18 Would you like me to -- I could 19 restate what I believe, but I don't 20 think that's exactly how I would state 21 it, no. 22 QUESTIONS BY MS. BRANSCOME: 23 Q. Okay. So then yes or no: Has 24 consensus been reached in the scientific 25 community that cosmetic talc can cause</p>	<p>1 discuss those issues. 2 I think it's consistent with -- 3 I don't know if the ACOG statement goes that 4 far on mechanism, but it does talk about 5 ovarian cancer. That's a recent statement. 6 And I believe it's consistent 7 with some of the -- I believe my opinions are 8 consistent with some of the opinions reached 9 by others in science, but that's the only way 10 I can answer that for you. 11 Q. Okay. Because you have not, 12 one way or the other, done an evaluation of 13 whether or not chronic inflammatory process 14 is a biological mechanism on which the 15 scientific community has reached general 16 consensus with respect to the causation of 17 ovarian cancer; is that correct? 18 MR. MEADOWS: Objection. 19 THE WITNESS: I can't tell you 20 that -- I can't tell you that every 21 body that's looked at it, but I have 22 tried to point you to evidence that I 23 believe is consistent with that. 24 For example, the IARC would be 25 a good example of consensus on</p>
Page 191	Page 193
<p>1 ovarian cancer through a chronic inflammatory 2 process? 3 A. I don't believe I formed the 4 opinion either way, that it's yes or no, 5 because I haven't tried to -- I haven't tried 6 to form the opinion about what the -- in 7 other words, I haven't -- I can't say for 8 every scientist out there. 9 I certainly can tell you what I 10 believe based on what the consensus of 11 science says about mechanisms underlying 12 cancer and the consistency of those 13 mechanisms with talc, and then I have an 14 opinion about what I believe that information 15 says. 16 I do believe my opinions, 17 however, are consistent with some consensus 18 statements, such as the issue on the 19 mechanism is consistent with consensus 20 opinion reached by IARC, where they discuss 21 the inflammatory process as an underlying 22 biologically plausible mechanism that can 23 lead to ovarian cancer. 24 I think it's consistent with 25 the Canadian risk assessment where they</p>	<p>1 biologic mechanism because they have a 2 whole part of their assessment of 3 non-asbestiform talc and perineal 4 cancer -- of perineal use and ovarian 5 cancer that discusses mechanism. And 6 that is consistent with what I have 7 said. So there is a consensus 8 opinion. 9 But I guess what I'm saying to 10 you is I can't tell you that all -- 11 all people who have put statements 12 have come to that exact opinion. But 13 there aren't that many places out 14 there that are addressing that issue 15 as far as the consensus on a 16 mechanism. There's more statements 17 about the relationship between ovarian 18 cancer and talc use than there are 19 drilling down to what the mechanism 20 must be. 21 QUESTIONS BY MS. BRANSCOME: 22 Q. Okay. 23 A. So that's the issue. It's a 24 little -- it's a little hard to answer that 25 yes or no because of that.</p>

Confidential - Pursuant to Protective Order

Page 194	Page 196
<p>1 Q. Okay. When we talk about the 2 idea of biologic -- a biologically plausible 3 mechanism, what is your understanding of the 4 term "plausible" in that expression? 5 A. When I use the word 6 "biologically plausible mechanism" or 7 "biologic plausibility," I'm using it 8 consistent with what Bradford Hill uses, 9 that's it's the idea that the evidence that 10 available makes -- the evidence that 11 available supports a pathway where you can go 12 to exposure to response. 13 So in other words, there's a -- 14 the biological information is consistent with 15 how we know cancer can develop. That's the 16 response we're looking at. And the exposure 17 we're looking at is known to produce those 18 kind of biologic events. 19 So as a result, based upon 20 knowing that there's a consistency between 21 the data that we have on the -- on the 22 exposure and the data that we have on the way 23 cancer can occur, those things -- those 24 things align. So that makes it biologically 25 plausible that that could occur.</p>	<p>1 are known to be able to produce, 2 specifically, ovarian cancer. 3 QUESTIONS BY MS. BRANSCOME: 4 Q. Is it your opinion that IARC, 5 for example, has concluded that the 6 biological mechanism by which talc may cause 7 ovarian cancer is chronic inflammation? 8 MS. PARFITT: Objection. 9 THE WITNESS: I don't know that 10 they have used -- they've described it 11 quite that way, but they do describe 12 what they believe is the biologically 13 plausible mechanism. Because they do 14 organize and use within the 15 definitions of how they describe some 16 things that are consistent with what 17 Bradford Hill uses. 18 QUESTIONS BY MS. BRANSCOME: 19 Q. Okay. And obviously you're 20 familiar with the IARC evaluation of talc 21 with respect to the possibility of causing 22 ovarian cancer, correct? 23 A. Yeah. If you mean the recent 24 one, yes, the most recent assessment. 25 Q. Yes.</p>
Page 195	Page 197
<p>1 Q. But you would agree that 2 biological plausibility suggests that it is a 3 plausible explanation, but it may not have 4 been established as the definitive pathway by 5 which a disease is caused, correct? 6 MS. PARFITT: Objection. Form. 7 THE WITNESS: Well, I would 8 agree that in the discussion of 9 biologic plausibility in the Bradford 10 Hill paper that is true. But if you 11 look at people's discussion of the use 12 of -- I want to say "biological 13 mechanism" rather than the word 14 "biologic plausibility," because 15 really as a toxicologist I'm trying to 16 understand whether there's a biologic 17 mechanism that makes sense. Those are 18 words I like to use. Does it make 19 sense that this exposure could lead to 20 this response. 21 And that involved looking at 22 the mechanistic data or the data on 23 the way toxic responses are produced 24 by talc, and whether or not they align 25 with the types of toxic insults that</p>	<p>1 And that IARC has in fact 2 classified cosmetic talc not containing 3 asbestos as possibly carcinogenic to humans, 4 correct? 5 A. It's a possible human 6 carcinogen 2B, that's correct. 7 Q. Okay. And if a product is 8 listed in the 2B category, does that 9 necessarily mean the product, in your view, 10 is carcinogenic? 11 A. Not always, because that comes 12 down to an assessment of -- then you're 13 putting together a -- a risk assessment that 14 looks at -- looks at -- across the 15 information that you have available. And 16 that may be that -- that the -- the possible 17 is all you can say, or it may be that you 18 believe that the information -- there's 19 enough information there to take it further. 20 Has a possibility -- that's 21 what I said, they do a hazard assessment. 22 They rank things on hazard based on -- on 23 unlikely -- not enough evidence, less -- the 24 possibility, the probability or it's known. 25 Q. In your opinion, is your</p>

Confidential - Pursuant to Protective Order

Page 198	Page 200
<p>1 characterization of the risk of Johnson's 2 baby powder or talcum powder products with 3 respect to ovarian cancer, are you in the MDL 4 characterizing that risk as a higher level of 5 risk than what IARC characterized it, or do 6 you agree with the 2B characterization of 7 possibly carcinogenic? 8 MS. PARFITT: Objection. Form. 9 THE WITNESS: So I'm not IARC, 10 so I don't try to second-guess there. 11 They have reached a conclusion, and I 12 use that as part of my weight of the 13 evidence. So I haven't formed the 14 opinion they're right or wrong. 15 But I have done a different 16 assessment. My assessment, first off, 17 includes more information than IARC 18 had, so as a result, I have formed the 19 conclusion that I believe that it's 20 more likely than not that exposure 21 to -- perineal exposure to talc body 22 powders increases the risk of ovarian 23 cancer in women who use that product. 24 And I will put the caveat this 25 has to be chronic use or repeated use,</p>	<p>1 opinion. 2 Q. Is there a threshold of the use 3 of Johnson & Johnson's talcum powder products 4 below which there is no increased risk, in 5 your opinion, of ovarian cancer? 6 A. We have not identified that 7 threshold. That's what's missing within 8 the -- the literature that exists today. So 9 I can't tell you whether or not with only a 10 thousand applications over a lifetime that 11 is -- is not enough for every individual or 12 not, but certainly I do believe that the -- 13 that the exposure has to be habit, routine, 14 chronic, something that is done maybe not on 15 a daily basis but on a routine basis in a 16 woman's life. 17 So that is consistent, I think, 18 with the literature. 19 MS. BRANSCOME: Okay. We can 20 go off the record. 21 VIDEOGRAPHER: We are going off 22 the record at 12:36 p.m. 23 (Off the record at 12:36 p.m.) 24 VIDEOGRAPHER: We are back on 25 the record at 1:35 p.m.</p>
Page 199	Page 201
<p>1 because I've gone -- I've said that 2 many times. 3 So that -- that is my opinion. 4 So that's a different statement and a 5 different assessment than what IARC 6 does. 7 But -- so I don't disagree with 8 their possible -- I weigh that, but I 9 believe the evidence for the risk 10 assessment shows me that it's more 11 likely than not that this -- this 12 exposure will increase the risk above 13 a background risk for women who are 14 using this product. 15 QUESTIONS BY MS. BRANSCOME: 16 Q. And how do you define chronic 17 or repeated use? 18 A. Well, that is variable within 19 the literature. For me, chronic is 20 exposure -- if as a toxicologist, I would 21 typically say chronic use is years of use. 22 It doesn't have to be daily, but it would be 23 years. That's the most common description 24 you see in toxicology, so I would say that's 25 fair. That's a fair assessment of my</p>	<p>1 QUESTIONS BY MS. BRANSCOME: 2 Q. Good afternoon again, 3 Dr. Plunkett. 4 A. Good afternoon. 5 Q. I want to talk a little bit 6 about the Health Canada assessment. 7 We talked about this before, 8 but this is something that you reviewed after 9 you completed your report which has been 10 marked as Exhibit 4, correct? 11 A. Yes, and I wanted to tell you, 12 I did not bring all those documents printed. 13 I apologize. So there is a separate Health 14 Canada draft risk assessment that I didn't 15 print. 16 Q. Okay. So when you're referring 17 to the Health Canada analysis, what document 18 are you specifically referring to? 19 A. So I'm referring to the -- the 20 combined documents, but there are times when 21 you've asked me questions that I've been 22 referring -- and I tried to say, I believe, 23 Taher. 24 But, yes, some of the questions 25 you asked me when I said Health Canada, I was</p>

Confidential - Pursuant to Protective Order

Page 202	Page 204
<p>1 talking about the combined documents, which</p> <p>2 would include their -- I guess it's called a</p> <p>3 draft risk assessment document, yeah, which</p> <p>4 refers to this document but is a separate --</p> <p>5 is their own separate statement.</p> <p>6 Q. As you sit here today, what is</p> <p>7 your understanding of the current position</p> <p>8 that has been articulated in the collection</p> <p>9 of documents that you refer to as Health</p> <p>10 Canada with respect to any potential</p> <p>11 relationship between cosmetic talc and</p> <p>12 ovarian cancer?</p> <p>13 A. So that's why I did print out</p> <p>14 the small one, because I think it summarized</p> <p>15 it. So here, if you look at this Exhibit 6,</p> <p>16 it makes specific conclusions or draws --</p> <p>17 makes statements. And essentially it talks</p> <p>18 about talc being a possible risk of ovarian</p> <p>19 cancer, but then it gives women specific</p> <p>20 advice about what to do in order to minimize</p> <p>21 exposure to the products, and some of that</p> <p>22 was relevant as well.</p> <p>23 Just one reason I printed it</p> <p>24 out, it has to do with either choosing an</p> <p>25 alternative product or avoiding genital</p>	<p>1 there is a association between those two</p> <p>2 things, the exposure and the response, which</p> <p>3 is more than a possible association, if you</p> <p>4 want to use those words.</p> <p>5 But my assessment that I've</p> <p>6 done is not exactly the same, for example, as</p> <p>7 IARC does, which is more of just a hazard</p> <p>8 assessment.</p> <p>9 Q. Right.</p> <p>10 So I'm focusing my questions</p> <p>11 now on your risk assessment as compared to</p> <p>12 the documents that you've supplied us with</p> <p>13 with respect to Health Canada. And if I</p> <p>14 understand it correctly, are you stating that</p> <p>15 your opinion with respect to the relationship</p> <p>16 between cosmetic talc and ovarian cancer, you</p> <p>17 believe that it is an association that is</p> <p>18 stronger than a possible risk; is that</p> <p>19 correct?</p> <p>20 A. Well, I don't say it's a</p> <p>21 possible risk; I say there is an increased</p> <p>22 risk. So I think it's a different statement,</p> <p>23 yes, absolutely.</p> <p>24 Of course, I'm not Health</p> <p>25 Canada, so, you know, they have a framework</p>
Page 203	Page 205
<p>1 exposure to talc.</p> <p>2 And let me see the exact words</p> <p>3 that they use, but --</p> <p>4 Q. Before you do that, do you</p> <p>5 agree with the characterization that cosmetic</p> <p>6 talc presents a possible risk of ovarian</p> <p>7 cancer?</p> <p>8 A. No, I don't think that's my</p> <p>9 opinion. I think my opinion is stronger than</p> <p>10 that.</p> <p>11 But are you talking about my</p> <p>12 causation analysis opinion or just my risk</p> <p>13 assessment opinion?</p> <p>14 Q. I'm asking about any opinion</p> <p>15 you intend to offer in the MDL.</p> <p>16 A. Okay. So I will not be giving</p> <p>17 the causation analysis opinion, so that -- I</p> <p>18 will take that off the table.</p> <p>19 So I think my opinion is a</p> <p>20 little stronger because I say that the</p> <p>21 exposure to the perineal -- the talc by</p> <p>22 perineal application in women increases the</p> <p>23 risk. So I'm not saying it's a possible</p> <p>24 risk. I'm actually -- I believe that it</p> <p>25 increases the risk. And I do believe that</p>	<p>1 upon which they make decisions, and I'm doing</p> <p>2 an analysis based on what I have done. And</p> <p>3 so it's not exactly the same, although some</p> <p>4 of the same documents and information is</p> <p>5 weighed within -- and then that's when you</p> <p>6 have the issue of what Health Canada does</p> <p>7 versus what they rely upon.</p> <p>8 But this Taher risk assessment</p> <p>9 is just one piece of information that Health</p> <p>10 Canada has weighed in their assessment if you</p> <p>11 read their -- their draft risk assessment.</p> <p>12 Q. So the question I have about</p> <p>13 the Taher risk assessment, earlier you were</p> <p>14 referring to the fact that you have only seen</p> <p>15 a quantitative assessment of the weight of</p> <p>16 particular components of scientific evidence</p> <p>17 in evaluating epidemiological studies; is</p> <p>18 that correct?</p> <p>19 A. So that's what I typically see,</p> <p>20 yes. And I don't know that -- I've never</p> <p>21 seen it. But the typical approach would be</p> <p>22 to use it there as opposed to using it in the</p> <p>23 context of a human health risk assessment</p> <p>24 based on animal in vitro data.</p> <p>25 Q. All right. Are you familiar</p>

Confidential - Pursuant to Protective Order

Page 206	Page 208
<p>1 with something called the Klimisch scoring 2 system? 3 A. I don't know if I am now. 4 You'll need to show me what it is you're 5 referring to. The name doesn't ring a bell, 6 no. 7 Q. Okay. So it's not something 8 that you've used in the past? 9 A. No, not that I recall using. 10 Q. All right. 11 A. Unless it has another name, and 12 that's why I'm asking you. 13 Q. All right. So if you have 14 actually -- it's the document in front of you 15 that we've already marked as Deposition 16 Exhibit 5, I believe. 17 A. Yes. 18 Q. And that is the Taher study 19 that we were discussing and is cited by the 20 Health Canada risk assessment. 21 If you turn to page 5 -- well, 22 actually beginning on page 4, do you see 23 there is a section entitled "Literature 24 Search and Identification of Relevant 25 Nonhuman Studies"?</p>	<p>1 So, yes, if they stated they've 2 done -- we'd have to pull the supplementary 3 materials out, but I recall them doing 4 scoring based on epi studies but not on 5 the -- all of the animal studies that they 6 talk about. But we can pull it out and look. 7 I could be wrong. 8 Q. Okay. Did you review the 9 supplementary material 7, 8 and 9? 10 A. Yes, I did, and we'd have to 11 pull them out because I don't recall the 12 details. 13 Q. All right. We may take a look 14 at those in a minute. 15 It talks about them classifying 16 the animal and in vitro studies into four 17 categories of reliability. 18 Do you see that? 19 A. Yes. 20 Q. So did you make any attempt, 21 when you were reviewing the various studies 22 in reaching your opinion about the potential 23 risk of talc in causing ovarian cancer, did 24 you make any attempt to separate out the 25 different pieces of evidence into categories</p>
Page 207	Page 209
<p>1 Do you see that? 2 A. Yes. 3 Q. And this is related to an 4 analysis that these authors performed on 5 potentially relevant animal and in vitro 6 studies, correct? 7 A. Yes, that is true. 8 Q. All right. And it states here 9 that "all retrieved studies were examined for 10 relevance, reliability and overall quality 11 using the Klimisch scoring system." 12 Do you see that? 13 A. Yes, I do see that. So I have 14 seen that before. I just didn't -- I didn't 15 recall it. 16 Q. Okay. And so would you agree 17 that it is possible and in fact has been done 18 in a study that you rely on to apply a 19 quantitative scoring system to animal and in 20 vitro studies, particularly in the context of 21 looking at the relationship between talc and 22 ovarian cancer? 23 A. Well, I didn't say it was 24 impossible. I said I don't believe it's 25 routine based on my experience.</p>	<p>1 of reliability like the authors of this paper 2 have done? 3 A. I didn't do it exactly the way 4 they did it, but I certainly do do that as 5 part of my screening. 6 I told you one of the 7 characteristics or one of the assessments I 8 make is whether I believe the data is 9 reliable data that I can -- that I can use in 10 a weight of the evidence. So I make a -- and 11 when I talk about reliability, I'm talking 12 then about things such as I mentioned, peer 13 review, whether or not there is statistical 14 analysis, whether or not the study is 15 designed in a way that's consistent with 16 general principles of toxicology, control 17 groups or not control groups. 18 Those kinds of things I do -- I 19 do consider when I am assessing the use of a 20 study or not. 21 Q. Is it your testimony here today 22 that contained within your report that's 23 marked as Exhibit 4, I could find 24 categorization of reliability of each of the 25 pieces of scientific literature that you have</p>

Confidential - Pursuant to Protective Order

Page 210	Page 212
<p>1 included in your weight of the evidence 2 analysis? Is that your testimony today? 3 A. No, that's not what I'm telling 4 you, no. 5 Q. Okay. So you would agree that 6 you did not -- first of all, did you develop 7 categories of reliability in which you 8 separated the particular scientific studies 9 into as part of your weight of the evidence 10 analysis? 11 A. I do look at -- I do categorize 12 studies based upon my assessment of their 13 reliability and their ability to be used to 14 answer the question I'm asking, but I -- I 15 already told you, I didn't do it the way it's 16 set out here. I didn't have these specific 17 five categories, no. That's not what I did. 18 Q. Okay. Other than the CIR 2013 19 publication, which you have said that you do 20 not find reliable and you assign little 21 weight to it, can you point me to another 22 place in Exhibit 4 where you assign a 23 specific category of weight that you have 24 given to a particular study that you include 25 in your weight of the evidence analysis?</p>	<p>1 reliance list? 2 A. I believe it was, yes. 3 Q. Okay. And so for this one I 4 just want to direct your attention to the 5 conclusion section -- well, let me ask you 6 first: How does this document relate to the 7 collection of documents with respect to 8 Health Canada that you identified as relevant 9 to your opinion? 10 A. It was one of the materials 11 that they rely upon or they cite. That's the 12 reason I pulled it. It was -- I pulled 13 documents that they provided on the website 14 that were cited. 15 Q. Okay. And if you could turn to 16 page 11 of that document, there's a 17 conclusion section. The first sentence of 18 the third paragraph reads, "The given -- 19 given the context-specific nature of each 20 risk assessment and the diversity of tools 21 and criteria applicable, transparent 22 documentation of the specific application of 23 the WOE approach is especially important." 24 Did I read that correctly? 25 A. Yes, you did.</p>
Page 211	Page 213
<p>1 A. If what you're asking me is do 2 I make a specific statement next to each 3 study that I discuss about little weight or 4 great weight, no, I don't do that, if that's 5 what you're asking me. 6 Q. Okay. As part of the 7 collection of documents that relate to Health 8 Canada that was provided to us as part of 9 your new reliance list, did you review a 10 document entitled weight of the evidence -- 11 or "Weight of evidence: General principles 12 and current applications of Health Canada"? 13 A. Yes, I've seen that. 14 (Plunkett Exhibit 8 marked for 15 identification.) 16 QUESTIONS BY MS. BRANSCOME: 17 Q. All right. We will mark this 18 as Plunkett Deposition Exhibit Number 8. 19 All right. The document that I 20 just handed you that's marked as Plunkett 21 Deposition Exhibit Number 8, are you familiar 22 with that document, Dr. Plunkett? 23 A. Yep, I've seen this before. 24 Q. Is this listed among the new 25 materials that have been added to your</p>	<p>1 Q. And is your understanding of 2 WOE that it is weight of evidence? 3 A. Yes, that's correct. 4 Q. Do you agree with this 5 statement? 6 A. In a regulatory context, I do 7 believe that that is true, because within the 8 regulatory context when they do the risk 9 assessment, there's a need to understand why 10 decisions are made. So, absolutely, in a 11 regulatory context, I would agree that this 12 kind of transparency is even being adopted by 13 EPA. 14 Q. And is it your opinion then 15 that a different level of transparency is 16 needed for expert testimony in court? 17 A. No, that's not what I'm saying. 18 I'm saying that's a different process. And 19 that's what part of this process is. It's 20 understanding the ability to provide a dialog 21 about what was done. 22 So as a result, this is 23 something that is common to the work that 24 I've done in the past. Even in a 25 nonlitigation context with my regulatory</p>

Confidential - Pursuant to Protective Order

Page 214	Page 216
<p>1 clients, doing a risk assessment doesn't</p> <p>2 necessarily involve the same level of detail</p> <p>3 that a regulatory -- a regulator would apply</p> <p>4 to the transparency of the assessment. Not</p> <p>5 to say that it couldn't be done, but it's</p> <p>6 just -- I would say it's not necessarily</p> <p>7 typical.</p> <p>8 Q. So this specifically refers to</p> <p>9 transparent documentation.</p> <p>10 Do you see that?</p> <p>11 A. Yes.</p> <p>12 Q. Would you agree that the report</p> <p>13 that you have produced in the MDL does not</p> <p>14 have documentation of the specific</p> <p>15 application of the weight of evidence</p> <p>16 approach?</p> <p>17 MS. PARFITT: Objection.</p> <p>18 Excuse me, objection. Form.</p> <p>19 THE WITNESS: I disagree to an</p> <p>20 extent because I did attempt to</p> <p>21 provide in my report a description of</p> <p>22 the methods that I used and the</p> <p>23 resources that I've relied upon for a</p> <p>24 discussion of how those methods are</p> <p>25 used.</p>	<p>1 study. In other words, as I discussed many</p> <p>2 times in deposition, when you're talking</p> <p>3 about doing a human health risk assessment,</p> <p>4 there's certain types of data that are most</p> <p>5 relevant. I mean, when they use the word</p> <p>6 "reliable" -- I don't know that many of these</p> <p>7 studies have the same level of reliability as</p> <p>8 far as peer review, but they're -- for</p> <p>9 example, on the issue of migration, it's my</p> <p>10 opinion that the data from the human studies</p> <p>11 is a more reliable or relevant source of</p> <p>12 information. And I've laid out why, because</p> <p>13 of differences in the anatomy, things like</p> <p>14 that, with the data.</p> <p>15 Q. Are you familiar with the term</p> <p>16 "binning exercise"?</p> <p>17 A. Yes, I am. And that is</p> <p>18 certainly something that I have used in other</p> <p>19 aspects of work that I have done.</p> <p>20 Q. Did you do a binning exercise</p> <p>21 in rendering your opinions and what you've</p> <p>22 provided to us in the context of your</p> <p>23 opinions in the MDL?</p> <p>24 A. Yes, that's the exercise I</p> <p>25 start with. I'm binning them into human,</p>
Page 215	Page 217
<p>1 And then in addition to that,</p> <p>2 I've attempted to lay out for you in</p> <p>3 my report a discussion of the pieces</p> <p>4 of evidence that I've relied upon,</p> <p>5 including some -- for some of those --</p> <p>6 that's one of the reasons I got so</p> <p>7 detailed in the section on migration</p> <p>8 and providing you an analysis of each</p> <p>9 of the papers that I relied upon and</p> <p>10 what I thought was important within</p> <p>11 them that led to my -- the formation</p> <p>12 of my opinions.</p> <p>13 So I disagree to some extent.</p> <p>14 QUESTIONS BY MS. BRANSCOME:</p> <p>15 Q. Okay. Turning back to what</p> <p>16 Taher did in classifying different studies</p> <p>17 into different categories of reliability.</p> <p>18 Have you done that type of analysis in the</p> <p>19 past where you have separated out different</p> <p>20 studies into different categories of weight</p> <p>21 or reliability as part of an overall</p> <p>22 analysis?</p> <p>23 A. Well, I do that every time I do</p> <p>24 a weight of the evidence when I separate into</p> <p>25 categories first based upon the type of</p>	<p>1 animal, mechanistic, in vitro data. That's</p> <p>2 the first bins.</p> <p>3 In fact, in the copper work we</p> <p>4 did, that's what we did. We separated the</p> <p>5 data into in vitro/only mechanistic</p> <p>6 information, animal studies, did we have</p> <p>7 human studies.</p> <p>8 And we also looked at</p> <p>9 studies -- we had a separate bin of exposures</p> <p>10 like I do. I have studies that just address</p> <p>11 the issue of exposure potentially.</p> <p>12 So, yes, it's -- it's</p> <p>13 consistent with doing that. It's --</p> <p>14 essentially binning is just separating the</p> <p>15 information into groups based on what</p> <p>16 questions those -- those data can answer.</p> <p>17 Q. Okay. Have you ever -- do you</p> <p>18 ever separate them into bins based on the</p> <p>19 level of weight that you would give a</p> <p>20 particular study?</p> <p>21 A. I do that when I'm analyzing</p> <p>22 each of the studies within that group or that</p> <p>23 bin. That's what I do. I give them -- in my</p> <p>24 weight -- in my analysis, I weigh those</p> <p>25 studies based upon my judgment on the</p>

Confidential - Pursuant to Protective Order

Page 218	Page 220
<p>1 relevance, the reliability, the power of the</p> <p>2 study, the statistical analysis that's done,</p> <p>3 the inclusion in animal studies, in</p> <p>4 particular, of controls. Those are all parts</p> <p>5 of that analysis that I do. So, yes, I do do</p> <p>6 that.</p> <p>7 And then in -- there have been</p> <p>8 exercises that I've done in the past with</p> <p>9 other individuals where we may have taken a</p> <p>10 yellow sticky note and put down on top of it</p> <p>11 animal data with exposure information, animal</p> <p>12 data without exposure information. That's</p> <p>13 the process that I'm doing when I am looking</p> <p>14 across the data. I'm separating those pieces</p> <p>15 of data into groups and what types of</p> <p>16 questions they can answer.</p> <p>17 So that is consistent with what</p> <p>18 I do when I do a weight of analysis approach</p> <p>19 in the work that I do in both nonlitigation</p> <p>20 and litigation context.</p> <p>21 Q. Okay. But we have no specific</p> <p>22 documentation of the different ratings that</p> <p>23 you gave the various pieces of evidence that</p> <p>24 you included in your weight of the evidence</p> <p>25 analysis, aside from occasional references to</p>	<p>1 inflammation, cause ovarian cancer?</p> <p>2 A. Because it doesn't change the</p> <p>3 phenotype of the cell. It has to -- the --</p> <p>4 and I discuss that. You have to -- you have</p> <p>5 to set up a chronic inflammatory process that</p> <p>6 leads to changes within the cellular</p> <p>7 phenotype to go from a cell that is -- that</p> <p>8 is -- is dividing normally to a cell that</p> <p>9 isn't.</p> <p>10 So it's -- it's the same issue</p> <p>11 that you address even in a study in animals.</p> <p>12 Why do not all animals exposed to -- exposed</p> <p>13 to a chemical develop tumors. It's the idea</p> <p>14 that something has to be initiated beyond the</p> <p>15 exposure or maybe beyond inflammation to lead</p> <p>16 to the series of events.</p> <p>17 And so, yes, it's recognized</p> <p>18 that you can get inflammation, and</p> <p>19 inflammation can go down the road in becoming</p> <p>20 a carcinogenic process, or inflammation can</p> <p>21 no longer -- can stay where it is. It</p> <p>22 doesn't progress beyond just a chronic</p> <p>23 inflammatory process.</p> <p>24 Q. And so if you had a study that</p> <p>25 demonstrated that a particular agent causes</p>
Page 219	Page 221
<p>1 giving something less or more weight,</p> <p>2 correct?</p> <p>3 A. Well, I certainly -- I told you</p> <p>4 I have not given numerical values that you're</p> <p>5 asking me, but I've attempted to do that when</p> <p>6 I have described them in groups, when I talk</p> <p>7 about human versus animal versus in vitro.</p> <p>8 Because I've already told you, I believe,</p> <p>9 it's my opinion that certain types of</p> <p>10 information are more informative than others.</p> <p>11 And so the more informative it is, the more</p> <p>12 weight you're giving it in -- obviously in</p> <p>13 your analysis.</p> <p>14 But it is a different exercise</p> <p>15 than what is described here. And here I'm</p> <p>16 pointing to Exhibit 8. And it's a different</p> <p>17 exercise, obviously, than what a regulatory</p> <p>18 body is required to do where they are trying</p> <p>19 to come up with ways to increase the</p> <p>20 transparency when no one can go and actually</p> <p>21 talk to each of the regulators individually</p> <p>22 to understand what their thinking was.</p> <p>23 Q. Okay. Returning to biological</p> <p>24 mechanism for a minute, why doesn't</p> <p>25 inflammation generally, including chronic</p>	<p>1 inflammation, you would need more information</p> <p>2 in order to make the conclusion that that</p> <p>3 agent can in fact cause cancer, correct?</p> <p>4 MR. MEADOWS: Objection.</p> <p>5 THE WITNESS: You would look</p> <p>6 for more informative information,</p> <p>7 exactly, which is why, when I've</p> <p>8 talked about the individual</p> <p>9 constituents in the context of</p> <p>10 consistency on mechanism for cancer,</p> <p>11 I've pointed to documents where that</p> <p>12 information has been discussed.</p> <p>13 So like when I talk about</p> <p>14 asbestos or cobalt or I point to</p> <p>15 the -- for example, the IARC</p> <p>16 assessment where they go through</p> <p>17 that -- that discussion of the fact</p> <p>18 that there's not just data showing</p> <p>19 that a biologically plausible</p> <p>20 mechanism may be inflammation, but</p> <p>21 there's also data to show that that</p> <p>22 can lead to tumor development as well.</p> <p>23 QUESTIONS BY MS. BRANSCOME:</p> <p>24 Q. Okay. How does talc change the</p> <p>25 phenotype of the ovarian cell?</p>

Confidential - Pursuant to Protective Order

Page 222	Page 224
<p>1 A. So this is one of the details 2 we don't know, other than generally it's 3 changing the phenotype to go from a normal 4 cell to a tumor cell. That is being 5 observed. When you find the presence of the 6 tumor, that is what you're observing. 7 Q. Does pure talc with no other 8 constituent components, can it change the 9 phenotype of an ovarian cell? 10 MR. MEADOWS: Objection. 11 THE WITNESS: So that's a 12 difficult question to answer with 13 certainty because of the fact that I 14 don't believe that we have assurance 15 that any of the studies are done with 16 essentially pure talc. 17 However, in the studies that 18 claim to have been done with pure 19 talc -- for example, the NTP study 20 claims to have been done with pure 21 talc. So if that is pure talc, truly 22 is, then that study is an example of 23 evidence for the chronic inflammatory 24 process leading to preneoplastic 25 lesions that are setting down the road</p>	<p>1 in vitro or an animal experiment -- by which 2 you would expose either cells or animal to 3 talc with different constituent products to 4 identify or separate out the individual 5 effects of the components? Is that a study 6 that you could design as a toxicologist? 7 A. I think that would be difficult 8 to do, but I'm not saying impossible to do. 9 And here's the -- there are some very 10 specific considerations you'd have to put 11 into that design. 12 I would argue that some of that 13 is already available, where we have studies 14 that have looked at the dose-response effects 15 for toxicity with cobalt, with chromium, with 16 asbestos. 17 When you get to asbestos and 18 talc, it's more problematic because then the 19 question is what is -- what is it? What are 20 the specific characteristics in all the 21 different studies of exactly what the 22 asbestos was versus exactly what the talc 23 was. 24 But I think you could attempt 25 to do that, and then the question would be,</p>
Page 223	Page 225
<p>1 mechanism towards cancer. 2 So there are data out there. 3 The problem you have, I believe, in 4 the literature is whether or not, 5 based on the discussion that is 6 becoming apparent now with sensitivity 7 and ability to take the natural 8 product and actually determine exactly 9 what's in it, that I don't think there 10 is the ability to assure that any -- 11 any of these studies with the samples 12 of talc they're using is absolutely, 13 100 percent, only platy talc. I think 14 there's -- there's some concern about 15 that. But certainly you will take -- 16 you have to take what is discussed 17 within the study as evidence from what 18 they're claiming. 19 So many of the studies say we 20 used asbestos-free talc or platy -- 21 pure platy talc and we got a toxic 22 response. 23 QUESTIONS BY MS. BRANSCOME: 24 Q. Would it be possible to design 25 an experiment -- and now I'm talking about an</p>	<p>1 being able to use that data not so much to -- 2 not so much to identify a dose response for a 3 certain insult, but to look at the fact -- 4 look at potency differences across the 5 compounds. And then there's the issue of 6 then looking at additivity when you know you 7 have a complex mixture. 8 So that could be done, but, 9 again, it would be difficult to do based on 10 what we know about talc, being able to really 11 know that -- you would have to really be very 12 careful that what it is that you're looking 13 at is -- is not containing any of those 14 things that we unfortunately know co-occur 15 with constituents within the natural product. 16 But no one has done those 17 studies. I point that out. I haven't seen 18 that study that you're asking for. I have 19 not seen somebody do that. 20 Q. And a study like that would be 21 relevant in evaluating the potency of the 22 individual constituents and what might 23 actually be the driving factor for phenotypic 24 change, correct? 25 A. Not necessarily. I would argue</p>

Confidential - Pursuant to Protective Order

Page 226	Page 228
<p>1 that we already have an answer to that by</p> <p>2 looking at the data that's been collected on</p> <p>3 the complex mixture itself. So the issue</p> <p>4 would be why -- the question is what do you</p> <p>5 gain by being able to say that we're only</p> <p>6 pointing to this constituent or that</p> <p>7 constituent. That isn't what is occurring.</p> <p>8 What people are exposed to is</p> <p>9 the complex mixture, not just each one of</p> <p>10 those individual components. To me this is</p> <p>11 not a case of asbestos-only exposure. This</p> <p>12 is a case of exposure to consumer products</p> <p>13 that are talc that may have within them at</p> <p>14 any given time -- and data indicates that</p> <p>15 there are substantial chance that asbestos</p> <p>16 may be in -- is in certain of these products.</p> <p>17 But my opinions are not</p> <p>18 dependent on there being asbestos there at a</p> <p>19 particular level or copper there -- or, I'm</p> <p>20 sorry, cobalt there at a particular level</p> <p>21 because my opinions are based on the</p> <p>22 observations we have on the complex product</p> <p>23 as it exists.</p> <p>24 Q. And you recognize that</p> <p>25 different types of talc and different talc</p>	<p>1 been linked to an inflammatory response.</p> <p>2 Oxidative stress is often a triggering</p> <p>3 mechanism.</p> <p>4 Q. Does the body have protective</p> <p>5 mechanisms that limit tissue damage from</p> <p>6 oxidative stress?</p> <p>7 A. Yes, which is why not everybody</p> <p>8 that's exposed to any particular chemical is</p> <p>9 going to get cancer. Some people will</p> <p>10 respond better. Some cells will respond</p> <p>11 better. Some individuals in a population at</p> <p>12 one time in their life may respond better.</p> <p>13 Q. You would agree that in vitro</p> <p>14 studies do not account for the body's natural</p> <p>15 defenses outside of what exists at the</p> <p>16 cellular level, correct?</p> <p>17 A. Depends on the in vitro study</p> <p>18 that's being done and whether or not there is</p> <p>19 components added.</p> <p>20 So I've seen studies done where</p> <p>21 they take cells and then add extra levels of</p> <p>22 glutathione to try to protect the cells from</p> <p>23 certain stressors that could lead to damage,</p> <p>24 but I agree with you that an isolated cell on</p> <p>25 its own is a different microenvironment than</p>
Page 227	Page 229
<p>1 products have different constituent</p> <p>2 components in different amounts, correct?</p> <p>3 A. Some can. I agree with that.</p> <p>4 That is true.</p> <p>5 So if you're being broad, as in</p> <p>6 pharmaceutical-grade versus industrial-grade</p> <p>7 or chemical-grade, yeah, because they'll have</p> <p>8 a purity level assigned.</p> <p>9 But as far as what the -- what</p> <p>10 the components are, it isn't always defined</p> <p>11 even specifically within that.</p> <p>12 Q. Okay. And does the presence of</p> <p>13 oxidative stress in a tissue indicate that</p> <p>14 cancer will develop in that tissue?</p> <p>15 A. Will definitively develop?</p> <p>16 Not -- I don't think you could say</p> <p>17 definitively develop, but it's certainly in</p> <p>18 the biologically plausible mechanism that's</p> <p>19 been understood to lead to chronic</p> <p>20 inflammation and also has been linked to</p> <p>21 cancer.</p> <p>22 So that's the issue of not</p> <p>23 necessarily saying it has to be there, but it</p> <p>24 certainly is something that is observed</p> <p>25 routinely in cases where carcinogenesis has</p>	<p>1 an intact tissue, which is a different</p> <p>2 environment than an intact animal, which is</p> <p>3 even different than an intact human being.</p> <p>4 Yes, they're all -- you look at those levels</p> <p>5 of evidence or those types of evidence</p> <p>6 differently, depending upon the end points</p> <p>7 you're collecting.</p> <p>8 Q. And so you would give lower</p> <p>9 weight to an in vitro study as compared to an</p> <p>10 in vivo study, for example?</p> <p>11 A. Depends on the question you're</p> <p>12 asking. I would give a lot of weight if the</p> <p>13 question is what do I know -- if I want to</p> <p>14 try to understand the biologically plausible</p> <p>15 mechanism, some of those in vitro studies are</p> <p>16 some of the most important, because it's the</p> <p>17 only ones that allow us to answer a question.</p> <p>18 If the question is higher level</p> <p>19 about what is the evidence to show that</p> <p>20 there's an increased risk overall for cancer</p> <p>21 or a hazard for cancer, then certainly you</p> <p>22 need to have more than an in vitro study.</p> <p>23 So as -- so on -- if you want</p> <p>24 to layer it up, obviously, if all you had was</p> <p>25 in vitro data, you'd have much less</p>

Confidential - Pursuant to Protective Order

Page 230	Page 232
<p>1 confidence in the conclusions you can draw</p> <p>2 unless you had some in vivo data. In vivo</p> <p>3 data is going to allow you to interpret the</p> <p>4 in vitro data.</p> <p>5 So certainly there would be</p> <p>6 more weight given in that assessment to the</p> <p>7 fact that you had in vivo data.</p> <p>8 Q. And so when you made the</p> <p>9 statement that, for instance, you always give</p> <p>10 more weight to human data, is that true, or</p> <p>11 does that also depend?</p> <p>12 A. Well, it depends on whether you</p> <p>13 have human data. So if I have human data and</p> <p>14 I have a doubt, any doubts at all, about</p> <p>15 whether or not the exposure-response</p> <p>16 relationship would be affected by the way the</p> <p>17 animal studies are designed, then, yes, I</p> <p>18 would give more weight to the human studies.</p> <p>19 In a case, however, such as</p> <p>20 inhalation exposure assessments where</p> <p>21 there -- it's much better, actually, to do an</p> <p>22 animal study where we can do a dose response</p> <p>23 across different sizes of particles and</p> <p>24 actually observe lesions as they develop over</p> <p>25 time, which is why I love -- I love the NTP</p>	<p>1 weight, but it could if you only had one</p> <p>2 crappy human study, one really badly designed</p> <p>3 human study, and I had a GLP quality cancer</p> <p>4 bioassay then, absolutely. I mean, IARC does</p> <p>5 this. They look at that animal data and say,</p> <p>6 "This one tells us -- answers the questions</p> <p>7 we want to answer, and this very poorly</p> <p>8 designed case series isn't going to allow us</p> <p>9 to do that."</p> <p>10 So you could, but I would say</p> <p>11 it's more the other issue, that you look at</p> <p>12 animal and human more on an equal basis if</p> <p>13 the relevance and the extrapolation can be</p> <p>14 done reliably.</p> <p>15 And that's the question you</p> <p>16 have to ask, can I extrapolate from animals</p> <p>17 to humans in a reliable manner.</p> <p>18 Q. Okay. Would you agree that the</p> <p>19 response to cosmetic talc can vary depending</p> <p>20 on tissue type in the body?</p> <p>21 A. Yes, I would say that that is</p> <p>22 true, whether or not there's certain</p> <p>23 protective barriers in place, for example,</p> <p>24 yes.</p> <p>25 Q. And so in order to draw</p>
Page 231	Page 233
<p>1 93 study of interim sacrifices, looking at</p> <p>2 that issue. That data is very reliable in</p> <p>3 order to understand the risk of lung damage</p> <p>4 as compared to a human study where we don't</p> <p>5 have those serial time points, doses that are</p> <p>6 defined tightly.</p> <p>7 So -- and the relevance between</p> <p>8 those kinds of initial lung injury in certain</p> <p>9 animals versus humans match fairly well.</p> <p>10 That's my problem, though, in</p> <p>11 the case with the perineal exposure. I'm</p> <p>12 saying to you, because of the route of</p> <p>13 contact -- we need to be able to get it there</p> <p>14 to the tissue -- the human data is extremely</p> <p>15 important.</p> <p>16 Q. So is it fair to say that in</p> <p>17 some circumstances animal data gets more</p> <p>18 weight than human data and in other</p> <p>19 circumstances human data gets more weight</p> <p>20 than animal data? It is circumstance</p> <p>21 dependent?</p> <p>22 A. I would put it a different way.</p> <p>23 I would say in some cases animal data is</p> <p>24 weighted in a similar manner to human data.</p> <p>25 I don't necessarily say it would get more</p>	<p>1 conclusions based on a study of one cell</p> <p>2 type's reaction to cosmetic talc to another,</p> <p>3 you would need to understand the differences</p> <p>4 in similarities between those two cell types,</p> <p>5 correct?</p> <p>6 MS. PARFITT: Objection.</p> <p>7 THE WITNESS: It's a different</p> <p>8 question. So you were asking me</p> <p>9 about -- I didn't think you were just</p> <p>10 asking about cells. I thought you</p> <p>11 were asking me about like routes of</p> <p>12 exposure, dermal versus inhalation.</p> <p>13 Those things differ.</p> <p>14 Cell types may or may not.</p> <p>15 That may or may not be true. Because</p> <p>16 if two cells -- two different cell</p> <p>17 types in the body share similar</p> <p>18 characteristics as far as the -- for</p> <p>19 example, if they're both epithelial</p> <p>20 cells or mesothelial cells, those type</p> <p>21 of cells you would expect to respond</p> <p>22 the same way.</p> <p>23 But I would agree that, for</p> <p>24 example, a neuronal cell versus a GI</p> <p>25 cell versus a liver cell, there could</p>

Confidential - Pursuant to Protective Order

Page 234	Page 236
<p>1 be differences in how they would</p> <p>2 respond, yes, and so you would -- you</p> <p>3 would look at those things</p> <p>4 individually.</p> <p>5 QUESTIONS BY MS. BRANSCOME:</p> <p>6 Q. And so it's important to</p> <p>7 understand the differences and the</p> <p>8 similarities between the different cell types</p> <p>9 before drawing conclusions using studies from</p> <p>10 different cell types?</p> <p>11 MS. PARFITT: Objection.</p> <p>12 MR. MEADOWS: Objection.</p> <p>13 THE WITNESS: I certainly think</p> <p>14 you should consider the cell types</p> <p>15 that are being used and whether or not</p> <p>16 those cell types are ones that are</p> <p>17 relevant to your risk assessment</p> <p>18 question you're asking, yes.</p> <p>19 QUESTIONS BY MS. BRANSCOME:</p> <p>20 Q. Okay. You would agree as a</p> <p>21 toxicologist, dose is an important part of a</p> <p>22 toxicological analysis of an agent, correct?</p> <p>23 A. If you're doing risk, yes. If</p> <p>24 you're only doing hazard, it may not be as</p> <p>25 important. It depends upon the question</p>	<p>1 Q. Okay. And in your -- in your</p> <p>2 report, as part of your risk assessment that</p> <p>3 you did in the MDL -- this is paragraph 12 on</p> <p>4 page 8.</p> <p>5 A. Yes, I'm there.</p> <p>6 Q. Okay. You state about</p> <p>7 two-thirds of the way down the paragraph that</p> <p>8 "weight of the evidence methods were critical</p> <p>9 to defining the literature that identified</p> <p>10 the hazards of talc exposure as well as</p> <p>11 defining the dose-response relationship</p> <p>12 between talc exposure and the risk of adverse</p> <p>13 health effects."</p> <p>14 Did I read that correctly?</p> <p>15 A. You did. That's correct.</p> <p>16 Q. All right. Is it your view</p> <p>17 that in the case you have reached an opinion</p> <p>18 that defines the dose-response relationship</p> <p>19 between talc exposure and the risk of ovarian</p> <p>20 cancer?</p> <p>21 A. It depends what you mean by</p> <p>22 define. I can tell you what I mean in this</p> <p>23 sentence, and maybe that would help you.</p> <p>24 Q. Dr. Plunkett, it is your</p> <p>25 report. And so I am asking you, using your</p>
Page 235	Page 237
<p>1 you're asking about hazard.</p> <p>2 Do you want me to explain?</p> <p>3 Q. I do want you to explain the</p> <p>4 difference between a risk analysis and a</p> <p>5 hazard analysis.</p> <p>6 A. Okay. So in an initial hazard</p> <p>7 analysis, if the question is, is there a</p> <p>8 hazard associated with exposure, let's say,</p> <p>9 by inhalation, it may not matter whether it</p> <p>10 was a high dose or a low dose study. Both of</p> <p>11 those can identify hazard.</p> <p>12 Then you ask the question: Is</p> <p>13 there a dose-response relationship? That's</p> <p>14 the next step beyond hazard.</p> <p>15 So hazard is -- to me is</p> <p>16 identifying the end points that you're going</p> <p>17 to monitor for toxicity, sort of the target</p> <p>18 organs, those things, and so whether or not</p> <p>19 there's a dose-response study available, it</p> <p>20 wouldn't be as important.</p> <p>21 But certainly when you go to</p> <p>22 that next step to assess risk, you'd like to</p> <p>23 be able to see whether or not there is a</p> <p>24 dose-response relationship in the effect that</p> <p>25 you're assessing.</p>	<p>1 own definition of "define," have you rendered</p> <p>2 an opinion that defines the dose-response</p> <p>3 relationship between talc exposure and the</p> <p>4 risk of ovarian cancer?</p> <p>5 A. I have formed opinions about</p> <p>6 the dose-response relationship generally, but</p> <p>7 unfortunately -- I answered that question for</p> <p>8 you earlier when you asked me, I think, about</p> <p>9 is there -- I don't know if you used the word</p> <p>10 "threshold," but I did.</p> <p>11 So the available information</p> <p>12 doesn't allow us to identify an ultimate</p> <p>13 threshold, for example, in the case of women</p> <p>14 exposed to talc perineally and their -- and</p> <p>15 their development of ovarian cancer.</p> <p>16 Instead, in defining the dose</p> <p>17 response, what we can do with the data -- and</p> <p>18 that is what I attempted to do. This is</p> <p>19 where you look at defining the dose response</p> <p>20 in the animal studies, which we can look at,</p> <p>21 or defining dose response in cell studies,</p> <p>22 showing that as the dose increases, the</p> <p>23 hazard and the risk increase. So risk</p> <p>24 actually you quantify. There's a certain</p> <p>25 response at this dose and a different</p>

Confidential - Pursuant to Protective Order

Page 238	Page 240
<p>1 response at the next dose, or have we 2 plateaued, that the responses are the same as 3 dose increases. 4 So that, I did do that as part 5 of my assessment, trying to define the dose 6 as far as how that linked to the responses in 7 each of the studies I looked at. 8 Q. You would agree, though, that 9 some studies did not show a dose relationship 10 between talc and ovarian cancer or the 11 clinical signs that were indicative of the 12 potential for development into ovarian 13 cancer, correct? 14 MS. PARFITT: Objection. 15 THE WITNESS: If you're talking 16 about the human data; is that what 17 you're referring to? Or are you 18 talking about all -- any of the data? 19 QUESTIONS BY MS. BRANSCOME: 20 Q. Any of the data. 21 A. So I would disagree on the 22 animal data. I think on the animal data they 23 often -- most of the animal studies I've 24 relied upon have looked at more than one dose 25 or at least looked a no exposure versus a</p>	<p>1 or -- that they may make a -- an 2 author may make a statement, but I'm 3 talking about looking -- this is 4 weight of the evidence. I'm looking 5 across. And I'm saying, across the 6 data, when I look at the human data 7 versus the animal data, for example, 8 versus in vitro studies, the in vitro 9 studies and the animal studies allow 10 you to look at dose response for talc 11 toxicity. 12 The -- even the animal studies 13 allow you to look at dose response for 14 development of precancerous lesions, 15 you're on the way to cancer, for 16 example, in the NTP studies. 17 And then in the human studies, 18 some of those studies are designed 19 such that the authors could draw 20 conclusions about dose response and 21 some are not. 22 Even in some of the studies 23 where they attempted to look at dose 24 response, some of the authors indicate 25 they don't see an effect. So that is</p>
Page 239	Page 241
<p>1 dose, and most of them have looked at more 2 than one dose. 3 In the case of the human 4 studies, unfortunately, some of those studies 5 were not designed to be able to define dose. 6 In other words, the questions weren't asked, 7 for example, of the individuals even in the 8 prospective studies. Some of those 9 included -- did not include the information 10 collected on frequency and duration of use. 11 So if it's not collected, 12 obviously, I don't have it to look at. And 13 that's one of the limitations of human 14 epidemiological investigations, is that it 15 often is not designed appropriately to look 16 at dose response. 17 Q. Is it your opinion that there 18 are no studies looking at talc and the risk 19 of ovarian cancer in which the authors of the 20 study have concluded there was no clear 21 pattern of increased risk with dose? 22 MS. PARFITT: Objection. 23 THE WITNESS: No, that's not 24 what I've said. No. It's very 25 possible that an individual paper</p>	<p>1 true. And part of that may be driven 2 by the design of the study, the number 3 of individuals in the study, the way 4 that the questions were asked. 5 There's limitations on the way that 6 information is collected. 7 If you want to look at each 8 study, we can, but -- 9 QUESTIONS BY MS. BRANSCOME: 10 Q. So my question to you, whether 11 you agree or disagree with the author's 12 conclusion, is simply that if you look at the 13 overall animal and human studies that you 14 cite in your report or have considered on 15 your reliance list that look at a potential 16 dose-response relationship for talc toxicity, 17 do some of those studies conclude that there 18 is not a dose-response relationship? 19 MS. PARFITT: Objection. 20 THE WITNESS: I disagree for 21 talc toxicity, but I would say if 22 you're going to limit it to the issue 23 of the ovarian cancer response, I 24 would agree. I have seen that in some 25 of the studies.</p>

61 (Pages 238 to 241)

Confidential - Pursuant to Protective Order

Page 242	Page 244
<p>1 I think talc toxicity, I don't</p> <p>2 know if anybody has made the</p> <p>3 comment -- I would doubt it -- that</p> <p>4 there is no dose response for toxic</p> <p>5 effects of talc.</p> <p>6 QUESTIONS BY MS. BRANSCOME:</p> <p>7 Q. Okay. You discuss in your</p> <p>8 report -- wait a moment. It's in</p> <p>9 paragraph 58 on page 38. And I just want to</p> <p>10 make sure I understood what you were citing</p> <p>11 here.</p> <p>12 In paragraph 58 you state that</p> <p>13 "It is important to remember that</p> <p>14 administration of even a single dose of talc</p> <p>15 in animals has been shown to produce adverse</p> <p>16 effects locally at the site of the exposure."</p> <p>17 What are you referring to</p> <p>18 there?</p> <p>19 A. Acute doses. In other words,</p> <p>20 in studies that have described installation</p> <p>21 of a single dose of talc in some form into a</p> <p>22 tissue, that they are observing adverse</p> <p>23 responses.</p> <p>24 An example of that may be</p> <p>25 the -- I think it's Hamilton. Is that the</p>	<p>1 is that you give them less weight because you</p> <p>2 believe that the individuals who conducted</p> <p>3 the study had been paid by either a company</p> <p>4 or agencies that had some investment in the</p> <p>5 outcome of the study; is that correct?</p> <p>6 A. Is that my opinion?</p> <p>7 Q. Yes.</p> <p>8 A. For any particular study,</p> <p>9 you'll need to show me what you're pointing</p> <p>10 to. I do have opinions about some of the</p> <p>11 work by Drs. Huncharek and Muscat, yes. I</p> <p>12 think I address that specifically, and that</p> <p>13 has -- that's not so much to do with my</p> <p>14 weight of the evidence; that has more to do</p> <p>15 with transparency and what was being</p> <p>16 disseminated to the public and disseminated</p> <p>17 to the FDA as far as evaluations.</p> <p>18 That's a different issue than</p> <p>19 the weight of -- the weight of -- the weight</p> <p>20 of the evidence assessment for risk. I think</p> <p>21 those were separate.</p> <p>22 Q. So then I'll ask you that.</p> <p>23 In doing your weight of the</p> <p>24 evidence analysis for risk, have you</p> <p>25 discounted the weight that you've given to</p>
Page 243	Page 245
<p>1 one where they stilled it into the ovaries</p> <p>2 with a single dose?</p> <p>3 Q. So these are large-dose</p> <p>4 exposures?</p> <p>5 A. Well, not all --</p> <p>6 Q. Or are they, I should say?</p> <p>7 A. I don't know that they all are,</p> <p>8 no. There are -- there are -- I don't think</p> <p>9 I have attempted to quantify large in this</p> <p>10 sentence.</p> <p>11 What I'm stating here is not an</p> <p>12 issue of large versus small. It's an issue</p> <p>13 of the fact that there are toxic effects with</p> <p>14 single exposures. And I'm just making the</p> <p>15 comment -- this has to do with hazard, right?</p> <p>16 It's the idea even a single dose -- or a</p> <p>17 single exposure you can get irritant,</p> <p>18 inflammatory reactions at the site of</p> <p>19 exposure. And that's all I'm trying to say.</p> <p>20 That's why I'm citing as reviewed by EPA. I</p> <p>21 believe EPA even makes a very similar</p> <p>22 statement.</p> <p>23 Q. Okay. Do you take into</p> <p>24 account -- there are some studies for</p> <p>25 which -- at least my reading of your report</p>	<p>1 any particular piece of scientific evidence</p> <p>2 based off of potential affiliations of the</p> <p>3 authors?</p> <p>4 A. I certainly did with the CIR</p> <p>5 review document. I've already told you that.</p> <p>6 And that's because I have evidence that shows</p> <p>7 it's not just an affiliation issue, but it's</p> <p>8 actually -- it's more -- it's more important</p> <p>9 than that.</p> <p>10 Q. Are there any other examples?</p> <p>11 A. I think that's the only one</p> <p>12 right now as I sit here that I can tell you</p> <p>13 that I had identified as carrying little</p> <p>14 weight because of an issue of either</p> <p>15 authorship or input in the way it was</p> <p>16 described.</p> <p>17 There are certainly studies</p> <p>18 within my weight of the evidence evaluation,</p> <p>19 some of which were performed by industry. I</p> <p>20 certainly look at that issue, but unless I</p> <p>21 have -- have a reason to believe that there's</p> <p>22 an inherent bias based on something I know,</p> <p>23 they go into the weight of the evidence</p> <p>24 without making a correction for that.</p> <p>25 In many cases that I work in</p>

Confidential - Pursuant to Protective Order

Page 246	Page 248
<p>1 litigation, I will find situations like the</p> <p>2 situation here with Huncharek and Muscat</p> <p>3 where I have, for example -- I think this</p> <p>4 came up in the Risperdal litigation for me.</p> <p>5 It's the idea that there was a series of</p> <p>6 papers put out by an individual investigator</p> <p>7 where documents that I could get access to</p> <p>8 show me that indeed their analysis was not</p> <p>9 done by them but it was ghostwritten by</p> <p>10 somebody else. So that gives me pause,</p> <p>11 although I would never have known that unless</p> <p>12 I had access to internal documents.</p> <p>13 So initial weight of the</p> <p>14 evidence I did not discount it, but then I</p> <p>15 went back and had to reevaluate the role</p> <p>16 those studies played in my overall</p> <p>17 assessment.</p> <p>18 Q. Do you take into account in any</p> <p>19 way in evaluating the weight of a study if it</p> <p>20 is conducted by someone who serves as an</p> <p>21 expert on behalf of the plaintiffs in the</p> <p>22 active litigation?</p> <p>23 A. It would be the same -- same</p> <p>24 issue. I certainly consider it as part of</p> <p>25 what I look at, but just like if they were an</p>	<p>1 tested, that he reports are Johnson's baby</p> <p>2 powder, did you also consider the work that</p> <p>3 was done by experts that have been retained</p> <p>4 on behalf of the defendants to characterize</p> <p>5 the components of Johnson's baby powder? Do</p> <p>6 you give them equal weight?</p> <p>7 A. So I haven't seen a variety of</p> <p>8 the documents that you're talking about,</p> <p>9 so -- because I have not worked in the</p> <p>10 litigation cases that have involved asbestos</p> <p>11 only. So -- which I think is where those</p> <p>12 documents are.</p> <p>13 In the litigation I -- in the</p> <p>14 litigation I worked in, I am aware of what</p> <p>15 other experts on both sides have said. I</p> <p>16 don't believe I've seen an analysis from a</p> <p>17 defense expert that is -- that is like</p> <p>18 Dr. Longo's, at least in the litigation I've</p> <p>19 worked in. Certainly I would consider that</p> <p>20 and look at that if it's available, and I</p> <p>21 would consider it.</p> <p>22 I would point out, Dr. Longo's</p> <p>23 analysis is not the piece of evidence that</p> <p>24 you start with, though. You start with what</p> <p>25 I discuss in the published literature first,</p>
Page 247	Page 249
<p>1 expert for the defense versus an expert for</p> <p>2 the plaintiff, you judge that information</p> <p>3 based on what you know. And if I don't have</p> <p>4 information to discount it, I will not</p> <p>5 discount it.</p> <p>6 But absolutely, I understand.</p> <p>7 Just as people we all -- look at some of the</p> <p>8 things I've published where I have said my</p> <p>9 work was sponsored by the American Chemistry</p> <p>10 Council. You know, people -- that's why you</p> <p>11 disclose the conflicts. You put it there so</p> <p>12 people can weigh it if they want, but it</p> <p>13 doesn't mean you discount the work</p> <p>14 automatically.</p> <p>15 And so I think for any paper,</p> <p>16 plaintiff, defense, whoever it is that's</p> <p>17 writing it, you need to consider it based on</p> <p>18 the information you have. And if you believe</p> <p>19 that you have information to indicate that</p> <p>20 there's some issue with the reliability of</p> <p>21 the analysis, then absolutely you consider</p> <p>22 that.</p> <p>23 Q. So, for example, when you rely</p> <p>24 on Dr. Longo's characterization of the</p> <p>25 constituent components in samples that he has</p>	<p>1 because there are published documents out</p> <p>2 there in the literature that describe exactly</p> <p>3 what Dr. Longo is now describing.</p> <p>4 Q. What published documents are</p> <p>5 those?</p> <p>6 A. Those are Dr. Blount's reports</p> <p>7 in 1991, which is before the litigation came</p> <p>8 about, is my understanding.</p> <p>9 There's also -- there's five or</p> <p>10 six. I can tell you the paragraph.</p> <p>11 Q. For Johnson's baby powder, I</p> <p>12 would be interested in that, yes.</p> <p>13 A. So I -- I'll have to look and</p> <p>14 see if it's Johnson's baby powder only, but</p> <p>15 certainly there is other evidence on the</p> <p>16 issue of asbestos contamination and</p> <p>17 specifically in talc.</p> <p>18 So I -- you want me to find the</p> <p>19 paragraph for you?</p> <p>20 Q. Please. If you think there is</p> <p>21 published literature documenting asbestos in</p> <p>22 Johnson's baby powder, I would like to see</p> <p>23 that.</p> <p>24 A. So this is my paragraph 32.</p> <p>25 And I'd have to pull each of these articles</p>

Confidential - Pursuant to Protective Order

Page 250	Page 252
<p>1 out because I don't recall what each of them</p> <p>2 says. But I'm pointing to Paoletti, Blount,</p> <p>3 Mattenklott, Moon, Gordon, Anderson, Rohl,</p> <p>4 Pooley and Rowlands, Blejer and Arlon,</p> <p>5 Cralley, Millman.</p> <p>6 And then I cite -- and then of</p> <p>7 course the next piece of evidence is there</p> <p>8 are actually documents from J&J and Imerys</p> <p>9 that show detection of asbestos or</p> <p>10 asbestos-like minerals in talc.</p> <p>11 Q. As you sit here today, can you</p> <p>12 identify which of these published articles</p> <p>13 that you list in paragraph 32 relate to</p> <p>14 Johnson's baby powder?</p> <p>15 A. I would have to pull them to</p> <p>16 answer that.</p> <p>17 Q. Okay.</p> <p>18 A. As I sit here, I'd have to pull</p> <p>19 them. But I would refer you -- I know at</p> <p>20 least some of them do based on the statement</p> <p>21 I've made, but...</p> <p>22 Q. So you did not make an attempt</p> <p>23 in this paper to identify which products were</p> <p>24 being analyzed in these specific articles.</p> <p>25 It's not indicated on the face of this</p>	<p>1 look.</p> <p>2 Q. Have you reviewed Dr. Blount's</p> <p>3 deposition?</p> <p>4 A. I have reviewed a -- something</p> <p>5 by Dr. Blount. Whether it was trial</p> <p>6 testimony or deposition, I have seen</p> <p>7 something, yes, that she has said regarding</p> <p>8 this issue.</p> <p>9 Q. To the extent that there is</p> <p>10 confusion about whether or not a sample</p> <p>11 tested by Dr. Blount is in fact Johnson's</p> <p>12 baby powder, would you reduce the weight that</p> <p>13 you give that particular piece of evidence in</p> <p>14 evaluating whether asbestos has been present</p> <p>15 in Johnson's baby powder?</p> <p>16 MS. PARFITT: Objection. Form.</p> <p>17 MR. MEADOWS: Objection.</p> <p>18 THE WITNESS: I don't know</p> <p>19 reduce the weight because -- because</p> <p>20 there's -- there are plenty of</p> <p>21 documents here that talk about that.</p> <p>22 I would consider it --</p> <p>23 certainly it would -- it's not so much</p> <p>24 weight. It's a different bin. We'll</p> <p>25 call it a bin, a different bin of</p>
Page 251	Page 253
<p>1 paragraph, correct?</p> <p>2 A. I don't tell you on the face,</p> <p>3 but you if read the sentence I said, "When</p> <p>4 commercially available, talcum powder</p> <p>5 products were analyzed, including powders</p> <p>6 sold by Johnson & Johnson. The data has</p> <p>7 shown that the powders contained varied</p> <p>8 levels" -- and I'm saying "fibers," so it's</p> <p>9 just asbestos -- "including fibers that</p> <p>10 stated to be asbestos."</p> <p>11 So to tell you which of those,</p> <p>12 I'd have to pull them. And I apologize, I</p> <p>13 didn't bring them all with me.</p> <p>14 Q. Have you been provided --</p> <p>15 you're aware that Dr. Blount's paper does not</p> <p>16 identify Johnson's baby powder in the face of</p> <p>17 the article, correct?</p> <p>18 A. I believe that's true. You'd</p> <p>19 have to go to her deposition, I believe,</p> <p>20 where she's given -- where she discusses what</p> <p>21 the source of that was, and maybe even a --</p> <p>22 there may even be a separate document,</p> <p>23 actually, not a deposition, that was -- that</p> <p>24 was in the files of Johnson & Johnson that</p> <p>25 goes along with that, but I'd have to go</p>	<p>1 information. There's information on</p> <p>2 talc powders generally, and then</p> <p>3 there's some information that's</p> <p>4 specific to certain body powders.</p> <p>5 So certainly -- would I pay</p> <p>6 attention if they identified it? Yes.</p> <p>7 But in the statement I'm making</p> <p>8 here, I'm not claiming that every one</p> <p>9 of these is relating to just the</p> <p>10 powder sold by Johnson & Johnson.</p> <p>11 This is across the available</p> <p>12 information that's public and then</p> <p>13 also the information that's available</p> <p>14 in the files of Johnson & Johnson.</p> <p>15 QUESTIONS BY MS. BRANSCOME:</p> <p>16 Q. What is your definition of</p> <p>17 asbestos?</p> <p>18 A. My definition of asbestos is</p> <p>19 exactly what the different documents describe</p> <p>20 it typically. It's a fibrous mineral,</p> <p>21 typically. It occurs in a variety of</p> <p>22 different forms. Most of the times they'll</p> <p>23 say "asbestos." Sometimes they'll say</p> <p>24 "chrysotile." Sometimes they'll say</p> <p>25 "tremolite." Sometimes they'll say</p>

Confidential - Pursuant to Protective Order

Page 254	Page 256
<p>1 "anthophyllite." Those are the three most 2 common ones I see. But those are all mineral 3 forms of asbestos. 4 So just like IARC puts those 5 all within one bin, I'm putting those all in 6 one bin because they have a similar toxicity 7 profile. 8 Q. Is it your view that each of 9 the different types of asbestos has the same 10 toxicity profile? 11 A. They all have the same ability 12 to cause cancer, but they have different 13 potencies. So they do have -- there will be 14 some differences in the dose response and the 15 potency of them, but certainly they've all 16 been linked as being carcinogens by IARC. 17 And I would agree, when you 18 look at their data, there is data and 19 evidence to indicate that. 20 Q. Which type of asbestos is the 21 most potent? 22 A. For which end point? For lung 23 cancer? I believe chrysotile is. For other 24 end points, I'd have to go look. I mean, 25 chrysotile is the sharp -- is the sharp --</p>	<p>1 A. Has to do with the fact that we 2 have a complex mixture that has multiple 3 carcinogenic substances. 4 And asbestos is important from 5 the aspect of the way that it has been 6 assessed even by regulatory bodies, the idea 7 that even very low levels of fibers pose a 8 cancer hazard and a cancer risk in 9 individuals have been shown to be 10 carcinogenic. 11 So that's what I'm saying about 12 potency of asbestos is different than potency 13 of some other carcinogens that you might look 14 at. But the importance of it is it's a 15 complex mixture, talc, body powders, a 16 complex mixture that includes constituents 17 that are known human carcinogens as well as 18 some that are -- been ranked other ways by 19 regulatory bodies. 20 Q. If Johnson's talcum powder 21 products do not contain asbestos, does that 22 change your opinion with respect to the risk 23 they pose with respect to ovarian cancer? 24 A. No, and I think that was very 25 clear if you looked at my first report. So</p>
Page 255	Page 257
<p>1 the sharded-type structure. 2 But there's data on fibrous -- 3 the fiber -- the fibrous forms of asbestos 4 rather than the -- or the amphibole forms of 5 asbestos as opposed to chrysotile, which is 6 the serpentine form. 7 Q. Do you consider yourself an 8 expert in asbestos? 9 A. Not in -- 10 MS. PARFITT: Objection. 11 THE WITNESS: Not the geology 12 of asbestos, no. 13 I have expertise in toxicology 14 as it relates to interpretation of the 15 data related to asbestos. I have 16 never give -- given testimony in a 17 case on asbestos, but it's something 18 I've studied in the past in my work as 19 a toxicologist, not as a testifying 20 expert. 21 QUESTIONS BY MS. BRANSCOME: 22 Q. What role does your analysis of 23 the possibility that there may be asbestos in 24 Johnson's talcum powder products play in your 25 risk assessment in the MDL?</p>	<p>1 even -- there's -- I don't think in any of my 2 reports I've opined that without looking at 3 the complex mixture that we wouldn't be here. 4 In other words, I have not 5 opined that if it doesn't have -- if it 6 doesn't have asbestos, it's not a risk. I 7 have not opined that, and I don't believe 8 that, because I think there is independent 9 risk for the fact that we have a complex 10 mixture of talc that has been tested and 11 shown to be carcinogenic. 12 It's my opinion, I told you -- 13 maybe it wasn't you. I may have told this 14 yesterday, I'm sorry, to Mr. Smith that I 15 believe that there is evidence to show that 16 there is a significant exposure to asbestos 17 based on the data that's been collected. 18 But certainly, you know, in 19 some -- the data has shown that in the assays 20 that have been done or the analyses that have 21 been done that you can't say that talc is 22 asbestos-free. 23 Q. Well, so -- 24 A. So -- 25 Q. -- the question I have</p>

Confidential - Pursuant to Protective Order

Page 258	Page 260
<p>1 specifically relates to ovarian cancer. 2 Is it your view that through an 3 exposure route that is relevant for ovarian 4 cancer, that the use of Johnson's talcum 5 products involve a substantial exposure to 6 asbestos? 7 A. I believe based on the use of 8 the products that -- where the data has been 9 collected that there would be a substantial 10 exposure to asbestos, regardless of how 11 you're exposed, perineal -- perineally or by 12 inhalation. 13 Q. What is your basis for reaching 14 that conclusion? 15 A. It's looking at the number of 16 fibers that have been detected in the 17 products, in looking at the -- the widespread 18 nature of the presence of asbestos fiber -- 19 asbestos in the talcum powder products and 20 the fact that even though it's at a very low 21 level by their -- their level of detection, 22 again, can't be said to be asbestos-free. 23 So regardless of whether it's 24 talc that's being applied perineally or a 25 talc that you're inhaling while you're</p>	<p>1 asbestos above background through the 2 perineal use of Johnson's talcum powder 3 products? 4 MR. MEADOWS: Objection. 5 MS. PARFITT: Objection. 6 THE WITNESS: I don't think 7 that's the opinion I have formed to 8 date, but certainly the opinion I have 9 formed is that the data I have seen 10 indicates that you can't separate out 11 talc without asbestos versus talc with 12 asbestos in the information that's 13 been collected. Because there's -- 14 all -- the information that's been 15 collected has shown there's no 16 evidence that asbestos-free talc is 17 available. 18 If by asking that question 19 you're trying to say that it's the 20 asbestos alone that's causing the 21 cancer, that is not my opinion. So 22 that is when the dose issue would 23 become very important for asbestos. 24 QUESTIONS BY MS. BRANSCOME: 25 Q. Okay.</p>
Page 259	Page 261
<p>1 applying it perineally, the fibers are still 2 going to be present within that talc. 3 Q. Have you or anyone done an 4 analysis of the dose of asbestos to which 5 someone might be exposed perineally? 6 A. I haven't done a specific 7 calculation, no. 8 Q. Has anyone done that 9 calculation? 10 MS. PARFITT: Objection. Form. 11 QUESTIONS BY MS. BRANSCOME: 12 Q. That you have seen? 13 MS. PARFITT: Objection. 14 THE WITNESS: I'm trying to 15 remember whether I saw that done in 16 any of the documents related to 17 Dr. Longo. 18 I don't know. I'd have to go 19 look. 20 QUESTIONS BY MS. BRANSCOME: 21 Q. Okay. So as you sit here 22 today, can you give an opinion to a 23 scientific degree of certainty, reasonable 24 degree of scientific certainty, that an 25 individual would be exposed to a dose of</p>	<p>1 A. So that's -- so that's a 2 different question I have not answered. 3 Q. And in reaching your opinion 4 that there is no evidence that asbestos-free 5 talc exists, you have not been provided with 6 the reports by the defense experts, including 7 Dr. Matthew Sanchez, analyzing Johnson's 8 talcum powder products for the presence or 9 absence of asbestos, correct? 10 MS. PARFITT: Objection. Form. 11 I think you're aware that the 12 MDL expert reports have not yet been 13 provided to us. 14 MS. BRANSCOME: Yeah. 15 MS. PARFITT: I'm just making a 16 point. 17 THE WITNESS: I have not seen a 18 report by Dr. Sanchez. I assume I 19 will, because typically after -- later 20 in the litigation, once all experts 21 have been deposed or revealed, I'm 22 usually given defense expert reports 23 and their deposition testimony. So I 24 expect to see that; I just haven't 25 seen it yet.</p>

Confidential - Pursuant to Protective Order

Page 262	Page 264
<p>1 QUESTIONS BY MS. BRANSCOME: 2 Q. And you haven't seen it in any 3 of the cases in which you've rendered an 4 opinion, correct, not just the MDL? 5 A. Well, none of the cases that I 6 have worked in have involved the issue of 7 looking for asbestos exposure. 8 The cases I have worked on have 9 been talking about talc exposure that may 10 include asbestos as a constituent, but it 11 wasn't focused on asbestos exposure. 12 So, no, none of the cases I 13 worked on have provided testimony in that 14 area. 15 You understand what I'm saying? 16 Q. Let me just make it clear. You 17 have not, in any of the cases in which you 18 have offered opinions with respect to the 19 contents of talc, been provided with an 20 expert report or testimony by Dr. Sanchez 21 about what he did or did not find in 22 Johnson's talcum powder products with respect 23 to asbestos? 24 MS. PARFITT: Objection. Form. 25 THE WITNESS: So I can't tell</p>	<p>1 application for any of the heavy metals. So 2 the three that I've mentioned, no, I have not 3 done that calculation. 4 Q. You would agree, based on your 5 training and experience as a toxicologist, 6 that in order for an agent -- and we can talk 7 specifically about a metal -- to present a 8 risk of cancer it needs to be bioaccessible, 9 correct? 10 A. If by bioaccessible you are not 11 limiting that definition to solubilized into 12 the blood and carried systematically, yes, I 13 would agree with that. Bioaccessible meaning 14 it has to be in a form that can somehow 15 interact with the tissue, yes, I agree with 16 that. But it could be as simple as tissue 17 contact versus needing to be solubilized. 18 Q. Okay. Is silica bioaccessible? 19 A. It depends on the form of the 20 silica. So silica particles can be 21 bioaccessible if inhaled and found on the 22 surface of the lung. That can cause injury 23 at the site of the lung. So that's an 24 accessibility to that particular tissue that 25 it contacts.</p>
Page 263	Page 265
<p>1 you that I have not. I don't recall 2 it. That's all I can say. I don't 3 recall that name. 4 QUESTIONS BY MS. BRANSCOME: 5 Q. It's certainly not something 6 you discuss in your report, correct? 7 A. No, I do not. And I don't know 8 that it's in my reliance materials. That's 9 why I'd ask you to look there, because if 10 it's in my reliance materials, then I've seen 11 it. 12 Q. Okay. 13 A. And I mean big reliance 14 material list, not my reference list. 15 Q. All right. With respect to the 16 other potential constituents of talc, have 17 you done any analysis to provide an answer as 18 to how much -- what dose of chromium, for 19 example, an individual might be exposed to 20 through the perineal use of Johnson's talcum 21 powder products over a lifetime? 22 A. No, and I have -- well, I know 23 it's a separate deposition. We discussed 24 this yesterday. No, I have not done a -- a 25 calculation of a potential dose with perineal</p>	<p>1 Q. We talked earlier -- it's 2 somewhat related to bioaccessibility, but we 3 talked about the way in which different 4 particles might move specifically through the 5 genital tract in women. 6 Do you recall that? 7 A. Yes. A general discussion. 8 Q. Yes. 9 And when you testified that 10 starch and talc might not move at the same 11 rate, do you have an opinion as to which 12 might move more quickly through the tract? 13 A. I haven't formed that opinion, 14 no. 15 Q. Okay. And do both talc and 16 starch particles remain in the body for the 17 same length of time? 18 A. I haven't done an analysis to 19 see if the data tells us what the -- what the 20 differences might be. I would expect there 21 to be differences, which is what I told you 22 earlier, because I would expect the starch to 23 be able to be solubilized, where I would not 24 necessarily expect the talc to act in that 25 same manner.</p>

67 (Pages 262 to 265)

Confidential - Pursuant to Protective Order

Page 266	Page 268
<p>1 Q. Is cornstarch capable of 2 causing an inflammatory process? 3 A. It can. It is -- but it is -- 4 it's a different level of risk for 5 inflammatory responses than is talc, just by 6 its chemical nature. 7 Q. Have you done an analysis in 8 your report that examines the differences 9 between the inflammatory response that can be 10 triggered by talc as opposed to cornstarch? 11 A. I haven't analyzed inflammatory 12 response. Instead, what I've done is done a 13 comparison of what the toxicity -- the 14 differences in the toxicity potential have 15 been described in medical literature, and I 16 cite -- I have a paragraph where I cite to 17 some sources that talk about the differences 18 in the toxicity potential or biocompatibility 19 of starch versus talc. 20 Q. Now, I had a question about 21 your supplemental report that was marked as 22 Exhibit 3 to the deposition. 23 At paragraph 67... 24 A. Okay. 25 Q. You identify here six heavy</p>	<p>1 only three heavy metals: chromium, cobalt 2 and nickel. 3 Do you see that? 4 A. Yes. 5 Q. Why did you remove three of the 6 heavy metals? 7 A. It's not so much removing. 8 Those three heavy metals that I focused on in 9 my MDL report are ones that have been talked 10 about with a similar mechanism of action as 11 far as irritation and biologic -- biologic 12 plausibility mechanism being irritation and 13 inflammation. 14 So that's why I focus on those 15 three, which may not -- which is not 16 necessarily the case for some of the others, 17 even though they're also -- have a 18 carcinogenic hazard, pose a risk. 19 Q. So in your -- as part of your 20 risk assessment that you performed in the 21 MDL, are you offering the opinion that to the 22 extent they exist in any of the Johnson 23 talcum powder products, that arsenic, lead -- 24 A. Cadmium. 25 Q. -- and cadmium play any role in</p>
Page 267	Page 269
<p>1 metals - arsenic, chromium, lead, cobalt, 2 cadmium and nickel - that in your 3 supplemental report dated August 29, 2018, 4 you say have been reported across lots of 5 talc powders. 6 Do you see that? 7 A. Are you in -- now you're in my 8 MDL report or here? 9 Q. No. 10 A. Oh, so where are you? I'm 11 sorry. 12 Q. Same report. It's the sentence 13 that begins at the bottom of page 6. 14 A. Okay. Hold on. 15 About that they have varied at 16 the levels -- 17 Q. Yes. So you identify six 18 different types of heavy metals. 19 Do you see that there? 20 A. Yes, I do. 21 Q. Okay. And the question I had 22 for you was that in your report in the MDL, 23 if you look at paragraph 36 -- 24 A. Yes. 25 Q. -- you identify -- you identify</p>	<p>1 the risk of developing ovarian cancer? 2 A. That is not an opinion that I 3 would be offering in the MDL. 4 Q. Okay. Now, you talk about 5 these heavy metals having been classified by 6 different agencies as either known probable 7 or possible human carcinogens, correct? 8 A. You're in my MDL report again? 9 Q. Oh, yes. 10 A. Okay. I'm sorry. Okay. Let 11 me get there. 12 Yeah, I do have that 13 discussion. I'm just trying to find it. 14 Q. Sure. 15 A. Okay. Yes, I'm there. 16 Q. Is it your view, based on your 17 expertise, that because a compound can cause 18 one type of cancer, it can cause all types of 19 cancer? 20 A. No, not necessarily. It 21 depends on the -- well, it depends on a 22 couple of things. It depends on what's been 23 studied. Have all types of cancer even been 24 studied. And then it also -- it also depends 25 upon, I believe, the route of exposure as</p>

68 (Pages 266 to 269)

Confidential - Pursuant to Protective Order

Page 270	Page 272
<p>1 well. So can it get to where it could cause 2 that, could it distribute there. And then in 3 addition to that, what data has been 4 collected. Is there enough data, for 5 example, to show that there's extrapolation 6 from animals to humans in the types of tumors 7 or is it -- or if we have good human data, 8 then we would focus on the types of cancers 9 that you're seeing in humans, for example. 10 Q. Okay. But you recognize even 11 where there is complete data some compounds 12 can cause one type of cancer and they are 13 incapable of causing another type, correct? 14 MS. PARFITT: Objection. Form. 15 THE WITNESS: I don't know 16 about incapable, but I would agree 17 that you certainly would see -- you 18 could potentially see different 19 observations. 20 If you're talking about animals 21 versus humans, or are you talking 22 about -- 23 QUESTIONS BY MS. BRANSCOME: 24 Q. If humans. 25 A. Based on what you had seen in</p>	<p>1 you can extrapolate with scientific basis 2 from one type of cancer cause to ovarian 3 cancer with respect to the heavy metals 4 specifically? 5 A. Well, I haven't attempted to 6 that, because I haven't attempted to define a 7 independent risk for each of those metals 8 individually. 9 The issue -- the issue I have 10 with those metals is -- there's a paragraph 11 here where I talk about pathogenesis of 12 carcinogenesis, where I talk about different 13 stages of cancer development and the fact 14 that inflammatory responses may be operating 15 at all those different stages. 16 So the issue is you have 17 potential -- you have compounds that are 18 known to produce cancer or have been shown to 19 have a potential risk of cancer. They share 20 a similar mechanism to talc, so as a result 21 of that, they factor into your risk 22 assessment as far as there being an exposure 23 to a mixture. 24 But on the issue of ovarian 25 cancer, I'm looking at the data that's been</p>
Page 271	Page 273
<p>1 the animals; is that what you're asking me? 2 Q. Yes. 3 A. Yes. So, yes, there is not 4 always a one-to-one concordance. So that's 5 why -- that's why I made the comment that 6 it's important to have some human data or 7 experience, so that you can put in context 8 the data you collected in animals. 9 I would say to you there are 10 certain kinds of tumors in animals, for 11 example, that are shown to be not relevant at 12 all to human risk assessment. Like four 13 stomach tumors in rats is an example. I've 14 dealt with that one a lot. 15 Q. What types of cancer -- type or 16 types of cancer are the basis for the 17 classification of chromium as a known human 18 carcinogen by IARC? 19 A. So I have to pull it out, but I 20 believe that there may be some GI cancers and 21 maybe some skin cancers, but I'm not sure. 22 I've got it pull it out. It's been a while 23 since I've looked at it. 24 Q. Okay. Have you done an 25 analysis to evaluate whether or not the types</p>	<p>1 collected on talc itself, which would be talc 2 with the constituents that could include the 3 metals. But certainly I'm not saying that it 4 is -- without the presence of one or the 5 other of these there would be no risk of 6 ovarian cancer. I'm not saying that either. 7 Q. So my question is, though, can 8 you point me either to scientific literature 9 directly documenting that these heavy metals 10 can cause ovarian cancer or to scientific 11 literature that enables you to extrapolate 12 from the types of cancer that they are known 13 or believed to cause to ovarian cancer? 14 A. So I -- on the issue of can I 15 point you to the data on ovarian cancer, I'd 16 have to go back. I can't answer that without 17 looking at the assessments. 18 But on the other -- second 19 question you asked me, that's the question I 20 was just trying to answer before. It's the 21 idea that regardless of where the cancer is 22 developing, the fact that these compounds 23 have the ability to stimulate similar toxic 24 responses in tissues could lead to a -- 25 setting up a situation where the -- where the</p>

Confidential - Pursuant to Protective Order

Page 274	Page 276
<p>1 tissue is primed for cancer development.</p> <p>2 Q. And do you have --</p> <p>3 A. And so that --</p> <p>4 Q. Sorry.</p> <p>5 A. And that has to do with the</p> <p>6 basic science of carcinogenesis when you look</p> <p>7 at underlying mechanisms, especially with</p> <p>8 tissue contact, direct tissue contact, with</p> <p>9 irritants or inflammatory processes.</p> <p>10 But I would -- I am not -- I</p> <p>11 have not formed the opinion, again, that with</p> <p>12 or without either one of these that I would</p> <p>13 expect ovarian cancer to be the target. I'm</p> <p>14 saying that ovarian cancer risk is increased</p> <p>15 based on exposure to talc, which includes a</p> <p>16 variety of constituents.</p> <p>17 Q. Okay. And do you cite anywhere</p> <p>18 in your report to studies documenting -- I</p> <p>19 know you said you'd need to go look at them,</p> <p>20 but I'm asking if it's in your report</p> <p>21 anywhere a discussion of any studies showing</p> <p>22 that the particular heavy metals that you</p> <p>23 cite as potential constituents of Johnson &</p> <p>24 Johnson's products have been demonstrated to</p> <p>25 increase a risk for ovarian cancer on their</p>	<p>1 So, again, that's what I'm</p> <p>2 pointing to and why I have cited the data.</p> <p>3 Q. Now, you talked about -- when</p> <p>4 we were discussing mechanism, you said that</p> <p>5 inflammation alone is not necessarily</p> <p>6 sufficient to cause cancer, correct?</p> <p>7 A. Yes, I did.</p> <p>8 Q. All right. Do you have</p> <p>9 scientific studies that show that any of the</p> <p>10 heavy metals or the fragrance constituents</p> <p>11 that you identify as potential carcinogens</p> <p>12 create -- generate phenotypic changes like</p> <p>13 you discussed were next for the formation of</p> <p>14 cancer?</p> <p>15 A. I believe that data is</p> <p>16 available on nickel. I need to go back and</p> <p>17 look at chromium and cobalt, but I do believe</p> <p>18 with nickel you'll find similar data on</p> <p>19 tissue irritation and inflammatory processes.</p> <p>20 Nickel is also a sensitizer, so</p> <p>21 it has interaction with the immune system, so</p> <p>22 I do believe that for nickel you can find</p> <p>23 some of that data.</p> <p>24 Q. Okay. But as you sit here</p> <p>25 today, can you point me into any of that</p>
Page 275	Page 277
<p>1 own?</p> <p>2 A. So, no, I haven't addressed</p> <p>3 that in my report. And again, I think that's</p> <p>4 inconsistent with the way I'm using these</p> <p>5 data. But that's fine. I mean, no, I</p> <p>6 haven't done a specific assessment of ovarian</p> <p>7 cancer risk with each of those metals</p> <p>8 individually.</p> <p>9 Q. I would ask the same questions</p> <p>10 for the different fragrance constituents that</p> <p>11 you allege in your report are potential</p> <p>12 carcinogens.</p> <p>13 Have you done any analysis, and</p> <p>14 can you point me to any scientific studies</p> <p>15 that establish that those particular</p> <p>16 compounds are capable of causing ovarian</p> <p>17 cancer?</p> <p>18 A. No, I haven't done that</p> <p>19 analysis, but, again, general principles of</p> <p>20 toxicology and cancer risk assessment, when</p> <p>21 you look at the presence of multiple --</p> <p>22 excuse me, multiple carcinogens with similar</p> <p>23 mechanisms of action, you would assume in</p> <p>24 your risk assessment that those risks could</p> <p>25 be additive.</p>	<p>1 that's discussed in your report?</p> <p>2 A. No specific discussion other</p> <p>3 than, again, all -- the IARC -- I'm citing to</p> <p>4 the IARC assessments, and the IARC</p> <p>5 assessments for each of those discuss</p> <p>6 carcinogenesis and a biologically plausible</p> <p>7 mechanism being linked to the ability of</p> <p>8 these compounds to induce oxidative stress</p> <p>9 and/or inflammatory processes.</p> <p>10 Q. Okay. In your opinion, you</p> <p>11 talk about the mixture of constituents that</p> <p>12 are involved in talc.</p> <p>13 Have you done any analysis to</p> <p>14 look at how the different constituents</p> <p>15 interact with each other?</p> <p>16 A. Well, yes, that's my issue at</p> <p>17 looking at underlying mechanism.</p> <p>18 But are you asking me -- I</p> <p>19 certainly don't have a -- the only studies</p> <p>20 that I have to rely upon on the interaction</p> <p>21 of the mixture is the actual studies on the</p> <p>22 powders themselves, where we know that the</p> <p>23 powders contain constituents other than just</p> <p>24 platy talc.</p> <p>25 Q. Okay. And do the constituents</p>

70 (Pages 274 to 277)

Confidential - Pursuant to Protective Order

Page 278	Page 280
<p>1 need to have the same underlying potential</p> <p>2 carcinogenic mechanism for them to have an</p> <p>3 additive effect?</p> <p>4 A. By general principles of</p> <p>5 toxicology, yes, you look at mode -- mode of</p> <p>6 action or mechanism of action before you</p> <p>7 apply that additivity principle to the cancer</p> <p>8 risk assessment.</p> <p>9 Q. And so as you sit here, you</p> <p>10 believe there have been scientific</p> <p>11 documentation that nickel might operate</p> <p>12 through the same biological mechanism as you</p> <p>13 purport talc to operate, but you're not sure</p> <p>14 about the other heavy metals or the fragrance</p> <p>15 constituents; is that correct?</p> <p>16 MS. PARFITT: Objection.</p> <p>17 THE WITNESS: For the fragrance</p> <p>18 constituents, I'd definitely have to</p> <p>19 pull because I haven't looked at that</p> <p>20 individual assessment in a while.</p> <p>21 For these three, what I do know</p> <p>22 is that they do share the ability to</p> <p>23 at least induce oxidative stress.</p> <p>24 What I can't recall for</p> <p>25 chromium and for cobalt is whether</p>	<p>1 So those two -- we'd have human data</p> <p>2 to show that.</p> <p>3 But on the issue of cobalt, it</p> <p>4 may only be -- I need to go back and</p> <p>5 look, but it may indeed just be animal</p> <p>6 data.</p> <p>7 QUESTIONS BY MS. BRANSCOME:</p> <p>8 Q. And so your basis for that</p> <p>9 would be the IARC classification?</p> <p>10 Is that where I would go to</p> <p>11 look if I wanted to look at it after this</p> <p>12 deposition?</p> <p>13 A. I'd go to the IARC reviews.</p> <p>14 I'd go to those three which I believe I have</p> <p>15 cited down here for you and given you where</p> <p>16 to go to find them.</p> <p>17 Q. Okay. You discuss in your</p> <p>18 report -- and if you'd like to reference it,</p> <p>19 it's paragraph 69 on page 47 -- the concept</p> <p>20 of genotoxic and nongenotoxic carcinogens.</p> <p>21 Do you recall that?</p> <p>22 A. Yes.</p> <p>23 Q. And as you sit here today, is</p> <p>24 it your opinion that talc is more likely a</p> <p>25 nongenotoxic carcinogen?</p>
Page 279	Page 281
<p>1 they're taking it the next step from</p> <p>2 oxidative stress to inflammatory</p> <p>3 process. I believe that they do, but</p> <p>4 I'd have to check, whereas I know</p> <p>5 nickel has been shown to lead to an</p> <p>6 inflammatory process after oxidative</p> <p>7 stress has been induced.</p> <p>8 QUESTIONS BY MS. BRANSCOME:</p> <p>9 Q. And you would agree, even more</p> <p>10 than requiring an inflammatory process, you</p> <p>11 would actually have to see that these</p> <p>12 compounds can generate phenotypic changes,</p> <p>13 correct?</p> <p>14 MS. PARFITT: Objection.</p> <p>15 THE WITNESS: Well, we know</p> <p>16 they do because they've been shown to</p> <p>17 be carcinogenic. If you've been shown</p> <p>18 to be carcinogenic, you've done a</p> <p>19 phenotypic change in the cell from a</p> <p>20 normal cell to a cancer cell.</p> <p>21 So we know they have the</p> <p>22 capability to induce tumors, or</p> <p>23 cancer, all three of those, at least</p> <p>24 in animals if not in humans as well,</p> <p>25 because two of them are known human.</p>	<p>1 A. As the direct insult, yes. And</p> <p>2 I would like to -- I would like to point out</p> <p>3 that in the literature -- the reason I have</p> <p>4 this paragraph here is because in the</p> <p>5 literature in the past, in the area of</p> <p>6 chemicals, it's been -- toxicologists have</p> <p>7 attempted to put two bins, direct genotoxic</p> <p>8 insult versus nondirect genotoxic. It</p> <p>9 doesn't mean you can't get a genotoxic event</p> <p>10 after the initiation.</p> <p>11 So I want to make sure you</p> <p>12 understand that. I'm not saying that there</p> <p>13 is no possibility of this chemical in its --</p> <p>14 in its process of inducing cancer leading to</p> <p>15 indirect genotoxicity, but I'm talking about</p> <p>16 the direct mechanism at the site of the cell.</p> <p>17 So talc, for example, has been</p> <p>18 shown to not be genotoxic in cells. And so</p> <p>19 that's why I believe, then, when I look at</p> <p>20 the rest of the data that fits, that it fits</p> <p>21 the definition of a nongenotoxic carcinogen</p> <p>22 by its initial mechanisms to induce cancer.</p> <p>23 Q. Okay. And if talc is, in fact,</p> <p>24 a nongenotoxic carcinogen, it would suggest</p> <p>25 that there is likely a threshold dose below</p>

Confidential - Pursuant to Protective Order

Page 282	Page 284
<p>1 which it does not have a carcinogenic effect, 2 correct? 3 MS. PARFITT: Objection. 4 THE WITNESS: It is possible, 5 and that's the problem. In order to 6 fully assess that, you would have to 7 have the data to prove it. 8 But that's the assumption. You 9 assume with nongenotoxic carcinogens 10 that you could identify a level where 11 you wouldn't turn on that indirect 12 mechanism. So that -- yes, that is 13 true. 14 QUESTIONS BY MS. BRANSCOME: 15 Q. And you have not been able to 16 identify, nor can you point to, scientific 17 literature that identifies a threshold -- a 18 threshold dose for talc with respect to its 19 carcinogenic potential for ovarian cancer, 20 correct? 21 A. Not a specific dose, but I 22 think that's why I mentioned to you -- and 23 I -- I think that's why Canada, when you look 24 at their document, they talk about 25 discouraging routine use generally. So it's</p>	<p>1 what they've done, but is it possible 2 that they would do it? Any regulatory 3 agency, it's possible they could do 4 it, yes. 5 QUESTIONS BY MS. BRANSCOME: 6 Q. Do you have any information 7 with respect to Health Canada's 8 decision-making, other than what you have 9 read on the face of the documents? 10 A. That is all I have to look at 11 is what is provided on the website. 12 Q. Okay. And so the statement 13 that you think Health Canada was suggesting a 14 dose threshold by their statement of 15 discouraging routine use, you're basing that 16 entirely on what you read on the piece of 17 paper, correct? 18 MS. PARFITT: Objection. Form. 19 THE WITNESS: Well, that's what 20 they state. So, yes, I'm -- I am 21 telling you what I see on their 22 website. If that's what you're asking 23 me, yes, that is true. 24 QUESTIONS BY MS. BRANSCOME: 25 Q. Okay. Can you point me --</p>
Page 283	Page 285
<p>1 the issue of what -- single use of a body 2 powder or an occasional use is a different 3 risk assessment than routine use. 4 So if you want to talk about 5 thresholds that way, that's very imprecise, 6 but you could do that. You can talk about 7 whether or not there -- I do believe there's 8 a different risk profile for one or two uses 9 of talc body powder versus a risk profile of 10 somebody who uses it routinely, because I 11 think that fits that threshold definition. 12 It's the idea that you have limited 13 availability for enough particles to migrate 14 to lead to the tissue toxicity that it cannot 15 be recovered from or repair. 16 Q. You're familiar with the 17 concept of the precautionary principle, 18 correct? 19 A. Yes. 20 Q. All right. And you understand 21 that Health Canada may have made 22 recommendations with respect to product usage 23 that are purely precautionary, correct? 24 MS. PARFITT: Objection. Form. 25 THE WITNESS: I disagree that's</p>	<p>1 well, do you discuss -- have you looked at, 2 as part of your opinion specifically in the 3 MDL, the studies exploring a potential link 4 between asbestos and ovarian cancer? Just 5 asbestos. 6 A. Some of the studies, yes, but I 7 have not -- I have not done a separate risk 8 assessment just for asbestos by itself, 9 because I have not assumed that there is 10 asbestos-only exposure. 11 Does that make sense? 12 But I do cite -- for example, I 13 cite to some of the early literature on -- so 14 this -- I guess where this opinion comes in 15 is on hazard and warning. So in the warnings 16 I talk about when it was known that asbestos 17 was linked with cancer, because the warning 18 standard is not causation proven but the 19 identification of the potential. And so that 20 is in my report on warnings, but that is not 21 within my discussion of the weight of the 22 evidence for risk assessment of the talc 23 product. 24 Q. Okay. 25 A. Does that make sense?</p>

Confidential - Pursuant to Protective Order

Page 286	Page 288
<p>1 Q. Uh-huh.</p> <p>2 For example, have you rendered</p> <p>3 an opinion about what dose of asbestos</p> <p>4 exposure would be necessary to cause ovarian</p> <p>5 cancer in an individual?</p> <p>6 A. No, I have not formed that</p> <p>7 opinion at this time.</p> <p>8 Q. Okay. Do you have an opinion</p> <p>9 about the background level of asbestos to</p> <p>10 which individuals are exposed with no</p> <p>11 increased risk of any type of cancer?</p> <p>12 A. No, I do not have an opinion.</p> <p>13 I do believe others do, but I do not.</p> <p>14 Q. Okay. You may have been asked</p> <p>15 some of these questions before, but I will</p> <p>16 keep them brief.</p> <p>17 Have you ever published any</p> <p>18 articles that state that talc causes ovarian</p> <p>19 cancer?</p> <p>20 A. No, I have not.</p> <p>21 Q. Have you ever publicly</p> <p>22 expressed the opinion that talc increases the</p> <p>23 risk of ovarian cancer outside of literature?</p> <p>24 A. No. My work has been in the --</p> <p>25 in the courtroom.</p>	<p>1 not classified any of the heavy metals that</p> <p>2 you've identified in your MDL report as</p> <p>3 carcinogenic to the ovary?</p> <p>4 A. So the answer is I'd have to</p> <p>5 look. I don't recall that, but I'd have to</p> <p>6 look to confirm.</p> <p>7 Q. Okay.</p> <p>8 A. That's the answer I believe I</p> <p>9 gave a few minutes ago, yes.</p> <p>10 Q. So if I look at the IARC</p> <p>11 website, then I can confirm whether or not</p> <p>12 they have identified any of those as</p> <p>13 carcinogenic to the ovary?</p> <p>14 A. Not so much the web -- well,</p> <p>15 the website or the actual documents. I think</p> <p>16 I would actually point you to the actual</p> <p>17 monograph --</p> <p>18 Q. To the monograph.</p> <p>19 A. -- because there may be</p> <p>20 evidence in there of ovarian cancer as being</p> <p>21 seen in studies. And I'd have to go look.</p> <p>22 Q. Okay. That was not part of</p> <p>23 your consideration here, correct?</p> <p>24 A. So ovarian cancer is part of my</p> <p>25 consideration, but I didn't -- in this part</p>
Page 287	Page 289
<p>1 MS. BRANSCOME: I think we can</p> <p>2 take a break.</p> <p>3 VIDEOGRAPHER: We are going off</p> <p>4 the record at 2:57 p.m.</p> <p>5 (Off the record at 2:57 p.m.)</p> <p>6 VIDEOGRAPHER: We are back on</p> <p>7 the record at 3:13 p.m.</p> <p>8 MS. BRANSCOME: Dr. Plunkett, I</p> <p>9 have no more questions for you on</p> <p>10 behalf of Johnson & Johnson, subject</p> <p>11 to your counsel doing a direct of any</p> <p>12 kind.</p> <p>13 THE WITNESS: Sure. Thank you.</p> <p>14 EXAMINATION</p> <p>15 QUESTIONS BY MS. BOCKUS:</p> <p>16 Q. Good afternoon, Dr. Plunkett.</p> <p>17 You and I have met before. My name is Jane</p> <p>18 Bockus, and as you know, I represent Imerys</p> <p>19 in this case.</p> <p>20 A. Yes.</p> <p>21 Q. Correct?</p> <p>22 I want to go back to just touch</p> <p>23 briefly on a couple of issues that have</p> <p>24 already been addressed.</p> <p>25 Would you agree that IARC has</p>	<p>1 of my evaluation I'm trying to -- trying to</p> <p>2 describe these metals. And this is really</p> <p>3 about mechanism of biologic plausibility and</p> <p>4 the fact that these two things can go</p> <p>5 together, and then the concept of additivity</p> <p>6 is they're on hazard. The idea if you have a</p> <p>7 cancer hazard generally and you have similar</p> <p>8 mode of action, regardless of the tissue, you</p> <p>9 would be expected to have a potential</p> <p>10 additive effect when you do a risk</p> <p>11 assessment.</p> <p>12 So that's my use of that data,</p> <p>13 which is why I didn't do a separate ovarian</p> <p>14 cancer assessment for each of the each</p> <p>15 constituents but just on powder.</p> <p>16 Q. And you discuss that topic on</p> <p>17 page 47, paragraph 68, of your report,</p> <p>18 correct, the -- whether there's an additive</p> <p>19 effect?</p> <p>20 And you cite to Casarett and</p> <p>21 Doull. I don't know if I'm pronouncing those</p> <p>22 names correctly.</p> <p>23 A. I'm sorry, on what page?</p> <p>24 Q. I'm on page 47, paragraph 68.</p> <p>25 A. Okay. Sorry. I should know</p>

Confidential - Pursuant to Protective Order

Page 290	Page 292
<p>1 where it is, but...</p> <p>2 Okay. I'm there, yes. Okay.</p> <p>3 Yes, I do cite to a chapter in</p> <p>4 Casarett and Doull, yes.</p> <p>5 Q. Okay. And Casarett and Doull</p> <p>6 is a resource that you cite to for a couple</p> <p>7 of different toxicological principles that</p> <p>8 you discuss in your -- in your report,</p> <p>9 correct?</p> <p>10 A. Yes, because it's one of the</p> <p>11 most well-recognized textbooks that is used</p> <p>12 across different either universities or</p> <p>13 schools or even in regulatory agencies.</p> <p>14 I would also say I cite EPA</p> <p>15 2000 there. I'm not citing just Casarett,</p> <p>16 but I am citing Casarett as well as an EPA</p> <p>17 guidance document.</p> <p>18 Q. In Casarett and Doull, do they</p> <p>19 actually discuss talcum powder in Chapter 2,</p> <p>20 or is it more just the concept of the</p> <p>21 potential of the effects when you have two</p> <p>22 different chemicals that you're exposed to at</p> <p>23 once or three or four?</p> <p>24 A. It's the latter. It's the --</p> <p>25 because you'll notice the title is</p>	<p>1 a genetically susceptible mouse study</p> <p>2 to hurry the process along to look at,</p> <p>3 but you might not be able to do it</p> <p>4 through perineal exposure. You might</p> <p>5 have to do it through another route</p> <p>6 such as either inhalation or maybe</p> <p>7 even you could -- you could look at it</p> <p>8 through intraperitoneal injections,</p> <p>9 for example.</p> <p>10 QUESTIONS BY MS. BOCKUS:</p> <p>11 Q. Well, and what the textbook</p> <p>12 talks about is the fact that you need to</p> <p>13 study it to find out whether the effects are</p> <p>14 additive, whether the effects are something</p> <p>15 that multiply the risk, you know, so that the</p> <p>16 two together are greater than either one</p> <p>17 alone, or do the effects offset each other</p> <p>18 and reduce the risk, correct?</p> <p>19 A. That is discussed there --</p> <p>20 MS. PARFITT: Objection.</p> <p>21 THE WITNESS: -- which is why</p> <p>22 I've cited the EPA document. Because</p> <p>23 the EPA document addresses the issue</p> <p>24 of mixtures, and this is the issue of</p> <p>25 mode of action. If you have chemicals</p>
Page 291	Page 293
<p>1 "Principles of Toxicology," so it's the</p> <p>2 general chapter teaching principles for risk</p> <p>3 assessment and toxicology as used in risk</p> <p>4 assessment.</p> <p>5 Q. And whether there is an</p> <p>6 additive effect of, say, talc and nickel,</p> <p>7 that's something that an experiment could be</p> <p>8 designed to study, correct?</p> <p>9 MS. PARFITT: Objection.</p> <p>10 THE WITNESS: If you're talking</p> <p>11 generally for cancer and not worried</p> <p>12 about the issue of ovarian cancer, if</p> <p>13 you're talking about cancer, like</p> <p>14 doing an inhalation experiment to look</p> <p>15 what happens to the lung, that you</p> <p>16 could do.</p> <p>17 The problem with the animal</p> <p>18 studies and ovarian cancer due to</p> <p>19 perineal exposure is it's very</p> <p>20 difficult to understand how you design</p> <p>21 a study to expose the animals that way</p> <p>22 reliably in the way that humans are</p> <p>23 exposed.</p> <p>24 But generally you could</p> <p>25 study -- you might even be able to do</p>	<p>1 that you're looking at on the issue of</p> <p>2 additivity or no effect, you will --</p> <p>3 you look at that issue of how they're</p> <p>4 affecting the tissue and underlying</p> <p>5 mechanism.</p> <p>6 But the only way to look at the</p> <p>7 magnitude absolutely of how the risk</p> <p>8 would change is by doing an</p> <p>9 experiment. That is true.</p> <p>10 QUESTIONS BY MS. BOCKUS:</p> <p>11 Q. And to your knowledge, that</p> <p>12 experiment has never been done; is that</p> <p>13 correct?</p> <p>14 A. I can't guarantee that it's</p> <p>15 only been done for nickel and talc alone, but</p> <p>16 I would -- I would state that based on --</p> <p>17 there are studies out there that have been</p> <p>18 done where they've used the body powder that</p> <p>19 we know have metals -- a variety of things</p> <p>20 within it that are not just platy talc, but</p> <p>21 those experiments are that kind of data.</p> <p>22 But as far as gathering</p> <p>23 dose-response information or teasing out</p> <p>24 individual components, that is not available.</p> <p>25 Q. Do you agree that dose response</p>

Confidential - Pursuant to Protective Order

Page 294	Page 296
<p>1 is the fundamental principle of toxicology</p> <p>2 that underpins the effects that chemicals can</p> <p>3 have on living organisms?</p> <p>4 A. When you're talking general</p> <p>5 toxicology, yes, I think it's talked about in</p> <p>6 the textbook.</p> <p>7 Q. And you agree that it is the</p> <p>8 dose of the chemical and the pattern of</p> <p>9 exposure that determines whether a chemical</p> <p>10 produces an adverse effect on an organism,</p> <p>11 not simply the presence of the chemical?</p> <p>12 A. For a typical dose-response</p> <p>13 relationship for non -- for nongenotoxic</p> <p>14 events, absolutely, I would agree that is</p> <p>15 probably true. And I don't mean nongeno --</p> <p>16 noncancer events.</p> <p>17 In the issue of cancer biology,</p> <p>18 some of those issues don't hold all the time.</p> <p>19 In other words, there are certain chemicals</p> <p>20 and certain ways of looking at cancer risk</p> <p>21 assessment where you can't assume where the</p> <p>22 threshold is or identify what a safe dose</p> <p>23 would be. But certainly I agree on the issue</p> <p>24 of noncancer risk assessment generally, or</p> <p>25 general end points of toxicity, that is true.</p>	<p>1 A. That is true with the exception</p> <p>2 of Parmley and Woodruff, which addresses this</p> <p>3 issue of --</p> <p>4 MS. PARFITT: Objection.</p> <p>5 THE WITNESS: Talks about the</p> <p>6 issue of exposure from the outside to</p> <p>7 the inside.</p> <p>8 But the data that is collected</p> <p>9 with the different studies they have</p> <p>10 deposited at some point -- at some</p> <p>11 position within the vagina, that is</p> <p>12 true.</p> <p>13 QUESTIONS BY MS. BOCKUS:</p> <p>14 Q. And that is not how talc is</p> <p>15 deposited in women who use it regularly in</p> <p>16 their daily routine, correct?</p> <p>17 MS. PARFITT: Objection.</p> <p>18 Misstates the evidence.</p> <p>19 THE WITNESS: So I would say</p> <p>20 that depends on what women are doing.</p> <p>21 Perineal application, for example,</p> <p>22 application on the underwear, can lead</p> <p>23 to contact of the vaginal opening</p> <p>24 depending on the woman.</p> <p>25 For example, a woman who has</p>
Page 295	Page 297
<p>1 Q. And again, do you agree that in</p> <p>2 general toxicology the effects that might be</p> <p>3 reported at high doses will not occur at</p> <p>4 lower doses if the concentration at the site</p> <p>5 of action falls below the threshold for</p> <p>6 toxicity?</p> <p>7 A. Yes, that could -- that could</p> <p>8 be possible, yes.</p> <p>9 Q. And do you agree that</p> <p>10 evidence-based toxicology and epidemiology</p> <p>11 dictates that the dose of the chemical is the</p> <p>12 critical factor when examining the risk posed</p> <p>13 by a chemical, not just its presence even in</p> <p>14 the human body?</p> <p>15 A. I would say that's generally</p> <p>16 true, yes, which is why I have attempted to</p> <p>17 look at the dose-response relationship as</p> <p>18 well as the prevalence of the contact.</p> <p>19 Q. And with regard to the human</p> <p>20 studies that you cite, would you agree that</p> <p>21 none of the studies that you cite in your</p> <p>22 report that have to do with migration of</p> <p>23 particles within the genital tract of the</p> <p>24 female involve applications to the perineum</p> <p>25 or outside of the genital tract?</p>	<p>1 a -- had many children has a tract</p> <p>2 that is stretched. There, indeed, you</p> <p>3 can have more direct contact than you</p> <p>4 can with a very tight -- so I would</p> <p>5 say it depends on the woman and it</p> <p>6 depends on the situation.</p> <p>7 But I do think it's generally</p> <p>8 accepted, based on my review of the</p> <p>9 literature, that there is the</p> <p>10 opportunity for exposure internally</p> <p>11 from perineal application.</p> <p>12 QUESTIONS BY MS. BOCKUS:</p> <p>13 Q. And if I understand what you</p> <p>14 testified to earlier today and yesterday, you</p> <p>15 don't have any data that would advise on --</p> <p>16 out of the talc that is deposited in the</p> <p>17 underwear, what percentage of it makes it</p> <p>18 into the reproductive tract?</p> <p>19 A. That's the data that's missing,</p> <p>20 that is true. And unfortunately, no one has</p> <p>21 done a study. It would be -- if there was a</p> <p>22 way to do that, it would be interesting to do</p> <p>23 that. I just don't see how you design that</p> <p>24 study, especially knowing the hazard of talc</p> <p>25 at this point. I think that would be a</p>

75 (Pages 294 to 297)

Confidential - Pursuant to Protective Order

Page 298	Page 300
<p>1 difficult study to get approval for.</p> <p>2 Q. And do you have an opinion as</p> <p>3 to whether it is even correct that each day</p> <p>4 that a woman uses talc in her underwear, that</p> <p>5 some of the talc makes its way to the ovary?</p> <p>6 MS. PARFITT: Objection. Form.</p> <p>7 THE WITNESS: Have I -- can I</p> <p>8 quantify that?</p> <p>9 No, I haven't quantified it. I</p> <p>10 think I got asked that earlier. I</p> <p>11 can't quantify the amount that gets</p> <p>12 there. Or, I'm sorry, I may have</p> <p>13 misheard the start of your question.</p> <p>14 I apologize.</p> <p>15 QUESTIONS BY MS. BOCKUS:</p> <p>16 Q. Yeah, I'm really asking: Do</p> <p>17 you have an opinion as to whether it happens</p> <p>18 every single time a woman applies talc to her</p> <p>19 perineal area? Does some of that talc make</p> <p>20 it to her ovary?</p> <p>21 MR. MEADOWS: Objection.</p> <p>22 MS. PARFITT: Objection.</p> <p>23 THE WITNESS: I don't think I</p> <p>24 stated it quite that way, but</p> <p>25 certainly I think the opportunity is</p>	<p>1 migration occurs every day, once a week, once</p> <p>2 a month?</p> <p>3 MS. PARFITT: Objection. Form.</p> <p>4 THE WITNESS: I haven't</p> <p>5 formulated my point -- my opinion</p> <p>6 quite that way; however, I do believe</p> <p>7 that it is something that is going to</p> <p>8 happen routinely with exposure. I do</p> <p>9 believe that migration is something</p> <p>10 that is going on routinely with</p> <p>11 application.</p> <p>12 So with applications, I do</p> <p>13 believe that that is, but I can't tell</p> <p>14 you that this amount has migrated on</p> <p>15 this particular day with this</p> <p>16 particular application, no. That --</p> <p>17 the data that we have collected is not</p> <p>18 there to allow us to do that.</p> <p>19 QUESTIONS BY MS. BOCKUS:</p> <p>20 Q. How do you define the word</p> <p>21 "routinely" as you're using it in that</p> <p>22 answer?</p> <p>23 A. So that would be the idea of</p> <p>24 repeated exposures, you know, within a week,</p> <p>25 within a month, within a year. So not --</p>
Page 299	Page 301
<p>1 there with every application. And of</p> <p>2 course it would depend upon the amount</p> <p>3 of time that the contact may be in</p> <p>4 place. But the opportunity is there.</p> <p>5 So, for example, if you applied</p> <p>6 it to your underwear and 30 minutes</p> <p>7 later you go to the bathroom, it's</p> <p>8 very possible that you will have wiped</p> <p>9 away, and so that that application may</p> <p>10 have taken an opportunity away. But I</p> <p>11 do believe that the opportunity is</p> <p>12 there based on the literature I have</p> <p>13 seen.</p> <p>14 And so I haven't formed the</p> <p>15 opinion, though, that it's absolutely</p> <p>16 every time. My opinion, I think, is</p> <p>17 based on the fact that I believe that</p> <p>18 there is data to indicate that</p> <p>19 exposure occurs, and that with</p> <p>20 routine, continual habit, sort of a</p> <p>21 habit exposure, that indeed that there</p> <p>22 was some migration that occurs.</p> <p>23 QUESTIONS BY MS. BOCKUS:</p> <p>24 Q. And is it fair to say that you</p> <p>25 don't have an opinion as to whether that</p>	<p>1 routine to me would not be -- would not be</p> <p>2 applying it once a month one month, waiting</p> <p>3 six months, doing it again, and then not</p> <p>4 doing it until the next year.</p> <p>5 Again, it's the idea -- some</p> <p>6 people may -- routine may be during the hot</p> <p>7 season of the year, they're routinely getting</p> <p>8 daily exposures when it's warm, and during</p> <p>9 the cold weather not applying. But then the</p> <p>10 next year doing -- that's a routine for them</p> <p>11 and their habits based on their pattern of</p> <p>12 exposure.</p> <p>13 Again, we know that talc, when</p> <p>14 it -- when it migrates and gets into the</p> <p>15 body, we have data to show that it is -- it</p> <p>16 is able to persist in the body. The fact</p> <p>17 that you may have not been exposed for three</p> <p>18 months because it was cold doesn't mean that</p> <p>19 you -- that that changes the fact that you're</p> <p>20 still at risk with additional exposures the</p> <p>21 next -- the next time that that habit</p> <p>22 becomes -- comes into place.</p> <p>23 So I think there's multiple</p> <p>24 exposure patterns that are possible, but when</p> <p>25 I use routine, it's something that people are</p>

Confidential - Pursuant to Protective Order

Page 302	Page 304
<p>1 doing throughout their -- a period of their</p> <p>2 life. And so it would be something that</p> <p>3 happens either on a weekly basis for a good</p> <p>4 part of the year. I haven't defined it with</p> <p>5 a particular number, though, no.</p> <p>6 Q. And my question had to do with</p> <p>7 out of the number of times a given woman --</p> <p>8 or an average woman uses talc, what</p> <p>9 percentage of the time does talc make its way</p> <p>10 into her reproductive tract?</p> <p>11 A. So I don't think that</p> <p>12 anybody -- anybody can point to a piece of</p> <p>13 data that tells you that, but, again, it's</p> <p>14 based upon the anatomy, I would expect there</p> <p>15 to be the potential each time it's applied.</p> <p>16 And on your question on</p> <p>17 routine, when I'm talking routine, I'm</p> <p>18 looking at not just frequency but also</p> <p>19 duration. So when I'm talking about dose,</p> <p>20 it's the fact that they do it on a repeated</p> <p>21 basis for a number of -- a period of years as</p> <p>22 well.</p> <p>23 That's what the data shows in</p> <p>24 the human studies. It's not something,</p> <p>25 again, that may have been done routinely for</p>	<p>1 opinion on a set number, no. I can't --</p> <p>2 can't point you a specific number.</p> <p>3 I'm not doing case-specific, so</p> <p>4 I've not looked at any of those pieces of</p> <p>5 information for any given plaintiff.</p> <p>6 Q. And I'm just trying to get the</p> <p>7 threshold.</p> <p>8 A. Uh-huh.</p> <p>9 Q. As I understand it, that is</p> <p>10 part of a toxicological evaluation, is the</p> <p>11 threshold below which there's not an issue.</p> <p>12 So I think you've said you</p> <p>13 don't know if it's less than a year, but you</p> <p>14 think it's more likely than not that it's</p> <p>15 greater than one month.</p> <p>16 MR. MEADOWS: Objection.</p> <p>17 QUESTIONS BY MS. BOCKUS:</p> <p>18 Q. Is that fair?</p> <p>19 A. No, that's not exactly what I'm</p> <p>20 saying. I'm saying we don't know the</p> <p>21 threshold. So as a result, I'm not of the</p> <p>22 opinion that it absolutely can't -- it only</p> <p>23 has to be this long.</p> <p>24 What I'm saying to you is per</p> <p>25 general principles of toxicology and based on</p>
Page 303	Page 305
<p>1 one year, but it does appear to be something</p> <p>2 that's done more -- longer term than that.</p> <p>3 But we can't give a number. We</p> <p>4 have no threshold. We don't know exactly</p> <p>5 what that minimum number is.</p> <p>6 Q. Do you think that the minimum</p> <p>7 number is greater than a year?</p> <p>8 MS. PARFITT: Objection. Form.</p> <p>9 THE WITNESS: I haven't formed</p> <p>10 that opinion, no.</p> <p>11 QUESTIONS BY MS. BOCKUS:</p> <p>12 Q. Do you think it's greater than</p> <p>13 a month?</p> <p>14 MR. MEADOWS: Objection.</p> <p>15 THE WITNESS: Greater than a</p> <p>16 month?</p> <p>17 QUESTIONS BY MS. BOCKUS:</p> <p>18 Q. Yes.</p> <p>19 A. One month in their life?</p> <p>20 Q. One month in their life, where</p> <p>21 they're using it every day for a month.</p> <p>22 A. So I haven't formed that</p> <p>23 opinion at this point in time, but I'd say</p> <p>24 it's more likely to occur when you do it more</p> <p>25 than a month. But I haven't formed an</p>	<p>1 the human data that we have, it indicates</p> <p>2 that it's more frequent than just one month,</p> <p>3 but I can't tell you that it's absolutely not</p> <p>4 possible.</p> <p>5 That's where -- I do think when</p> <p>6 you're talking about those kinds of patterns,</p> <p>7 that's a case-specific issue for individuals,</p> <p>8 because I think that would have to be</p> <p>9 considered for each individual. But</p> <p>10 certainly as a toxicologist, I'm using the</p> <p>11 words "routine," "repeated," "longer</p> <p>12 duration," "chronic exposure." And when I</p> <p>13 defined "chronic" earlier, I talked about</p> <p>14 years of exposure versus just one month.</p> <p>15 That would be consistent with</p> <p>16 what I have said, yes, but I'm not -- I -- I</p> <p>17 certainly don't want to rule out that there</p> <p>18 couldn't be somebody out there that could</p> <p>19 show something different, because it may very</p> <p>20 well be that there are people that you can</p> <p>21 identify with the presence of talc in their</p> <p>22 ovaries and all of their other case-specific</p> <p>23 things that could -- could make that pattern</p> <p>24 a -- make someone be able to draw a</p> <p>25 case-specific, reliable conclusion.</p>

Confidential - Pursuant to Protective Order

Page 306	Page 308
<p>1 But that's not my role. I</p> <p>2 don't do case-specific.</p> <p>3 Q. And I am simply trying to get</p> <p>4 the parameters of your opinions with regard</p> <p>5 to the amount of talc use one would need to</p> <p>6 have before you would feel comfortable --</p> <p>7 well, that in your opinion would be</p> <p>8 sufficient to create a toxic environment.</p> <p>9 MR. MEADOWS: Objection.</p> <p>10 THE WITNESS: Well, that's a</p> <p>11 different question. So toxic</p> <p>12 environment could be with a much</p> <p>13 shorter time exposure, okay?</p> <p>14 QUESTIONS BY MS. BOCKUS:</p> <p>15 Q. Right.</p> <p>16 A. So but if you're talking</p> <p>17 about -- the opinion that I have formed has</p> <p>18 to do with an increased risk of ovarian</p> <p>19 cancer. So with that opinion, that's the</p> <p>20 description, I believe, I was giving this</p> <p>21 morning. It's the idea that the data that</p> <p>22 I've seen indicates that my opinion that</p> <p>23 perineal use of talc body powder products</p> <p>24 increases your risk for ovarian cancer above</p> <p>25 that background level that you know exists.</p>	<p>1 QUESTIONS BY MS. BOCKUS:</p> <p>2 Q. Okay. An ingredient supplier.</p> <p>3 And you agree that Imerys does</p> <p>4 not sell any products to the general public,</p> <p>5 correct?</p> <p>6 MR. MEADOWS: Objection.</p> <p>7 THE WITNESS: I don't know</p> <p>8 that's definitely true, but I'm not</p> <p>9 aware that they do.</p> <p>10 QUESTIONS BY MS. BOCKUS:</p> <p>11 Q. And what Imerys supplies to</p> <p>12 Johnson & Johnson is not a finished cosmetic</p> <p>13 that is ready to be sold on the market,</p> <p>14 correct?</p> <p>15 MR. MEADOWS: Objection.</p> <p>16 MS. PARFITT: Objection.</p> <p>17 THE WITNESS: I don't know that</p> <p>18 I can answer that except in the</p> <p>19 context of Johnson & Johnson's baby</p> <p>20 powder, SHOWER TO SHOWER® and Shimmer,</p> <p>21 it's my understanding that Johnson &</p> <p>22 Johnson mixes -- has some fragrance</p> <p>23 added to the talc.</p> <p>24 I don't believe Imerys does</p> <p>25 that, but I don't know for sure.</p>
Page 307	Page 309
<p>1 That opinion is based on data</p> <p>2 that is -- is -- the supporting data would</p> <p>3 indicate that it has to be a habit, routine,</p> <p>4 a chronic exposure. And so as a</p> <p>5 toxicologist, I've tried to put that in</p> <p>6 context.</p> <p>7 I don't know what else to tell</p> <p>8 you. That's the opinions I have formed to</p> <p>9 date.</p> <p>10 Q. A chronic -- a habit, routine,</p> <p>11 a chronic exposure for years?</p> <p>12 A. Well, chronic --</p> <p>13 MR. MEADOWS: Objection.</p> <p>14 THE WITNESS: -- is defined as</p> <p>15 years, typically, by a toxicologist,</p> <p>16 and so that's what I -- that's what I</p> <p>17 told you.</p> <p>18 QUESTIONS BY MS. BOCKUS:</p> <p>19 Q. Shifting to your regulatory</p> <p>20 opinions, you would agree that Imerys is a</p> <p>21 raw material supplier to J&J; is that</p> <p>22 correct?</p> <p>23 MR. MEADOWS: Objection.</p> <p>24 THE WITNESS: I would call them</p> <p>25 an ingredient supplier, yes.</p>	<p>1 So based on what I know -- I'm</p> <p>2 telling you what I know, and I would</p> <p>3 call them, again, an ingredient</p> <p>4 supplier, and I would call Johnson &</p> <p>5 Johnson a cosmetic manufacturer.</p> <p>6 Does that answer the question?</p> <p>7 QUESTIONS BY MS. BOCKUS:</p> <p>8 Q. It does.</p> <p>9 Would you agree that the</p> <p>10 minerals that you have identified in your</p> <p>11 report, that the documents that you have</p> <p>12 seen, would classify their -- to the extent</p> <p>13 that they are ever in the powder, that</p> <p>14 they're trace ingredients?</p> <p>15 MS. PARFITT: Objection.</p> <p>16 MR. MEADOWS: Objection.</p> <p>17 THE WITNESS: So which</p> <p>18 ingredients are you referring to?</p> <p>19 So some of the metals, no, are</p> <p>20 not trace ingredients.</p> <p>21 Are you talking about the --</p> <p>22 are you talking about the -- like the</p> <p>23 presence of tremolite or the presence</p> <p>24 of chrysotile --</p> <p>25</p>

78 (Pages 306 to 309)

Confidential - Pursuant to Protective Order

Page 310	Page 312
<p>1 QUESTIONS BY MS. BOCKUS: 2 Q. No. No, I'm sorry. I'm 3 talking about the three metals that you 4 identify in your report. Those are trace 5 elements that are -- that are sometimes 6 detected in the studies of the -- of the 7 talc. 8 MR. MEADOWS: Objection. 9 THE WITNESS: It's not how I 10 would say it. I would say they're 11 heavy metal components that are 12 naturally occurring within the product 13 that are sometimes -- sometimes 14 detectable at levels that are reported 15 as trace based on the detection limit 16 within the analysis, but at other 17 times they're not listed as trace. 18 They're actually listed with a 19 specific amount. 20 So that's what -- how I would 21 define what I call trace. Usually 22 that's how it will be reported in the 23 lab, trace, which means below the 24 limit of quantification, but it's 25 there. You're detecting it.</p>	<p>1 QUESTIONS BY MS. BOCKUS: 2 Q. Have you seen any studies where 3 women's blood has reflected the presence of 4 nickel or cobalt or chromium? 5 MR. MEADOWS: Objection. 6 QUESTIONS BY MS. BOCKUS: 7 Q. Who are parts of these 8 studies -- these ovarian cancer studies? 9 MR. MEADOWS: Objection. 10 THE WITNESS: The 11 epidemiological literature you're 12 asking me? 13 QUESTIONS BY MS. BOCKUS: 14 Q. Yes, ma'am. 15 A. It's possible in the Nurses' 16 Health Study that we can go to that, because 17 I know they do collect some heavy metal 18 levels. I've done that for other clients on 19 other issues. 20 Most of the others, I doubt 21 that we have heavy metal levels in blood. 22 But certainly there are levels of heavy metal 23 in blood, especially things like lead, for 24 example, that we have very limited capacity 25 to eliminate.</p>
Page 311	Page 313
<p>1 I would agree that -- that 2 there are other descriptions of heavy 3 metals in the heavy metal literature 4 that talk about trace amounts being 5 found in -- naturally occurring in 6 food, for example, and I agree that 7 that does occur. But in the case of 8 this product, we actually have 9 often -- we actually have a -- a limit 10 that is set for acceptability in the 11 specification. 12 And so I would think it's more 13 proper to call it a level of the heavy 14 metal that is allowable by the purity 15 specifications set by the product. 16 And sometimes those levels may be 17 above, and most of the times those 18 levels are below, which is why it's 19 cleared. Because I've seen some 20 analyses where different products may 21 have been, I guess, turned away or 22 considered not acceptable based on the 23 analysis of certain types of minerals 24 or metals. 25</p>	<p>1 So whether or not you carry 2 around a significant body burden of a heavy 3 metal in your blood is somewhat driven by the 4 exposure pattern you get. It's something 5 that's commonly -- or can you excrete it 6 quickly or not. So... 7 Q. And are you familiar with any 8 studies that have suggested that the use of 9 body powders leads to a heavy burden of 10 nickel, chromium or cobalt in the blood? 11 A. So I have not seen such 12 analysis done, no, I have not. 13 Q. In paragraph 67 of your report, 14 which is on page 46 -- I'm sorry, on -- oh, 15 I'm sorry. Paragraph 64, I apologize. 16 A. No. No, that's fine. 17 Q. It's on page 44. 18 You cite to two abstracts -- 19 A. Yes. 20 Q. -- one by Fletcher and one by 21 Fletcher and Saed. 22 Do you consider these abstracts 23 to be reliable sources of data? 24 A. They're not as reliable at all 25 as a peer-reviewed article. So there's a</p>

79 (Pages 310 to 313)

Confidential - Pursuant to Protective Order

Page 314	Page 316
<p>1 difference in the weight you give an 2 abstract, absolutely. 3 However, knowing the papers 4 that Dr. Saed has actually published in the 5 peer-reviewed literature, I have -- I have 6 mentioned them in here because I do believe 7 that they are -- they are pieces of 8 information that are highly relevant to some 9 of the issues raised in other cellular 10 studies, and so that's why they're here. But 11 certainly I do not give them the same weight 12 as in my assessment of overall risk. 13 And I would say that I had the 14 same opinions on risk before I had these 15 studies. Because in my original reports, 16 obviously, I have gone further than risk and 17 talked about cause, and I didn't have the 18 Fletcher studies. 19 The Fletcher studies are more 20 on the issue of biologic plausibility and 21 mechanism versus being important 22 underpinnings, for example, for a hazard 23 assessment. 24 Q. Is there any way that someone 25 reading your report could tell that you</p>	<p>1 A. I attempted to do that. I 2 can't tell that you there isn't something in 3 here I've missed. But, yes, I read this 4 report six or seven times before I finalized 5 it, trying to make sure that the language I 6 was using was an accurate reflection of the 7 opinion I'm expressing. 8 But it's possible, if you want 9 to point to something that you want to ask me 10 about, I can tell you whether or not that was 11 something that I would change. 12 Q. So on page 77, paragraph 118 in 13 the middle of it, you say, "Based on the 14 knowledge available by the 1950s, talc body 15 powders manufactured and sold by Imerys and 16 Johnson & Johnson." 17 And that's the question that I 18 have for you. 19 A. I see what you're saying. 20 Q. Was Imerys selling anything to 21 Johnson & Johnson in the 1950s? 22 MR. MEADOWS: Objection. 23 THE WITNESS: I'm thinking. 24 It's possible they did not. That may 25 be true.</p>
Page 315	Page 317
<p>1 attribute less weight to the abstracts by 2 Saed and Fletcher just by reading your 3 report? 4 MR. MEADOWS: Objection. 5 THE WITNESS: I don't know if 6 they could or not. Hopefully they 7 would based upon where they appear in 8 the report. They're not cited a lot 9 of other places, but they certainly 10 are cited. 11 So that's why I'm here today, 12 though. You're asking me these 13 questions; I'm telling you. That's 14 how I look at these studies. That's 15 all I can say. 16 I haven't -- I haven't, 17 certainly, as I've told you, given 18 things numerical weight throughout my 19 report. 20 QUESTIONS BY MS. BOCKUS: 21 Q. Looking at paragraph 118... 22 Well, when you were preparing 23 your report, were you careful with the 24 language that you used in it to be precise 25 and accurate?</p>	<p>1 QUESTIONS BY MS. BOCKUS: 2 Q. Well, and actually -- 3 A. You know what? When I wrote 4 this sentence, I assumed that they did, but 5 if that is not true, then certainly this 6 sentence should be just Johnson & Johnson. 7 Q. Well, earlier in your report, 8 in a footnote you indicate that Imerys began 9 supplying talc to Johnson & Johnson in 1989 10 or the late 1980s. 11 Do you remember making that 12 notation? 13 A. So let me look. So if that's 14 an inconsistency, then that should change. 15 Let me look. 16 Q. And that's all I want to know, 17 if it's an inconsistency, should it change. 18 A. If it is an inconsistency -- 19 certainly if Imerys was not selling talc to 20 Johnson & Johnson in 19 -- the 1950s, then -- 21 then certainly Johnson & Johnson's products 22 would not -- would not be affected by Imerys' 23 activity. 24 However, if Imerys is selling 25 talc to anyone that makes a consumer product</p>

Confidential - Pursuant to Protective Order

Page 318	Page 320
<p>1 in the 1950s, then -- or a precursor company</p> <p>2 to Imerys is making talc that's selling for</p> <p>3 body powder to somebody other than Johnson &</p> <p>4 Johnson, then that opinion would still hold.</p> <p>5 So -- but I certainly agree, I</p> <p>6 think I -- you're right, I think I have a</p> <p>7 statement about the link between the two in</p> <p>8 '89. So in that case, then certainly the --</p> <p>9 the link here would be related to Johnson &</p> <p>10 Johnson's products.</p> <p>11 Q. Okay. Yeah.</p> <p>12 A. Whether or not -- if they</p> <p>13 weren't sourced from Imerys, then that's a</p> <p>14 separate duty on a product, not this product.</p> <p>15 Q. If you look on the bottom of</p> <p>16 page 7, I think you'll see the footnote I was</p> <p>17 referencing.</p> <p>18 And with regard to your last</p> <p>19 answer, you don't have any information as to</p> <p>20 whether Imerys existed and, if it did,</p> <p>21 what -- who its customers were in 1950s,</p> <p>22 correct?</p> <p>23 A. I don't believe I do, no.</p> <p>24 MS. BOCKUS: I think that's all</p> <p>25 that I have. Thank you.</p>	<p>1 complete assessment the way I did, then I</p> <p>2 would agree that other people could come to a</p> <p>3 different conclusion, absolutely.</p> <p>4 So I think it depends what you</p> <p>5 mean by "reasonable scientist." But I would</p> <p>6 agree that individuals can look at the same</p> <p>7 body of data and, based on their judgment and</p> <p>8 experience, based on looking at that same</p> <p>9 body of data, could come to a different</p> <p>10 conclusion, yes. That's true.</p> <p>11 Q. You've been involved in this</p> <p>12 talc litigation for at least a couple of</p> <p>13 years, right?</p> <p>14 A. Yes.</p> <p>15 Q. And you know that various</p> <p>16 defendants have offered experts who disagree</p> <p>17 with your conclusions, right?</p> <p>18 A. Some of my conclusions, yes. I</p> <p>19 don't know that there is somebody that's in</p> <p>20 the litigation that does exactly what I do</p> <p>21 across all the opinions I've expressed, but,</p> <p>22 yes, certain parts of my opinions there are</p> <p>23 other experts I'm aware of, yes.</p> <p>24 Q. Well, they -- you're aware that</p> <p>25 there are defense experts who disagree with</p>
Page 319	Page 321
<p>1 MR. LOCKE: I've got a few</p> <p>2 questions.</p> <p>3 EXAMINATION</p> <p>4 QUESTIONS BY MR. LOCKE:</p> <p>5 Q. Doctor, my name's Tom Locke. I</p> <p>6 represent the Personal Care Products Council.</p> <p>7 We met a couple of times before, I think.</p> <p>8 A. I apologize, I don't recall</p> <p>9 your name at least. The face looked</p> <p>10 familiar, though. I apologize.</p> <p>11 Q. I try to maintain a low</p> <p>12 profile.</p> <p>13 I have relatively few</p> <p>14 questions. I wanted to ask you overall about</p> <p>15 your opinion.</p> <p>16 Would you agree that reasonable</p> <p>17 scientists can disagree with your opinion</p> <p>18 that talc increases the risk of ovarian</p> <p>19 cancer?</p> <p>20 A. I'd say I wouldn't say it quite</p> <p>21 that way. I'd say that I agree that</p> <p>22 scientists can disagree on conclusions they</p> <p>23 draw, depending on the -- depending on the</p> <p>24 way that they have assessed.</p> <p>25 So certainly based on a</p>	<p>1 your opinion that talc increases the risk of</p> <p>2 ovarian cancer; is that correct?</p> <p>3 A. Yes, I -- I am aware of that</p> <p>4 fact.</p> <p>5 Q. And in your review of the</p> <p>6 records that go back or the scientific</p> <p>7 materials that go back 35 years or more,</p> <p>8 you've seen that there's disagreement</p> <p>9 regarding that issue; is that correct?</p> <p>10 A. So what documents are you</p> <p>11 referring to? Are you asking me about a</p> <p>12 specific -- just the published medical</p> <p>13 literature? Are you asking about documents</p> <p>14 like internal company documents, reviews by</p> <p>15 others? What are you asking me about?</p> <p>16 Q. Well, let's focus on the</p> <p>17 published medical literature.</p> <p>18 There are scientists who have</p> <p>19 disagreed with your opinion; is that correct?</p> <p>20 MS. PARFITT: Objection.</p> <p>21 THE WITNESS: I'm not aware of</p> <p>22 a paper in the published medical</p> <p>23 literature that has done the exact</p> <p>24 assessment I have done.</p> <p>25 So I am aware of the fact,</p>

81 (Pages 318 to 321)

Confidential - Pursuant to Protective Order

Page 322	Page 324
<p>1 however, that there are individual</p> <p>2 papers by scientists that, for</p> <p>3 example, have concluded that there is</p> <p>4 no association between exposure to</p> <p>5 talc perineally and ovarian cancer,</p> <p>6 yes. Individual papers, I am aware of</p> <p>7 that, but that's different than what I</p> <p>8 have done.</p> <p>9 QUESTIONS BY MR. LOCKE:</p> <p>10 Q. Let me just ask you about what</p> <p>11 you were requested to do on behalf of</p> <p>12 plaintiff's counsel.</p> <p>13 Plaintiff's counsel asked you</p> <p>14 to provide opinions related to the human</p> <p>15 health hazards posed by exposure to talcum</p> <p>16 powder products and how those hazards relate</p> <p>17 to the regulatory requirements for marketing</p> <p>18 cosmetic ingredients and cosmetic products in</p> <p>19 the United States; is that correct?</p> <p>20 MR. MEADOWS: Objection.</p> <p>21 THE WITNESS: I didn't write</p> <p>22 that, but that sounds like an accurate</p> <p>23 reflection of what -- what we -- what</p> <p>24 I have done at least in parts of my</p> <p>25 report, yes.</p>	<p>1 what I've been doing in the litigation.</p> <p>2 Q. Okay. As to that second</p> <p>3 bucket, the US regulatory requirements for</p> <p>4 marketing cosmetic ingredients and products,</p> <p>5 that's not relevant to the scientific</p> <p>6 question whether talc may cause ovarian</p> <p>7 cancer; am I right?</p> <p>8 A. No. I disagree with that based</p> <p>9 on the fact that a company that markets a</p> <p>10 cosmetic product is required to do a safety</p> <p>11 assessment. And if in that safety assessment</p> <p>12 issues relate to cancer or ovarian cancer and</p> <p>13 the use of talc, then those two things are</p> <p>14 related.</p> <p>15 But I would agree that -- that</p> <p>16 doing a risk assessment like I've done is a</p> <p>17 separate issue from doing a safety assessment</p> <p>18 for a product, because there's actually even</p> <p>19 a lesser standard for an issue of looking at</p> <p>20 a safety assessment for a product versus</p> <p>21 actually forming the opinion that there is an</p> <p>22 increased risk of cancer with exposure to</p> <p>23 talc.</p> <p>24 Q. Now, did IARC in 2006, did it</p> <p>25 look at the US regulatory process in</p>
Page 323	Page 325
<p>1 QUESTIONS BY MR. LOCKE:</p> <p>2 Q. Well, if you look at your</p> <p>3 report, I think you go to part where you were</p> <p>4 asked to provide -- and I just pulled it from</p> <p>5 what you said.</p> <p>6 A. So I did write it, I apologize.</p> <p>7 It didn't sound like me.</p> <p>8 Q. It started with "to provide</p> <p>9 opinions related to the human health hazards"</p> <p>10 and so forth, so I just wanted to make sure</p> <p>11 we're clear on that.</p> <p>12 A. Sure.</p> <p>13 Q. So does that sound right in</p> <p>14 terms of what you were asked to do?</p> <p>15 A. I said I -- certainly those are</p> <p>16 the kinds of things that I was definitely</p> <p>17 asked to do. I was asked to do two basic --</p> <p>18 two basic things, which was having to do with</p> <p>19 toxicology and risk assessment, and then a</p> <p>20 separate issue related to regulatory</p> <p>21 concerns.</p> <p>22 So, yes, those are the two</p> <p>23 basic, I guess, buckets of information and</p> <p>24 documents that I reviewed and opinions I've</p> <p>25 expressed, and I think that's consistent with</p>	<p>1 considering whether talc may cause ovarian</p> <p>2 cancer?</p> <p>3 MR. MEADOWS: Objection.</p> <p>4 THE WITNESS: I don't think I</p> <p>5 understand what you mean. It's not a</p> <p>6 US regulatory process, no, if that's</p> <p>7 what you're asking me.</p> <p>8 They have a -- they have a</p> <p>9 discussion of what the products are,</p> <p>10 which is part of the way they're sold.</p> <p>11 But I don't think they're discussing</p> <p>12 the duty of a company under the</p> <p>13 regulatory process, no, that's a</p> <p>14 separate issue.</p> <p>15 QUESTIONS BY MR. LOCKE:</p> <p>16 Q. So their analysis of whether</p> <p>17 talc may cause ovarian cancer, that's</p> <p>18 different than the analysis of whether a</p> <p>19 company may have a duty, whatever that duty</p> <p>20 may be?</p> <p>21 MR. MEADOWS: Objection.</p> <p>22 THE WITNESS: It's a different</p> <p>23 process, absolutely. IARC is a</p> <p>24 separate, independent body that does</p> <p>25 an assessment looking at the issue of</p>

Confidential - Pursuant to Protective Order

Page 326	Page 328
<p>1 cancer hazard and looking at whether 2 or not there is sufficient evidence to 3 categorize that hazard, whereas a duty 4 of a company under the regulatory 5 situation is broader than just cancer 6 hazard; it's a whole different thing. 7 It's what you do internally before you 8 market a product. Totally different. 9 And so certainly when I -- 10 that's why I have separate sections in 11 my report, and that's why I even 12 have -- I've had discussions about the 13 difference between the regulatory 14 standard for warning versus the 15 assessment of risk that may be 16 required in order to start to produce 17 a -- identify a association or an 18 increased risk or even if you did a 19 causation analysis. Totally different 20 type of exercise. 21 QUESTIONS BY MR. LOCKE: 22 Q. Do you first, in that exercise, 23 look at the scientific issue of whether talc 24 may cause ovarian cancer? 25 A. Are you asking me in either of</p>	<p>1 this is a different assessment and 2 different standard. It's a much lower 3 standard on cosmetics for what needs 4 to be done as far as warning. 5 Now, when a company comes and 6 initiates a safety assessment on their 7 product, before they even think about 8 what am I going to warn, they should 9 be doing a comprehensive assessment of 10 safety based on what's available 11 publicly, knowing what others have 12 reported and then what data they've 13 collected. 14 If they don't have data at all 15 on the safety of the product, then the 16 product has to say that. We don't 17 know. We do not know if this product 18 is safe. And that's one of the things 19 that is allowed under FDA -- under FDA 20 regulations as well. 21 But essentially some -- some 22 assessment must be done to understand 23 from the perspective of the company 24 that this product is safe for 25 consumers to use as -- under the</p>
Page 327	Page 329
<p>1 these exercises? 2 Q. Well, let's say when you're 3 getting to -- you mentioned the duty to warn. 4 So if you're looking at the duty to warn, do 5 you first have to look at does talc cause 6 ovarian cancer? 7 MR. MEADOWS: Objection. 8 THE WITNESS: That's not the 9 question you asked. No. I would 10 argue, based on the regulations, if 11 you look at the standard, the question 12 is, is there evidence to indicate that 13 there is a chance, there is a 14 potential -- not that it does, but is 15 there a potential for that type of 16 hazard to be posed to consumers who 17 use the product. 18 It's a possibility versus being 19 a -- I'm taking it beyond possibility 20 when I'm doing my assessment for 21 increased risk. And I talked about 22 that this morning, and I can't 23 remember her last name. The 24 Johnson -- I apologize. But I -- with 25 Johnson & Johnson. I talked about</p>	<p>1 directions of use. 2 So in the case of this, it 3 would be a body powder being used on 4 the body surface but also perineally 5 because -- because that was an 6 exposure pattern that was understood. 7 QUESTIONS BY MR. LOCKE: 8 Q. Okay. You described two 9 different buckets. They're independent 10 assessments; is that correct? 11 MR. MEADOWS: Objection. 12 THE WITNESS: Initially that's 13 where I started, and now I'm talking 14 two different duties. There's a duty 15 to warn, but there's first a duty to 16 collect information before you market 17 it. It's your premarket safety 18 assessment. 19 QUESTIONS BY MR. LOCKE: 20 Q. Okay. I'm not actually talking 21 about the manufacturer's duty. I wanted to 22 just first address your scientific analysis. 23 That's a separate question that 24 led you to your opinion on the -- your 25 opinion that talc increases the risk of</p>

Confidential - Pursuant to Protective Order

Page 330	Page 332
<p>1 ovarian cancer, correct?</p> <p>2 MR. MEADOWS: Objection.</p> <p>3 THE WITNESS: Yes, that's what</p> <p>4 I described. And I thought you were</p> <p>5 talking about duty of the company, and</p> <p>6 so I apologize. I didn't mean to go</p> <p>7 off on a tangent.</p> <p>8 If you want to focus just on</p> <p>9 the risk assessment -- is that what</p> <p>10 you want to do? -- that's what I'm</p> <p>11 doing.</p> <p>12 QUESTIONS BY MR. LOCKE:</p> <p>13 Q. No, I just want to understand,</p> <p>14 those are two different things, though,</p> <p>15 right?</p> <p>16 A. Those are two different --</p> <p>17 those are two different tasks that I</p> <p>18 undertook, yes. I undertook a risk</p> <p>19 assessment task to form opinions based on</p> <p>20 what I can say about risk, and then I</p> <p>21 separately -- and I had done this earlier on</p> <p>22 the issue of warnings, looking at what do we</p> <p>23 know about the product and whether or not --</p> <p>24 and when did we know it, and what should</p> <p>25 consumers have been warned about based on the</p>	<p>1 also sort of -- that's a piece along the way</p> <p>2 to doing a causation analysis, but it's not</p> <p>3 the same.</p> <p>4 Q. Your opinion regarding the</p> <p>5 FDA's responsibilities and functions, that's</p> <p>6 not related to your opinion that talc may</p> <p>7 cause an increased risk in ovarian cancer; is</p> <p>8 that correct?</p> <p>9 MR. MEADOWS: Objection.</p> <p>10 THE WITNESS: I don't think</p> <p>11 that's true the way you're asking that</p> <p>12 question, because I don't know how you</p> <p>13 divorce the fact that as a -- in a</p> <p>14 regulatory assessment, if I identify</p> <p>15 cancer hazard, I have identified a</p> <p>16 duty to warn. That's certainly</p> <p>17 something that should be warned about</p> <p>18 when I understand that there's not</p> <p>19 only the potential, but I believe</p> <p>20 there's an increased risk.</p> <p>21 But I would agree with you that</p> <p>22 in my report, I'm laying out for you</p> <p>23 even different bodies of information</p> <p>24 that -- as I step through it.</p> <p>25 Does that make sense to you?</p>
Page 331	Page 333
<p>1 safety information that was available over</p> <p>2 time.</p> <p>3 Q. The risk assessment task,</p> <p>4 that's what you mean by your analysis that</p> <p>5 talc increases the risk of ovarian cancer?</p> <p>6 A. That's correct.</p> <p>7 Q. You could have stopped at that,</p> <p>8 but then you performed an additional task; is</p> <p>9 that right?</p> <p>10 A. Well, actually, no, because the</p> <p>11 first task I actually started with was the</p> <p>12 regulatory task. When I first started</p> <p>13 getting involved in the litigation very --</p> <p>14 before I wrote my first report, one of the</p> <p>15 first things I was looking at was the issue</p> <p>16 of the duty of the manufacturer to provide</p> <p>17 warnings.</p> <p>18 And then after that, I expanded</p> <p>19 that role to be an inclusion as well of a</p> <p>20 causation analysis.</p> <p>21 And then now I'm not doing a</p> <p>22 full causation analysis in this litigation,</p> <p>23 but I'm using essentially some of the same</p> <p>24 information to provide you with a description</p> <p>25 of a -- a health risk assessment, which was</p>	<p>1 QUESTIONS BY MR. LOCKE:</p> <p>2 Q. Not really.</p> <p>3 A. I'm sorry.</p> <p>4 Q. I'm talking about your</p> <p>5 scientific analysis here, not your regulatory</p> <p>6 analysis.</p> <p>7 To do your scientific analysis,</p> <p>8 you looked at scientific materials, right?</p> <p>9 A. Yes, but I do the same thing</p> <p>10 for my regulatory analysis. That's why I'm</p> <p>11 confused. I -- to me they are connected.</p> <p>12 But I would agree with you, I</p> <p>13 had an analysis. Let's just talk about that,</p> <p>14 my analysis on risk assessment and my</p> <p>15 opinions that I've expressed. Those are laid</p> <p>16 out in a separate section of my report,</p> <p>17 absolutely. So we could talk about that if</p> <p>18 you'd like.</p> <p>19 Q. Well, I just want to</p> <p>20 understand, and I think I do now, that's a</p> <p>21 separate issue from your regulatory opinion?</p> <p>22 A. It's not a separate issue.</p> <p>23 That's where I'm having trouble with your</p> <p>24 language.</p> <p>25 It's a separate task because,</p>

Confidential - Pursuant to Protective Order

Page 334	Page 336
<p>1 for example, I may have only been asked, but 2 I wasn't, to just describe whether or not, as 3 a human risk assessor and toxicologist, there 4 is a hazard or a risk posed by the product, 5 and I could stop there. 6 But I was asked, based on -- 7 based on my experience working in the area of 8 regulatory toxicology but also on regulatory 9 issues for clients where I give advice, I was 10 asked to look at how does that scientific 11 information impact what the company should be 12 doing. 13 And so that's -- that's why I'm 14 saying you can't divorce them, because the 15 warning issue I'm talking about is intimately 16 tied into the human health risk assessment 17 results. 18 Q. So do you consider yourself 19 primarily here as a warning expert? 20 MR. MEADOWS: Objection. 21 THE WITNESS: I consider that 22 one of my roles, yes, absolutely. 23 It depends upon how individual 24 cases, individual attorneys, will -- 25 will ask -- decide to use me. For</p>	<p>1 But I practice in both those areas in 2 my consulting practice and in my 3 experience. 4 QUESTIONS BY MR. LOCKE: 5 Q. Let me ask you a few questions 6 about your cosmetic ingredient review 7 statements, CIR. 8 We can agree to call it that, 9 right? 10 A. Yes, that's fine. 11 Q. In parts of your report, you 12 cite the CIR as an authoritative source on 13 cosmetic ingredients; is that correct? 14 A. So where are you looking at, 15 the background information on the CIR? 16 Yes, they certainly are a 17 source of information that FDA relies upon as 18 far as assessments, yes, that's true. 19 Q. Well, and on page -- or 20 paragraph 35, page 23, you cite to the CIR 21 on, for example, chemicals purportedly in 22 cosmetics. You have a footnote there. 23 A. So -- 24 Q. I believe it's footnote 31. 25 A. Yes, I have looked at -- looked</p>
Page 335	Page 337
<p>1 example, I have been used in one trial 2 to only talk about the toxicology. 3 Other trials, I've talked about 4 toxicology as well as regulatory 5 issues. So I think it just depends on 6 the case. 7 In the MDL, I am prepared, 8 however, to come to talk at a trial on 9 the regulatory system that guides 10 cosmetics as well as provide opinions 11 that talk about what are the hazards 12 of talc, what is the toxicology of 13 talc, what do -- how can you be 14 exposed to talc, that migration issue, 15 and then my opinions about whether or 16 not I believe that there is an 17 increased risk of ovarian cancer. 18 So I would be -- be prepared to 19 talk about both of those things. 20 That's why I said I do think I'm a 21 little different than some of the 22 other experts that you may encounter, 23 for example, in the defense side, 24 where someone may just do regulatory 25 or somebody may just do toxicology.</p>	<p>1 at the CIR as a source of information because 2 many of the chemicals, many of the 3 ingredients within the fragrance of Johnson & 4 Johnson, the only available information may 5 be found within the CIR that's publicly 6 available. 7 Q. And you rely on the report of 8 Dr. Cralley; is that correct? 9 MR. MEADOWS: Objection. 10 MS. PARFITT: Objection. 11 QUESTIONS BY MR. LOCKE: 12 Q. You reference Appendix D to 13 your report. I believe if you stay on the 14 same page you'll see that, the same 15 paragraph. 16 A. I wouldn't say I rely on the 17 report of Dr. Cralley because I form my 18 opinions independent of Dr. Cralley, but 19 certainly his -- I believe if you go to his 20 reports, his report is supportive of my 21 opinions in this area. 22 Q. Did you read his report? 23 A. I have read it now, but I did 24 not read it before I -- before I formed my 25 opinions in this particular paragraph, yes.</p>

85 (Pages 334 to 337)

Confidential - Pursuant to Protective Order

Page 338	Page 340
<p>1 Q. I'm a little confused because</p> <p>2 you're citing to his report.</p> <p>3 You read it or you didn't read</p> <p>4 it before you wrote this paragraph?</p> <p>5 A. I read it before I wrote the</p> <p>6 paragraph. I didn't read it before I had</p> <p>7 formed the opinion. Do you understand what</p> <p>8 I'm saying?</p> <p>9 I did my review of the irritant</p> <p>10 chemicals independently before I looked at</p> <p>11 Dr. Cralley's report. So I had formed the</p> <p>12 opinion that -- of the chemicals I had</p> <p>13 searched for that this is what I identified.</p> <p>14 And that's what this is talking about, right?</p> <p>15 I'm saying here that of the</p> <p>16 more than 100 chemicals included, over</p> <p>17 70 percent are compounds linked with some</p> <p>18 level of irritant hazard. That was done on</p> <p>19 my own.</p> <p>20 Then, if you go to look at</p> <p>21 Dr. Cralley's report, I cite it here because</p> <p>22 it's consistent. That is, his report</p> <p>23 provides support additionally for the</p> <p>24 statement I'm making.</p> <p>25 So I'm not relying on his</p>	<p>1 is no other source available.</p> <p>2 Q. Okay. In your report you state</p> <p>3 that the CIR process is administered</p> <p>4 independent of the FDA.</p> <p>5 But the FDA is on the CIR</p> <p>6 steering committee; is that correct?</p> <p>7 A. That is correct.</p> <p>8 Q. You don't mention that in your</p> <p>9 report, although you mention others who were</p> <p>10 on the CIR steering committee, correct?</p> <p>11 A. Yes, there's a paragraph where</p> <p>12 I talk about others, yes.</p> <p>13 Q. But you don't mention that the</p> <p>14 FDA is on the steering committee?</p> <p>15 A. I believe I -- I believe I've</p> <p>16 been asked that question before, and I said</p> <p>17 yes, but certainly in this report I don't</p> <p>18 believe I state that, that is true.</p> <p>19 Q. CIR solicits input from the</p> <p>20 public; is that correct?</p> <p>21 MS. PARFITT: Objection.</p> <p>22 THE WITNESS: I would say they</p> <p>23 solicit input from industry, yes.</p> <p>24 QUESTIONS BY MR. LOCKE:</p> <p>25 Q. Well --</p>
Page 339	Page 341
<p>1 conclusions to make my opinion, but it's</p> <p>2 certainly -- I am citing it here as it being</p> <p>3 a piece of evidence that is consistent with</p> <p>4 my opinions.</p> <p>5 Q. Sorry, I seem to have messed up</p> <p>6 my microphone. I'll try to hold it for a</p> <p>7 little bit then.</p> <p>8 Do you disagree with</p> <p>9 Dr. Cralley's report?</p> <p>10 A. I have not formed an opinion</p> <p>11 that I agree or disagree. He -- with his --</p> <p>12 I believe he has information that is</p> <p>13 consistent with the opinion I'm expressing in</p> <p>14 the sentence, however.</p> <p>15 Q. And do you know that</p> <p>16 Dr. Cralley repeatedly cites to the CIR as an</p> <p>17 authoritative source regarding cosmetic</p> <p>18 ingredients?</p> <p>19 A. I don't know that he uses that</p> <p>20 exact language, but he does cite to it, yes,</p> <p>21 in his report. Certainly he does.</p> <p>22 Q. More than 20 times, right?</p> <p>23 A. That, I have not counted. I</p> <p>24 can't tell you that. But he does, just like</p> <p>25 I do, as a source of information when there</p>	<p>1 A. But they -- and they do have a</p> <p>2 public comment period, which is mainly input</p> <p>3 from industry.</p> <p>4 But I agree that they do -- and</p> <p>5 if what you're referring to is a public</p> <p>6 comment period, yes, there is that for the</p> <p>7 documents.</p> <p>8 Q. You can go on the website and</p> <p>9 see what ingredients CIR is going to review,</p> <p>10 right?</p> <p>11 A. Yes, you can.</p> <p>12 Q. Have you done that?</p> <p>13 A. Yes, I've done it many times</p> <p>14 before.</p> <p>15 Q. Okay. And did you submit</p> <p>16 comments on talc in 2012?</p> <p>17 A. No, I did not.</p> <p>18 Q. Okay. You could -- the public</p> <p>19 can submit comments many times during the</p> <p>20 process of an ingredient review; is that</p> <p>21 correct?</p> <p>22 A. There are different --</p> <p>23 different stages of the draft document. Is</p> <p>24 that what you're asking me? Yes, that can be</p> <p>25 done.</p>

86 (Pages 338 to 341)

Confidential - Pursuant to Protective Order

Page 342	Page 344
<p>1 Q. Well, even before it's a draft, 2 CIR is soliciting information about the 3 ingredient to include in the initial 4 materials provided to the expert panel; isn't 5 that correct? 6 A. Technically I believe that is 7 true, but I would disagree that that is 8 something that happens routinely. But I 9 would agree that -- I would say technically 10 you may be -- that is something that could 11 occur, yes, but that is not the situation, 12 for example, in the case of talc. 13 Q. Why not? 14 A. Based upon what I have seen 15 described as how the review was done, and 16 that has to do with the testimony of 17 different -- or different documents that I've 18 reviewed and the testimony of individuals 19 related to this document. 20 Q. Well, Dr. Cramer could have 21 submitted comments to the CIR regarding talc, 22 couldn't he? 23 MR. MEADOWS: Objection. 24 MS. PARFITT: Objection. 25 THE WITNESS: You'd have to ask</p>	<p>1 submitted. 2 Q. And CIR meetings are open to 3 the public, right? 4 A. That is true, they are open to 5 the public, but in my experience it -- they 6 are not meetings that are heavily attended by 7 the public but indeed are -- tend to be 8 meetings attended by industry stakeholders 9 within the ingredients that are being 10 reviewed. 11 Q. You know Mr. Steinberg here. 12 He was a plaintiff's expert for a while? 13 A. I don't know him personally, 14 but I know his name and I know he was a 15 plaintiff's expert, yes. 16 Q. You know he attended the talc 17 meeting, right? 18 A. Yes, I believe he was working 19 with indus -- he works with industry, so I 20 believe indeed he did attend that meeting. 21 Q. You're not claiming he was 22 working with any industry member regarding 23 talc, are you? 24 A. That's not what I stated. I 25 know he's a consultant to the cosmetic</p>
Page 343	Page 345
<p>1 Dr. Cramer if he was aware that they 2 were reviewing it. I can't answer 3 that for Dr. Cramer. 4 But if he was aware of it, 5 certainly -- if you're aware of the 6 process going on and the timing of it, 7 certainly you can submit comments. 8 I'm not disagreeing with you on that. 9 That is true. 10 QUESTIONS BY MR. LOCKE: 11 Q. CIR publishes in advance what 12 it's going to review; isn't that correct? 13 A. What is coming up for review? 14 Q. Yes. 15 A. Yes, things that are proposed 16 for the next meeting, yes, that's true. 17 Q. And you could submit comments 18 to the first draft of the CIR report; isn't 19 that correct? 20 A. I would agree that that is 21 possible to happen, yes. 22 Q. And you can submit comments 23 before the final report is drafted, correct? 24 A. Yes, as long as it's still in 25 draft form, yes, those comments can be</p>	<p>1 industry, so it doesn't surprise me. And I 2 believe he lives in the area, so it doesn't 3 surprise me that he attended. 4 I haven't spoken to him about 5 any of that, though, so I have no specific 6 details of that. 7 Q. Transcripts of the meeting are 8 available to the public, right? 9 A. You can download the 10 transcripts, yes. 11 Q. They're on the website? 12 A. That's what I said. You can 13 download. I'm sorry. 14 Q. Okay. 15 A. Yes, you can download them from 16 the website. 17 Q. Did you submit comments to the 18 CIR regarding talc? 19 A. No, I did not. 20 Q. Why not? 21 A. I wasn't aware of the process 22 that was going on in the draft form at the 23 time. 24 Q. Why is that? 25 A. I was not following the CIR for</p>

Confidential - Pursuant to Protective Order

Page 346	Page 348
<p>1 talc at that particular time. I have a lot 2 of other clients and a lot of other issues 3 that go on on a routine basis, and I -- I 4 literally would not have time to follow every 5 assessment they do, considering that they do 6 thousands of chemicals. 7 Q. Did you know of the CIR prior 8 to your retention by plaintiff's counsel? 9 A. Yes. In fact, I -- one of the 10 journals that I receive, International 11 Journal of Toxicology, maybe, publishes many 12 of their safety assessments. So I certainly 13 am, yes. 14 I was aware -- when I was at 15 Evirion, I was aware of the existence of CIR. 16 Q. Have you ever provided prior to 17 this litigation -- and by "this litigation" I 18 mean any aspect of the talc litigation -- an 19 expert opinion on cosmetics' ingredients? 20 A. You're asking me in any other 21 litigation on a cosmetic ingredient? 22 I'm thinking back to the cases 23 I've worked on. Not as a -- not as a 24 testifying expert. 25 At Evirion, though, we worked on</p>	<p>1 same level of review of any of these 2 ingredients as can be provided -- as was 3 provided by the IARC. 4 And so, again, that's one of 5 the comparisons I'm doing. I'm talking about 6 the difference in the time, the effort, the 7 difference in the independence of the 8 reviews. And so that -- when I'm talking 9 about, those numbers, that's what I'm 10 focusing on. I'm focusing on the fact that 11 you have so many reviews in a very short 12 period of time, with a one-expert panel, it's 13 impossible for that level of analysis and 14 review to be anywhere near what IARC panels 15 do, and also nowhere near the level of review 16 that I have done based on the number of 17 documents that I have analyzed and looked at. 18 So it's a different type of review. 19 Q. Let me ask you a few questions 20 because you have criticized the panel. 21 You would agree with that, 22 correct? 23 A. Yes. Oh, absolutely. This 24 particular analysis I have. I have made some 25 general criticisms of the overall process,</p>
Page 347	Page 349
<p>1 litigation involving cosmetic ingredients, 2 thought I was not the testifying expert. 3 Q. In your report you talk about 4 the percentage of -- or the number of 5 ingredients that the CIR listed as unsafe. 6 Do you recall that? 7 A. Yes. I mean, if you want me to 8 verify the number, I need to go there. But, 9 yes. 10 Q. You don't mention that CIR has 11 put limitations on approximately 50 percent 12 of the ingredients that it has reviewed, do 13 you? 14 A. I don't mention that, but they 15 do. They have -- they have -- when they have 16 a statement about safety, they will -- they 17 will often talk about the limitations from 18 the safe use based on either concentration or 19 even maybe route of exposure, that is true. 20 Q. Why don't you do that? Why 21 didn't you include that in your report? 22 A. No particular reason. I mean, 23 the point I'm trying to make is really the 24 workload that's going on here and the 25 impossibility of the task of providing the</p>	<p>1 and then I made some specific criticisms of 2 this particular review. 3 Q. And one of your criticisms is 4 that the CIR -- I think you said two CIR 5 expert panelists had conflicts of interest; 6 is that correct? 7 A. Yes, that -- they did, that 8 were not -- that were not -- I believe not 9 understood even by Dr. Andersen at that time. 10 I think these are things brought up to him 11 that he was not aware of. 12 Q. All right. Now, you read his 13 testimony in one of the trials in California, 14 right? 15 A. Yes, that's the -- in fact, 16 that's the source of the information where 17 I'm citing to those names of those 18 individuals. I think I refer to that, his 19 trial testimony. 20 Q. And didn't he, though, say, 21 well, he didn't view it as a conflict of 22 interest because the money wasn't going to 23 them personally, it was going to their 24 organizations? 25 A. He did make that statement,</p>

Confidential - Pursuant to Protective Order

Page 350	Page 352
<p>1 yes.</p> <p>2 Q. And you disagree with that</p> <p>3 statement?</p> <p>4 A. I don't -- I mean, his</p> <p>5 testimony is what it is.</p> <p>6 Are you asking me do I disagree</p> <p>7 that that's a conflict of interest?</p> <p>8 I disagree that you shouldn't</p> <p>9 disclose that as a potential conflict in the</p> <p>10 documents that are produced, just like I do</p> <p>11 when I write an article and I disclose that</p> <p>12 I've had funding. I don't say what the</p> <p>13 funding specifically paid for, but I've had</p> <p>14 funding or support from this industry</p> <p>15 individual or that industry individual.</p> <p>16 It's -- it's something that just is about</p> <p>17 transparency.</p> <p>18 Q. So when you write articles, you</p> <p>19 say that you've been paid a lot of money by</p> <p>20 plaintiffs' lawyers?</p> <p>21 MR. MEADOWS: Objection.</p> <p>22 MS. PARFITT: Objection.</p> <p>23 THE WITNESS: Well, I haven't</p> <p>24 written an article that overlaps with</p> <p>25 an issue that I've addressed in</p>	<p>1 from an industry or a company that has</p> <p>2 to do with the issue you're looking</p> <p>3 at, yes, a conflict -- a conflict of</p> <p>4 interest absolutely needs to be</p> <p>5 described.</p> <p>6 QUESTIONS BY MR. LOCKE:</p> <p>7 Q. And that would -- well, let me</p> <p>8 just ask you: You're not an ethicist, are</p> <p>9 you?</p> <p>10 A. No, I'm not trained as an</p> <p>11 ethicist.</p> <p>12 Q. And you're not a lawyer, are</p> <p>13 you?</p> <p>14 A. Well, no, but I have passed the</p> <p>15 patent bar, but I'm not trained as a lawyer.</p> <p>16 Q. That doesn't make you an</p> <p>17 ethicist, right?</p> <p>18 A. No, it does not.</p> <p>19 Q. Okay. Let's talk about one of</p> <p>20 the people you criticized, Dr. Wilma</p> <p>21 Bergfeld.</p> <p>22 Did you know she was the first</p> <p>23 woman who was the president -- to be the</p> <p>24 president of the American Academy of</p> <p>25 Dermatology?</p>
Page 351	Page 353
<p>1 plaintiffs' litigation, but I</p> <p>2 certainly have given my conflict of</p> <p>3 interest statements that relate to the</p> <p>4 issue in the article.</p> <p>5 I do that -- I've done that</p> <p>6 with -- on my work -- several of my --</p> <p>7 several of my assessments talking</p> <p>8 about risks of pesticides. I've done</p> <p>9 it with the work that I've done that</p> <p>10 that's been sort of, I guess,</p> <p>11 policy-type work on behalf of the</p> <p>12 American Chemistry Council.</p> <p>13 So absolutely I do.</p> <p>14 QUESTIONS BY MR. LOCKE:</p> <p>15 Q. Okay. You don't think it's</p> <p>16 relevant that you receive 50 percent of your</p> <p>17 money solely from plaintiffs' products</p> <p>18 liability lawyers?</p> <p>19 MR. MEADOWS: Objection.</p> <p>20 MS. PARFITT: Objection. Form.</p> <p>21 THE WITNESS: If it has nothing</p> <p>22 to do with the issue that I'm</p> <p>23 addressing in the paper, no, I do not</p> <p>24 think that.</p> <p>25 But when you're accepting money</p>	<p>1 A. No, I don't know her</p> <p>2 personally, so, no, I did not know that.</p> <p>3 Q. Did you investigate her at all</p> <p>4 when you criticized her?</p> <p>5 A. I wasn't criticizing her, I was</p> <p>6 criticizing the CIR process for failing to</p> <p>7 disclose the conflicts of interest of</p> <p>8 individuals that were involved in their</p> <p>9 assessment.</p> <p>10 I certainly am not giving</p> <p>11 personal criticism to either of those</p> <p>12 individuals.</p> <p>13 Q. You would agree that the</p> <p>14 American Academy of Dermatology is a</p> <p>15 reputable organization?</p> <p>16 A. I haven't formed an opinion one</p> <p>17 way or the other; however, I'm aware of them,</p> <p>18 and certainly I know individuals that are</p> <p>19 members of it, yes.</p> <p>20 Q. Are those individuals reputable</p> <p>21 people?</p> <p>22 MS. PARFITT: Objection.</p> <p>23 THE WITNESS: They are people</p> <p>24 that practice medicine that certainly</p> <p>25 I would go see. I mean, you're asking</p>

Confidential - Pursuant to Protective Order

Page 354	Page 356
<p>1 me if I formed a very specific opinion</p> <p>2 about them as individuals, and I</p> <p>3 haven't done that.</p> <p>4 QUESTIONS BY MR. LOCKE:</p> <p>5 Q. Do you have any reason to</p> <p>6 believe that the American Academy of</p> <p>7 Dermatology is disreputable?</p> <p>8 A. No. Again, I haven't formed an</p> <p>9 opinion one way or the other. I'm aware of</p> <p>10 the organization, and it certainly is one</p> <p>11 that is -- has within its members a number of</p> <p>12 people that I know that practice in</p> <p>13 dermatology.</p> <p>14 Q. Did you know that Dr. Bergfeld</p> <p>15 was the first woman to be president of the</p> <p>16 Cleveland Academy of Medicine?</p> <p>17 A. To the what? What was the</p> <p>18 first word?</p> <p>19 Q. Cleveland Academy of Medicine?</p> <p>20 A. No. Again, I'm not aware of</p> <p>21 her CV specifically, other than what may have</p> <p>22 been discussed -- it's possible her -- I know</p> <p>23 her affiliation will be listed in some of the</p> <p>24 documents as to where she is today, but I do</p> <p>25 not know her CV and her history.</p>	<p>1 and also gynecological -- gynecological</p> <p>2 sciences on the issue of migration.</p> <p>3 Q. You're not a epidemiologist,</p> <p>4 are you?</p> <p>5 A. Not by training. It's a tool I</p> <p>6 use all the time, but I'm not an</p> <p>7 epidemiologist by training.</p> <p>8 Q. And panel members on the CIR,</p> <p>9 they might have used the same tool that</p> <p>10 you're using to form your opinion about talc,</p> <p>11 correct?</p> <p>12 MR. MEADOWS: Objection.</p> <p>13 THE WITNESS: Based on what</p> <p>14 I've reviewed from the minutes and the</p> <p>15 write-up, I would disagree that that</p> <p>16 is -- they have done -- they've used</p> <p>17 the tools in the same way I have. I</p> <p>18 disagree with that.</p> <p>19 QUESTIONS BY MR. LOCKE:</p> <p>20 Q. No, but I'm saying their</p> <p>21 epidemiology could be the same background</p> <p>22 that you have. You haven't reviewed who they</p> <p>23 are, so you really don't really know.</p> <p>24 MR. MEADOWS: Objection.</p> <p>25 THE WITNESS: Well, I do</p>
Page 355	Page 357
<p>1 Q. Are you aware that she was the</p> <p>2 first president -- or she was a president of</p> <p>3 the American Society of Dermatopathology?</p> <p>4 A. No. Same thing. If I'm not</p> <p>5 aware of her CV, I wouldn't know that.</p> <p>6 Q. How about that she was the</p> <p>7 former chair to the FDA's drug -- FDA's</p> <p>8 Dermatology and Ophthalmology Advisory</p> <p>9 Committee?</p> <p>10 A. Same answer. I don't know her</p> <p>11 CV, so I have no knowledge.</p> <p>12 Q. Is it your opinion that</p> <p>13 Dr. Bergfeld was not qualified to chair the</p> <p>14 CIR panel that considered talc?</p> <p>15 A. I don't think I formed that</p> <p>16 specific opinion. Instead, what I have --</p> <p>17 the opinions I formed relate to the overall</p> <p>18 makeup of the panel that failed to include</p> <p>19 individuals with expertise that were -- that</p> <p>20 are really key to assessing the safety of</p> <p>21 talc. And that had to do with the issues of,</p> <p>22 as I discuss it, epidemiology -- oh, I'm</p> <p>23 sorry, I think I need to put this back --</p> <p>24 period -- sorry. In the area of epidemiology</p> <p>25 is one that I talked about it specifically,</p>	<p>1 know -- I do know Dr. Klaassen, who I</p> <p>2 believe was on the panel as a</p> <p>3 toxicologist. He is not somebody</p> <p>4 that -- he is not somebody that I</p> <p>5 understand does a significant amount</p> <p>6 of evaluation in risk assessment for</p> <p>7 epidemiological studies. He has done</p> <p>8 some of that, yes, I agree, but it's</p> <p>9 different training than mine.</p> <p>10 QUESTIONS BY MR. LOCKE:</p> <p>11 Q. You're better qualified than he</p> <p>12 is?</p> <p>13 A. No, that's not what I'm saying.</p> <p>14 I'm saying it's different background.</p> <p>15 The question that I heard you</p> <p>16 ask me, I believe, was directed towards the</p> <p>17 differences in my background versus somebody</p> <p>18 else's.</p> <p>19 And I'm saying that I'm not</p> <p>20 aware that he has the same background I do,</p> <p>21 but there is not -- there was not somebody on</p> <p>22 the panel that had specific expertise and</p> <p>23 analysis of epidemiological studies as an</p> <p>24 epidemiologist. And I think that's important</p> <p>25 in this case where you're analyzing in a</p>

Confidential - Pursuant to Protective Order

Page 358	Page 360
<p>1 causation analysis a wide variety of studies. 2 So I do think it's important. 3 Q. You're not a gynecological 4 oncologist, are you? 5 A. No, I'm not. But again, that 6 would have been an important expertise to 7 have on the panel when -- 8 Q. And yet you formed your opinion 9 with -- 10 MR. MEADOWS: Hold on. 11 MR. LOCKE: No. No. Go ahead. 12 You can ask follow-up questions 13 if you want. 14 MR. MEADOWS: You're 15 interrupting her. 16 MR. LOCKE: Well, I've got a 17 limited amount of time, and I've got 18 to keep moving. 19 MR. MEADOWS: Well -- 20 MR. LOCKE: They're very long 21 answers to questions that I'm not 22 asking. So I -- you follow up if you 23 would like with your questions, but I 24 got to keep moving. 25 MR. MEADOWS: Well, I'm sorry,</p>	<p>1 I'm sorry. 2 Q. The FDA frequently seeks 3 information, scientific information, from 4 cosmetic manufacturers; is that correct? 5 A. I don't understand what you 6 mean by "frequently seeks." They rely on 7 cosmetic manufacturers to do their own safety 8 assessments. 9 Is that what you're referring 10 to? 11 Q. Well, they ask PCPC to comment 12 on scientific issues, correct? 13 A. Yes, I would agree that that 14 interaction has happened, but that's not 15 where the responsibility lies. But I agree, 16 they have. 17 Q. I'm not asking about 18 responsibility. I'm asking: Has the FDA 19 asked cosmetic manufacturers for scientific 20 information? 21 A. Yes, they have in this case. I 22 discuss some of that, yes. 23 Q. And they do that frequently, 24 right? Not just in this case, but generally? 25 A. I can't answer that for all</p>
Page 359	Page 361
<p>1 but you're not going to be allowed to 2 interrupt her. 3 MR. LOCKE: Okay. Then we'll 4 go longer. If she's going to answer 5 questions I'm not asking, then I need 6 to go -- I need to be able to go 7 longer. 8 MR. MEADOWS: You're not going 9 to be allowed to interrupt her. 10 That's just the bottom line. 11 QUESTIONS BY MR. LOCKE: 12 Q. You're not a gynecological 13 oncologist, right? 14 A. I'm not trained as a 15 gynecologic oncologist, that is true. 16 Q. You're not a medical doctor, 17 correct? 18 A. I am not a physician, that is 19 correct. 20 Q. Let's talk about the citizens 21 petition. 22 The FDA frequently seeks 23 scientific information from cosmetic 24 manufacturers; is that correct? 25 A. First part of the question?</p>	<p>1 situations. I have seen it happen before, 2 yes. 3 Q. The FDA asked, for example, for 4 then CTFA to cosponsor the 1994 workshop on 5 talc, correct? 6 A. Yes, they did. 7 Q. The FDA knew that the report 8 prepared by Dr. Huncharek and Dr. Muscat was 9 based on PCPC's retention of those 10 consultants, correct? 11 A. So what are you -- what time 12 period are you talking about? 13 Q. Well, now, there was only one 14 time that Drs. Huncharek and Muscat submitted 15 a report to the FDA regarding talc, correct? 16 A. So I need to look to confirm 17 that. Which time period are you talking 18 about? 19 Q. 2009. Citizens petition. 20 A. Oh, that is true. In the 21 citizens petition, that is true, yes. But 22 I -- but... 23 Q. I mean, it says in the letter, 24 "We're submitting a report written by Drs. 25 Huncharek and Muscat," correct?</p>

Confidential - Pursuant to Protective Order

Page 362	Page 364
<p>1 A. In the cover letter from the 2 CRE? 3 Q. From -- not CRE, from PCPC. 4 A. Okay. So let -- I need to -- I 5 need to refresh my memory on the way the 6 submissions were made. I apologize. 7 Do you remember which paragraph 8 that you're referring to? 9 Q. Well, it's throughout your 10 report you're talking about the citizens 11 petition. 12 A. So it's my recollection, based 13 upon the documents that I have seen, that it 14 was not a transparent process at all times 15 that Drs. Huncharek and Muscat were being 16 identified as independent consultants and 17 were not ones that were being actually paid 18 by the industry for some of the work that 19 they did. And I think that's discussed in my 20 report. 21 Q. Well, let's break that down. 22 A. If you want me to confirm the 23 issue of the 2009 -- if you will point me to 24 where you say I discuss this, I will confirm 25 that or not.</p>	<p>1 Q. And you're not aware of any 2 other document indicating that PCPC ever 3 hired Drs. Huncharek or Muscat? 4 A. So that's where I'll need to go 5 back and look at the documents, because -- 6 that I have discussed. So I need to find 7 that on my paragraph. 8 If you want to go off the 9 record for a minute so I don't waste your 10 time, I will look. 11 Q. Sure. 12 A. It's up to you. Or we can stay 13 on the record. 14 MR. LOCKE: I'm fine going off. 15 VIDEOGRAPHER: We are going off 16 the record at 4:23 p.m. 17 (Off the record at 4:23 p.m.) 18 VIDEOGRAPHER: We are back on 19 the record at 4:25 p.m. 20 QUESTIONS BY MR. LOCKE: 21 Q. The question I asked: Are you 22 aware of any other document indicating that 23 PCPC ever hired Dr. Huncharek and Muscat 24 other than for the 2009 response or 25 submission to the citizens petition?</p>
Page 363	Page 365
<p>1 Q. Well, let me break it down. 2 Citizens petition submitted in 3 2008, right? 4 A. Well, there were two: one in 5 1994 and another -- I'm sorry, 1992, and 6 another in 2008. 7 Q. Well, there are actually 8 several more than that, but let's just focus 9 on the 2008. 10 In 2008, a citizens petition 11 was submitted? 12 A. Yes, that is true. 13 Q. And PCPC responded to that 14 citizens petition in 2009, correct? 15 A. They submitted comments. Is 16 that what you're asking me? Yes, they did. 17 Q. Yes. 18 And that was a cover letter, 19 correct? 20 A. A cover letter -- that's all it 21 was was a cover letter? 22 Q. Well, attached to the cover 23 letter was a report from Drs. Huncharek and 24 Muscat? 25 A. Yes, that is true.</p>	<p>1 A. I would have to pull this 2 document, but in paragraph 90 I make a 3 statement: A 2005 response written by 4 Dr. Muscat says -- this is not '09, this is 5 2005, and Dr. Huncharek critiqued the work of 6 Dr. Cramer, who also failed to disclose the 7 financial relation -- I'll start over. 8 Okay. So I'm sorry to repeat 9 myself, but there was a little noise. 10 You asked 2009. So the other 11 time period I have in my report in 12 paragraph 90 talks about 2005, but I'd have 13 to pull this document. 14 But I am citing to the 15 deposition of Dr. Loretz, who was a PCPC 16 employee, so I think I would need to pull 17 this in order to confirm. 18 But I see depositions of her 19 and Dr. Nicholson as talking about them 20 failing to disclose the financial 21 relationship between their work and industry. 22 Q. So if Dr. Loretz did not 23 testify that PCPC had retained Drs. Huncharek 24 and Muscat in 2005, you'd have no other 25 evidence?</p>

Confidential - Pursuant to Protective Order

Page 366	Page 368
<p>1 A. I can't answer that</p> <p>2 definitively, but this is what I would point</p> <p>3 you to. So I'd have to pull these documents</p> <p>4 to confirm, but I have -- both paragraphs 89</p> <p>5 and 90 address these general issues for you,</p> <p>6 but I think that's the sentence and the</p> <p>7 documents that I think would be relevant.</p> <p>8 But I'd have to pull them to fully answer</p> <p>9 your question.</p> <p>10 Q. The reason I ask the question</p> <p>11 is because you frequently say "the cosmetics</p> <p>12 industry" without identifying a party or a</p> <p>13 person. And -- well, I'll just leave it at</p> <p>14 that.</p> <p>15 A. And I guess the reason I'm</p> <p>16 saying I need to -- I'm questioning that it</p> <p>17 doesn't have to do with PCPC is because I am</p> <p>18 citing to a deposition of their employee. So</p> <p>19 I need to -- I would -- to affirm it, though,</p> <p>20 I'd need to -- I don't want to say that</p> <p>21 100 percent the answer to your question is</p> <p>22 this is the evidence, but I believe that I</p> <p>23 would need to go here to confirm one way or</p> <p>24 the other. But certainly I would -- this</p> <p>25 raises suspicion about that for me.</p>	<p>1 Q. What evidence do you have of</p> <p>2 that?</p> <p>3 A. Based upon the close</p> <p>4 interaction between PCPC, Imerys and Johnson</p> <p>5 & Johnson throughout these time periods when</p> <p>6 different actions were being taken to comment</p> <p>7 or to submit information on behalf of</p> <p>8 industry.</p> <p>9 Q. Do you have a single document</p> <p>10 you can point to or is that an assumption?</p> <p>11 A. That is something I seem to</p> <p>12 remember based on my review of these</p> <p>13 documents, but if you need a document, I</p> <p>14 would have to -- have to go and look for it.</p> <p>15 Q. Sitting here today, you can't</p> <p>16 recall?</p> <p>17 A. I can't give you a specific</p> <p>18 document as I sit here today, no.</p> <p>19 MR. LOCKE: I have no further</p> <p>20 questions.</p> <p>21 MR. MEADOWS: Yeah, short</p> <p>22 break. Maybe we're done, maybe we're</p> <p>23 not.</p> <p>24 VIDEOGRAPHER: We are going off</p> <p>25 the record at 4:30 p.m.</p>
Page 367	Page 369
<p>1 Q. You have no evidence that PCPC</p> <p>2 ever retained the Center for Regulatory</p> <p>3 Effectiveness; is that correct?</p> <p>4 A. I believe my evidence is hiring</p> <p>5 through Imerys, but let me look to make sure</p> <p>6 that is true.</p> <p>7 Q. Why don't you look at page --</p> <p>8 or I'm sorry, paragraph 95, page 63.</p> <p>9 A. That's where I am. That's</p> <p>10 where I am, so let me read what I have here</p> <p>11 because it's been a while since I've read</p> <p>12 this paragraph.</p> <p>13 So the question is, do I have</p> <p>14 in evidence this paragraph that PCPC directly</p> <p>15 hired the CRE?</p> <p>16 No, that is not provided by</p> <p>17 this paragraph.</p> <p>18 Q. Okay.</p> <p>19 A. However, in this paragraph,</p> <p>20 based on these documents that I'm seeing and</p> <p>21 I'm -- my memory of what is discussed,</p> <p>22 certainly I believe PCPC would have been</p> <p>23 aware of the interaction of CRE at these time</p> <p>24 points when I'm talking about this event --</p> <p>25 these events.</p>	<p>1 (Off the record at 4:30 p.m.)</p> <p>2 VIDEOGRAPHER: We are back on</p> <p>3 the record at 4:45 p.m.</p> <p>4 CROSS-EXAMINATION</p> <p>5 QUESTIONS BY MS. PARFITT:</p> <p>6 Q. All right. Dr. Plunkett, good</p> <p>7 afternoon. I know it's been a long day.</p> <p>8 Dr. Plunkett, you were asked</p> <p>9 throughout the course of the day about</p> <p>10 different constituents which are part of the</p> <p>11 talcum powder products.</p> <p>12 Do you recall those questions?</p> <p>13 A. Yes.</p> <p>14 Q. All right. If -- without going</p> <p>15 through each and every one of different</p> <p>16 constituents that we've talked about that are</p> <p>17 contained or could be contained in the talcum</p> <p>18 powder products, if they are present, do</p> <p>19 those various constituents present and</p> <p>20 provide biologically plausible evidence that</p> <p>21 talcum powder products can increase the risk</p> <p>22 of ovarian cancer?</p> <p>23 MS. BOCKUS: Object to the</p> <p>24 form.</p> <p>25 THE WITNESS: Yes, which is --</p>

Page 370	Page 372
<p>1 I think I have a couple of paragraphs 2 where I talk about that issue. It has 3 to do -- there's other information as 4 well, but that is a key piece of that 5 information. And I focused on mode of 6 action and additivity. That's on 7 mechanism, biologic plausibility. 8 So the fact that you have a 9 variety of constituents that have a 10 known cancer hazard that share a mode 11 of action, that increases your 12 confidence in the biologic 13 plausibility of that relationship 14 between ovarian cancer and exposure to 15 talc body powders, yes. 16 MS. PARFITT: Thank you. I 17 have no further questions. Thank you 18 very much, Dr. Plunkett. And a happy 19 holiday to you. 20 THE WITNESS: Thank you. 21 MS. BRANSCOME: I have no 22 questions. 23 MS. BOCKUS: No questions. 24 VIDEOGRAPHER: The time now is 25 4:47 p.m. This concludes the</p>	<p>1 CERTIFICATE 2 3 I, CARRIE A. CAMPBELL, Registered 4 Diplomate Reporter, Certified Realtime Reporter and Certified Shorthand Reporter, do 5 hereby certify that prior to the commencement of the examination, Laura Plunkett, Ph.D., 6 DABT was duly sworn by me to testify to the truth, the whole truth and nothing but the 7 truth. 8 I DO FURTHER CERTIFY that the foregoing is a verbatim transcript of the 9 testimony as taken stenographically by and before me at the time, place and on the date hereinbefore set forth, to the best of my 10 ability. 11 I DO FURTHER CERTIFY that I am neither a relative nor employee nor attorney 12 nor counsel of any of the parties to this action, and that I am neither a relative nor 13 employee of such attorney or counsel, and that I am not financially interested in the 14 action. 15 16 17 18 CARRIE A. Qualifications

In this report, I describe the role of oxidative stress in the pathogenesis and behavior of ovarian cancer, as well as describe the biological effects of talcum powder on normal ovarian and fallopian tube cells, macrophages, and ovarian cancer cells.

I am an Associate Professor with tenure at Wayne State University in Detroit, Michigan, where I am Director of Ovarian Cancer Research. I am a faculty member in the Departments of Obstetrics & Gynecology, Cell Biology, and Anatomy & Physiology at Wayne State School of Medicine. I am also a Member of the Karmanos Cancer Institute, Molecular Biology and Genetics Program.

I received a Ph.D. in Molecular Biology at the University of Essex, Colchester, England in 1986. My postgraduate training included a Fellowship in Immunopathology at the University of Michigan, Ann Arbor from 1992-1993 and a Fellowship in Molecular Biology at the Henry Ford Hospital in Detroit, Michigan from 1988-1990. I joined the faculty at Wayne State School of Medicine in 1998.

My laboratory investigates the role of oxidative stress in the pathogenesis of ovarian cancer. This concentration arose from my original research that focused on the molecular mechanisms involved in the pathogenesis of tissue fibrosis and the need to compare the effects of oxidative stress on a malignant overgrowth versus a benign overgrowth, specifically postoperative adhesions.

My research in ovarian cancer has resulted in the identification of biomarkers for assessing the progression and metastasis of ovarian cancer. The major outcome of my work with fibrosis and postoperative adhesions, in addition to the development of the ex-vivo model for adhesion, was the development and characterization of the adhesion phenotype in cell culture. Additionally,

the cell culture system was used to test the hypothesis that hypoxia is the trigger for the development of postoperative adhesions.

I have taught numerous undergraduate, graduate, medical students, residents, and fellows. Many of these have received research awards, published important papers, and accepted prestigious academic faculty positions. I have been the recipient of national and international grants and contracts from organizations including the American Association for Cancer Research (AACR), NIH/NICHD, U.S. Department of Defense, the Ovarian Cancer Research Fund Alliance, the Michigan Ovarian Cancer Alliance, and other ovarian cancer foundations. I have been a prolific publisher and presenter at scientific meetings. I have been an author on 136 original studies published in peer-reviewed journals with additional review articles, and book chapters. Recently, I published a review article in the journal, Gynecologic Oncology titled, “Updates of the role of oxidative stress in the pathogenesis of ovarian cancer” and a textbook chapter titled “New insights into the Pathogenesis of Ovarian Cancer: Oxidative Stress” summarizing my research in this area. My CV is attached as Exhibit A. In addition to the references included in this report, the materials I reviewed are attached as Exhibit B. My fees and prior testimony are attached as Exhibit C.

Ovarian cancer

Ovarian cancer is the most lethal gynecologic malignancy and ranks fifth in cancer deaths among women diagnosed with cancer¹. Epithelial ovarian cancer (EOC) has long been considered a heterogeneous disease with respect to histopathology, molecular biology, and clinical outcome^{1,2}. It comprises at least five distinct histological subtypes, the most common and well-studied being high-grade serous ovarian cancer. In the last decade, researchers have proposed the theory that many ovarian cancers arise from the distal fallopian tubes. For this reason, as well as the similarities in pathogenesis, presentation, treatment, and prognosis, fallopian tube, ovarian, and

peritoneal cancer are generally treated as a single entity. Although surgical techniques and treatments have advanced over the years, the prognosis of EOC remains poor, with a 5-year survival rate of 50% in advanced stage ². This is largely due to the lack of early warning symptoms and screening methods, and the development of chemoresistance ^{1,2}. Ovarian cancer is known to be associated with germline mutations in the BRCA1 or BRCA2 genes, but with a rate of only 20-40%, suggesting the presence of other unknown mutations in other predisposition genes ³. Additional genetic variations including single nucleotide polymorphisms (SNPs) have been described to act as low to moderate penetrant alleles that contribute to ovarian cancer risk ^{3,4}. Non-synonymous SNPs substitute encoded amino acids in proteins and are more likely to alter the structure, function, and interaction of the protein ⁴. The pathophysiology of EOC is not fully understood but has been strongly associated with inflammation and the resultant oxidative stress⁵.

Oxidative stress

Homeostasis, the balance between the production and elimination of oxidants, is maintained by mechanisms involving oxidants and antioxidant enzymes and molecules. If this balance is altered, it leads to an enhanced state of oxidative stress that alters key biomolecules and cells of living organism ⁵. Oxidant molecules are divided into two main groups; oxygen-derived or nitrogen-containing molecules. Oxygen-derived molecules, also known as reactive oxygen species (ROS), include free radicals such as hydroxyl (HO^\bullet), superoxide ($\text{O}_2^{\bullet-}$), peroxy (RO_2^\bullet), and alkoxy (RO^\bullet), as well as oxidizing agents such as hydrogen peroxide (H_2O_2), hypochlorous acid (HOCl), ozone (O_3), and singlet oxygen ($^1\text{O}_2$) that can be converted to radicals ^{5,6}. Nitrogen containing oxidants, also known as reactive nitrogen species (RNS), are derived from nitric oxide (NO) that is produced in the mitochondria in response to hypoxia ⁵. Exposure to inflammation, infection, carcinogens, and toxicants are major sources of ROS and RNS, *in vivo* ⁵⁻⁸. Additionally,

RNS and ROS can be produced by various enzymes including cytochrome P450, lipoxygenase, cyclooxygenase, nicotinamide adenine dinucleotide phosphate (NAD(P)H) oxidase complex, xanthine oxidase (XO), and peroxisomes (Figure 1) ^{5,7,9}.

To maintain the redox balance, ROS and RNS are neutralized by various important enzyme systems including superoxide dismutase (SOD), catalase (CAT), glutathione S-transferase (GST), glutathione (GSH), thioredoxin coupled with thioredoxin reductase, glutaredoxin, glutathione peroxidase (GPX), and glutathione reductase (GSR) ⁶. Superoxide dismutase is known to convert $O_2^{\bullet-}$ to H_2O_2 , which is then converted to water by CAT. Glutathione S-transferase is involved in detoxification of carcinogens and xenobiotics by catalyzing their conjugation to GSH that will aid in expulsion from the cell ⁶. Indeed, the GSH-to-oxidized-GSH (GSH/GSSG) ratio is a good indicator of cellular redox buffering capacity ^{10,11}. Under enhanced oxidative stress, the GSH/GSSG complex is known to stimulate the activity of the GS-X-MRP1 efflux pump, which removes toxins from cells. This mechanism has been investigated in the development of resistance to chemotherapeutic drugs ^{10,11}.

Ovarian Cancer Cells Manifest a Persistent Pro-Oxidant State

Recent evidence demonstrates that oxidative stress is a critical factor in the initiation and development of several cancers, including ovarian cancer ^{12,13}. Consistently, it has been reported that ovarian cancer patients manifest significantly decreased levels of antioxidants and higher levels of oxidants ¹²⁻¹⁷. An enhanced redox state, resulting from increased expression of key pro-oxidant enzymes and decreased expression of antioxidant enzymes, has been extensively described in epithelial ovarian cancer (EOC) ¹⁶⁻¹⁸. My laboratory has previously reported that MPO, a hemoprotein present solely in myeloid cells that acts as a powerful oxidant, and iNOS, a key pro-oxidant enzyme, are highly expressed and co-localized to the same cell in EOC cells ¹⁷. These two

enzymes, MPO and iNOS, work together to inhibit apoptosis, a hallmark of ovarian cancer cells. Apoptosis, or programmed cell death, refers to the normal and controlled death of cells. Myeloperoxidase acts as powerful oxidant enzyme in EOC cells through the utilization of nitric oxide (NO) produced by iNOS as a one-electron substrate generating NO^+ , a labile nitrosylating species^{19,21}. My laboratory was the first to report that MPO was expressed by EOC cells and tissues¹⁷. Silencing MPO gene expression utilizing MPO specific siRNA induced apoptosis in EOC cells through a mechanism that involved the S-nitrosylation of caspase-3 by MPO¹⁷. Additionally, there is compelling evidence that MPO serves as a source of free iron under oxidative stress, where both NO^+ and superoxide are elevated¹⁹. Iron reacts with hydrogen peroxide (H_2O_2) and catalyzes the generation of highly reactive hydroxy radical (HO^\bullet), thereby increasing oxidative stress, which in turn increases free iron concentrations by the Fenton and Haber–Weiss reaction^{19,21}. Additionally, my laboratory has highlighted the potential benefits of the combination of serum MPO and free iron as biomarkers for early detection and prognosis of ovarian cancer¹⁴. EOC cells are also characterized by enhanced expression of NAD(P)H oxidase, a potent oxidant enzyme that is known to be the major source of $\text{O}_2^{\bullet-}$ in the cell. Such high levels of $\text{O}_2^{\bullet-}$ combined with significantly high levels of NO generates peroxynitrite, another powerful nitrosylation and nitration agent, which modifies proteins and DNA structure and function in cells²².

A reliable screening and detection method based on molecular profiles for ovarian cancer has not yet been developed because the disease exhibits a wide range of morphological, clinical and genetic variations during its progression. The search for non-invasive, cost-effective ovarian cancer biomarker tests has been ongoing for many years. Immunizations of mice with ovarian cancer cells has led to hybridoma validation by ELISA, while flow cytometry analysis permitted the discovery of cancer antigen (CA)-125 (the only marker currently used in clinical practice) and

mesothelin²³. Furthermore, the screening of an array of 21,500 unknown ovarian cDNAs hybridized with labeled first-strand cDNA from ten ovarian tumors and six normal tissues led to the discovery of human epididymis protein 4 (HE4)²⁴. Most interestingly, HE4 is overexpressed in 93% of serous and 100% of endometrioid EOCs, and in 50% of clear cell carcinomas, but not in mucinous ovarian carcinomas²⁵. Thus, HE4 was identified as one of the most useful biomarkers for ovarian cancer, although it lacked tissue-specificity^{24,26-28}. Secreted HE4 high levels were also detected in the serum of ovarian cancer patients²⁹. Additionally, combining CA-125 and HE4 is a more accurate predictor of malignancy than either alone³⁰⁻³². The discovery of MPO expression in ovarian EOC cells and tissues was surprising, as it is only expressed by cells of myeloid origin. Intriguingly, my laboratory has previously reported that the combination of serum MPO and free iron may serve as biomarkers for early detection of ovarian cancer¹⁴.

Common Polymorphisms in Redox Enzymes are Associated with Ovarian Cancer.

A single nucleotide polymorphism (SNP) occurs as a result of gene point mutations with an estimated frequency of at least one in every 1000 base pairs that are selectively maintained and distributed in populations throughout the human genome³³. An association between common SNPs in oxidative DNA repair genes and redox genes with human cancer susceptibility has been established⁷. Common SNPs in the redox enzymes are known to be strongly associated with an altered enzymatic activity in these enzymes, and helps explain the enhanced redox state that has been linked to several malignancies, including ovarian cancer^{12,16}. Additionally, it helps explain the observation of significantly decreased apoptosis and increased survival of EOC cells¹⁷. It is therefore critical to determine the exact effect of common SNPs in various redox enzymes on all process involved in the development of the oncogenic phenotype³⁴⁻³⁷. Such studies can be linked to other studies focusing on determining the effects of genes involved in carcinogen metabolism

(detoxification and/or activation), redox enzymes, and DNA repair pathways³⁶. Numerous SNPs associated with change of function have been identified in antioxidant enzymes including *CAT*, *GPX1*, *GSR*, and *SOD2*^{35,37}. Additionally, the association between genetic polymorphisms in genes with anti-tumor activity and those involved in the cell cycle has been reported in ovarian cancer^{38,39}. Recently, several genetic variations have been identified in genome-wide association studies (GWAS), and were found to act as low to moderate penetrant alleles, which contribute to ovarian cancer risk, as well as other diseases^{4,40}.

There is now an association of specific SNPs in key oxidant and anti-oxidant enzymes that impact increased risk of ovarian cancer and/or overall survival of patients with ovarian cancer^{34,35}. A common SNP that reduced CAT activity (rs1001179) was utilized as a significant predictor of death when present in ovarian cancer patients and was also associated with increased risk for breast cancer^{34,35,37,41}. This SNP is also linked to increased risk, survival, and response to adjuvant treatment of cancer patients, including ovarian^{34,42}. Another common SNP that reduced CYBA activity (rs4673) was also reported to be associated with an increased risk for ovarian cancer^{34,35}. The mutant genotype of the *CYBA* gene has been shown to both decrease and increase activity of the protein, thereby altering the generation of $O_2^{\bullet-}$ ^{34,35}. Moreover, functionally distinct *MPO* polymorphisms, such as (rs2333227) have been linked to relative increased risk for development of ovarian cancer as well as other cancers^{34,35,43}. Additional SNPs that influenced the risk of EOC have been successfully identified from the GWAS studies including rs3814113 (located at 9p22, near *BNC2*), rs2072590 (located at 2q31, which contains a family of *HOX* genes), rs2665390 (located at 3q25, intronic to *TIPARP*), rs10088218 (located at 8q24, 700 kb downstream of *MYC*), rs8170 (located at 19p13, near *MERIT40*), and rs9303542 (located at 17q21, intronic to *SKAP1*)

^{34,35}. Thus, the genetic component of increased ovarian cancer risk may be attributed to SNPs that result in point mutations in the redox genes and potentially other genes ⁴⁴.

Chemoresistance is Associated with Point Mutations in Key Redox Enzymes in EOC cells

To date, the acquisition of chemoresistance in ovarian cancer is being investigated. The enhanced oxidant state reported in chemoresistant EOC cells is likely linked to point mutations in key redox enzymes ³⁵. Chemoresistant EOC cells manifested increased levels of CAT, GPX, and iNOS and decreased levels of GSR, SOD, and NAD(P)H oxidase as compared to their sensitive counterparts ³⁵. Interestingly, chemoresistant EOC cells, and not their sensitive counterparts, manifested specific point mutations that corresponded to known functional SNPs, in key redox enzymes including *SOD2* (rs4880), *NOS2* (rs2297518), and *CYBA* (rs4673) ⁴⁵. However, altered enzymatic activity for CAT and GSR observed in chemoresistant EOC cells did not correspond to the specific SNP of interest in those enzymes, indicating involvement of other possible functional SNPs for those enzymes ³⁵. Coincidentally, chemotherapy treatment induced point mutations that happen to correspond to known functional SNPs in key oxidant enzymes subsequently led to the acquisition of chemoresistance by EOC cells. Indeed, the induction of specific point mutations in *SOD2* or *GPX1* in sensitive EOC cells resulted in a decrease in the sensitivity to chemotherapy of these cells ³⁵. In fact, the addition of *SOD* to sensitive EOC cells during chemotherapy treatment synergistically increased the efficacy to chemotherapy ³⁵.

Alternatively, the observed nucleotide switch in response to chemotherapy in EOC cells may be the result of nucleotide substitution, a process that includes transitions, replacement of one purine by the other or that of one pyrimidine by the other, or transversions, replacement of a purine by a pyrimidine or vice versa ³⁵. Actually, hydroxyl radicals are known to react with DNA causing the formation of many pyrimidine and purine-derived lesions ³⁵. The oxidative damage to 8-Oxo-

2'-deoxyguanosine, a major product of DNA oxidation, induces genetic alterations in oncogenes and tumor suppressor genes that have been involved in tumor initiation and progression³⁵. A GC to TA transversion has been reported in the *ras* oncogene and the *p53* tumor suppressor gene in several cancers. However, the GC to TA transversion is not unique to hydroxy-2'-deoxyguanosine, as CC to TT substitutions have been identified as signature mutations for oxidants and free radicals³⁵. Moreover, the observed nucleotide switch in response to chemotherapy in EOC cells can be due to the fact that acquisition of chemoresistance generates an entirely different population of cells with a distinct genotype. Hence, chemotherapy kills the bulk of the tumor cells leaving a subtype of cancer cells with ability for repair and renewal, known as cancer stem cells (CSCs)³⁵. Indeed, cancer stem cells have been isolated from various types of cancer including leukemia, breast, brain, pancreatic, prostate, ovary and colon³⁵. Interestingly, CSC populations were present in cultures of SKOV-3 EOC cells and have been shown to be chemoresistant in nature³⁵.

Talcum powder and increased risk of ovarian cancer

Talcum powder is made from talc, a mineral containing mainly of the elements magnesium, silicon, and oxygen. In its natural form, some talc contains asbestos. Talc and asbestos are both silicate minerals; the carcinogenic effects of asbestos have been extensively studied and documented in the medical literature^{46,47}. Asbestos fibers in the lung initiate an inflammatory and scarring process, and it has been proposed that ground talc, as a foreign body, initiates a similar inflammatory response and it has been proposed that ground talc, as a foreign body, might initiate an inflammatory response^{48,47}. There has been concern about a possible link between talcum powder usage in the genital and ovarian cancer, as well as lung cancer in workers exposed to talc in an occupational setting⁴⁹. Studies that exposed lab animals (rats, mice, and hamsters) to asbestos-free talcum powder in various ways have had mixed results, with some showing tumor

formation and others finding only inflammation^{50,51}. The International Agency for Research on Cancer (IARC) is part of the World Health Organization (WHO). Its major goal is to identify causes of cancer. Based on limited evidence from human studies of a link to ovarian cancer, IARC classified the perineal (genital) use of talc-based body powder (not containing asbestiform fibers) as “possibly carcinogenic to humans.” (Group 2b)⁸⁸. Talcum powder containing asbestos and fibrous talc are both considered carcinogenic (Group 1) by IARC⁸⁹.

The association between perineal talc powder dusting and ovarian cancer has been studied in at least 25 case-control studies, three cohort studies, six meta-analyses and one pooled study⁷³. Although the cohort studies individually did not show a statistically significant increased risk of ovarian cancer with talcum powder usage, the case-control studies overall and the meta-analyses show a consistent and significant increased risk. This risk is estimated to be 30-40%. The studies have shown conflicting results regarding the presence of a dose-response, largely due to the failure of many studies to obtain necessary information on the frequency and duration of usage and the inherent challenge of quantifying actual exposure. Although migration/transport of particles through the genital tract is universally accepted and the inflammatory nature of talcum powder consistently demonstrated, the exact mechanism for carcinogenesis had not been conclusively elucidated. For these reasons, there has been some reluctance in the scientific community to accept talcum powder as a causative risk factor for the development of ovarian cancer. The most recent meta-analysis, reported by Penninkilampi and Eslick in 2017, found that any perineal talc use was associated with a statistically significant increased risk of ovarian cancer (OR = 1.31). More than 3600 lifetime applications (OR = 1.42) were slightly more associated with ovarian cancer than <3600 (OR = 1.32). An association with ever use of talc was found in case-control studies (OR = 1.35), but not cohort studies (OR = 1.06). However, cohort studies found an association between

talc use and invasive serous type ovarian cancer (OR = 1.25), the most common and most lethal subtype. In the opinion of the authors, meta-analysis is the highest level of evidence in this setting because of the need for a large number of cases and long-term follow-up in a relatively rare form of cancer with a lengthy latency period. The authors of this meta-analysis suggested that cellular injury, oxidative stress, and local increase in inflammatory mediators might be the mechanism by which talcum powder promotes carcinogenesis, but that this mechanism was unclear. They recognized the “substantial need for further research on a potential mechanism by which ovarian cancer may be caused by talc, as this will allow a causal relationship to be established or rejected with more certainty”⁷³.

In addition to epidemiological studies, the claim that regular use of talcum powder for perineal hygiene purpose is associated with an increased risk of ovarian cancer is based on several reports confirming the presence of talc particles in the ovaries and other parts of the female reproductive tract as well as in lymphatic vessels and tissues of the pelvis^{45,75}. Henderson first reported the presence of talc particles in ovaries in 1971. A study by Cramer, et al has reported the presence of talc in pelvic lymph nodes of a woman with ovarian cancer who used talc daily for 30 years⁴⁵. The ability of talc particles to migrate through the genital tract to the distal fallopian tube and ovaries is well accepted^{45,75}.

It has been suggested that the associations between perineal talc dusting and ovarian cancer might be explained by the induction of ANTI-MUC1 antibodies⁵⁷. Additionally, in a previous study by Shukla et.al., whereby human mesothelial cells (LP9/TERT-1) were exposed to low and high (15 and 75 mm²/cm² dish) equal surface area concentrations of nonfibrous talc for 8 or 24 hours, the authors found that nonfibrous talc at low concentrations to cause an increase in the

expression of Activating Transcription Factor 3 (ATF3) at 8 hours and no changes at 24 hours, whereas expression levels of 30 genes were elevated at 8 hours at high talc concentrations⁷⁸.

My laboratory undertook research to determine whether or not there was a molecular basis for the observed association between talcum powder and ovarian cancer. If a biological effect was demonstrated, we hoped to define the mechanism in detail. Issues like this one, relating to the pathogenesis of ovarian cancer and the relationship between inflammation and other pathological conditions in the female reproductive system as well as cancer, have been the focus of my laboratory for many years.

Findings from recent research from our laboratory relating to the effects of talcum powder exposure *in vitro*

The following is a description of the methodology used:

Cell Lines: Ovarian cancer cells: SKOV-3 (ATCC), A2780 (Sigma Aldrich), and TOV112D (a kind gift from Gen Sheng Wu at Wayne State University, Detroit, MI)²⁵. Normal cell lines: human macrophage cells (EL-1, ATCC), human primary normal ovarian epithelial cells (Cell Biologics), Human Ovarian Epithelial Cells (HOSEpiC, ScienCell Research Laboratories, Inc.) immortalized human fallopian tube secretory epithelial cells (FT33-shp53-R24C, Applied Biological Materials). All cells were grown in media and conditions following manufacturer's protocol. EL-1 cells were grown in IMDM media (ATCC) supplemented with 0.1 mM hypoxanthine and 0.1 mM thymidine solution (H-T, ATCC) and 0.05mM β -mercaptoethanol. SKOV-3 EOC cells were grown in HyClone McCoy's 5A medium (Fisher Scientific), A2780 EOC cells were grown in HyClone RPMI-1640 (Fisher Scientific), and both TOV112D EOC cells were grown in MCDB105 (Cell Applications) and Medium 199 (Fisher Scientific) (1:1). All media was supplemented with fetal bovine serum (FBS, Innovative Research) and penicillin/streptomycin

(Fisher Scientific), per their manufacturer specifications. Human primary normal ovarian epithelial cells were grown in Complete Human Epithelial Cell Medium (Cell Biologics).

Treatment of cells: Talcum powder (Fisher Scientific, Catalog #T4-500, Lot#166820) or Johnson's Baby Powder (Johnson & Johnson, #30027477, Lot#13717RA) was dissolved in DMSO (Sigma Aldrich) at a concentration of 500 mg in 10 ml and was filtered with a 0.2 μ m syringe filter (Corning). Sterile DMSO was used as a control for all treatments. Cells were seeded in 100 mm cell culture dishes (3×10^6) and were treated 24 hours later with 0, 5, 20, or 100 μ g/ml of talc for 48 hours. Cell pellets were collected for RNA, DNA, and protein extraction. Cell culture media was collected for CA-125 analysis by ELISA.

Real time RT-PCR: Total RNA was extracted from all cells using the RNeasy Mini Kit (Qiagen) according to the protocol provided by the manufacturer. Measurement of the amount of RNA in each sample was performed using a Nanodrop Spectrophotometer (Thermo Fisher Scientific). A 20 μ L cDNA reaction volume containing 0.5 μ g RNA was prepared using the SuperScript VILO Master Mix Kit (Life Technologies), as described by the manufacturer's protocol. Optimal oligonucleotide primer pairs were selected for each target using Beacon Designer (Premier Biosoft, Inc., Table 1). Quantitative RT-PCR was performed using the EXPRESS SYBR Green ER qPCR Supermix Kit (Life Technologies) and the Cepheid 1.2f Detection System as previously described²⁴. Standards with known concentrations and lengths were designed specifically for β -actin (79 bp), CAT (105 bp), iNOS (89 bp), GSR (103 bp), GPX1 (100 bp), MPO (79 bp), and SOD3 (84 bp), allowing for construction of a standard curve using a 10-fold dilution series²⁶. A specific standard for each gene allows for absolute quantification of the gene in number of copies, which can then be expressed per microgram of RNA. All samples

were normalized to the housekeeping gene, β -actin. A final melting curve analysis was performed to demonstrate specificity of the PCR product.

Protein Detection: Cell pellets were lysed utilizing cell lysis buffer (20 mM Tris-HCl (pH 7.5), 150 mM NaCl, 1 mM Na₂EDTA, 1 mM EGTA, 1% Triton, 2.5 sodium pyrophosphate, 1 mM beta-glycerophosphate, 1 mM Na₃VO₄, 1 μ g/ml leupeptin) containing a cocktail of protease inhibitors. Samples were centrifuged at 13000 rpm for 10 minutes at 4°C. Total protein concentration of cell lysates from control and talc-treated cells was measured with the Pierce BCA Protein Assay Kit (Thermo Scientific, Rockford, Illinois) per the manufacturer's protocol.

Detection of protein/activity by ELISA: ELISA kits for each target were purchased and used according to the manufacturer's protocol. The following ELISA kits were purchased from Cayman Chemical, Ann Arbor, MI: CAT, SOD3, GSR, GPX1, and MPO. Nitrite (NO₂⁻)/nitrate (NO₃⁻) were determined spectrophotometrically by measuring their absorbance at 210 nm after separation by HPLC with standard NO₂⁻/NO₃⁻ as previously reported¹⁹. The analysis was performed by a HPLC system (Shimadzu Scientific Instruments, Inc.) including a LC-10ADV pump, fr-10A injector and DGU-14A degasser. Nitrite/nitrate were detected using an RF-10 XL fluorescence detector with 210 nm excitation and 440 nm emission. CA-125 protein levels were measured in cell media by ELISA from Ray Biotech according to the manufacturer's protocol.

TaqMan® SNP Genotyping Assay: DNA was isolated utilizing the EZ1 DNA Tissue Kit (Qiagen Valencia, CA) for EOC cells according the manufacturer's protocols. The TaqMan® SNP Genotyping Assay Set (Applied Biosystems, Carlsbad, CA) (NCBI dbSNP genome build 37, MAF source 1000 genomes) were used to genotype the SNPs described in Table 1. The Applied Genomics Technology Center (AGTC, Wayne State University, Detroit, MI) performed these

assays. Analysis was done utilizing the QuantStudio™ 12 K Flex Real-Time PCR System (Applied Biosystems).

Statistical Analysis: Normality was examined using the Kolmogorov-Smirnov test and by visual inspection of quantile-quantile plots. Because most of the data were not normally distributed, differences in distributions were examined using the Kruskal-Wallis test. Generalized linear models were fit to examine pairwise differences in estimated least squares mean expression values by exposure to 0, 5, 20 or 100 ug/ml of Talc. We used the Tukey-Kramer adjustment for multiple comparisons, and the regression models were fit using log₂ transformed analyte expression values after adding a numeric constant '1' to meet model assumptions while avoiding negative transformed values. P-values below 0.05 are statistically significant.

Research Findings: Recent studies from our laboratory have shown conclusively that talcum powder alter key redox and inflammatory markers, enhance cell proliferation, and inhibit apoptosis in EOC cells, which are hallmarks of ovarian cancer. More importantly, this effect is also manifested by talcum powder in normal cells, including surface ovarian epithelium, fallopian tube, and macrophages. Oxidative stress has been implicated in the pathogenesis of ovarian cancer, specifically, by increased expression of several key pro-oxidant enzymes such as iNOS, MPO, and NAD(P)H oxidase in EOC tissues and cells as compared to normal cells indicating an enhanced redox state, as we have recently demonstrated ¹⁹. This redox state is further enhanced in chemoresistant EOC cells as evident by a further increase in iNOS and NO₂⁻/NO₃⁻ and a decrease in GSR levels, suggesting a shift towards a pro-oxidant state ¹⁹. Antioxidant enzymes, key regulators of cellular redox balance, are differentially expressed in various cancers, including ovarian ^{19,79}. Specifically, GPX expression is reduced in prostate, bladder, and estrogen receptor negative breast cancer cell lines as well as in cancerous tissues from the kidney. However, GPX

activity is increased in cancerous tissues from breast⁷⁹. Glutathione reductase levels, on the other hand, are elevated in lung cancer, although differentially expressed in breast and kidney cancerous tissues^{5,80}. Similarly, CAT was decreased in breast, bladder, and lung cancer while increased in brain cancer⁸¹⁻⁸³. Superoxide dismutase is expressed in lung, colorectal, gastric ovarian, and breast cancer, while decreased activity and expression have been reported in colorectal carcinomas and pancreatic cancer cells⁸³⁻⁸⁶. Collectively, this differential expression of antioxidants demonstrates the unique and complex redox microenvironment in cancer. Glutathione reductase is a flavoprotein that catalyzes the NADPH-dependent reduction of oxidized glutathione (GSSG) to GSH. This enzyme is essential for the GSH redox cycle which maintains adequate levels of reduced cellular GSH. A high GSH/GSSG ratio is essential for protection against oxidative stress. Treatment with talc significantly reduced GSR in normal and cancer cells, altering the redox balance. Likewise, GPX is an enzyme that detoxifies reactive electrophilic intermediates and thus plays an important role in protecting cells from cytotoxic and carcinogenic agents. Overexpression of GPX is triggered by exogenous chemical agents and reactive oxygen species, and is thus thought to represent an adaptive response to stress⁸⁰. Treatment of normal and cancer cells with talc significantly reduced GPX, which compromised the overall cell response to stress.

We have previously reported that EOC cells manifest increased cell proliferations and decreased apoptosis¹⁹. Consistent with these findings, recent studies from my laboratory have shown that talc enhances cell proliferation and induces an inhibition in apoptosis in EOC cells, but more importantly in normal cells, suggesting talc is a stimulus to the development of the oncogenic phenotype. We also previously reported a cross-talk between iNOS and MPO in ovarian cancer which contributed to the lower apoptosis observed in ovarian cancer cells^{17,19}. Collectively, we now have substantial evidence demonstrating that altered oxidative stress may play a role in

maintaining the oncogenic phenotype of EOC cells. Treatment of normal or ovarian cancer cells with talc resulted in a significant increase in MPO and iNOS, supporting the role of talc in the enhancement of a pro-oxidant state that is a major cause in the development and maintenance of the oncogenic phenotype.

Furthermore, CA-125, which exists as a membrane-bound and secreted protein in epithelial ovarian cancer cells, has been established as a biomarker for disease progression and response to treatment². CA-125 expression was significantly increased from nearly undetectable levels in controls to values approaching clinical significance (35 U/ml in postmenopausal women⁸⁷) in talc treated cell lines without the physiologic effects on the tumor microenvironment one would expect to be present in the human body, highlighting the implications of the pro-oxidant states caused by talc alone.

To elucidate the mechanism by which talc alters the redox balance to favor a pro-oxidant state not only in ovarian cancer cells, but more importantly in normal cells, my laboratory examined selected known gene mutations in key oxidant and antioxidant enzymes. These mutations correspond to specific SNPs that are known to be associated with altered enzymatic activity and increased cancer risk^{34,35}. Results show that the *CAT* SNP (rs769217) which results in decreased enzymatic activity was induced in all normal cell lines tested and in TOV112D EOC lines. However, the *CAT* mutation was not detected in A2780 or SKOV-3 cell lines. Nevertheless, our results confirm a decrease in *CAT* expression and enzymatic activity in all talc treated cells, indicating the existence of other *CAT* SNPs. However, the *SOD3* (rs2536512) and *GSR* (rs8190955) SNP genotypes were not detected in any cell line, yet *SOD3* and *GSR* activity and expression were decreased in all talc treated cells, again suggesting the presence of other SNPs. Our results have also shown that all cells, except for HOSEpiC cells, manifest the SNP genotype

of *GPXI* (C/T) before talc treatment. Intriguingly, talc treatment reversed this SNP genotype to the normal genotype. Consistent with this finding, it has previously been reported that acquisition of chemoresistance by ovarian cancer cells is associated with a switch from the *GPXI* SNP genotype to the normal *GPXI* genotype³⁵. It is not understood why a *GPXI* SNP genotype predominates in untreated normal and ovarian cancer cells. Additionally, our results showed that talc treatment was associated with a genotype switch from common C/C genotype in *NOS2* in untreated cells to T/T, the SNP genotype, in talc treated cells, except in A2780 and TOV112D. Nevertheless, our results confirm an increase in iNOS expression and enzymatic activity in all talc treated cells, again suggesting the existence of other *NOS2* SNPs. Collectively, these findings demonstrate that talc treatment induced gene point mutations that happen to correspond to SNPs in locations with functional effects, thus altering overall redox balance for the initiation and development of ovarian cancer. Future studies examining such SNPs are important to fully elucidate a genotype switch mechanism induced by talc exposure.

In summary, this research clearly demonstrates that talcum powder induces inflammation and alters the redox balance favoring a pro-oxidant state in normal and EOC cells. This study has shown a dose-dependent significant increase in key pro-oxidants, iNOS, NO₂⁻/NO₃⁻, and MPO and a concomitant decrease in key antioxidant enzymes, CAT, SOD, GPX, and GSR, in all talc treated cells (both normal and ovarian cancer) compared to their controls. Additionally, there was a significant increase in CA-125 levels in all the talc treated cells compared to their controls, except in macrophages (which do not produce CA-125). The mechanism by which talc alters the cellular redox and inflammatory balance involves the induction of specific mutations in key oxidant and antioxidant enzymes that correlate with alterations in their activities. The fact that these mutations

happen to correspond to known SNPs of these enzymes indicate a genetic predisposition to developing ovarian cancer with genital talcum powder exposure.

Summary of opinions

These opinions are made to a reasonable degree of scientific certainty and are based on my experience, training, and expertise, as well as a knowledge of the relevant scientific literature and my previous and ongoing research.

1. Johnson's Baby Powder elicits an inflammatory response in normal ovarian and tubal cells and in ovarian cancer cells that can result in the development and the progression of ovarian cancer.
2. This pro-carcinogenic process involves oxidative stress, alteration of the redox environment by increasing oxidant enzymes and decreasing anti-oxidant enzymes, promotion of cell proliferation, inhibition of apoptosis, and induction of specific genetic mutations.
3. Johnson's Baby Powder exposure results in elevation of CA-125, a clinically relevant biomarker for ovarian cancer, in normal and ovarian cancer cells.
4. The molecular effects resulting from Johnson's Baby Powder exposure exhibit a clear dose-response pattern.
5. In my opinion, based on established molecular mechanisms for the pathogenesis of ovarian cancer (as evidenced in the peer-reviewed scientific literature and my previously published research) and my *in vitro* experiments, Johnson's Baby Powder exposure can cause ovarian cancer.
6. In my opinion, based on established molecular mechanisms that influence the progression and chemoresistance associated with ovarian cancer (as evidenced in the peer-reviewed

scientific literature and my previously published research) and my *in vitro* experiments,

Johnson's Baby Powder exposure worsens the prognosis for patients with ovarian cancer.

I reserve the right to amend or supplement this report as new information becomes available.

I'm the videographer for Golkow</p> <p>6 Litigation Services. Today's date is January 23rd,</p> <p>7 2019. The time is now 9:15 a.m. This video deposition</p> <p>8 is being held in Detroit, Michigan in regards to the</p> <p>9 Johnson & Johnson Talcum Powder Products Marketing,</p> <p>10 Sales Practices, and Products Liability Litigation,</p> <p>11 pending in the United States District Court for the</p> <p>12 District of New Jersey.</p> <p>13 The deponent is Dr. Ghassan Saed. And</p> <p>14 counsel will be noted on the stenographic record. And</p> <p>15 will the court reporter please swear in the witness.</p> <p>16 DR. GHASSAN SAED,</p> <p>17 having first been duly sworn, was examined and</p> <p>18 testified on his oath as follows:</p> <p>19 MR. HEGARTY: Before we begin with</p> <p>20 questioning Dr. Saed, I want to make a note on the</p> <p>21 record with regard to materials that were produced to</p> <p>22 us this morning by counsel for Plaintiffs. Those</p> <p>23 materials included the original lab notebook for</p> <p>24 presumably the study that Dr. Saed did that's reported</p> <p>25 in a manuscript that we were provided as well in</p>
<p style="text-align: right;">Page 11</p> <p>1 SAED DEPOSITION EXHIBIT NUMBER 16, EXPERT REPORT, 175</p> <p>2 WAS MARKED BY THE REPORTER FOR IDENTIFICATION</p> <p>3</p> <p>4 SAED DEPOSITION EXHIBIT NUMBER 17, RESEARCH 214</p> <p>5 ARTICLE, WAS MARKED BY THE REPORTER FOR</p> <p>6 IDENTIFICATION</p> <p>7</p> <p>8 SAED DEPOSITION EXHIBIT NUMBER 18, CURRICULUM 278</p> <p>9 VITAE, WAS MARKED BY THE REPORTER FOR</p> <p>10 IDENTIFICATION</p> <p>11</p> <p>12 SAED DEPOSITION EXHIBIT NUMBER 19, ABSTRACT 315</p> <p>13 SUBMITTED TO SGO, WAS MARKED BY THE REPORTER FOR</p> <p>14 IDENTIFICATION</p> <p>15</p> <p>16 SAED DEPOSITION EXHIBIT NUMBER 20, ABSTRACT, 316</p> <p>17 WAS MARKED BY THE REPORTER FOR IDENTIFICATION</p> <p>18</p> <p>19 SAED DEPOSITION EXHIBIT NUMBER 21, ABSTRACT 317</p> <p>20 FROM SRI, WAS MARKED BY THE REPORTER FOR</p> <p>21 IDENTIFICATION</p> <p>22</p> <p>23</p> <p>24</p> <p>25</p>	<p style="text-align: right;">Page 13</p> <p>1 advance, and it's our understanding that we were to</p> <p>2 have copies of the notebook provided to us in advance</p> <p>3 of the deposition. We were provided with what we</p> <p>4 believe to be that notebook that I'm marking as Exhibit</p> <p>5 Number 1.</p> <p>6 SAED DEPOSITION EXHIBIT NUMBER 1,</p> <p>7 COPY OF NOTEBOOK BATES SAED000001 - SAED000097,</p> <p>8 WAS MARKED BY THE REPORTER</p> <p>9 FOR IDENTIFICATION</p> <p>10 MR. HEGARTY: That notebook -- those notebook</p> <p>11 pages begin on Page 30 and go through Page 124 as noted</p> <p>12 in handwriting on the pages. They are Bates Numbered 1</p> <p>13 through 97.</p> <p>14 SAED DEPOSITION EXHIBIT NUMBER 2,</p> <p>15 LAB NOTEBOOK, (Retained by Witness)</p> <p>16 WAS MARKED BY THE REPORTER</p> <p>17 FOR IDENTIFICATION</p> <p>18 MR. HEGARTY: The lab notebook we've been</p> <p>19 provided this morning, which I will designate for</p> <p>20 purposes of the record as Exhibit Number 2, because we</p> <p>21 were told that we were not to mark on it and that Dr.</p> <p>22 Saed would retain it, but the lab notebook provided is</p> <p>23 Exhibit Number 2, includes Pages 1 through 29 which we</p> <p>24 were not provided in advance of the deposition. We</p> <p>25 believe those pages should have been provided along</p>

4 (Pages 10 to 13)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 14</p> <p>1 with the other pages pursuant to Judge Pisano's order 2 and pursuant to our Notice of Deposition. Not having 3 those pages in advance prejudices our right to have a 4 full and complete opportunity to discuss the lab 5 notebook with Dr. Saed during his deposition, and we 6 object to its production here this morning and 7 certainly reserve our right to seek additional time 8 with Dr. Saed as well as any other remedies that we 9 might be entitled to for what we believe to be an 10 untimely production. 11 Also, I will note for purposes of the record 12 that we received this morning as well another lab 13 notebook that is purported to be a notebook covering an 14 additional set of tests that Dr. Saed did with Fisher 15 Scientific Talc, and make note that there's a reference 16 in the manuscript that we were provided testing done on 17 Fisher Scientific talc. We'll designate for purposes 18 of the record this notebook is Exhibit Number 3. 19 SAED DEPOSITION EXHIBIT NUMBER 3, 20 LAB NOTEBOOK, (Retained by Witness) 21 WAS MARKED BY THE REPORTER 22 FOR IDENTIFICATION 23 MR. HEGARTY: This notebook was not provided 24 nor -- in advance of the deposition nor were any pages 25 of this notebook provided in advance of the deposition.</p>	<p style="text-align: right;">Page 16</p> <p>1 excuse me, was not a part of Dr. Saed's manuscript. 2 MR. HEGARTY: I marked it as Exhibit 3, the 3 other lab notebook. 4 MS. O'DELL: I'm referring to Exhibit 2, the 5 initial lab -- 6 MR. HEGARTY: Okay, I'm sorry, I thought you 7 were referring to the second one. 8 MS. O'DELL: I was not. 9 MR. HEGARTY: I'm sorry to interrupt. 10 MS. O'DELL: I'm pretty sure you are not 11 sorry you interrupted me, but Exhibit 2 is the lab 12 notebook I'm referring to, and the study that is the 13 basis of the objection was not a part of the manuscript 14 or the report. 15 Secondly, Exhibit 3 includes a separate and 16 distinct set of data for a Fisher talc study, and we 17 have provided that today, it was published in an 18 abstract and we provided that today in compliance with 19 the second notice of deposition. So the plaintiff's 20 position is we have provided everything the Judge 21 ordered, everything that's required as part of the 22 notice, and we'll oppose any motion to extend the 23 deposition and keep it open. 24 MR. HEGARTY: I do have a question. You're 25 saying that the lab notebook we designated as Exhibit</p>
<p style="text-align: right;">Page 15</p> <p>1 We have not had an opportunity to review it to know 2 whether this is pertinent to the manuscript that we'll 3 talk about here today, but also believe that this is 4 likely to also fall within the scope of Judge Pisano's 5 order and certainly within the scope of the Notice of 6 Deposition that we had made. So we also object to 7 its -- the timeliness of the production of this 8 notebook and, again, we reserve all rights for whatever 9 remedies are appropriate due to this late production. 10 MR. KLATT: Imerys Talc America joins in what 11 Mr. Hegarty said. And can we have the agreement we've 12 had that one objection is good for all? 13 MS. O'DELL: Yes. 14 MR. KLATT: All defendants join. 15 MS. O'DELL: So on behalf of the steering 16 committee, let me state that Judge Pisano's order 17 related to the specific -- a specific Notice of 18 Deposition that requested documents regarding the 19 underlying data and study that was reported in Dr. 20 Saed's manuscript as well as his expert report. That 21 was the subject of the order. Those materials were 22 provided in compliance with Judge Pisano's order. 23 There was a second general notice that asked for other 24 talc studies. The additional talc study that's noted 25 in the lab book Exhibit 2 was not a part of Judge --</p>	<p style="text-align: right;">Page 17</p> <p>1 Number 2 for which you provided copies is not related 2 to the manuscript that's titled Molecular Basis 3 Supporting the Association of Talcum Powder Use With 4 Increased Risk of Ovarian Cancer? 5 MS. O'DELL: That's not what I said. What I 6 said is the portion of the lab notebook Exhibit 2, 7 which you referred to as Pages 1 through 29, are not 8 reported in the manuscript or the report, the expert 9 report in this matter, and, therefore, they were not 10 subject Judge Pisano's previous ruling, so that's the 11 distinction that I'm making. These are materials that 12 were made available to you today and you have full 13 opportunity TO ask Dr. Saed questions about it. 14 MR. HEGARTY: I understand. 15 EXAMINATION BY MR. HEGARTY: 16 Q. Good morning, Dr. Saed. 17 A. Good morning. 18 Q. Would you -- strike that. My name is Mark Hegarty. I 19 represent the Johnson & Johnson defendants in this 20 matter. Would you please state your full name for the 21 record, please. 22 A. Ghassan Saed. 23 Q. Who is your current employer, Dr. Saed? 24 A. Wayne State University Medical School. 25 Q. What is your title?</p>

5 (Pages 14 to 17)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 18</p> <p>1 A. Wayne State University Medical School. 2 Q. What is your title there? 3 A. Associate professor. 4 Q. How long have you held that position? 5 A. Eight years about, I'm not -- 6 Q. Do you also have a separate personal consulting 7 business for purposes of litigation? 8 A. DS Biotech, it's a consulting company. 9 Q. Are there any other employees or owners or other 10 individuals involved in DS Biotech besides you? 11 A. No. 12 Q. Is your son in any way involved in that business? 13 A. Just doing some paperwork. 14 Q. Do you do any business through DS Biotech besides 15 expert witness consulting for litigation? 16 A. We do consulting for scientific testing for 17 universities, for investigators, we design experiments, 18 we help them write manuscripts. 19 Q. You said for other investigators or universities. Do 20 you do any business with any companies? 21 A. I do, yes. 22 Q. Can you name a company with whom you do business? 23 A. Temple Pharmaceuticals. 24 Q. How long has DS Biotech been in business? 25 A. 2006.</p>	<p style="text-align: right;">Page 20</p> <p>1 BY MR. HEGARTY: 2 Q. What portion of the fees have you not been paid -- 3 A. So we -- 4 Q. -- through DS Biotech? 5 A. So we have to deduct expenses and everything. 6 Q. Can you approximate the expenses you have had to deduct 7 from the fees you've -- 8 A. I haven't done it for this year yet. 9 Q. Do you have any other sources of income besides your 10 work at Wayne State and through DS Biotech? 11 A. No. 12 Q. What are you charging Plaintiff's Counsel in this 13 litigation for your work? 14 A. \$600 an hour. 15 Q. Do you have different rates for deposition or trial 16 testimony? 17 A. Do I have different rate? 18 Q. Sure. The rate you just quoted me was per hour, \$600 19 per hour. Do you have a different per-hour rate if 20 you're being deposed or if you're going to trial? 21 A. Oh, no. 22 Q. You have obligations at Wayne State University to 23 disclose financial arrangements -- 24 A. Yes. 25 Q. -- is that correct? Have you disclosed your financial</p>
<p style="text-align: right;">Page 19</p> <p>1 Q. Are you currently named as an expert witness in any 2 other litigation besides this one? 3 A. No. 4 Q. Have the fees that you have generated in connection 5 with your work on this case been directed to DS 6 Biotech? 7 A. Been directed? 8 Q. Well, have the fees that you have generated for your 9 work on this case been paid to DS Biotech? 10 A. Yes. 11 Q. Do you receive all of the income from those fees? 12 A. Through DS Biotech? 13 Q. Yes. 14 A. Yes, after I submit taxes and all that. 15 Q. But you essentially receive the fees even though they 16 were directed to DS Biotech, correct? 17 A. Correct, the company received it, yes. 18 Q. Then you have been -- you were paid by the company, 19 correct? 20 A. Yes. 21 Q. Were you -- have you been paid by the company the same 22 amount to which the fees generated? 23 MS. O'DELL: Object to the form. 24 THE WITNESS: Yeah, I am -- the answer is no. 25</p>	<p style="text-align: right;">Page 21</p> <p>1 arrangement -- 2 A. Yes. 3 Q. -- to Wayne State with regard to your work with 4 Plaintiff's Counsel in this case? 5 A. Yes. 6 Q. When did you make that disclosure? 7 A. Every year they -- there's a deadline to receive -- to 8 submit a form which shows consultation efforts, and for 9 2018 that was submitted 10 days ago. 10 Q. Who did you identify to whom you were consulting with 11 with regard to that disclosure for purposes of this 12 litigation? 13 A. DS Biotech and Beasley Allen. 14 Q. You prepared a report in this case, correct? 15 A. (Nods head.) 16 Q. Yes? 17 A. Did I prepare a report? Yes. 18 Q. Did anyone outside of the lawyers for the plaintiffs in 19 this case assist you in any way with that report? 20 A. No. 21 Q. Do you know how much you have been paid through the 22 present date for your work in this litigation? 23 A. Yes. 24 Q. How much? 25 A. Approximately 260, something like that.</p>

6 (Pages 18 to 21)

Ghassan Saed, Ph.D.

Page 22	Page 24
<p>1 Q. 260,000?</p> <p>2 A. Yes, about that, maybe a little bit less, I don't know,</p> <p>3 I can't remember the exact number.</p> <p>4 SAED DEPOSITION EXHIBIT NUMBER 4,</p> <p>5 INVOICES,</p> <p>6 WAS MARKED BY THE REPORTER</p> <p>7 FOR IDENTIFICATION</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. I'm marking as Exhibit Number 4, Dr. Saed, copies of</p> <p>10 invoices that we were provided in advance of the</p> <p>11 deposition. Would you look at Exhibit Number 4, and</p> <p>12 tell me whether those are copies of all the invoices</p> <p>13 you have generated for purposes of your work in this</p> <p>14 case?</p> <p>15 A. Yeah, they look fine to me.</p> <p>16 Q. The last invoice we were provided is dated November 16,</p> <p>17 2018, that's the issue date. Have you prepared any</p> <p>18 additional invoices since that date?</p> <p>19 A. No.</p> <p>20 Q. Have you spent additional time on this case for which</p> <p>21 you intend to prepare an invoice --</p> <p>22 A. Yes.</p> <p>23 Q. -- since that date?</p> <p>24 A. Yes.</p> <p>25 Q. How much additional time have you spent that you have</p>	<p>1 Beasley Allen?</p> <p>2 A. So I started October, maybe 1st of October, maybe</p> <p>3 before that, I can't remember the exact date.</p> <p>4 Q. What is your best estimate?</p> <p>5 A. I would say end of September.</p> <p>6 Q. So the first invoice -- I'm sorry, go ahead.</p> <p>7 A. Go ahead.</p> <p>8 Q. So the first invoice on Exhibit Number 4 would reflect</p> <p>9 the time you spent from approximately the end of</p> <p>10 September through October 30th, 2017, correct?</p> <p>11 A. Correct.</p> <p>12 Q. Can you describe for me with regard to the first</p> <p>13 invoice the type of work that you did between the</p> <p>14 first -- between the end of September and the date of</p> <p>15 this first invoice?</p> <p>16 A. Sure. So this was time for meetings, meeting with them</p> <p>17 and reviewing literature basically.</p> <p>18 Q. You said meeting with them. Who is "them"?</p> <p>19 A. With Beasley Allen.</p> <p>20 Q. Which attorneys from Beasley Allen did you meet with?</p> <p>21 A. Dr. Thompson, Mrs. --</p> <p>22 MS. O'DELL: O'Dell.</p> <p>23 THE WITNESS: -- O'Dell and Jennifer --</p> <p>24 what's her last name?</p> <p>25</p>
Page 23	Page 25
<p>1 not yet invoiced?</p> <p>2 A. Approximately 100, 110 hours.</p> <p>3 Q. The invoices show that they were issued by DS Biotech,</p> <p>4 that's the company we talked about earlier, is that</p> <p>5 correct?</p> <p>6 A. Yes.</p> <p>7 Q. There are no other employees of DS Biotech besides</p> <p>8 yourself, is that correct?</p> <p>9 A. And help from my son, paperwork part-time.</p> <p>10 Q. Is he a paid employee?</p> <p>11 A. No.</p> <p>12 Q. The first page of Exhibit Number 4 with an issue date</p> <p>13 of the invoice 10-30-2017 includes just a single word</p> <p>14 in the description Consulting with no corresponding</p> <p>15 date. What is the date of the first consulting entry</p> <p>16 that you have listed on the first page of Exhibit</p> <p>17 Number 4?</p> <p>18 A. 10-30, so what's the -- I'm sorry.</p> <p>19 Q. Let me ask, Exhibit Number 4, the first page refers to</p> <p>20 an invoice of \$20,400 at a unit price of \$600, so there</p> <p>21 would be several hours, you spent several hours doing</p> <p>22 something that generated that invoice, correct?</p> <p>23 A. Yes.</p> <p>24 Q. When did that something start? When is the first time</p> <p>25 that you spent anytime on this matter on behalf of</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. Do you recall the date of your first contact by Beasley</p> <p>3 Allen?</p> <p>4 A. Around middle of August.</p> <p>5 Q. How was that contact made?</p> <p>6 A. A phone call.</p> <p>7 Q. A phone call to you?</p> <p>8 A. Yes.</p> <p>9 Q. Who called you?</p> <p>10 A. Dr. Thompson.</p> <p>11 Q. Did you know Dr. Thompson before the call?</p> <p>12 A. No.</p> <p>13 Q. Apart from -- or strike that. What did she tell you</p> <p>14 when she first called you?</p> <p>15 A. She told me that they would like to meet with me to</p> <p>16 discuss the possibility of acting as a witness expert</p> <p>17 in ovarian cancer inflammation and oxidative stress.</p> <p>18 Q. Did you agree to serve as a retained expert on behalf</p> <p>19 of Beasley Allen at that first call?</p> <p>20 A. No.</p> <p>21 Q. What else were you told by Miss Thompson during that</p> <p>22 phone call?</p> <p>23 A. We just basically talked about setting a meeting and we</p> <p>24 did.</p> <p>25 Q. You said that she told you that they would like to meet</p>

7 (Pages 22 to 25)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 26</p> <p>1 with you to discuss the possibility of acting as a</p> <p>2 witness, expert witness on cancer inflammation and</p> <p>3 oxidative stress. Was there a reference during that</p> <p>4 call to talc exposure?</p> <p>5 A. No.</p> <p>6 Q. So talc was not brought up --</p> <p>7 A. In the conversation, no.</p> <p>8 Q. -- in the first call. Was the fact that they were</p> <p>9 representing clients or that they were wanting to talk</p> <p>10 to you in connection with a litigation, was that</p> <p>11 discussed?</p> <p>12 A. In the phone call, no.</p> <p>13 Q. Did she identify herself as a lawyer?</p> <p>14 A. Yes, and the firm.</p> <p>15 Q. What was your understanding as far as why a lawyer from</p> <p>16 Beasley Allen would want to talk to you about</p> <p>17 inflammation and oxidative stress?</p> <p>18 A. Because -- so, oh, so you're telling me if she told me</p> <p>19 she is the lawyer on behalf of the defendants, I mean</p> <p>20 the plaintiffs in ovarian cancer cases and talc?</p> <p>21 Q. Yes.</p> <p>22 A. She, yes, she identified herself as such.</p> <p>23 Q. So you understood that the --</p> <p>24 A. Yes.</p> <p>25 Q. -- consulting that you would be doing would be with</p>	<p style="text-align: right;">Page 28</p> <p>1 moment after Mark's question so I can object if I need</p> <p>2 to.</p> <p>3 THE WITNESS: Oh, I'm sorry.</p> <p>4 MS. O'DELL: Thank you.</p> <p>5 THE WITNESS: Where are we now?</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. Yes, I said -- my question was what analysis of the</p> <p>8 medical literature had you done with regard to talc and</p> <p>9 ovarian cancer prior to the call from Miss Thompson?</p> <p>10 A. Reading the literature.</p> <p>11 Q. What literature had you read?</p> <p>12 A. I read the epidemiology studies, I read some of the</p> <p>13 molecular studies, I read what's in the news, I read</p> <p>14 everything, I listened to the news, that's my interest,</p> <p>15 it's ovarian cancer and inflammation.</p> <p>16 Q. What epidemiologic studies had you read prior to the</p> <p>17 call from Miss Thompson?</p> <p>18 A. I read -- the exact one?</p> <p>19 Q. Yes.</p> <p>20 A. I can't remember exact one, but I read several studies.</p> <p>21 Q. Can you identify the names of any studies, whether by</p> <p>22 author or study name, that you had read prior to the</p> <p>23 call from Miss Thompson?</p> <p>24 MS. O'DELL: Object and asked and answered.</p> <p>25 THE WITNESS: Yeah. I mean I can look it up</p>
<p style="text-align: right;">Page 27</p> <p>1 regard to in some way to talc, correct?</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 THE WITNESS: No. I was asked to serve as a</p> <p>4 witness expert in my specialty, which is what we did</p> <p>5 and what I do for the last 30 years, ovarian cancer,</p> <p>6 oxidative stress, and inflammation.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. As of the time of that phone call, your specialty was</p> <p>9 not talc, correct?</p> <p>10 A. My specialty is anything that induces inflammation and</p> <p>11 oxidative stress that is linked to ovarian cancer.</p> <p>12 Q. But at the time of that first call you had done no</p> <p>13 studies involving talc, correct?</p> <p>14 A. No, no studies, but I was really interested in it</p> <p>15 because of the media reports that's going at the time.</p> <p>16 Q. And at the time of that first call you had done no</p> <p>17 analysis of the medical literature with regard to talc</p> <p>18 and ovarian cancer, correct?</p> <p>19 MS. O'DELL: Objection.</p> <p>20 THE WITNESS: Not correct.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. What analysis of the medical literature had you done</p> <p>23 with regard to talc and ovarian cancer prior to the</p> <p>24 call from Miss Thompson?</p> <p>25 MS. O'DELL: Doctor, if you'll give me just a</p>	<p style="text-align: right;">Page 29</p> <p>1 for you, but the cohort study is what I read, and I</p> <p>2 read some other studies. I can't remember exactly.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. When in relation to the call from Miss Thompson had you</p> <p>5 read the medical literature you just described?</p> <p>6 A. Sorry, I missed that.</p> <p>7 Q. When in relation to the call from Miss Thompson in</p> <p>8 August of 2017 had you read the literature you just</p> <p>9 talked about, the epi studies, the molecular studies?</p> <p>10 A. Yeah, it's over the past year prior.</p> <p>11 Q. What was it that prompted you to review those materials</p> <p>12 in the first place?</p> <p>13 A. The media reports.</p> <p>14 Q. What media reports?</p> <p>15 A. People talking about the risk of ovarian cancer and</p> <p>16 talc powder use, it was all over the place.</p> <p>17 Q. As of the time that Miss Thompson called, you had done</p> <p>18 no studies yourself involving talc, correct?</p> <p>19 A. Lab studies?</p> <p>20 Q. Lab studies.</p> <p>21 A. No.</p> <p>22 Q. You had done no other study besides reading the</p> <p>23 literature, correct?</p> <p>24 MS. O'DELL: Objection to form.</p> <p>25 THE WITNESS: Other studies related to talc?</p>

8 (Pages 26 to 29)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 30</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. Correct.</p> <p>3 A. I didn't do any studies related to -- lab studies</p> <p>4 related to talc before that, yes.</p> <p>5 Q. And as of the time that Miss Thompson called you, had</p> <p>6 you formed any opinions with regard to talc and ovarian</p> <p>7 cancer?</p> <p>8 A. Formed an opinion?</p> <p>9 Q. Yes, as to whether there's a causal link between talc</p> <p>10 and ovarian cancer?</p> <p>11 A. It's always my opinion that anything that causes</p> <p>12 inflammation, redox imbalance, is linked to increased</p> <p>13 risk of ovarian cancer. This is the core of my work.</p> <p>14 Q. So it's always been your opinion that anything that</p> <p>15 causes inflammation will cause ovarian cancer?</p> <p>16 MS. O'DELL: Object to the form.</p> <p>17 You may answer.</p> <p>18 THE WITNESS: No. I said that anything that</p> <p>19 induces inflammation, alter the redox balance is</p> <p>20 potential for increasing risk of ovarian cancer, yes.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. As of the time that Miss Thompson called you, what</p> <p>23 medical studies reported that talc altered the redox</p> <p>24 balance leading to inflammation?</p> <p>25 A. There was one study of Shukla, I think, and they</p>	<p style="text-align: right;">Page 32</p> <p>1 talc and ovarian cancer?</p> <p>2 A. That talc is a potential inducer of inflammation, and</p> <p>3 it induces and increases risk of ovarian cancer.</p> <p>4 Q. Those opinions came from your review -- from the media</p> <p>5 reports and your review of the literature you</p> <p>6 described?</p> <p>7 A. Uh-huh.</p> <p>8 Q. Is that correct?</p> <p>9 A. Correct.</p> <p>10 Q. With regard to the invoices we marked as Exhibit</p> <p>11 Number 4, do these reflect only your time spent in this</p> <p>12 case?</p> <p>13 A. Correct.</p> <p>14 Q. Are you able to break down from these invoices the</p> <p>15 amount of hours you spent reviewing literature?</p> <p>16 A. From the first one?</p> <p>17 Q. From the first one through the end.</p> <p>18 A. The answer is no, because I always review literature,</p> <p>19 this is my job, that's what I do for a living, I review</p> <p>20 literature every single day.</p> <p>21 Q. After being contacted by Miss Thompson, did you review</p> <p>22 literature with regard to this subject area, talc and</p> <p>23 ovarian cancer, that you had not reviewed before?</p> <p>24 A. Yes.</p> <p>25 Q. Are you able to break down from these invoices the</p>
<p style="text-align: right;">Page 31</p> <p>1 measured the effect of -- they measured the reactive</p> <p>2 oxygen species especially dihydrogen peroxide H2O2, and</p> <p>3 they found a dose response effect when exposure to</p> <p>4 talc.</p> <p>5 Q. From that one study you came to the opinion that --</p> <p>6 A. No.</p> <p>7 Q. -- talc use causes redox imbalance that leads to</p> <p>8 inflammation that leads to ovarian cancer?</p> <p>9 MS. O'DELL: Object to the form.</p> <p>10 THE WITNESS: No. What I said that my</p> <p>11 interest is inflammation and redox balance and</p> <p>12 imbalance and reactive oxygen species, so anything that</p> <p>13 able at the cellular level to alter this, manipulate</p> <p>14 this, is a candidate, is a potential risk to ovarian</p> <p>15 cancer.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. As of the time that Miss Thompson called you, had you</p> <p>18 come to the opinion that talc used by women did alter</p> <p>19 the redox balance?</p> <p>20 MS. O'DELL: Objection, asked and answered.</p> <p>21 You may answer.</p> <p>22 THE WITNESS: Repeat the question, please.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. Sure. As of the time that you received the call from</p> <p>25 Miss Thompson, what opinion did you have with regard to</p>	<p style="text-align: right;">Page 33</p> <p>1 amount of time you spent writing your expert report?</p> <p>2 A. There is actually one that actually state -- no, no,</p> <p>3 where is it? I thought there was one saying expert</p> <p>4 report. I can identify it, yes.</p> <p>5 Q. You can't identify it?</p> <p>6 A. I can, just give me one second. Yes, it's this one.</p> <p>7 Q. The very last one?</p> <p>8 A. Yes.</p> <p>9 Q. Does the very last one represent the amount of time you</p> <p>10 spent writing your report?</p> <p>11 A. Correct.</p> <p>12 Q. Are you able to break down from the invoices the amount</p> <p>13 of time you spent talking with lawyers for Beasley</p> <p>14 Allen?</p> <p>15 A. No.</p> <p>16 Q. You prepared a manuscript which we'll talk about today</p> <p>17 that has been submitted to the Journal for Reproductive</p> <p>18 Sciences entitled Molecular Basis Supporting the</p> <p>19 Association of Talcum Powder Use With Increased Risk of</p> <p>20 Ovarian Cancer. Are you familiar with that?</p> <p>21 A. Yes.</p> <p>22 Q. Did you bill the time you spent preparing that</p> <p>23 manuscript to lawyers for Beasley Allen?</p> <p>24 A. For this one? Yes.</p> <p>25 Q. Is that reflected in these invoices?</p>

9 (Pages 30 to 33)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 34</p> <p>1 A. Yes.</p> <p>2 Q. Are you able to tell me how much time you spent</p> <p>3 preparing that manuscript that's reflected in the</p> <p>4 invoices we marked as Exhibit Number 4?</p> <p>5 A. Exactly, no.</p> <p>6 Q. Can you approximate it in any way?</p> <p>7 A. Yes.</p> <p>8 Q. What's your approximation?</p> <p>9 A. I would say about 60 to 70 hours.</p> <p>10 Q. There are other authors on that paper, correct?</p> <p>11 A. Correct.</p> <p>12 Q. Did you bill their time to Beasley Allen for their work</p> <p>13 on the manuscript?</p> <p>14 A. No.</p> <p>15 Q. How was their time paid for?</p> <p>16 A. So some of them are, if you look at the names, some of</p> <p>17 them are the department chair, Dr. Morris, and this is</p> <p>18 an academic institution, we don't bill for the time of</p> <p>19 consultants or coworkers or co-authors. The research</p> <p>20 technicians was paid from my lab, and Amy Harper is a</p> <p>21 fellow, OB-GYN oncology fellow, and they're paid for</p> <p>22 fellowships through the department, so we don't bill</p> <p>23 for their time.</p> <p>24 Q. I'm marking as Exhibit Number 5 -- I'm sorry, go ahead.</p> <p>25 A. Go ahead.</p>	<p style="text-align: right;">Page 36</p> <p>1 costs for your talc project that she did on</p> <p>2 December 18, 2018?</p> <p>3 A. I always ask for all my projects accounts.</p> <p>4 Q. Where is the documentation or accounting of the time</p> <p>5 you spent, the lab supplies, the equipment, services,</p> <p>6 isn't there a separate list that breaks down the hours</p> <p>7 or the costs for personnel time and lab supplies,</p> <p>8 equipment, services?</p> <p>9 MS. O'DELL: Objection.</p> <p>10 THE WITNESS: Yeah, so the question is these</p> <p>11 numbers came from breakdown of expenses, receipts. We</p> <p>12 do have receipts for all the expenses from the lab.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Do you have receipts for, that document all the time</p> <p>15 that is under the heading personnel?</p> <p>16 A. So the only personnel that's paid was Dr. Fletcher and</p> <p>17 part-time my research assistant, medical student Ira,</p> <p>18 she was paid part-time, but full-time salary was paid</p> <p>19 for Nicole from this budget.</p> <p>20 Q. Who paid --</p> <p>21 A. That's included in what they call indirect.</p> <p>22 Q. Let me finish, Doctor, who paid for Ira and Nicole's</p> <p>23 time?</p> <p>24 A. My lab.</p> <p>25 Q. When you say your lab, you're talking about your lab at</p>
<p style="text-align: right;">Page 35</p> <p>1 Q. You were saying something.</p> <p>2 A. I said the only time billed to this from the manuscript</p> <p>3 is my time.</p> <p>4 Q. I'm marking this as Exhibit Number 5, a copy of another</p> <p>5 document we were provided in advance of the deposition.</p> <p>6 SAED DEPOSITION EXHIBIT NUMBER 5,</p> <p>7 DECEMBER 18, 2018 DOCUMENT,</p> <p>8 WAS MARKED BY THE REPORTER</p> <p>9 FOR IDENTIFICATION</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. Can you tell me what Exhibit Number 5 is?</p> <p>12 A. So this is the cost of this project since the beginning</p> <p>13 till now from my lab from my side.</p> <p>14 Q. This listing of costs was sent to you by a Sharon Pepe?</p> <p>15 A. The contract -- the grants and contract manager, yes.</p> <p>16 Q. Who is that?</p> <p>17 A. The financial manager of our department, grants and</p> <p>18 contract.</p> <p>19 Q. How did she come to send you this document on</p> <p>20 December 18, 2018?</p> <p>21 A. How come?</p> <p>22 Q. Yes.</p> <p>23 A. I asked her. Every year they give us a budget balance</p> <p>24 of each account that we have.</p> <p>25 Q. Why did you ask her to send you the accounting of the</p>	<p style="text-align: right;">Page 37</p> <p>1 Wayne State?</p> <p>2 A. Yes.</p> <p>3 Q. And where did the funds come from that your lab could</p> <p>4 use to pay Ira and Nicole?</p> <p>5 A. I have discretion funding for my lab.</p> <p>6 Q. I'm sorry?</p> <p>7 A. I have funds available for me to my lab.</p> <p>8 Q. Who provides those funds?</p> <p>9 A. The department.</p> <p>10 Q. So the department paid for Ira's and Nicole's time to</p> <p>11 work on this talc project?</p> <p>12 A. Correct.</p> <p>13 Q. The total listed there is \$94,957. How much of that</p> <p>14 went to Ira and Nicole?</p> <p>15 A. Most of that went to Nicole, I can't remember exact,</p> <p>16 but most of that went to Nicole because she was a</p> <p>17 full-time post doc at the time.</p> <p>18 Q. Do you know where the department received the funds</p> <p>19 that were used to pay Ira and Nicole?</p> <p>20 MS. O'DELL: Object to the form.</p> <p>21 THE WITNESS: I missed that.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. Sure. I think you said the department paid for Ira's</p> <p>24 and Nicole's time. From where did the department get</p> <p>25 the funds they used to pay for Ira and Nicole's time?</p>

10 (Pages 34 to 37)

Ghassan Saed, Ph.D.

Page 38	Page 40
<p>1 A. Let me explain that. So I get fund from the department 2 in the form of an account, and the personnel is billed 3 into this account. 4 Q. So where did the funds come from that you get access 5 to? 6 A. From the department. 7 Q. And where does the department get them from? 8 A. Ask them, I don't know. They have fund for scientists 9 to do, develop. 10 Q. Who would have the receipts of all the expenses and the 11 costs associated with this project? 12 A. Sharon. 13 Q. She notes that the costs listed are for your talc 14 project from October 1, 2017. Is that the date on 15 which the talc project started incurring expenses? 16 A. I think so, yes. 17 Q. The document notes that this does not include your 18 effort costs. What does that mean? 19 A. My salary. 20 Q. Your salary at Wayne State? 21 A. Yes. 22 Q. So you were paid a salary at Wayne State but you were 23 also paid by Beasley Allen to do this talc project, 24 correct? 25 MS. O'DELL: Object to the form.</p>	<p>1 A. I can't. I didn't -- I never thought about it like 2 that. 3 Q. Does Exhibit Number 5 capture all of the personnel, lab 4 supplies, equipment, services, costs for this project? 5 A. From my lab, yes. 6 Q. Have there been any such costs incurred since 7 December 18, 2018? 8 A. What's the last date here? Since what's the -- 9 Q. Since the date of this document, have there been 10 additional costs incurred for the talc project? 11 A. No. 12 Q. Dr. Saed, we were also provided today with what I'm 13 marking as Exhibit Number 6. 14 SAED DEPOSITION EXHIBIT NUMBER 6, 15 COPY OF CHECK DATED 11/2/2017 FOR \$15,000, 16 WAS MARKED BY THE REPORTER 17 FOR IDENTIFICATION 18 BY MR. HEGARTY: 19 Q. Would you please identify for me what Exhibit Number 6 20 is. 21 A. This is a retainer check for my consulting work. 22 Q. Did you ask for a retainer in connection with your 23 consulting work or did they offer to provide that to 24 you? 25 A. I can't remember.</p>
Page 39	Page 41
<p>1 THE WITNESS: I was paid as a consultant for 2 my time. 3 BY MR. HEGARTY: 4 Q. Now, all the work that you did on the talc project was 5 paid for in an hourly way by Beasley Allen, correct? 6 A. No. 7 Q. What time that you spent on the talc project was not 8 paid for by Beasley Allen? 9 A. It's the time I spent in the lab doing my duties. 10 Q. The time you spent in the lab doing your duties on this 11 project? 12 A. On this project, on other projects, too. 13 Q. So there was time you spent on the talc project that 14 you did not bill to Beasley Allen? 15 A. Correct. 16 Q. How did you divide that, the time that you did bill 17 Beasley Allen for on the talc project and the time you 18 didn't? 19 A. So the time I work for extra, additional work, I billed 20 them, like overtime, I worked Saturdays, I worked 21 weekends, I write, I read. 22 Q. Can you estimate the amount of time that you spent on 23 the talc project that you did not bill Beasley Allen? 24 A. Hour, hours you're talking? 25 Q. By hours.</p>	<p>1 Q. With regard to the invoices and the retainer, have you 2 been paid for all the invoices? 3 A. I have been paid for these invoices, yes. 4 Q. So with regard to the amount of the check, that was 5 \$15,000, correct? 6 A. The retainer check? Yes. 7 Q. Yes, and the date of the invoice is October 19, 2017? 8 A. Which invoice? 9 MS. O'DELL: Object to the form. 10 THE WITNESS: Which invoice? 11 BY MR. HEGARTY: 12 Q. Well, there's an invoice date listed at the bottom of 13 the check of October 19, 2017. Do you see that? 14 MS. O'DELL: I would just state for the 15 record that there are no additional invoices, that that 16 is my belief that data was put in by our Accounting 17 Department when the request was made, so there's no 18 invoice that has not been disclosed if that's -- 19 MR. HEGARTY: That was going to be my next 20 question. 21 The date of the check is November 2nd, 2017, 22 correct? 23 THE WITNESS: Correct. 24 BY MR. HEGARTY: 25 Q. And all these funds went to you, correct?</p>

11 (Pages 38 to 41)

Ghassan Saed, Ph.D.

Page 42	Page 44
<p>1 A. The 15,000?</p> <p>2 Q. Yes.</p> <p>3 A. Yes.</p> <p>4 SAED DEPOSITION EXHIBIT NUMBER 7,</p> <p>5 MOLECULAR BASIS SUPPORTING THE ASSOCIATION OF</p> <p>6 TALCUM POWDER USE WITH INCREASED RISK OF OVARIAN</p> <p>7 CANCER, WAS MARKED BY THE REPORTER</p> <p>8 FOR IDENTIFICATION</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. I'm going to mark next as Exhibit Number 7 a copy of a</p> <p>11 manuscript we've been provided, which I referenced</p> <p>12 earlier, the manuscript that I marked as Exhibit</p> <p>13 Number 7 is entitled Molecular Basis Supporting the</p> <p>14 Association of Talcum Powder Use With Increased Risk of</p> <p>15 Ovarian Cancer. Do you see what I'm referring to,</p> <p>16 Doctor?</p> <p>17 A. Yes.</p> <p>18 Q. First of all, is this the current version of the paper</p> <p>19 you submitted to Reproductive Sciences?</p> <p>20 A. Yes.</p> <p>21 Q. Do you have prior drafts of this paper in your office</p> <p>22 or in your possession?</p> <p>23 A. Do I have drafts?</p> <p>24 Q. Correct.</p> <p>25 A. Like --</p>	<p>1 submitted by the author section says January 3rd, 2019,</p> <p>2 which is after December 26, 2018. So my question is</p> <p>3 where is the manuscript that was submitted before</p> <p>4 December 26, 2018?</p> <p>5 A. Okay. So when you submit a manuscript, they return</p> <p>6 they usually give you some corrections or editing to</p> <p>7 do, and then you do the editing, and then you resubmit</p> <p>8 the manuscript, so I have both copies. Are you</p> <p>9 interested to see the one that went to revision versus</p> <p>10 the one after revision?</p> <p>11 Q. You have the copy that you initially sent to</p> <p>12 Reproductive Sciences which is the one referred to in</p> <p>13 the e-mail of December 26, 2018?</p> <p>14 A. Sure.</p> <p>15 Q. Are there only two drafts of the manuscript, the one</p> <p>16 you submitted prior to December 26, 2018 and the one we</p> <p>17 marked as Exhibit Number 7?</p> <p>18 A. For Reproductive Science, yes.</p> <p>19 Q. Have you made any revisions to the document that we</p> <p>20 have marked as Exhibit Number 7?</p> <p>21 A. Let's see if I remember, so this is the first -- which</p> <p>22 one is this, okay, because there is one original that</p> <p>23 we submitted.</p> <p>24 Q. Correct.</p> <p>25 A. Went to review, the reviewer asked for some</p>
Page 43	Page 45
<p>1 Q. Well, let me explain. Go to the very last page of</p> <p>2 Exhibit Number 7.</p> <p>3 A. Okay.</p> <p>4 Q. Very last page.</p> <p>5 A. Okay.</p> <p>6 Q. There's an e-mail there.</p> <p>7 A. Oh.</p> <p>8 Q. Of December 26, 2018, which would indicate that you</p> <p>9 submitted the paper in advance of that date, yet on the</p> <p>10 first page of Exhibit Number 7 it reports the date</p> <p>11 submitted by the author of January 3rd, 2019. So there</p> <p>12 must have been a prior manuscript submitted to</p> <p>13 Reproductive Sciences before Exhibit Number 7, correct?</p> <p>14 A. Hold on. I need to digest this. Can you repeat that,</p> <p>15 please?</p> <p>16 Q. Sure.</p> <p>17 A. What are we talking about?</p> <p>18 Q. The e-mail that you're looking at is dated December 26,</p> <p>19 2018, correct?</p> <p>20 A. Yes.</p> <p>21 Q. That e-mail refers to a manuscript you had submitted,</p> <p>22 which would have been submitted before that date,</p> <p>23 correct?</p> <p>24 A. Yes.</p> <p>25 Q. The first page of Exhibit Number 7 in the date</p>	<p>1 modification, I did it and resubmit it.</p> <p>2 Q. Is Exhibit Number -- I'm sorry, go ahead.</p> <p>3 A. So this, I can't remember is this the most recent one</p> <p>4 or not.</p> <p>5 Q. Did you bring a copy today?</p> <p>6 A. I have a copy.</p> <p>7 Q. You brought a copy from your office?</p> <p>8 A. Yeah, this is a copy from my office.</p> <p>9 Q. May I see it, please?</p> <p>10 A. Yes.</p> <p>11 SAED DEPOSITION EXHIBIT NUMBER 8,</p> <p>12 MOLECULAR BASIS SUPPORTING THE ASSOCIATION OF</p> <p>13 TALCUM POWDER USE WITH INCREASED RISK OF OVARIAN</p> <p>14 CANCER,</p> <p>15 WAS MARKED BY THE REPORTER</p> <p>16 FOR IDENTIFICATION</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. I'm going to mark as Exhibit Number 8 a copy of the</p> <p>19 article or manuscript that Dr. Saed just provided to</p> <p>20 me. At least the cover page contains the same date</p> <p>21 submitted by the author date. Would you look at the</p> <p>22 two Exhibit Number 7 and Exhibit Number 8, and tell me</p> <p>23 whether they are the same?</p> <p>24 A. Yeah, it looks the same to me.</p> <p>25 Q. So have there been any additional revisions to the</p>

12 (Pages 42 to 45)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 46</p> <p>1 manuscript that we've marked as 7 and 8?</p> <p>2 A. No. We revised it according to the reviewer's comment</p> <p>3 and resubmitted it, and then it was officially</p> <p>4 accepted.</p> <p>5 Q. Did you submit the manuscript to any other journals?</p> <p>6 A. Prior to this?</p> <p>7 Q. Prior to this.</p> <p>8 A. Yes.</p> <p>9 Q. What journals did you submit to?</p> <p>10 A. OB-GYN Oncology.</p> <p>11 Q. When did you submit the manuscript to OB-GYN Oncology?</p> <p>12 A. I'm not good on dates.</p> <p>13 Q. You submitted it before --</p> <p>14 A. Prior.</p> <p>15 Q. Prior to submitting it to Reproductive Sciences?</p> <p>16 A. Correct.</p> <p>17 Q. Are you able to estimate when you completed the</p> <p>18 manuscript such that it could be submitted to a</p> <p>19 journal?</p> <p>20 A. I would say -- what's the date now -- September,</p> <p>21 October, September maybe around.</p> <p>22 Q. Did you get a response from OB-GYN Oncology to your</p> <p>23 submission?</p> <p>24 A. I did.</p> <p>25 Q. What was their response?</p>	<p style="text-align: right;">Page 48</p> <p>1 A. Correct.</p> <p>2 Q. They, based on correspondence with you, sent that paper</p> <p>3 to peer reviewers, correct?</p> <p>4 A. Correct.</p> <p>5 Q. How many peer reviewers did they send it to?</p> <p>6 A. I don't know.</p> <p>7 Q. How many comments back from peer reviewers did you</p> <p>8 receive, just by peer reviewer number?</p> <p>9 A. I know, but I'm trying to remember, maybe one or two, I</p> <p>10 can't remember, I think two.</p> <p>11 Q. You mentioned one of the comments was --</p> <p>12 A. But two that they commented. So usually they send it</p> <p>13 to more. If they have no comments, they don't include</p> <p>14 them.</p> <p>15 Q. One of the reviewers commented that you needed to do</p> <p>16 additional in vivo animal studies to show the same</p> <p>17 effect that you reported in cell cultures that you did,</p> <p>18 correct?</p> <p>19 MS. O'DELL: Object to form.</p> <p>20 THE WITNESS: No.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. What did he say or she say?</p> <p>23 A. It was said that this is very exciting work,</p> <p>24 interesting work, has a biological relevance, it would</p> <p>25 be interesting to see if this can be shown in vivo.</p>
<p style="text-align: right;">Page 47</p> <p>1 A. That I needed to do in vivo, additional in vivo animal</p> <p>2 experiments.</p> <p>3 Q. That you needed to do additional in vivo animal</p> <p>4 experiments before they would agree to publish your</p> <p>5 paper; is that correct?</p> <p>6 A. No, they -- usually the basis of their rejection, this</p> <p>7 is a review of comment, not the editor request, so</p> <p>8 comments you can do, you can agree with or you can</p> <p>9 disagree with. So I always publish papers and I'm very</p> <p>10 familiar with this process. So there's a distinction</p> <p>11 between editor's opinion and reviewer's comment. So</p> <p>12 reviewer comments, they're not bound -- I'm not bound</p> <p>13 to their comments. I may agree with them and I may</p> <p>14 disagree with them. So the reviewer -- the editor,</p> <p>15 they usually, their policy, they use it based on</p> <p>16 reviewer's comment, that's part of the concentration,</p> <p>17 the other part will be the how many -- the volume, how</p> <p>18 many they receive and priority for the articles to be</p> <p>19 published.</p> <p>20 Q. So as to the chronology, you completed a draft of your</p> <p>21 manuscript that we marked as Exhibit Number 7 and 8,</p> <p>22 you submitted that manuscript initially to OB-GYN</p> <p>23 Oncology --</p> <p>24 A. Correct.</p> <p>25 Q. -- in the September 2018 time frame?</p>	<p style="text-align: right;">Page 49</p> <p>1 Q. Do you remember anything else that was said in those</p> <p>2 comments besides what you provided to us this morning?</p> <p>3 A. Yeah, they like it, they love my work.</p> <p>4 Q. Anything else you can recall from the comments?</p> <p>5 A. No, this is positive and it's good data that they need</p> <p>6 to -- complimented with.</p> <p>7 Q. So with regard to the comments, then what -- strike</p> <p>8 that. OB-GYN Oncology rejected your paper, correct?</p> <p>9 A. They said that -- yeah, they said that we don't want --</p> <p>10 priority at this time.</p> <p>11 Q. Did they say why they rejected your paper?</p> <p>12 A. They say we have lot of papers received by the journal</p> <p>13 and it's not a priority right now.</p> <p>14 Q. Do you have all the documents of your submission to</p> <p>15 OB-GYN Oncology and their -- the comments and other</p> <p>16 documents that you received back in connection with</p> <p>17 that submission?</p> <p>18 MS. O'DELL: Object to the form.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Yes?</p> <p>21 A. I want to see -- what's the question? Sorry.</p> <p>22 Q. Sure. Do you have the documentation, all the documents</p> <p>23 of your submission to OB-GYN Oncology and their</p> <p>24 response back?</p> <p>25 A. You mean the manuscript?</p>

13 (Pages 46 to 49)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 50</p> <p>1 Q. The manuscript, your cover letter, the letter back, the</p> <p>2 comments, the comments you received back, do you have</p> <p>3 all that material?</p> <p>4 A. Yes.</p> <p>5 Q. Is that back in your office?</p> <p>6 A. It's in my office, yes. You talking about manuscript,</p> <p>7 right?</p> <p>8 Q. Well, the manuscript and the reviewer comments.</p> <p>9 A. And the reviewer comments, yes.</p> <p>10 Q. You chose not to do or try to replicate your results in</p> <p>11 an in vivo animal model, correct?</p> <p>12 A. No, it's not correct, I didn't choose, I just don't</p> <p>13 have the time to do it and the money.</p> <p>14 Q. Did you submit your manuscript to any other journals</p> <p>15 besides OB-GYN Oncology and Reproductive Sciences?</p> <p>16 A. No.</p> <p>17 Q. How did you choose to submit your journal first to</p> <p>18 OB-GYN Oncology? Why did you choose that journal?</p> <p>19 A. Those, the OB-GYN Oncology and Reproductive Sciences</p> <p>20 are the major societies for our specialty, and most</p> <p>21 readers -- OB-GYN readers read those two manuscripts, I</p> <p>22 mean journals.</p> <p>23 Q. Of your specialty, which specialty is that?</p> <p>24 A. Like our -- like in the field of OB-GYN research.</p> <p>25 Q. And what resource do you have that Reproductive</p>	<p style="text-align: right;">Page 52</p> <p>1 does it represent all the work that you did that went</p> <p>2 into the paper we marked as Exhibit Number 7?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: So, yeah, so this part starting</p> <p>5 here, from here all the way to the end, that represents</p> <p>6 everything in the manuscript.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. You're pointing to 30?</p> <p>9 A. From here, yes.</p> <p>10 MS. O'DELL: To the end.</p> <p>11 THE WITNESS: To the end.</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. What is contained in Pages 1 through 29?</p> <p>14 A. This is like preliminary trials that we were running,</p> <p>15 testing, so forth, the talc.</p> <p>16 Q. Do Pages 1 through 29 represent activities as part of</p> <p>17 the work that generated the results contained on</p> <p>18 Pages 30 thereafter?</p> <p>19 A. No.</p> <p>20 Q. What does it represent, then?</p> <p>21 A. It's a trial, it's a pilot experiment to tune-up the</p> <p>22 technique.</p> <p>23 Q. When did this -- this pilot experiment goes back, at</p> <p>24 least based on the date of the notebook, to 10-15-17?</p> <p>25 A. Correct.</p>
<p style="text-align: right;">Page 51</p> <p>1 Sciences is a journal that most in your specialty</p> <p>2 review or read?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: I mean do I have a number? Or</p> <p>5 you mean the source where I got that from?</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. Yeah, where did you get that from?</p> <p>8 A. From my experience with them for the last 25 years.</p> <p>9 Q. Have you published in that journal before?</p> <p>10 A. Yes.</p> <p>11 Q. Have you published in OB-GYN Oncology before?</p> <p>12 A. Yes.</p> <p>13 Q. Is there such a thing as something called an impact</p> <p>14 factor of a journal?</p> <p>15 A. Correct.</p> <p>16 Q. Do you know what the impact factor is of Reproductive</p> <p>17 Sciences?</p> <p>18 A. About 3, 2.8 something.</p> <p>19 Q. How about OB-GYN Oncology?</p> <p>20 A. 4, the upper 5, the upper 4, 5, 4.6, 5 maybe.</p> <p>21 Q. We were also, as we talked earlier, provided with the</p> <p>22 original lab notebook that -- in connection with the</p> <p>23 article that you have submitted to Reproductive</p> <p>24 Sciences and that you submitted to OB-GYN Oncology. Is</p> <p>25 what we've designated as Exhibit Number 2 all of the --</p>	<p style="text-align: right;">Page 53</p> <p>1 Q. Is it -- do you always do pilot experiments before you</p> <p>2 do an experiment like this?</p> <p>3 A. Sure.</p> <p>4 Q. Why do you always do a pilot experiment?</p> <p>5 A. You need to figure out the right conditions, right</p> <p>6 concentration, the right incubation time.</p> <p>7 Q. And how does a pilot study provide that information?</p> <p>8 A. I don't understand what you mean.</p> <p>9 Q. How does a pilot study provide you with information to</p> <p>10 know you're using the right conditions, the right</p> <p>11 concentration?</p> <p>12 A. So when you use a concentration of 1,000 microgram per</p> <p>13 ml and it kills your cells, you know it's toxic, you</p> <p>14 should go lower.</p> <p>15 Q. Is that what you did here?</p> <p>16 A. Yes.</p> <p>17 Q. Do you do any other testing like that to determine the</p> <p>18 parameters of your later tests?</p> <p>19 A. Sorry, I don't understand.</p> <p>20 Q. Well the test you just described is sort of that it, it</p> <p>21 sort of set an upper limit of where you could go before</p> <p>22 you kill the cells, right?</p> <p>23 MS. O'DELL: Object.</p> <p>24 THE WITNESS: Just an example, I'm giving you</p> <p>25 an example.</p>

14 (Pages 50 to 53)

Ghassan Saed, Ph.D.

Page 54	Page 56
<p>1 BY MR. HEGARTY:</p> <p>2 Q. An example. Do you recall anything specific that you</p> <p>3 did in the pilot study that helped you define the</p> <p>4 parameters of the later study that you did?</p> <p>5 A. Other than the dose, most of the technology and the</p> <p>6 methods that we used, it's really standard in our</p> <p>7 laboratory, we have published them, we -- and not just</p> <p>8 us, it's standard accepted technology everywhere in</p> <p>9 this field.</p> <p>10 Q. And how did the pilot study that's reflected in Exhibit</p> <p>11 Number 2 inform you as to the studies -- study that you</p> <p>12 did that are reflected in the rest of the pages?</p> <p>13 A. Yes, so basically we looked at the dose here and this</p> <p>14 pilot study showing that the initial dose was high and</p> <p>15 it was like 500 microgram per ml to a thousand, that's</p> <p>16 how we started, and we figured out that this dose</p> <p>17 killed the cells and induced some toxicity, so this is</p> <p>18 why we learned from this, and then we turned up the</p> <p>19 CA-125 assay, this is turning up the assay to see how</p> <p>20 much you need to use. Is it from the media? Is it</p> <p>21 from the cell? You need to set up all this, and this</p> <p>22 is done in here, and it's described, it's not hidden,</p> <p>23 it's all over, it's all here. But we determined</p> <p>24 basically the dose, and we figured out what is toxic to</p> <p>25 the cells.</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. Are you confident that it was one or the other?</p> <p>3 A. Yes.</p> <p>4 Q. The lab notebook that we've been provided marked as</p> <p>5 Exhibit Number 2 has a first date of 10-15-17. Is that</p> <p>6 the first date that there was any lab work done either</p> <p>7 in the pilot study or the later study?</p> <p>8 A. No.</p> <p>9 Q. What is the earliest date of work?</p> <p>10 A. May I have this?</p> <p>11 Q. Yeah, I'm handing you Exhibit Number 3.</p> <p>12 A. So the first work that we did with talc, 9-26.</p> <p>13 Q. Dr. Saed referred to Exhibit Number 3 and pointed me to</p> <p>14 a page that's dated 9-26. First of all, what is</p> <p>15 represented or contained in Exhibit Number 3, this lab</p> <p>16 notebook?</p> <p>17 A. So this part, okay, so I have to indicate something, we</p> <p>18 share lab notebook, we use them for -- so not</p> <p>19 necessarily one lab notebook for one project. So, for</p> <p>20 example, the first part of this lab notebook --</p> <p>21 MS. O'DELL: Which is Exhibit 3.</p> <p>22 THE WITNESS: -- which is Exhibit 3, looking</p> <p>23 at the effect of a dipeptide on adhesion markers, and</p> <p>24 then we continued with talc, so sometimes we mix up,</p> <p>25 like we don't necessarily use one project for one lab</p>
Page 55	Page 57
<p>1 Q. How did you come to start with the 500 milligram per</p> <p>2 milliliter dose?</p> <p>3 A. So we read in the literature prior experiments people</p> <p>4 did from 5 all the way to 1,000, and I found the paper</p> <p>5 after we did -- we thought first initial experiment we</p> <p>6 will hit the cells with high concentration, see what</p> <p>7 happened, and then titrate it down, but then we found</p> <p>8 it's toxic effect on the cells so -- and then I came</p> <p>9 across a paper where they used these small doses that</p> <p>10 they found biological effect with, and they used 5, 20</p> <p>11 and 100 and up to 500, so I chose the lower range,</p> <p>12 which is 5, 20, and 100 for my study.</p> <p>13 Q. What paper was that?</p> <p>14 A. That was -- do you have that paper --</p> <p>15 Q. Is that the Buz'Zard paper?</p> <p>16 A. Let me see, do you have the Buz'Zard --</p> <p>17 MS. O'DELL: It's right in your notebook</p> <p>18 there, Doctor.</p> <p>19 THE WITNESS: Where do I find it now here?</p> <p>20 MS. O'DELL: You might look in your</p> <p>21 references of your report.</p> <p>22 THE WITNESS: Right.</p> <p>23 MS. O'DELL: And then we can go from there.</p> <p>24 THE WITNESS: I think it's Buz'Zard or</p> <p>25 Shukla, one or the other, I can't remember.</p>	<p>1 notebook, okay. So this part of the notebook --</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. The first part?</p> <p>4 A. The first part is for the different study. This part</p> <p>5 where we started the actual work with talc.</p> <p>6 Q. When you -- you started referencing the pages, this</p> <p>7 part, then what does this part represent being done?</p> <p>8 A. This part was an experiment that we did exposing cells,</p> <p>9 ovarian cancer cells, to talc, Fisher, and look at</p> <p>10 oxidative stress markers. We used three ovarian cancer</p> <p>11 cell lines, and we used macrophages of normal</p> <p>12 epithelial cells. And the result of this work was</p> <p>13 submitted to Society of Reproductive Investigation</p> <p>14 meeting that was held last year March, yes, last year</p> <p>15 in San Diego, and you can see all the way down, this is</p> <p>16 the poster that resulted from this work.</p> <p>17 Q. The poster you pointed to is on Page 63?</p> <p>18 A. Yes.</p> <p>19 Q. Was there a pilot study done before doing this</p> <p>20 experiment?</p> <p>21 A. So this is a pilot study.</p> <p>22 Q. So the study that we are looking at dated -- with the</p> <p>23 start date of 9-26-2017 --</p> <p>24 A. Right.</p> <p>25 Q. -- you consider that to be a pilot study?</p>

15 (Pages 54 to 57)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 58</p> <p>1 A. This is a -- we have many pilot studies. It depends on 2 what marker you're doing the pilot study for. So 3 there's a pilot study for CA-125. There is a pilot 4 study for the dose. There is a pilot study for cells. 5 So this is a pilot study. 6 Q. In the other notebook you went from a pilot study to 7 doing a subsequent study. 8 A. Correct. 9 Q. Did you do that with this pilot study? 10 A. No, this is only done with -- this is a preliminary 11 study that we did, and we only tested mRNA levels of 12 some oxidative stress markers. The other study that 13 you're referring to with the manuscript, this is a 14 comprehensive study that looked at every fold of gene 15 expression from mRNA to DNA to ELISA to activity of 16 proteins, everything. This is just simply a pilot 17 experiment looking at, yes, there is an effect, no, 18 there is not an effect, and, yes, there is an effect, 19 so we published it. 20 Q. The first date of any study that you did with talc is 21 September 26, 2017? 22 A. Correct. 23 Q. Who is involved in the study that we looked at in 24 Exhibit Number 3 whose begin date was September 26, 25 2017?</p>	<p style="text-align: right;">Page 60</p> <p>1 call from Miss Thompson, you would have still done 2 these studies? 3 A. Correct. 4 Q. Were the studies in the works at the time that Miss 5 Thompson called you? 6 A. I was reviewing literature only. 7 Q. You had not thought about doing actual laboratory 8 studies before Miss Thompson had called you involving 9 talc? 10 A. I planned it before she called me. 11 Q. You had actually planned to do laboratory studies? 12 A. Correct. 13 Q. Do you have any documentation of that plan? 14 A. No. 15 Q. Did you talk with anyone and tell them that your plan 16 was to do studies involving talc before you were called 17 by Miss Thompson? 18 A. We always discussed talking about looking at any 19 substance that induces inflammation and oxidative 20 stress. So we always talk in the lab and with 21 colleagues about any substance. Talc was brought up, 22 yes. 23 Q. To whom did you speak with about talc and doing an 24 experiment about talc before you received a call from 25 Miss Thompson?</p>
<p style="text-align: right;">Page 59</p> <p>1 A. That's Nicole King and Ira, and myself. 2 Q. What prompted you to do this initial study? 3 A. My lab interest is ovarian cancer and oxidative stress, 4 we talked about that, I answered that, the media and, 5 you know, what's going on, and this is the core of my 6 lab specialty is looking at oxidative stress markers, 7 inflammation, and ovarian cancer. 8 Q. Is it your testimony that this study with the start 9 date of 9-26-2017 was not prompted by your call with 10 Miss Thompson? 11 MS. O'DELL: Object to the call. 12 THE WITNESS: Was not prompted? 13 BY MR. HEGARTY: 14 Q. Yes. 15 MS. O'DELL: Object to the form. 16 BY MR. HEGARTY: 17 Q. In other words, you would not have done this study or 18 the study for which you have submitted a manuscript to 19 Reproductive Sciences if Miss Thompson had not called 20 you, correct? 21 MS. O'DELL: Object to the form. 22 THE WITNESS: No, I was always interested in 23 doing this. 24 BY MR. HEGARTY: 25 Q. So it's your testimony that if you had not gotten a</p>	<p style="text-align: right;">Page 61</p> <p>1 A. I discussed with Nicole. 2 Q. When was that discussion? 3 A. I can't remember dates, but we always discussed markers 4 of oxidative stress. 5 Q. Well, you said that you always talk in the lab and with 6 colleagues about any substance. Talc was brought up. 7 A. Correct. 8 Q. What substances had you tested in your lab with regard 9 to oxidative stress before your study about talc? 10 A. We go backwards, we go looking at reducing oxidative 11 stress and looking at mechanisms, or manipulating 12 alteration of oxidative stress, like, for example, we 13 did the work where we added a scavenger of Superoxide 14 dismutase, which is a very powerful oxidant, and we 15 looked at inducing apoptosis in ovarian cancer cells. 16 We're looking at intervention, changing the cell redox 17 balance, alteration of that balance, it is given, it's 18 accepted in the literature and in our world that cancer 19 cells and ovarian cancer cells included, they all have 20 characterized by a pro-oxidant state that is given, 21 it's known. So we don't need to show a substance that 22 induces further that oxidative stress. We are looking 23 for attenuating and modulating that oxidative stress 24 and see the effect, the downstream effect. We have 25 done that, we have published that with looking at SRNA</p>

16 (Pages 58 to 61)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 62</p> <p>1 to shut down proteins, knock down proteins, we did it</p> <p>2 for myeloperoxidase, we did it for ionase, we did it</p> <p>3 for SOD so.</p> <p>4 Q. But prior to the call you received from Miss Thompson,</p> <p>5 you had never tested any particulate or exposed cells</p> <p>6 to any particulate and looked for oxidative stress,</p> <p>7 correct?</p> <p>8 A. No, not correct. I used hypoxia, induced hypoxia and</p> <p>9 look at normal cells.</p> <p>10 Q. What particles did you apply to cells in that study?</p> <p>11 A. Hypoxia.</p> <p>12 Q. What's hypoxia?</p> <p>13 A. It is the creation of a hypoxic micro environment into</p> <p>14 the cells. This can be in vivo induced by infection,</p> <p>15 by wound, by many other factors that do that.</p> <p>16 Q. Let me clarify my question, then. My question is what</p> <p>17 environmental particles that are not generated in vivo</p> <p>18 had you ever applied to cells and culture prior to the</p> <p>19 call from Miss Thompson?</p> <p>20 A. That we published? I don't -- like a given particle</p> <p>21 you're talking about?</p> <p>22 Q. Correct.</p> <p>23 A. No, I don't have any, I never done anything like that.</p> <p>24 Q. What studies had you actually planned on doing with</p> <p>25 talc before your call -- before the call came from Miss</p>	<p style="text-align: right;">Page 64</p> <p>1 Q. -- informal about putting a test together, correct?</p> <p>2 A. I said I was planning to do this.</p> <p>3 Q. Okay.</p> <p>4 A. I had a plan to do this.</p> <p>5 Q. Okay. What was your plan?</p> <p>6 A. This is the plan -- the plan -- okay, this is important</p> <p>7 to know, that I have this set up ready in my lab, ready</p> <p>8 to go. We have all the technology for all these</p> <p>9 markers. So it is not hard just to add -- so when I</p> <p>10 plan, it means I -- we had used the setup that I</p> <p>11 already have in my laboratory, that's what I -- in my</p> <p>12 plan.</p> <p>13 Q. But you had not done anything to further that plan?</p> <p>14 A. Physically, no.</p> <p>15 Q. Let me finish, you had not done anything to further</p> <p>16 that plan until after the call came from Miss Thompson,</p> <p>17 correct?</p> <p>18 A. Correct.</p> <p>19 Q. Did you discuss at all the makeup of the study or what</p> <p>20 you were going to do with the study or the methods of</p> <p>21 the study with Beasley Allen before you did them?</p> <p>22 A. No.</p> <p>23 Q. Did you have any discussions at all with attorneys for</p> <p>24 Beasley Allen about the concept of the study, the</p> <p>25 methods of the study, the protocol of the study, how</p>
<p style="text-align: right;">Page 63</p> <p>1 Thompson? Had you actually formed the framework of a</p> <p>2 study?</p> <p>3 A. No, I was just thinking about the overall, it would be</p> <p>4 interesting to see if this is -- this will induce</p> <p>5 inflammation in our cells, and if it does, then it</p> <p>6 should be linked to the risk of ovarian cancer, so</p> <p>7 thinking, just talking about it.</p> <p>8 Q. With regard to the manuscript that -- strike that.</p> <p>9 With regard to the tests that were part of the</p> <p>10 manuscript, those tests were done in connection with</p> <p>11 your communications with Beasley Allen, correct?</p> <p>12 A. Those tests?</p> <p>13 Q. Yes.</p> <p>14 A. What do you mean by communication?</p> <p>15 MS. O'DELL: Object to form.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Well, you talked with Beasley Allen about doing those</p> <p>18 tests, correct, before you did them?</p> <p>19 MS. O'DELL: Object to the form.</p> <p>20 THE WITNESS: No, I was planning to do them,</p> <p>21 anyways.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. You just said, though, before the call you had not done</p> <p>24 anything formal or even --</p> <p>25 A. Yeah, I said --</p>	<p style="text-align: right;">Page 65</p> <p>1 the study was going to be done, anything like that?</p> <p>2 MS. O'DELL: Let me just stop you right</p> <p>3 there. I think when you're talking about conversations</p> <p>4 you -- you're talking about after the time that he's</p> <p>5 been engaged by Beasley Allen and those discussions</p> <p>6 would be protected by the privilege. I'm going to</p> <p>7 instruct the witness not to answer.</p> <p>8 MR. HEGARTY: Well, my questions are related</p> <p>9 solely to the manuscript, the testing in the manuscript</p> <p>10 that has been submitted to Reproductive Sciences. So</p> <p>11 is it your position that all the communications you had</p> <p>12 with regard to the tests done for purposes of the</p> <p>13 publication Reproductive Sciences and the writing of</p> <p>14 the article, submission of the article, are protected</p> <p>15 by the consulting privilege?</p> <p>16 MS. O'DELL: Well, and as you know, the</p> <p>17 substance of the manuscript largely is Dr. Saed's</p> <p>18 expert report, and the work that he did in terms of</p> <p>19 consulting was paid for by Beasley Allen and he was</p> <p>20 doing that as a part of the consulting arrangement.</p> <p>21 So, yes, to the degree he had conversations with the</p> <p>22 lawyers, we're going to -- I'm going to instruct him</p> <p>23 not to answer.</p> <p>24 MR. HEGARTY: I'm not going to argue with</p> <p>25 you. I just want to make sure I'm interesting that</p>

17 (Pages 62 to 65)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 66</p> <p>1 that's -- that your objection extends to any question</p> <p>2 that I would ask with regard to communications with</p> <p>3 Beasley Allen or attorneys for the plaintiffs with</p> <p>4 regard to the creation of the study, the setup of the</p> <p>5 study, the protocol of the study, doing the study,</p> <p>6 writing the manuscript.</p> <p>7 MS. O'DELL: That was not, your question's a</p> <p>8 little bit different than what you just described. You</p> <p>9 can ask your questions, there may be some that are</p> <p>10 appropriate and some not, but as regard the question</p> <p>11 that's on the table, I think that's inappropriate and</p> <p>12 I've instructed him not to answer.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Dr. Saed, did you have any discussions with any</p> <p>15 attorneys for Beasley Allen regarding the pilot study</p> <p>16 that we talked about in Exhibit Number 3?</p> <p>17 A. What's Exhibit Number 3?</p> <p>18 Q. The one -- the study that's dated 9-26-2007.</p> <p>19 MS. O'DELL: Objection, vague.</p> <p>20 THE WITNESS: Again, okay, here is my answer.</p> <p>21 No one has interfered with the design of the study, how</p> <p>22 the study should be done, what assay should be applied,</p> <p>23 what method of analysis should be performed, the</p> <p>24 writing of the results, the analysis of the results,</p> <p>25 this is my world, this is my specialty. No one</p>	<p style="text-align: right;">Page 68</p> <p>1 Number --</p> <p>2 A. My lab.</p> <p>3 Q. Sorry let me finish.</p> <p>4 A. We already talked.</p> <p>5 Q. Who paid for the pilot study that's reported in Exhibit</p> <p>6 Number 3?</p> <p>7 MS. O'DELL: Object to the form, to the</p> <p>8 degree it's vague.</p> <p>9 MR. HEGARTY: You can answer.</p> <p>10 THE WITNESS: We discussed this, right?</p> <p>11 BY MR. HEGARTY:</p> <p>12 Q. Now, the before questions, at least I thought, were</p> <p>13 limited to the lab costs for -- and personnel costs for</p> <p>14 the study in exhibit -- in the first notebook, Number</p> <p>15 2. Did those lab costs reflected in that exhibit,</p> <p>16 which is Exhibit Number 5, also cover the pilot study</p> <p>17 that's in notebook that we marked as Exhibit Number 3?</p> <p>18 A. The answer, my lab is paid for -- paid for all the</p> <p>19 studies that we did.</p> <p>20 Q. The --</p> <p>21 A. Yeah, you can go back five days later.</p> <p>22 Q. Exhibit Number 5 reports the costs of the talc project</p> <p>23 dated from October 1st, 2017. This pilot study began</p> <p>24 on September 26, 2017 correct?</p> <p>25 A. Correct.</p>
<p style="text-align: right;">Page 67</p> <p>1 interfered with that.</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. I appreciate that. That was not my question. My</p> <p>4 question was simply did you have any discussions with</p> <p>5 attorneys for Beasley Allen or attorneys for plaintiffs</p> <p>6 in this case with regard to conducting the pilot study</p> <p>7 that's in Exhibit Number 3 with the start date of</p> <p>8 9-26-2017?</p> <p>9 A. They know that I'm doing this.</p> <p>10 Q. Did they know that you were doing it at the time that</p> <p>11 you were doing it?</p> <p>12 A. At this time?</p> <p>13 Q. Yes.</p> <p>14 A. Yes.</p> <p>15 Q. Did you have discussions in advance of doing that study</p> <p>16 with them?</p> <p>17 A. I actually designed this whole thing. So when they</p> <p>18 approached me and I got -- you know, I told them this</p> <p>19 is what I'm going to do, this is what I have in mind,</p> <p>20 we have all this setup in my lab and I want to do it,</p> <p>21 and I did it.</p> <p>22 Q. Did they provide to you any suggestions on how to do</p> <p>23 this study?</p> <p>24 A. They don't know nothing about this.</p> <p>25 Q. Who paid for the pilot study that's reported in Exhibit</p>	<p style="text-align: right;">Page 69</p> <p>1 Q. Is it your testimony that the costs of the pilot study</p> <p>2 are included in what's listed in Exhibit Number 5?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: We started the -- culturing the</p> <p>5 cells, so the idea -- are you talking about the actual</p> <p>6 money? We started -- yes, it is included there.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. You shook your head. I want to make sure I got it on</p> <p>9 the record.</p> <p>10 A. Yes.</p> <p>11 Q. So the costs for the pilot study in Exhibit Number 3</p> <p>12 that began on September 26, 2017, are contained in</p> <p>13 Exhibit Number 5?</p> <p>14 A. Correct. It takes three weeks to get the cells up and</p> <p>15 going.</p> <p>16 MR. HEGARTY: Want to take a break? We've</p> <p>17 been going for about an hour and 20 minutes. Take a</p> <p>18 break.</p> <p>19 THE VIDEOGRAPHER: Going off the record at</p> <p>20 10:32 a.m.</p> <p>21 (A short recess was taken.)</p> <p>22 THE VIDEOGRAPHER: We're back on the record</p> <p>23 at 10:51 a.m.</p> <p>24 BY MR. HEGARTY:</p> <p>25 Q. Dr. Saed, when we left off, we were talking about any</p>

18 (Pages 66 to 69)

Ghassan Saed, Ph.D.

Page 70	Page 72
<p>1 communication you had with Beasley Allen or other 2 attorneys for the plaintiffs with regard to the 3 experiments that you did or the preparation of the 4 manuscript that you've submitted to Reproductive 5 Sciences. Over the course of the time that you did the 6 experiments, that you did the writing, that you 7 submitted to Reproductive Sciences, OB-GYN Oncology, 8 did you exchange any e-mails or letters with attorneys 9 for Beasley Allen or the plaintiffs with regard to the 10 testing, the writing, the submission of the manuscript? 11 MS. O'DELL: Objection to form. 12 THE WITNESS: Can you please repeat the 13 question, clarify what you -- 14 BY MR. HEGARTY: 15 Q. Sure. Well, during the time that you were doing the 16 testing that we've been talking about? 17 A. Experiments. 18 Q. -- that's reflected in the lab notebooks, you call them 19 experiments, in the time that you wrote the paper that 20 you first submitted to OB-GYN Oncology and then later 21 to Reproductive Sciences. Did you have communications 22 with attorneys for Beasley Allen or any plaintiff in 23 this litigation regarding the experiments or regarding 24 the writing of the article or regarding the submission 25 of the article to journals?</p>	<p>1 the manuscript, the submission of the manuscript; is 2 that correct? 3 MS. O'DELL: Object to the form. 4 BY MR. HEGARTY: 5 Q. You can answer. 6 A. I said -- I answered you. I said I did not discuss the 7 design of the experiments, the results of the 8 experiments, where to submit it, how to analyze the 9 data, all this work I did myself. 10 Q. Understood. I'm not asking if they provided input on 11 how to do it or how to write it or where to send it. 12 I'm asking if you had discussions with any attorney for 13 Beasley Allen or any other attorney for Plaintiff over 14 the course of doing all this work about what you were 15 doing? 16 A. I still don't understand discussion, what does the 17 discussion mean? 18 Q. Well, discussion means a phone call, an in-person 19 meeting, an e-mail? 20 A. Oh. 21 Q. Any communication that talks about what you're doing. 22 MS. O'DELL: Excuse me, you may answer the 23 question whether calls or meetings occurred, you may 24 answer that yes or no, but you cannot divulge the 25 discussions or the topics that were included in those</p>
Page 71	Page 73
<p>1 A. No. 2 Q. Did you have any telephone calls or meetings during 3 the -- about the experiments or the writing of the 4 manuscript for the journals or the submission of the 5 journals with attorneys for Beasley Allen or any 6 plaintiff in this litigation? 7 MS. O'DELL: Objection to the form. 8 THE WITNESS: No. 9 MS. O'DELL: I was just going to instruct you 10 to the degree that you're asking him about subjects 11 that were discussed in meetings with attorneys for the 12 plaintiff, don't discuss those, the subject matter 13 because those, they're not entitled to know those 14 discussions, so to the degree you can answer your 15 questions outside those parameters, you may. 16 THE WITNESS: My answer was no for any 17 discussion related to the design of the experiments, 18 the results of the work, the submission to the journal, 19 which journal to submit to, writing the manuscript, all 20 that work I know the answer was no to that work. 21 BY MR. HEGARTY: 22 Q. So as to everything you just described, you had no 23 discussions with the attorneys for Beasley Allen or any 24 plaintiffs in this case about anything dealing with 25 experiments, the design, the protocol the writing of</p>	<p>1 discussions. 2 THE WITNESS: Yes, so calls, we did calls. 3 BY MR. HEGARTY: 4 Q. And what were the -- what did you discuss with the 5 attorneys for Beasley Allen or the plaintiffs during 6 those calls with regard to the experiments you were 7 doing or the writing of the manuscript or the 8 submission of the journal? 9 MS. O'DELL: I'm going to instruct you not to 10 answer that question. 11 MR. HEGARTY: We object to that instruction 12 and believe that that is an inappropriate objection and 13 instruction that's not covered by the consultant 14 privilege, but we're not going to decide it here, 15 understand that, but I just want to make it clear on 16 the record that we don't agree that your objection 17 covers the kind of communications that I asked the 18 doctor. 19 MS. O'DELL: Well, the privilege covers 20 communications, whether written or verbal, in person or 21 on the telephone, during Dr. Saed's consulting 22 relationship with the plaintiffs and that's what you've 23 asked him and that's what I'm objecting to. 24 MR. HEGARTY: I understand the objection. We 25 don't agree with the objection.</p>

19 (Pages 70 to 73)

Ghassan Saed, Ph.D.

Page 74	Page 76
<p>1 MS. O'DELL: I want to make sure the record 2 is clear. 3 MR. HEGARTY: And I'm making for the record 4 that we don't agree with the objection and dispute the 5 propriety of it and object to you instructing the 6 doctor not to respond. With regard to this -- the work 7 we've been talking about, the pilot study with talc, 8 that's reflected in the -- and the other studies with 9 talc that's reflected in the two notebooks, have you 10 prepared any other manuscripts related to those 11 experiments that you intend to submit to any journal? 12 THE WITNESS: Other than submitted abstracts 13 to different meetings, no. 14 BY MR. HEGARTY: 15 Q. Have you prepared abstracts or do you intend to prepare 16 abstracts or have you submitted abstracts regarding the 17 work reflected in the two notebooks that have not yet 18 been disseminated? 19 A. Disseminated means -- 20 MS. O'DELL: Object to form. 21 BY MR. HEGARTY: 22 Q. Well, as we're going to look at here today, there are 23 some abstracts where you describe the work that you're 24 doing, the experiments that you did. Do you currently 25 have in the works any abstracts that have not yet been</p>	<p>1 MS. O'DELL: This is not your updated CV 2 actually, this is the one -- 3 THE WITNESS: I can find it for you. It's an 4 obstetrics and gynecology online, open access online. 5 BY MR. HEGARTY: 6 Q. Who within -- for that publication asked you to write 7 an editorial? 8 A. The editorial office. 9 Q. And when did that request come in? 10 A. I think two weeks ago. 11 Q. And editorial on what? 12 A. On talc and oxidative stress. 13 Q. Have you started writing it? 14 A. Not yet. 15 Q. Do you intend to do so? 16 A. Yes. 17 Q. Did they give you a date -- 18 A. No. 19 Q. -- for submission? 20 MS. O'DELL: Let him finish his question, 21 please, Doctor. 22 BY MR. HEGARTY: 23 Q. Did they give you a date for providing -- did they give 24 you a date for providing the editorial? 25 A. No.</p>
Page 75	Page 77
<p>1 published or provided to anyone? 2 MS. O'DELL: Object to the form. 3 BY MR. HEGARTY: 4 Q. Do you understand the question? 5 A. Not really. 6 Q. Well, do you currently have any abstracts that you're 7 working on that you intend to submit? 8 A. Now I understood. In relation to -- 9 Q. The experiments -- 10 A. In relation to the talc project? 11 Q. Correct. 12 A. The answer is no. 13 Q. Do you have any other written work in process relating 14 to the talc experiments that you intend to either turn 15 into an abstract or turn into a journal article? 16 A. I was asked to write an editorial to one of the 17 journals and I am planning to do that. 18 Q. Who asked you to write an editorial to a journal? 19 A. The journal. 20 Q. What journal? 21 A. OB-GYN, let me see, I can find the exact name for you, 22 which I'm planning to do. It's an open access journal 23 obstetrics and gynecology it's in my CV somewhere -- 24 trying to find it for you -- where is it -- this is my 25 updated CV?</p>	<p>1 Q. Is the editorial going to be in response to a journal 2 article or another publication? 3 A. It is in response to the published abstracts that I did 4 online. 5 Q. And with regard to the open access publication, is that 6 a publication that's only available on the internet? 7 A. Open access, yes. 8 Q. Is that a publication which you have to pay to have 9 your materials published on the internet? 10 A. All open access journals you have to pay, yes. 11 Q. You will have to pay to have your editorial published? 12 A. Yes. 13 Q. How much does that cost? 14 A. Not too much like, 3, \$400. 15 MR. LOCKE: Could we ask the witness to speak 16 up. 17 MS. O'DELL: They don't have access to a 18 speaker, so they're just listening to you over there, 19 so if you could raise your voice. 20 THE WITNESS: 4, \$500, 400 to 500 -- where is 21 that -- 22 MS. O'DELL: That's okay. 23 MR. HEGARTY: We're past that question, 24 Doctor. 25 THE WITNESS: Thank you.</p>

Ghassan Saed, Ph.D.

Page 78	Page 80
<p>1 BY MR. HEGARTY:</p> <p>2 Q. We were provided some additional materials this morning</p> <p>3 that I wanted to make sure I mark for the record and</p> <p>4 follow up on a few things in those materials. I'm</p> <p>5 going to mark as Exhibit Number 10 what was represented</p> <p>6 to us today to be the index for the lab notebook that</p> <p>7 we marked as Exhibit Number 2, that's the notebook that</p> <p>8 has the experiments in it that went into your</p> <p>9 manuscript.</p> <p>10 SAED DEPOSITION EXHIBIT NUMBER 10,</p> <p>11 INDEX FOR LAB NOTEBOOK,</p> <p>12 WAS MARKED BY THE REPORTER</p> <p>13 FOR IDENTIFICATION</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. And I'll show you -- make sure we have the right lab</p> <p>16 note --</p> <p>17 MR. LAPINSKI: Counsel, is there an Exhibit 9</p> <p>18 marked?</p> <p>19 MR. HEGARTY: Oh, I skipped over Exhibit 9.</p> <p>20 I'll go back to it.</p> <p>21 THE WITNESS: So this and this.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. Yes, you looked at Exhibit 2 compared to Exhibit 10.</p> <p>24 Is that the index to Exhibit 2?</p> <p>25 A. Yes.</p>	<p>1 A. That's the answer.</p> <p>2 Q. Let me look at the notebook. There are pages --</p> <p>3 there's 21 and then there is a 22, 23, and a 24 that's</p> <p>4 not referenced in the index. Why is that?</p> <p>5 A. Because those are figures. They could be referenced.</p> <p>6 Q. But they have page numbers on them.</p> <p>7 A. Sure.</p> <p>8 Q. And you otherwise list page numbers here that are also</p> <p>9 just pages that contained figures, correct?</p> <p>10 A. Correct.</p> <p>11 Q. Why are these pages not referenced in the index?</p> <p>12 A. I don't know.</p> <p>13 Q. There are also --</p> <p>14 A. Maybe --</p> <p>15 Q. I'm sorry.</p> <p>16 A. Maybe -- we have it, we labeled it.</p> <p>17 Q. But they're not included in the index.</p> <p>18 A. Maybe just missed here.</p> <p>19 Q. There are also a number of pages that have been cut out</p> <p>20 of Exhibit Number 2 that -- where the pages go from 24</p> <p>21 to 29, and there are clearly pages in between that</p> <p>22 appear to have either been cut out by a razor or by</p> <p>23 some other cutting instrument. First of all, what was</p> <p>24 on those pages?</p> <p>25 A. Okay, so as I mentioned earlier, we do not specify one</p>
Page 79	Page 81
<p>1 Q. With regard to the index there, on the index, Doctor,</p> <p>2 Exhibit 10, the pages after 21 you jump to 31. What</p> <p>3 happened to Pages 22 to 29 -- I'm sorry, 22 to 30?</p> <p>4 MS. O'DELL: I'm sorry, are you referring to</p> <p>5 Exhibit 10 or --</p> <p>6 MR. HEGARTY: Yes, Exhibit 10, the pages go</p> <p>7 20-21, then jump to 31-32, and my question is where are</p> <p>8 Pages 22 to 30?</p> <p>9 THE WITNESS: 22, you said?</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. Yes.</p> <p>12 A. 22, 23, 24, 29. Oh, so there's -- yeah, you talking</p> <p>13 about the tore apart?</p> <p>14 Q. We'll get to that part in a second. First of all, why</p> <p>15 aren't Pages 22 to 29 listed in the index or at least a</p> <p>16 portion of those?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 THE WITNESS: 31 -- 21 -- 21, 31, what</p> <p>19 happened, 21, yeah, there is nothing after that, right?</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. Well, on Exhibit Number 10 it jumps from 21 to 31, and</p> <p>22 where are the nine or ten pages in between those?</p> <p>23 A. Yeah, that's what I'm talking about, those are -- you</p> <p>24 want me to answer for the missing pages?</p> <p>25 Q. Well, I'll get to that first but --</p>	<p>1 lab notebook to a specific study. So my research</p> <p>2 technician by a mistake added a different project here,</p> <p>3 and because this is talc, there is a litigation and</p> <p>4 lawyers and all that, we had to remove it and we have</p> <p>5 to specialize in that lab notebook just for this work.</p> <p>6 Q. What other project was represented or documented in</p> <p>7 those pages that were removed from this lab notebook?</p> <p>8 A. It's a different project than talc.</p> <p>9 Q. What was the project or what is the project?</p> <p>10 MS. O'DELL: You mean the subject matter?</p> <p>11 BY MR. HEGARTY:</p> <p>12 Q. The subject matter.</p> <p>13 A. The same, reactive oxygen species, inflammation in</p> <p>14 ovarian cancer.</p> <p>15 Q. What are you looking at in that other project?</p> <p>16 A. I can't remember, but I can find out.</p> <p>17 Q. Does it involve exposure to any environmental</p> <p>18 particulate?</p> <p>19 A. No.</p> <p>20 Q. Do you know when the pages that we've been talking</p> <p>21 about were removed from this lab notebook?</p> <p>22 A. I don't remember.</p> <p>23 Q. Were you aware that they had been removed?</p> <p>24 A. Yes.</p> <p>25 Q. Have you ever in your experiences in conducting a lab</p>

21 (Pages 78 to 81)

Ghassan Saed, Ph.D.

Page 82	Page 84
<p>1 cut out pages of a lab notebook?</p> <p>2 A. Have I ever done that? No.</p> <p>3 Q. That's not good laboratory practice, is it?</p> <p>4 MS. O'DELL: Objection to form.</p> <p>5 THE WITNESS: Yes, I -- the reason I told</p> <p>6 you, I just told you the reason why we did that.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. But my question is that's not proper laboratory</p> <p>9 practice to cut out pages of a lab book, is it?</p> <p>10 MS. O'DELL: Object to the form.</p> <p>11 THE WITNESS: We didn't cut the notes from</p> <p>12 them, we just wanted to keep the talc study separate.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Understood, but I'm talking about good laboratory</p> <p>15 practices, and good laboratory practices don't sanction</p> <p>16 or allow for you to cut out pages of a laboratory</p> <p>17 notebook, do they?</p> <p>18 MS. O'DELL: Object to the form.</p> <p>19 THE WITNESS: We, as you can see, we're not</p> <p>20 hiding it.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. I'm not asking if you're hiding it. I'm asking you, do</p> <p>23 you -- is it your testimony that cutting lab -- cutting</p> <p>24 pages out of a lab notebook is consistent with good</p> <p>25 laboratory practice?</p>	<p>1 Q. And Nicole King again is who?</p> <p>2 A. My research post doc.</p> <p>3 Q. Then on the other lab notebook that contained -- that</p> <p>4 was on Exhibit 2. Exhibit 3 on the outside is</p> <p>5 something called Temple 1. What does that mean?</p> <p>6 A. That's a project that we did for Temple Pharmaceutical</p> <p>7 in our lab.</p> <p>8 Q. That's a project that's -- that's the project that's in</p> <p>9 the first part of the lab notebook?</p> <p>10 A. Correct.</p> <p>11 SAED DEPOSITION EXHIBIT NUMBER 9,</p> <p>12 PILOT STUDY,</p> <p>13 WAS MARKED BY THE REPORTER</p> <p>14 FOR IDENTIFICATION</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Also provided today, which I'll mark as Exhibit</p> <p>17 Number 9, are copies of what I believe to be the pilot</p> <p>18 study that's contained in Exhibit Number 3. Would you</p> <p>19 look at Exhibit Number 9 and compare to Exhibit</p> <p>20 Number 3, and tell me whether Exhibit Number 9 are the</p> <p>21 pages copied from Exhibit Number 3, the pilot project</p> <p>22 we talked about earlier along with the index?</p> <p>23 A. Yes.</p> <p>24 Q. On the first page of -- or strike that. On Page 1 of</p> <p>25 Exhibit Number 2 there's a statement at the very</p>
Page 83	Page 85
<p>1 MS. O'DELL: Object to the form.</p> <p>2 THE WITNESS: I didn't say that.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. You agree it's not consistent with good laboratory</p> <p>5 practice, don't you?</p> <p>6 MS. O'DELL: Object to the form.</p> <p>7 THE WITNESS: I don't agree.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. You don't agree with what?</p> <p>10 A. Okay, I told you the reason why we removed those pages.</p> <p>11 Q. Did you instruct someone to cut those pages out of this</p> <p>12 notebook?</p> <p>13 A. My lab research assistant was doing different project.</p> <p>14 She was writing it here in the middle of this lab</p> <p>15 notebook. I asked her let's remove it, continue so we</p> <p>16 can keep this lab notebook independent.</p> <p>17 Q. But the other lab notebook you prepared you left in the</p> <p>18 pages of the other project, you didn't cut those out,</p> <p>19 correct?</p> <p>20 A. No, because this was a preliminary results and that was</p> <p>21 continued, not in the middle, it was continued, so we</p> <p>22 only used like few pages from the book.</p> <p>23 Q. The lab notebooks contain on the outside, at least one</p> <p>24 of them, Nicole King Talc Study, do you see that?</p> <p>25 A. I do.</p>	<p>1 beginning that says tried to dissolve talc Fisher 74 --</p> <p>2 or Fisher T4-500 lot numbers 166820 in Johnson &</p> <p>3 Johnson Baby Powder. Do you see that reference? Do</p> <p>4 you see where I'm reading?</p> <p>5 A. You're reading wrong. What is in?</p> <p>6 Q. In.</p> <p>7 A. That's not in.</p> <p>8 Q. What is that word?</p> <p>9 A. That's or.</p> <p>10 Q. Or Johnson's Baby Powder, okay, and it says it won't</p> <p>11 completely dissolve. What does that mean?</p> <p>12 A. It won't completely dissolve.</p> <p>13 Q. What was the extent of its -- that it dissolved?</p> <p>14 A. Partial.</p> <p>15 MS. O'DELL: Object to form.</p> <p>16 THE WITNESS: Yeah, so, okay, so you need to</p> <p>17 know the percentage of how much it's dissolved?</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. How much is dissolved as reflected in Page 1.</p> <p>20 A. Nothing dissolved.</p> <p>21 Q. Whose handwriting is on Page 1?</p> <p>22 A. This is Nicole I think, I think.</p> <p>23 Q. Whose handwriting is throughout Exhibit Number 2?</p> <p>24 A. This?</p> <p>25 Q. Throughout the exhibit.</p>

22 (Pages 82 to 85)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 86</p> <p>1 A. Some Nicole, some others, my research assistant.</p> <p>2 Q. Who else's handwriting besides Nicole's are in Exhibit</p> <p>3 Number 2?</p> <p>4 A. My research assistant.</p> <p>5 Q. Who is that?</p> <p>6 A. Flory, her name is Flory, Flory Rong, I think she's</p> <p>7 part of the authors, yes, her name is, okay, this is</p> <p>8 the right -- correction, Fan Rong.</p> <p>9 MS. O'DELL: How do you spell that?</p> <p>10 THE WITNESS: It's here, F-a-n and then</p> <p>11 R-o-n-g.</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. Isn't it Rong Fan, Doctor?</p> <p>14 A. Rong Fan? The first name is --</p> <p>15 Q. First name is Rong, right?</p> <p>16 A. I think it's the other way around, I'm not expert on</p> <p>17 names.</p> <p>18 Q. Who is Mr. Rong?</p> <p>19 A. Mrs.</p> <p>20 Q. Mrs. Rong who is that?</p> <p>21 A. She is my research assistant.</p> <p>22 Q. How long has she been your research assistant?</p> <p>23 A. From I believe the beginning of '18.</p> <p>24 Q. But you don't know her name?</p> <p>25 A. I know her name, Flory, we call her Flory.</p>	<p style="text-align: right;">Page 88</p> <p>1 Q. Does that mean there could be instances where work was</p> <p>2 done on that date but then entered later in the lab</p> <p>3 notebook?</p> <p>4 A. Okay, so let me explain how we do this. So we run our</p> <p>5 experiments and we have everything, as you see here,</p> <p>6 electronically, and we -- it's a matter of -- practice</p> <p>7 of cutting and pasting it in the lab notebook, but</p> <p>8 everything is done in electronically.</p> <p>9 Q. When was this lab notebook, Exhibit Number 2, prepared?</p> <p>10 A. I don't know, exact dates?</p> <p>11 Q. Correct.</p> <p>12 A. I don't know, I can't remember.</p> <p>13 Q. Well, the date -- the dates run from 10-15-17 to --</p> <p>14 A. All the way to --</p> <p>15 Q. All the way to --</p> <p>16 A. -- October.</p> <p>17 Q. -- October or so of 2018. So was this notebook</p> <p>18 prepared over that entire period of time?</p> <p>19 A. Yes.</p> <p>20 Q. It wasn't prepared, put together in its entirety four</p> <p>21 weeks ago?</p> <p>22 A. Some of it was, yes.</p> <p>23 Q. What portions were put together four weeks ago?</p> <p>24 A. I think the one related to the last portion.</p> <p>25 Q. Can you point to me the pages that were put together in</p>
<p style="text-align: right;">Page 87</p> <p>1 Q. What's her full name?</p> <p>2 A. This is her full name, how she officially write, it's</p> <p>3 on the paper.</p> <p>4 Q. And is it -- according to you, is her name Fan Rong?</p> <p>5 A. I call her Flory.</p> <p>6 Q. Do you know her name?</p> <p>7 A. That's her name.</p> <p>8 Q. And how do you pronounce it?</p> <p>9 A. Rong Fan, I never called her with this name.</p> <p>10 Q. Who else's handwriting is contained in Exhibit</p> <p>11 Number 2?</p> <p>12 A. Some would be mine.</p> <p>13 Q. Who else?</p> <p>14 A. That's it.</p> <p>15 Q. Were all the entries in Exhibit Number 2 prepared at</p> <p>16 the time that the work was done?</p> <p>17 A. No.</p> <p>18 Q. When you say no, does that mean that there was work</p> <p>19 done and then the -- later on entries were made in the</p> <p>20 lab notebook?</p> <p>21 A. Correct.</p> <p>22 Q. How much later -- strike that. If the entries have a</p> <p>23 certain date on them, does that mean that they were</p> <p>24 entered on that date or the work was done on that date?</p> <p>25 A. Work was done on that date.</p>	<p style="text-align: right;">Page 89</p> <p>1 the last month or so?</p> <p>2 A. I can't really exactly remember, but the last, I would</p> <p>3 say, the statistical part for sure.</p> <p>4 Q. Starting on what page?</p> <p>5 A. I'm trying to find it. So starting on Page 114, this</p> <p>6 is the statistics of the study, all the way to 19 --</p> <p>7 122, 124, so all the way to the end, which is 124.</p> <p>8 This part, it's created by or done by a</p> <p>9 biostatistician, and this is all you can see</p> <p>10 electronics, so we just cut and pasted there.</p> <p>11 Q. So if you go to Page 114, that has a date of October 6,</p> <p>12 2018. Is it your testimony that this was not prepared</p> <p>13 on that date but was prepared later and then back dated</p> <p>14 to say October 6, 2018?</p> <p>15 MS. O'DELL: Object to the form, misstates</p> <p>16 his testimony.</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. You can answer.</p> <p>19 MS. O'DELL: If you understand the question.</p> <p>20 THE WITNESS: What's the question?</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. Sure. You see the date at the top of that page of</p> <p>23 October 6, 2018, correct?</p> <p>24 A. Correct.</p> <p>25 Q. Was this page prepared on that date or was it prepared</p>

23 (Pages 86 to 89)

Ghassan Saed, Ph.D.

Page 90	Page 92
<p>1 at a time later than that but dated October 6, 2018?</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 THE WITNESS: Okay, so this -- I can't</p> <p>4 remember when we did the statistics, but this date</p> <p>5 reflects when the statistics was actually done.</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. So in this instance, the statistics were done on</p> <p>8 October 6, 2018, but was the page prepared later than</p> <p>9 that after October 6, 2018?</p> <p>10 A. The pages, yes.</p> <p>11 Q. With regard to other entries in the notebook that have</p> <p>12 dates, can you tell whether those pages were created on</p> <p>13 the date listed on the page or were they created later</p> <p>14 but backdated to the date the work occurred?</p> <p>15 MS. O'DELL: Objection to form.</p> <p>16 THE WITNESS: Yeah, so, again, we do the</p> <p>17 experiment, sometimes it takes a week or two to write</p> <p>18 it in the notebook because we have the data</p> <p>19 electronically, so I cannot tell you the exact date</p> <p>20 when they were put in.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. All the data that is reflected in Exhibit Number 2 is</p> <p>23 kept in electronic format?</p> <p>24 A. Yes.</p> <p>25 Q. Does that electronic format still exist?</p>	<p>1 January 2018, and I'll direct you to Page --</p> <p>2 A. 51.</p> <p>3 Q. Page 53.</p> <p>4 A. Of this notebook?</p> <p>5 Q. Of the notebook.</p> <p>6 A. So one more time, the question.</p> <p>7 Q. Turn to Page 53 of Exhibit Number 2.</p> <p>8 A. 53?</p> <p>9 Q. Yes.</p> <p>10 A. Okay.</p> <p>11 Q. There's a couple dates at the top of January 3rd, 2018</p> <p>12 and, also, do you see January 7, 2018 at the top?</p> <p>13 MS. O'DELL: Excuse me, Mark, what Bates</p> <p>14 Number?</p> <p>15 MR. HEGARTY: I'm looking at -- I'm using the</p> <p>16 page numbers in the lower right-hand corner.</p> <p>17 THE WITNESS: 53?</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. 53.</p> <p>20 A. On this date?</p> <p>21 Q. Yes, 1-7-18. What I'm trying to find out is when was</p> <p>22 the first date that you did --</p> <p>23 MS. O'DELL: What's the Bates Number on the</p> <p>24 document?</p> <p>25 MR. HEGARTY: The Bates Number is 25.</p>
Page 91	Page 93
<p>1 A. Yes.</p> <p>2 Q. Is the data in that electronic format all dated and is</p> <p>3 the date the date the data was generated?</p> <p>4 MS. O'DELL: Objection to form.</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. You're pointing to an example.</p> <p>7 A. An example.</p> <p>8 Q. What page is that on?</p> <p>9 A. June 19.</p> <p>10 Q. What page is that on, Doctor?</p> <p>11 A. This is Page -- oh, no, that's -- which page was</p> <p>12 this --</p> <p>13 Q. It's in the lower right-hand corner.</p> <p>14 A. I just noticed -- no, it's this one. Like, for</p> <p>15 example, if you find the dates that are here, these</p> <p>16 dates reflect the time we did the experiment.</p> <p>17 Q. Can you stop at a page and give me an example?</p> <p>18 A. I'm trying to find one. So this is February --</p> <p>19 Page 73, if you look here, it says February -- so</p> <p>20 small, February 20th, is that --</p> <p>21 Q. Yes, 2018.</p> <p>22 A. Right. So that's the date, and that's the date that is</p> <p>23 this experiment performed.</p> <p>24 Q. With regard to the experiments that you did for your</p> <p>25 manuscript, did those experiments begin in</p>	<p>1 MS. O'DELL: Okay.</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. When is the first date that you started the -- when did</p> <p>4 you start the experiments that you then report in your</p> <p>5 manuscript?</p> <p>6 A. It says right there, January 3rd we seeded the cells,</p> <p>7 started the experiment.</p> <p>8 Q. If you go to Page 2 using the Bates -- let me switch</p> <p>9 you over to the Bates Numbers because that's what I had</p> <p>10 to work from.</p> <p>11 A. Okay.</p> <p>12 Q. Let me show you Exhibit Number 1, that's a copy of the</p> <p>13 notebook that we've been looking at, Exhibit Number 2.</p> <p>14 A. Okay. Page 2?</p> <p>15 Q. Look at Page 2 of Bates Number --</p> <p>16 MS. O'DELL: When he says Bates Number, he's</p> <p>17 referring to the very small number to the right-hand</p> <p>18 side that's been -- yes --</p> <p>19 THE WITNESS: Where does it say Page 2? Oh,</p> <p>20 sorry, okay. Page 2?</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. Yes, and that has a date of January 24, 2018?</p> <p>23 A. Yes.</p> <p>24 Q. Do you see that?</p> <p>25 A. Yes.</p>

24 (Pages 90 to 93)

Ghassan Saed, Ph.D.

Page 94	Page 96
<p>1 Q. Then if you go through the next several pages through 2 to Page 23 by Bates Number -- 3 A. Yes. 4 Q. -- that's dated March 2nd, 2018. Do you see that? 5 A. Yes. 6 Q. Then if you go to Page 25, I'm sorry, if you go to 7 Page 53 -- 8 A. It's January 7. 9 Q. Well, then you go Page 25 you see January 7, which is 10 not in the same order. So the book doesn't appear to 11 be in chronologic order, is that correct? 12 A. Okay, let me answer this. Here is the answer. So we 13 have sections, this is a PCR section, we left some 14 pages blank, next section is ELISA section, because 15 we're doing the experiments simultaneously, so we 16 wanted to separate each section, so the PCR section we 17 created, we designated certain pages, and then we have 18 ELISA section, and then we have other sections. So 19 every time we do the experiment, we add to the section. 20 That's why the dates are not in chronological order. 21 Q. Okay. If you look at Bates Number 78, Doctor, that 22 page is dated June 29, 2018? 23 A. This one? 24 Q. Yes. 25 A. Yes.</p>	<p>1 BY MR. HEGARTY: 2 Q. Sure. As we just looked at, the graphs are all -- and 3 tables and charts are all dated, correct? 4 A. Correct. 5 Q. Were they added to the notebook at the time they were 6 created or were they added later? 7 A. Which graph you referring to? 8 Q. Any of the tables where the -- that have been pasted 9 in, were they pasted in at the time they were created 10 or later? 11 MS. O'DELL: Object to the form, asked and 12 answered. 13 THE WITNESS: So you are saying if this graph 14 was created the same time that -- 15 BY MR. HEGARTY: 16 Q. We're looking at Page 87, and you're pointing to a 17 graph, and my question is with regard to the graph, was 18 it pasted in the notebook on the day it was generated? 19 MS. O'DELL: Objection, asked and answered. 20 THE WITNESS: I really can't remember, but we 21 have this electronically. 22 BY MR. HEGARTY: 23 Q. Doctor, if you go to Page 4, Bates Number 4, which 24 corresponds to Page 33 of the notebook -- 25 A. This?</p>
Page 95	Page 97
<p>1 Q. See that date? 2 A. I imagine it better if I see the notebook. 3 Q. Then if you turn over to Bates 86. 4 A. 86. 86 that's a different section. 5 Q. Okay. There's a date on there of September 4, 2018, 6 looked like there was a break between June 29th and 7 September 4. 8 A. Look at the original here, see that's a section, it's a 9 different section. 10 Q. To the extent that there are periods of time where 11 there is no activity going on, that there might be a 12 month between data entries, does that mean that there's 13 no work going on at that time? 14 A. No, no, no, we do simultaneously different, like we do 15 PCR, we do ELISA, we do proliferation, all that 16 studies, and we divided this notebook into sections, 17 and as we go, we added to the corresponding section, so 18 you can -- yeah. 19 Q. And were all the graphs in the notebook provided at a 20 later time or were they provided at the time they were 21 created? 22 MS. O'DELL: Objection to form. 23 THE WITNESS: Yeah, I don't really understand 24 the question. 25</p>	<p>1 Q. -- there appears to be a reference on Page 33 that 2 says go to Page 35. Do you see that? 3 A. Okay. 4 Q. How can you know to go to Page 35 when you're on 5 Page 33 and 35 is not yet created? 6 A. Oh, okay, good question. So this is established 7 protocol, we do this -- this is not like the first time 8 we're doing this, this is done repeatedly over years 9 and years and years with different publication. This 10 is the setup how we write it, so this is like something 11 we predicting to happen, this we already know, that's 12 the protocol, we just sticking it here. 13 Q. You're anticipating that when you prepare -- strike 14 that. When you prepared Page 33, you're anticipating 15 that you were going to -- 16 A. Discuss it. 17 Q. -- discuss it in Page 35? 18 A. Yes. 19 Q. Are the page numbers that you've added at the bottom in 20 handwriting, are those made in the beginning of the 21 work or are they added as you go? In other words, do 22 you start with a notebook that's blank and then just 23 simply number the pages before you start the work or 24 you do it after the fact? 25 A. We do it both ways, I don't remember.</p>

25 (Pages 94 to 97)

Ghassan Saed, Ph.D.

Page 98	Page 100
<p>1 Q. There's -- the writing I pointed to is in blue ink 2 versus the other writing, which is in black ink. Was 3 that blue ink added at the time that 33 was created or 4 was it added later? 5 A. I don't remember. 6 Q. Do you know whose handwriting -- 7 A. Yeah, this is Rong -- what's her name, Mrs. Rong. 8 Q. Okay. If you look again back at Page 4 of the Bates 9 Stamped copy. 10 A. Page 4. 11 Q. That's Exhibit Number 1. 12 A. Same page, 4? That's 4. 13 Q. Same Page 4, which is Page 33 of the lab notebook, 14 okay? 15 A. Same page. 16 Q. There is a portion of that notebook page that is whited 17 out, correct, and written over? 18 A. Yeah, I see that. 19 Q. What was whited out? 20 A. (Shrugs shoulders.) 21 Q. Do you know? 22 A. I don't know. Again, this is an established procedure 23 that had been published with several, 100 papers over. 24 Q. Well, what established procedure can you cite me to 25 that says that it's proper laboratory practice to white</p>	<p>1 BY MR. HEGARTY: 2 Q. That's not proper laboratory practice, is it? 3 A. No. What I said is really simple. She probably did a 4 mistake and then she whited out and wrote over it. 5 Q. Proper laboratory practice is to line through it so the 6 information that was there is still visible, and then 7 include the data somewhere else so everything is 8 transparent, correct? 9 MS. O'DELL: Object to the form. 10 THE WITNESS: The information that she whited 11 out has nothing to do with the results or anything. 12 This is just describing an established methodology that 13 is published in all of our papers. 14 MR. KLATT: Objection, form, unresponsive. 15 MR. HEGARTY: Understood, but the proper 16 laboratory practice would be to line through it so it 17 could still be visible, and then add the corrected or 18 additional information, correct? 19 MS. O'DELL: Object to the form. 20 THE WITNESS: My response, as I told you, 21 this is something that she probably misspelled or 22 mistake she did, she thought she was doing something, 23 writing something, she wrote different, you know, we're 24 doing different experiment different time, same times. 25 MR. KLATT: Objection, form, nonresponsive.</p>
Page 99	Page 101
<p>1 out information and then write over it? 2 MS. O'DELL: Object to the form. 3 THE WITNESS: If you like write something 4 like a mistake or a typo and you write it over. 5 BY MR. HEGARTY: 6 Q. Can you cite for me any -- 7 A. Cite? 8 Q. -- published guidelines or laboratory methods that say 9 that that's a proper approach to preparing a lab 10 notebook? 11 MS. O'DELL: Objection to form. 12 THE WITNESS: Yeah, umm, what we did here I 13 think -- this is her handwriting and -- 14 MS. O'DELL: When you say "her," who are you 15 referring to? 16 THE WITNESS: Rong, Mrs. Rong, so nothing 17 really that alarmed me or directed my attention to 18 anything. She wrote what she supposed to write. Maybe 19 she did a mistake. 20 BY MR. HEGARTY: 21 Q. Doctor, would you ever in preparing a lab notebook 22 white out information that's been written in a lab 23 notebook and then write over it? 24 MS. O'DELL: Object to the form. 25 THE WITNESS: Typically I don't do that, no.</p>	<p>1 BY MR. HEGARTY: 2 Q. Doctor, listen to my question. The proper laboratory 3 practice would be to line through what she whited over 4 so that it would still be visible, and then add 5 whatever other information she wanted to add to this 6 page, correct? 7 A. If it's related to data. 8 Q. So this is not proper, this whiting out is not proper 9 laboratory practice, correct? 10 MS. O'DELL: Let him finish his question, and 11 give me a moment to object. Object to the form. 12 You may answer if you remember his question. 13 THE WITNESS: What I am trying to tell you, 14 if it's something to do with data it is not proper to 15 do, but this is -- this even shouldn't be in the 16 notebook, we can reference that, it is something that 17 we do in our laboratory so we can be detailed, it's 18 about the procedure, the method, which is already 19 published. 20 BY MR. HEGARTY: 21 Q. But good laboratory practice -- 22 A. It has nothing to do -- 23 Q. Let me finish, Doctor -- good laboratory practice, 24 whether it's data or otherwise, dictates that you not 25 white out any information that's put in a lab notebook;</p>

26 (Pages 98 to 101)

Ghassan Saed, Ph.D.

Page 102	Page 104
<p>1 rather, you're to line through it so it's still</p> <p>2 visible, correct?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: I just told you what I feel.</p> <p>5 This is an established method, it's nothing to do with</p> <p>6 the data, this is just describing standard methodology,</p> <p>7 with it or without it, doesn't change anything.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. So are you okay or fine with the whiting out of</p> <p>10 information in this lab notebook as was done here?</p> <p>11 MS. O'DELL: Objection to form.</p> <p>12 THE WITNESS: What I'm -- am I fine with</p> <p>13 that?</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. Yes.</p> <p>16 A. I prefer that does not happen, but it happened and she</p> <p>17 did it, but that doesn't change anything.</p> <p>18 Q. Above that whited out area there's an arrow pointing to</p> <p>19 100 milligrams talc, after the arrow it says Johnson</p> <p>20 Baby Powder. Do you see where I'm referring to,</p> <p>21 Doctor?</p> <p>22 A. Yes.</p> <p>23 Q. Whose handwriting is that?</p> <p>24 A. I think it's Flory.</p> <p>25 Q. Was that information added later than the time this</p>	<p>1 that. Do you see that?</p> <p>2 A. I do.</p> <p>3 Q. Whose handwriting is reflected by the addition of</p> <p>4 Johnson & Johnson, et cetera?</p> <p>5 A. I think it's Flory, Rong.</p> <p>6 Q. What was under -- what did she write over?</p> <p>7 A. I don't know, I wasn't there when she wrote this, but</p> <p>8 when I looked at it I confirmed that this is what we</p> <p>9 did.</p> <p>10 Q. Well, did she write over Fisher Scientific talc?</p> <p>11 A. Could be.</p> <p>12 Q. But did you actually test Fisher Scientific talc</p> <p>13 instead of Johnson & Johnson and then alter the lab</p> <p>14 notebook?</p> <p>15 MS. O'DELL: Objection, form.</p> <p>16 THE WITNESS: We actually did both.</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. You agree it's not proper practice, as reflected here,</p> <p>19 to white out information in a lab notebook where it</p> <p>20 can't be read and then write over it, correct?</p> <p>21 MS. O'DELL: Objection to form.</p> <p>22 THE WITNESS: You keep asking me the same</p> <p>23 question. I'm answering you the same way. She did the</p> <p>24 mistakes, to the best of her ability that's what she</p> <p>25 thought she will do, and I left it because I don't want</p>
Page 103	Page 105
<p>1 page was prepared?</p> <p>2 A. No.</p> <p>3 Q. Can you tell when that information was added to Page 33</p> <p>4 or Bates Number Page 4?</p> <p>5 MS. O'DELL: Objection to the form.</p> <p>6 THE WITNESS: When we prepared the page.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. Why was it added in a way that put it out of order and</p> <p>9 had to have a line directing it to another part of the</p> <p>10 page?</p> <p>11 A. That's what we did.</p> <p>12 Q. Why was it not included there in the first place?</p> <p>13 MS. O'DELL: Objection, asked and answered.</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. You don't know?</p> <p>16 A. I don't know.</p> <p>17 Q. If you look next at Bates Stamp Page 25, which is</p> <p>18 Page 53 of the lab notebook, there is another portion</p> <p>19 that has been whited out and written over. Do you see</p> <p>20 that?</p> <p>21 A. Yes, I see it.</p> <p>22 Q. What was whited out?</p> <p>23 A. I don't know.</p> <p>24 Q. Something was whited out and the name Johnson & Johnson</p> <p>25 number 30027477 lot number 13717RA was written over</p>	<p>1 to change it.</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. Did you talk to her about the propriety of whiting out</p> <p>4 data?</p> <p>5 A. Yes, I did.</p> <p>6 Q. What did you tell her?</p> <p>7 A. I said we should not white out just write underneath</p> <p>8 it.</p> <p>9 Q. When did you have that discussion with her?</p> <p>10 A. After I saw this.</p> <p>11 Q. When did you see it?</p> <p>12 A. I think -- I don't remember.</p> <p>13 Q. Did you see it in the last two weeks?</p> <p>14 A. No, no, no, way before.</p> <p>15 Q. Is it proper methodology for creating -- for doing</p> <p>16 experiments and creating a lab book to white -- start</p> <p>17 over. Is it proper methodology in doing experiments</p> <p>18 like this in creating the lab book that corresponds</p> <p>19 with those experiments to white out information and</p> <p>20 then write over it?</p> <p>21 MS. O'DELL: Objection to form.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. In your opinion?</p> <p>24 MS. O'DELL: Objection to form.</p> <p>25 THE WITNESS: So I just told you we did</p>

27 (Pages 102 to 105)

Ghassan Saed, Ph.D.

Page 106	Page 108
<p>1 not -- with the information that is here is accurate, 2 we voluntarily did that. 3 BY MR. HEGARTY: 4 Q. I'm not asking you if the information is accurate with 5 my question. My question is, is it proper methodology 6 in doing experiments like this and in creating the lab 7 notebook that corresponds to those experiments to white 8 out information and write over it, in your opinion? 9 MS. O'DELL: Object to the form. 10 THE WITNESS: I mean it's -- in my personal 11 opinion? 12 BY MR. HEGARTY: 13 Q. Correct. 14 A. I think if you report that this is what actually 15 happened and a mistake happened and this is, to her 16 knowledge, this is the best way to handle it, she 17 handled it. 18 Q. So you consider the -- 19 A. And I talked to her about it and -- 20 Q. Do you consider the way she handled it to be proper 21 laboratory methodology? 22 A. That's why I told you, I talked to her about it so I 23 don't. 24 Q. May I see the notebook? 25 A. Sure.</p>	<p>1 MS. O'DELL: Object to form. 2 THE WITNESS: I didn't cover it, I just 3 showed it to you. 4 BY MR. HEGARTY: 5 Q. I'm talking about in the creation of a lab book, 6 though, is it considered proper methodology to take a 7 printout from a test and paste over text in the lab 8 notebook? 9 MS. O'DELL: Object to the form. 10 THE WITNESS: I just told you. So my answer 11 is the information that she decided to hide this that 12 you're talking about is an established methodology in 13 my lab that doesn't even need to be here. She chose 14 to just -- over it for a space limitation, that's all, 15 but it's not hidden, you can see it. 16 BY MR. HEGARTY: 17 Q. Thank you. 18 A. If we hide it, we can -- we don't have to have it 19 there. 20 Q. That information, though, was not photocopied and 21 provided to us in advance of the deposition, correct? 22 A. What information? 23 Q. The information that was covered by that chart. 24 MS. O'DELL: Object to the form. 25 THE WITNESS: I know, I see, there is no</p>
Page 107	Page 109
<p>1 Q. Doctor, I'm looking at Page 102 of the notebook, 2 Exhibit Number 2, which is Bates 78. If you want to 3 look at it -- 4 A. Okay, yes, I see it. 5 Q. -- either in Exhibit 1 or Exhibit 2. There appears to 6 be something that has been covered over by the table 7 that's been pasted there because I see some handwriting 8 on the far right-hand column, and I don't want to pull 9 that up, but what is under that table or that chart? 10 A. The answer is I don't know. But I'll find out. It's a 11 description of the method. 12 Q. I just want to note for the record that the doctor is 13 pulling the table up and -- 14 A. Yeah. 15 Q. Okay. 16 A. Do you want to see what's written under? 17 Q. Yes. 18 A. Okay. I want to see, also. Okay. So this is just the 19 oligonucleotide primers and the cyclin for the PCR, 20 this is very standard protocol that you don't need to 21 even show, it's a methodology, so it doesn't really 22 need to even show that. 23 Q. So, in your opinion, is it proper laboratory practice 24 in creating a lab book to cover up information that's 25 included in a lab book by a table or a chart?</p>	<p>1 information covered by that chart, that is not needed 2 to be there. 3 BY MR. HEGARTY: 4 Q. But there is information that's been covered, correct? 5 MS. O'DELL: Object to the form. 6 THE WITNESS: I answered, I said there is not 7 relevant information that is covered, intentionally 8 covered. 9 BY MR. HEGARTY: 10 Q. Over on Page 103 of Exhibit Number 2, Bates Number 79, 11 there is another or other words that have been whited 12 out. What are those other words? 13 MS. O'DELL: Object to the form. 14 THE WITNESS: I mean I can read the word. 15 BY MR. HEGARTY: 16 Q. What is the word? 17 A. It says sample something. 18 Q. Why was that whited out? 19 A. Maybe it doesn't belong here. 20 Q. Do you know why it was whited out? 21 A. I think it doesn't belong here. 22 Q. Who whited it out? 23 A. Flory. 24 Q. Is that whiteout okay to you in terms of doing a 25 proper -- having a proper methodology for preparing a</p>

28 (Pages 106 to 109)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 110</p> <p>1 lab notebook?</p> <p>2 MS. O'DELL: Objection to the form.</p> <p>3 THE WITNESS: I prefer without it but it's</p> <p>4 what it is.</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. Doctor, would you look at Exhibit Number 1 at Bates</p> <p>7 Stamp 57, please.</p> <p>8 A. Exhibit Number -- this is --</p> <p>9 Q. Yes, what you have in front of you.</p> <p>10 A. 57?</p> <p>11 Q. Correct. That corresponds to Page 84 of the lab</p> <p>12 notebook. There is now in the lab notebook a table</p> <p>13 that is pasted there that appears to have been removed</p> <p>14 from the page that we received that was photocopied and</p> <p>15 is part of Exhibit Number 1. Can you explain why our</p> <p>16 copy does not include that table?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 THE WITNESS: No idea.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Okay.</p> <p>21 A. But it's here.</p> <p>22 Q. Well, do you know what else --</p> <p>23 A. This is this.</p> <p>24 Q. Do you know what other charts were removed from the</p> <p>25 copy that we received?</p>	<p style="text-align: right;">Page 112</p> <p>1 someone to copy this notebook?</p> <p>2 A. To scan the notebook.</p> <p>3 Q. Who did you instruct to do that?</p> <p>4 A. Flory, my research assistant.</p> <p>5 Q. And did you instruct her to remove this table on</p> <p>6 Page 84?</p> <p>7 A. Absolutely not.</p> <p>8 Q. Do you know why it's not there?</p> <p>9 A. No idea, but the marks of this one are showing, and the</p> <p>10 graph is showing, so this should show up, I don't know</p> <p>11 why it's not showing up.</p> <p>12 Q. I'm going to direct you to Bates Stamp Page 62.</p> <p>13 A. Same thing.</p> <p>14 Q. Which is -- which corresponds to handwritten Page</p> <p>15 Number 87, there again is a chart --</p> <p>16 A. You referring to this one or this one?</p> <p>17 Q. I'm referring to 87, there again in the copy portion at</p> <p>18 the upper part of the page there is a table or a chart</p> <p>19 that is not included in the copy we've been given. Do</p> <p>20 you know why that is the case?</p> <p>21 MS. O'DELL: Objection to the form.</p> <p>22 THE WITNESS: So I think this is probably</p> <p>23 technical through scanning, I have no idea the answer</p> <p>24 is.</p> <p>25</p>
<p style="text-align: right;">Page 111</p> <p>1 A. No one removed anything.</p> <p>2 MS. O'DELL: Excuse me, when you say this is</p> <p>3 this, I don't know that that's clear on the record</p> <p>4 because you're pointing to the notebook.</p> <p>5 THE WITNESS: This is the results and this is</p> <p>6 the graph from the results.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. Well, can you explain to us if this page was copied and</p> <p>9 included in Exhibit Number 1, why this chart is not in</p> <p>10 Exhibit Number 1?</p> <p>11 A. No idea.</p> <p>12 Q. You agree that --</p> <p>13 A. When we scanned it probably didn't show up, I don't</p> <p>14 know.</p> <p>15 Q. Well, you would agree that it would had to have been</p> <p>16 removed, correct; otherwise it would appear on the</p> <p>17 paper?</p> <p>18 A. I don't agree.</p> <p>19 Q. Well, you can tell on the copy that there are places</p> <p>20 there that look like where tape had appeared, correct?</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 THE WITNESS: So same thing here, tape</p> <p>23 appeared and it's there.</p> <p>24 BY MR. HEGARTY:</p> <p>25 Q. Did you instruct -- strike that. Did you instruct</p>	<p style="text-align: right;">Page 113</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. Then under --</p> <p>3 A. But we do have all the data.</p> <p>4 Q. Under that table there appears to be some very vague</p> <p>5 what appears to be handwriting. Can you explain what</p> <p>6 that is? That again is on Bates Stamp 62, Page 87 of</p> <p>7 the original lab notebook.</p> <p>8 A. I don't know what that is.</p> <p>9 Q. Doctor, is this lab notebook typical of the lab</p> <p>10 notebooks you generate for all the experiments you've</p> <p>11 conducted?</p> <p>12 MS. O'DELL: Object to the form.</p> <p>13 THE WITNESS: What do you mean by typical?</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. Well, is this -- the things we've talked about here</p> <p>16 this morning, would those same things appear in all the</p> <p>17 lab notebooks that you prepare as part of your</p> <p>18 experiments?</p> <p>19 MS. O'DELL: Object to the form.</p> <p>20 THE WITNESS: So for -- most of our</p> <p>21 experiments are documented in a lab notebook like this.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. Do most of your experiments -- strike that -- do most</p> <p>24 of the notebooks of your experiments have whiteout in</p> <p>25 them?</p>

29 (Pages 110 to 113)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 114</p> <p>1 A. Oh, that's what you're saying?</p> <p>2 Q. Yes.</p> <p>3 A. No.</p> <p>4 Q. Have you ever seen one of your other notebooks for your</p> <p>5 lab experiments have whiteout in them and handwriting</p> <p>6 over that whiteout?</p> <p>7 A. It's not a general practice. The answer is I don't</p> <p>8 remember.</p> <p>9 Q. Does your lab have standard operating procedures for</p> <p>10 how a lab notebook is to be prepared?</p> <p>11 MS. O'DELL: Objection to the form.</p> <p>12 THE WITNESS: So from who? From our own lab?</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Correct.</p> <p>15 A. So this is the procedure that we follow for our lab.</p> <p>16 Q. Do you have any written standards on how you are to</p> <p>17 prepare a lab notebook?</p> <p>18 A. No.</p> <p>19 Q. Do you instruct those within your lab on how to prepare</p> <p>20 a lab notebook based on any published methods for</p> <p>21 preparing a lab notebook?</p> <p>22 A. So most of our work nowadays -- in the past we used to</p> <p>23 do a lot of lab notebooks, but most of the work that we</p> <p>24 do right now, most of it is electronically, and just to</p> <p>25 keep a record in case something happened to electronic</p>	<p style="text-align: right;">Page 116</p> <p>1 the laboratory notebooks we've been looking at today on</p> <p>2 how to prepare lab notebooks, correct?</p> <p>3 A. I instruct the lady who did this, yes, how to prepare</p> <p>4 lab notebook.</p> <p>5 Q. Did you ever instruct her about what to do in the case</p> <p>6 of needing to correct information that has been written</p> <p>7 in the lab notebook?</p> <p>8 A. Yes, she actually knows that because on, I already</p> <p>9 instruct her not to do the whiteout, she did it</p> <p>10 anyways, but her defense was, oh, I am only doing it on</p> <p>11 words that we already -- on procedures that is not even</p> <p>12 supposed to be there, it's like a normal practice</p> <p>13 procedure that we have done many times.</p> <p>14 Q. Doctor, if you would turn over to Bates Stamp 25 in</p> <p>15 Exhibit Number 1, which is Page 53 in the notebook.</p> <p>16 A. ELISA.</p> <p>17 Q. Under the -- in the section on the upper part of the</p> <p>18 page there appears to be documentation of adding talc</p> <p>19 to the cells; is that correct?</p> <p>20 A. Where do you see that? Cells were seeded, density --</p> <p>21 Q. Can I look at it, Doctor?</p> <p>22 A. Treat with --</p> <p>23 Q. This part of the notebook, what is described where</p> <p>24 you're talking about X1 X2 X3?</p> <p>25 A. Okay. These are the dilution of talc that we used, 5</p>
<p style="text-align: right;">Page 115</p> <p>1 version, we print it and paste it in the lab notebook.</p> <p>2 So in the past we used to take more precautions for lab</p> <p>3 notebooks, but these days because of this electronic</p> <p>4 facilities and help, we just print it and paste it</p> <p>5 there.</p> <p>6 Q. Did you instruct those who prepared the lab notebooks</p> <p>7 that we've been looking at here today on how to prepare</p> <p>8 laboratory notebooks? Did that instruction come from</p> <p>9 you?</p> <p>10 A. Yes.</p> <p>11 Q. Was that instruction based on any published standards</p> <p>12 in the literature for how to prepare a lab notebook?</p> <p>13 A. That was based on what I've been told since 1983.</p> <p>14 Q. Where were you taught that in 1983?</p> <p>15 A. I did my Ph.D. in molecular biology.</p> <p>16 Q. Where was that?</p> <p>17 A. Where?</p> <p>18 Q. Yes.</p> <p>19 A. England.</p> <p>20 Q. What school in England?</p> <p>21 A. University of Essex.</p> <p>22 Q. You learned at the University of Essex on how to</p> <p>23 prepare a laboratory notebook?</p> <p>24 A. Sure.</p> <p>25 Q. You used that training to instruct those who prepared</p>	<p style="text-align: right;">Page 117</p> <p>1 micrograms, 20 micrograms, and 100 micrograms. These</p> <p>2 are the three doses that we used, and this is how we</p> <p>3 got them.</p> <p>4 Q. With these doses are you adding DMSO?</p> <p>5 A. The talc was dissolved in DMSO.</p> <p>6 Q. Does the lab notebook show how much DMSO was used for</p> <p>7 each sample?</p> <p>8 A. How much DMSO? Yeah.</p> <p>9 Q. Yes. Where is that?</p> <p>10 A. Let me see. So you -- where is it -- it's</p> <p>11 50 milligrams per ml, so one ml, that's the initial</p> <p>12 concentration, 50 milligrams of the talc with one ml of</p> <p>13 the DMSO.</p> <p>14 Q. Did the amount of DMSO increase with the increasing</p> <p>15 doses of talc?</p> <p>16 A. No, no, no, no, okay, let me explain this.</p> <p>17 MS. O'DELL: What page were you referring to,</p> <p>18 Doctor?</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Thank you.</p> <p>21 A. The first page.</p> <p>22 Q. What's that page number?</p> <p>23 A. 1.</p> <p>24 Q. Page 1, okay.</p> <p>25 A. So let me explain this. So we prepare a stock solution</p>

30 (Pages 114 to 117)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 118</p> <p>1 of the talc powder plus DMSO, the solvent, which is</p> <p>2 50 milligrams per ml, you can upscale it, downscale it,</p> <p>3 from there we dilute, as you can see here, it says the</p> <p>4 exact delusions, and it says X1 times 10 to the 4th</p> <p>5 microgram per ml, that's what you want to get, and</p> <p>6 that's 15 ml times 5 micrograms per ml, that's the</p> <p>7 concentration desired, and then you take -- this will</p> <p>8 tell you how much volume you add to the cells. So we</p> <p>9 added 2.35 microliters that correspond to 5 micrograms</p> <p>10 per ml, 10 microliters corresponded to 20, and so on,</p> <p>11 50 corresponded to that, and then the untreated cells</p> <p>12 got that DMSO alone.</p> <p>13 MS. O'DELL: What page --</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. The DMSO at 2.5, 10, and 50?</p> <p>16 A. DMSO.</p> <p>17 Q. DMSO at 2.5, 10, and 50?</p> <p>18 MS. O'DELL: Excuse me, what page are you</p> <p>19 referring to?</p> <p>20 THE WITNESS: This Page 53 right here.</p> <p>21 No, so the DMSO has no concentration. The</p> <p>22 DMSO is the solvent where you dilute, dissolve the</p> <p>23 talc.</p> <p>24 BY MR. HEGARTY:</p> <p>25 Q. My question is -- was, though, with regard to the</p>	<p style="text-align: right;">Page 120</p> <p>1 Does the assay work by you measuring the amount of</p> <p>2 color change?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: The answer -- I just answered</p> <p>5 you.</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. Which is?</p> <p>8 A. Are you referring to --</p> <p>9 Q. Well, explain how it works with regard to color.</p> <p>10 A. Okay, oh, I would love to, I'll be very happy to do</p> <p>11 that. Okay, so this is measuring the optical density</p> <p>12 of the concentration of the protein that is correlated</p> <p>13 to the -- how much protein is there. You measure the</p> <p>14 optical density absorbance at 5, 62 nanometer, and you</p> <p>15 construct a standard curve from BSA, and the standard</p> <p>16 curve is known concentration, and it tells you when</p> <p>17 it -- where is the absorption and what's the slope of</p> <p>18 the line, and that helps you extrapolate the unknown</p> <p>19 samples from your standard curve.</p> <p>20 Q. So is --</p> <p>21 A. It is a colorimetric assay.</p> <p>22 Q. It's measuring a color change, correct?</p> <p>23 A. No.</p> <p>24 Q. When you say colorimetric assay, what do you mean?</p> <p>25 A. It's extension coefficient, it measures BSA at specific</p>
<p style="text-align: right;">Page 119</p> <p>1 controls --</p> <p>2 A. Volumes, you use volumes.</p> <p>3 Q. -- did you, for each level of talc applied to the</p> <p>4 cells, for the corresponding controls did you also</p> <p>5 apply DMSO?</p> <p>6 A. Yes.</p> <p>7 Q. At what volume?</p> <p>8 A. It's 2.5, 10, and 50.</p> <p>9 Q. Of DMSO alone?</p> <p>10 A. Correct.</p> <p>11 Q. If you turn over to Page 55, I'm sorry, 53 in the lab</p> <p>12 notebook, which is Bates Stamped 27 in the copy</p> <p>13 version, Page 53.</p> <p>14 A. This one? Same page?</p> <p>15 Q. 55, Page 55 of the lab notebook, which is Bates Stamped</p> <p>16 27.</p> <p>17 A. Okay.</p> <p>18 Q. Is this -- does this page describe the BCA protein</p> <p>19 detection assay?</p> <p>20 A. Correct.</p> <p>21 Q. And does the assay work by measuring the amount of</p> <p>22 color change, that is, the more color change you</p> <p>23 detect, the greater the response it indicates?</p> <p>24 A. Are you saying it's a colorimetric assay?</p> <p>25 Q. Well, I'm not sure. I can ask it in a different way.</p>	<p style="text-align: right;">Page 121</p> <p>1 wavelength.</p> <p>2 Q. And what did you do to validate that the assay would</p> <p>3 work with the presence of talc?</p> <p>4 A. What assay?</p> <p>5 Q. This assay.</p> <p>6 A. This assay is not for talc, this assay is a standard</p> <p>7 curve to measure -- to use a standard for -- so we can</p> <p>8 apply the same amount of protein for each sample.</p> <p>9 Q. But you are using -- you are measuring the samples</p> <p>10 after they've been -- after talc has been applied,</p> <p>11 correct?</p> <p>12 A. We are measuring each like, for example, okay --</p> <p>13 MS. O'DELL: Refer to a specific page.</p> <p>14 THE WITNESS: Let's say, for example,</p> <p>15 catalase, so we are measuring catalase, but to measure</p> <p>16 catalase, you need to compare between samples, right?</p> <p>17 You need to compare between treated versus untreated.</p> <p>18 How are you -- how can you determine that you have the</p> <p>19 same amount of protein? What if you have more protein</p> <p>20 here than here? The results is not accurate. So we</p> <p>21 use BSA as a standard to measure and standardize all</p> <p>22 the samples to the same amount of protein, so the</p> <p>23 comparison would be -- the comparison would be</p> <p>24 accurate.</p> <p>25</p>

31 (Pages 118 to 121)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 122</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. How did you rule out the possibility that the color</p> <p>3 change or the wavelength change was due to the talc</p> <p>4 particles themselves as opposed to any effect they were</p> <p>5 having?</p> <p>6 MS. O'DELL: Object to the form.</p> <p>7 THE WITNESS: Yeah, so we use the same cell</p> <p>8 line, we split the cells, we grow the cells, some cells</p> <p>9 get the talcum powder, the same cells, the other</p> <p>10 aliquot get no talcum powder, we extract proteins, we</p> <p>11 correct for the differences in the extraction of</p> <p>12 proteins, and then we run catalase, for example.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Within the proteins extracted, would there still be</p> <p>15 talc particles?</p> <p>16 A. No, no.</p> <p>17 Q. How do you know there are not talc particles?</p> <p>18 A. Because these are total proteins. You extract</p> <p>19 proteins. There is a process of extraction of</p> <p>20 proteins. You wash off all the media, you precipitate</p> <p>21 the cells, you lyse the cells, you extract proteins.</p> <p>22 Q. How many times did you repeat the experiment you just</p> <p>23 described for catalase?</p> <p>24 A. So all this work from January 24th till the end of this</p> <p>25 work, it's done in triplicate.</p>	<p style="text-align: right;">Page 124</p> <p>1 A. I am not measuring the protein, I'm measuring catalase.</p> <p>2 Q. You're measuring the catalase.</p> <p>3 A. Catalase and control cells versus treated cells, okay,</p> <p>4 in triplicates.</p> <p>5 Q. So you measure it once using the same sample, you</p> <p>6 measure the same sample two more times?</p> <p>7 A. Okay, oh, now I understand your question, okay. So</p> <p>8 this triplicate is for the assay, so we did one, two,</p> <p>9 three, four, five, six cell lines in triplicate each</p> <p>10 time point.</p> <p>11 Q. When you say in triplicate, does that mean you have</p> <p>12 three sets of petri dishes or are you doing one set of</p> <p>13 petri dishes and you're doing the test three times?</p> <p>14 MS. O'DELL: Objection.</p> <p>15 THE WITNESS: So it is -- this one here is</p> <p>16 one set of petri dish, and it's done in triplicate for</p> <p>17 each time point.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. So you didn't -- for each cell line you didn't have</p> <p>20 three --</p> <p>21 A. Independent.</p> <p>22 Q. -- independent cultures and then test each independent</p> <p>23 culture against the others. You had one independent</p> <p>24 culture you tested three times?</p> <p>25 MS. O'DELL: Object to the form.</p>
<p style="text-align: right;">Page 123</p> <p>1 Q. What does being done in triplicate mean?</p> <p>2 A. Every experiment is done in triplicate.</p> <p>3 Q. Explain that to me.</p> <p>4 A. Okay. So, for example, if you look at, see how --</p> <p>5 Q. What are you looking at?</p> <p>6 A. For example, 56, if you look at 56, look at the table.</p> <p>7 MS. O'DELL: Give us just a minute to get</p> <p>8 there.</p> <p>9 Q. Okay, go ahead.</p> <p>10 A. You have the table?</p> <p>11 Q. Yes.</p> <p>12 A. Okay. If you look at the table it says -- this</p> <p>13 particular ovarian cancer cell line, TOV-112-C, you</p> <p>14 have C, you have 5 microgram, you have 20 micrograms,</p> <p>15 and you have 100 microgram, you see them? And you can</p> <p>16 see OD1, OD2, OD3, blank, blank, blank, so triplicate,</p> <p>17 three times. The blank three times, the experiment</p> <p>18 three times, and subtract from the blank and do the</p> <p>19 calculation.</p> <p>20 Q. You're measuring the same protein extracted three</p> <p>21 times?</p> <p>22 MS. O'DELL: Object to the form.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. Is that correct?</p> <p>25</p>	<p style="text-align: right;">Page 125</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. Is that correct?</p> <p>3 MS. O'DELL: If you need to read his</p> <p>4 question, it was confusing.</p> <p>5 THE WITNESS: Independent cultures, what does</p> <p>6 that mean?</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. Well, I tried to use your word.</p> <p>9 A. I know.</p> <p>10 Q. Did you have for each cell line three separate petri</p> <p>11 dishes, three petri dishes, so you ran the experiment</p> <p>12 essentially three times for each cell line or did you</p> <p>13 have one petri dish with a cell line in it, extract the</p> <p>14 catalase, and run that extraction three times?</p> <p>15 A. No, no, no. How can you -- okay, I'm confused now.</p> <p>16 Okay, so how can you have one petri dish and you</p> <p>17 extract three time points of treatment?</p> <p>18 Q. I'm not asking you --</p> <p>19 A. So we have three, we have three, we have actually four,</p> <p>20 one, two, three, four, four independent culture dishes</p> <p>21 for each treatment.</p> <p>22 Q. Correct.</p> <p>23 A. That is done in triplicate.</p> <p>24 Q. And what you say in triplicate, that means you're</p> <p>25 taking the extraction and you're testing it three</p>

Ghassan Saed, Ph.D.

Page 126	Page 128
<p>1 times, the same extraction.</p> <p>2 A. For each time point.</p> <p>3 Q. For each time point.</p> <p>4 A. Yes.</p> <p>5 Q. You don't have petri dishes that have the same cells in</p> <p>6 it for three separate petri dishes, then doing the</p> <p>7 extractions for each of those three petri dishes, do</p> <p>8 you follow my question?</p> <p>9 A. Yeah, I follow the question.</p> <p>10 MS. O'DELL: Objection.</p> <p>11 THE WITNESS: You cannot do that because then</p> <p>12 you have to do triplicate of triplicate.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Exactly.</p> <p>15 A. Have I done that?</p> <p>16 Q. Yes.</p> <p>17 A. No.</p> <p>18 Q. Okay. That was my question.</p> <p>19 A. Not for this assay.</p> <p>20 Q. Have you ever done assays like that where you've had --</p> <p>21 A. Yes.</p> <p>22 Q. -- multiple?</p> <p>23 MS. O'DELL: Let him finish.</p> <p>24 BY MR. HEGARTY:</p> <p>25 Q. Have you done assays like that where you've used the</p>	<p>1 MS. O'DELL: So you wanted 26 of the Bates,</p> <p>2 and that's at the bottom left corner 54.</p> <p>3 THE WITNESS: This?</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. Yes. Your sample ID for -- your sample IDs run from</p> <p>6 356 to 386, is that right?</p> <p>7 A. So let me understand your question. Are these numbers</p> <p>8 in serial number?</p> <p>9 Q. Are these the sample ID numbers of your tests?</p> <p>10 A. Okay, so the sample ID correspond to each specimen,</p> <p>11 yes, each cells.</p> <p>12 Q. And those sample IDs run in chronologic order from 356</p> <p>13 to 386?</p> <p>14 A. No, they're missing. For example, there is 60 -- where</p> <p>15 is it -- actually, 84, 85, yes, they are.</p> <p>16 Q. So you're right, they jump from 371 to 379, do you see</p> <p>17 that?</p> <p>18 A. Yeah.</p> <p>19 Q. Why is that?</p> <p>20 A. Because, you see, these are already, these cells were</p> <p>21 treated in different times, so that's why they get</p> <p>22 different IDs.</p> <p>23 Q. Okay.</p> <p>24 A. This is a lot of work. You can't do it in one time.</p> <p>25 Q. What type of test is -- or strike that. Then if you</p>
Page 127	Page 129
<p>1 same cell line in three different dishes and done the</p> <p>2 triplicate, triplicate, triplicate off of each dish?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: Okay, so in the past I have</p> <p>5 done -- this is a very important question, it is always</p> <p>6 raised when we submit our data to be considered for</p> <p>7 publication, they will say did you do a real triplicate</p> <p>8 or a triplicate of the assay. So the answer is we have</p> <p>9 done that in the past, and in our system here there is</p> <p>10 no difference between -- because catalase have been</p> <p>11 done in our lab, we published with it, it is a standard</p> <p>12 protocol in our lab, and we never have -- we test it</p> <p>13 for intra-assay variation triplicates, and that was not</p> <p>14 the case. Did we test that? Yes, we did, but not for</p> <p>15 talc treatment per se, because these are established</p> <p>16 protocols in our lab, we already know and we learn from</p> <p>17 them, so you don't really need to do a triplicate of a</p> <p>18 triplicate of a triplicate.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Thank you. On Page 26 of the Bates Stamp document</p> <p>21 Number 1, which is after --</p> <p>22 MS. O'DELL: 54 of the lab.</p> <p>23 MR. HEGARTY: Is it 54 of the lab notebook?</p> <p>24 Because I can't -- my page doesn't have a handwritten</p> <p>25 number.</p>	<p>1 turn over to Page 69 of Exhibit Number 1, which, again,</p> <p>2 my copy doesn't have a handwritten page number on it.</p> <p>3 MR. LAPINSKI: Counsel, just to confirm, when</p> <p>4 you refer to page numbers, you're referring to the</p> <p>5 Bates Numbers, correct?</p> <p>6 MR. HEGARTY: In this case I'm referring to</p> <p>7 Page 69 in Exhibit Number 1, which is the Bates Number.</p> <p>8 MS. O'DELL: Well, and to be -- I think in</p> <p>9 the lower right-hand corner of your page that's 94, and</p> <p>10 that's what was produced so --</p> <p>11 MR. HEGARTY: If you go to Page 94, then,</p> <p>12 Doctor.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. It should be this.</p> <p>15 A. Yes.</p> <p>16 Q. Are those the same sample numbers that we looked at in</p> <p>17 the prior -- on the prior page?</p> <p>18 A. What page was it? Sorry.</p> <p>19 Q. That was Page 54.</p> <p>20 A. Yes.</p> <p>21 Q. Do those refer to the same samples?</p> <p>22 A. Yes.</p> <p>23 Q. If you turn next, then, to page Bates Number 76 Exhibit</p> <p>24 Number 1, Page 100 in the laboratory notebook, there</p> <p>25 are -- do you see what I'm referring you to, Doctor,</p>

33 (Pages 126 to 129)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 130</p> <p>1 Page 100?</p> <p>2 A. Yes.</p> <p>3 Q. There are again sample numbers listed there. Are those</p> <p>4 for a different test?</p> <p>5 A. This is for different test, this is Caspase-3 activity.</p> <p>6 Q. Are you using the same sample numbers as in the</p> <p>7 previous test?</p> <p>8 A. It should indicate here, so 368, 369, 370, so the</p> <p>9 answer is yes, some of them, the numbers that</p> <p>10 correspond they are -- let me see, hold on, let me just</p> <p>11 make sure. So this is for ELISA, we did the normal --</p> <p>12 so the answer is yes.</p> <p>13 Q. If you're using the same numbers for different tests,</p> <p>14 how are you able to keep those straight?</p> <p>15 MS. O'DELL: Objection, form.</p> <p>16 THE WITNESS: Okay. So let me explain this.</p> <p>17 So here, this is the sample ID, the treated cells.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. That's on Page --</p> <p>20 A. 54.</p> <p>21 Q. Okay.</p> <p>22 A. So this is the sample ID, and this is what are they,</p> <p>23 what each cell line definition. Now, this was</p> <p>24 subjected to isolation of protein, okay, and we use</p> <p>25 BSA, as we discussed, as a standard, then you isolate</p>	<p style="text-align: right;">Page 132</p> <p>1 SAED DEPOSITION EXHIBIT NUMBER 11,</p> <p>2 NOTEBOOKS,</p> <p>3 WAS MARKED BY THE REPORTER</p> <p>4 FOR IDENTIFICATION</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. So Exhibit Number 11 is the notebook you brought with</p> <p>7 you to the deposition here today?</p> <p>8 A. This, yes.</p> <p>9 MS. O'DELL: There are actually two parts.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. There are two parts. Where is the other part?</p> <p>12 MS. O'DELL: It's right here.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Both parts of the notebook contain what?</p> <p>15 A. So references 86 continued 89.</p> <p>16 Q. Did you compile Exhibit Number 11? Did you put that</p> <p>17 together?</p> <p>18 A. Number 11 we're talking about? Sorry.</p> <p>19 Q. Number 11 are both notebooks.</p> <p>20 A. Yes.</p> <p>21 Q. Did you choose the articles to put in Exhibit</p> <p>22 Number 11?</p> <p>23 A. My references from the articles, yes.</p> <p>24 MS. O'DELL: Just I think there's some lack</p> <p>25 of clarity. You chose the articles. Did you copy the</p>
<p style="text-align: right;">Page 131</p> <p>1 the total protein from it, now you can do what we did,</p> <p>2 we can do catalase, we can do SOD, we can do different</p> <p>3 markers from total proteins. Caspase-3 is included.</p> <p>4 Q. Got you, okay thank you. I'm probably going into a</p> <p>5 different section that's going to take a while if you</p> <p>6 want to take a break now or keep going.</p> <p>7 MS. O'DELL: It's 12:15, Doctor, would you</p> <p>8 like a short break for lunch or what's your preference?</p> <p>9 THE WITNESS: Yes.</p> <p>10 MR. HEGARTY: Let's go off the record.</p> <p>11 THE VIDEOGRAPHER: Going off the record at</p> <p>12 12:16 p.m.</p> <p>13 (A recess was taken.)</p> <p>14 THE VIDEOGRAPHER: We are back on the record</p> <p>15 at 1:26 p.m.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Doctor, you brought with you a notebook that appears to</p> <p>18 contain articles and perhaps a number of other</p> <p>19 documents. What is in the notebook that you have in</p> <p>20 front of you?</p> <p>21 A. So I have my report that I submitted, my CV, and my</p> <p>22 references.</p> <p>23 Q. I'll mark that notebook as Exhibit Number 11.</p> <p>24</p> <p>25</p>	<p style="text-align: right;">Page 133</p> <p>1 pages?</p> <p>2 THE WITNESS: No.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. Did you put the notebooks together yourself?</p> <p>5 A. No.</p> <p>6 Q. Do you know who put the notebooks together?</p> <p>7 MS. O'DELL: Objection, it's a little vague.</p> <p>8 THE WITNESS: You guys did it.</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. Counsel for Plaintiffs put the notebooks together?</p> <p>11 A. What do you call them, sorry?</p> <p>12 Q. Counsel for Plaintiffs put the notebooks --</p> <p>13 A. Yes, sorry, I'm just having -- I thought that I put the</p> <p>14 references together, yes.</p> <p>15 Q. I want to talk in more detail about Exhibit Number 7.</p> <p>16 That's your manuscript.</p> <p>17 A. Okay.</p> <p>18 Q. When did the writing process begin for Exhibit 7? And</p> <p>19 this goes back to the original version that you</p> <p>20 submitted to --</p> <p>21 A. Yes.</p> <p>22 Q. -- OB-GYN Oncology.</p> <p>23 A. September I think.</p> <p>24 Q. Do you know approximately when in September?</p> <p>25 A. I can't remember.</p>

34 (Pages 130 to 133)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 134</p> <p>1 Q. Dr. Fletcher is identified as the lead author. How did 2 that come about? 3 A. She is not the lead author. 4 Q. Who is the lead author? 5 A. I am. 6 Q. The reason I thought she was lead author is on the 7 second page of Exhibit Number 7 after the title she's 8 the first author listed. 9 A. That's -- lead author is the corresponding author, 10 that's me. 11 Q. What was the involvement of -- strike that. What was 12 Dr. Fletcher's involvement in the preparation of this 13 article? 14 A. So for the articles, she helped in doing the -- on this 15 article or experiments, the whole thing, or just this 16 article? 17 Q. Just on the article. 18 A. Okay, so her role was basically reading after me make 19 sure that the methods are what we really used, typos 20 and like help read proofing. 21 Q. What was Dr. Harper's involvement in preparation of the 22 manuscript? 23 A. Analysis of data, interpretation of data, she's a 24 clinical OB-GYN oncologist. 25 Q. What was Dr. -- or, I'm sorry, what was Ira Memaj?</p>	<p style="text-align: right;">Page 136</p> <p>1 article besides those we talked about? 2 A. No, so she -- that's why she's in the acknowledgment, 3 not in the authorship, because she was repeating 4 experiments. 5 Q. In connection with the experiments that you conducted 6 that went into preparing or that led to preparing of 7 this manuscript, did you prepare a proposal to request 8 funding of the experiments in the article? 9 MS. O'DELL: Object to the form. 10 THE WITNESS: I created a budget so to see 11 how much this will cost me. 12 BY MR. HEGARTY: 13 Q. When you seek funding from NIH, for example, or another 14 organization, you have to prepare a formal grant 15 request where you set out and provide certain 16 information describing what you intend to do and how 17 much it's going to cost, correct? 18 A. For NIH? 19 Q. Yes. 20 A. Yes. 21 Q. Did you prepare any kind of grant request in connection 22 with the experiments that went into preparing this 23 manuscript? 24 MS. O'DELL: Object to the form, other than 25 he's testified to.</p>
<p style="text-align: right;">Page 135</p> <p>1 A. Ira Memaj was a medical student that helped also in 2 looking for the grammar and proofreading mostly. 3 Q. What was Rong Fan's involvement? 4 A. Same thing. Now, the authors that are here, not 5 necessarily because they participated in writing the 6 manuscript, but they own the authorship because they 7 participated in the work that created the manuscript. 8 Q. What was Robert Morris's -- Dr. Robert Morris's -- 9 A. Dr. Morris is the OB-GYN Oncology chief, and he helped 10 in also editing the manuscript and help interpretation 11 of data clinically. 12 Q. Who prepared the original manuscript? Who was the 13 author? 14 A. I did. 15 Q. Did anyone help you write the original manuscript? 16 A. No. 17 Q. Did anyone in any way contribute to the manuscript 18 besides those individuals listed in Exhibit Number 7? 19 A. No. 20 Q. Over on Page 12 in the Acknowledgments section there's 21 a notation thanking Imaan Singh. 22 A. Yes, she was a medical student. 23 Q. What did Imaan Singh do? 24 A. She helped in running some experiments for us. 25 Q. Anyone else assist in any way in the preparation of the</p>	<p style="text-align: right;">Page 137</p> <p>1 THE WITNESS: The answer is no. 2 BY MR. HEGARTY: 3 Q. Did you submit the budget you created to anybody? 4 A. Official funding agencies, no. 5 Q. Did you provide the budget to Counsel for Plaintiffs, 6 Beasley Allen? 7 A. I can't remember. 8 Q. Do you still have a copy of the budget? 9 A. I do. 10 Q. Did you prepare any type of protocol or outline in 11 advance of the experiments describing the methods or 12 goals of the experiments? 13 A. In writing? 14 Q. In writing. 15 A. I don't remember. 16 Q. Is that something that's commonly done -- or strike 17 that. Is that something you commonly do in your work 18 in connection with doing studies that then go into a 19 journal article? 20 MS. O'DELL: Object to the form. 21 THE WITNESS: So the way I do this, this 22 is -- again, this is routinely done in our lab, and we 23 ran a pilot experiment using PCR, using single dose, 24 and when we saw the data and we saw that there's a 25 biological effect, then we had a plan of what to do,</p>

35 (Pages 134 to 137)

Ghassan Saed, Ph.D.

Page 138	Page 140
<p>1 and which is the whole study.</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. Do you prepare that plan in writing?</p> <p>4 A. In writing?</p> <p>5 Q. Yes.</p> <p>6 A. I really don't need to because it's the technology</p> <p>7 again, it is all applied in our laboratory, and we are</p> <p>8 testing the markers that we been extensively publishing</p> <p>9 on and testing through our lab.</p> <p>10 Q. For any articles that you have published in scientific</p> <p>11 journals, have you ever prepared an outline or protocol</p> <p>12 describing what you're going to do before you actually</p> <p>13 do the experiments?</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 THE WITNESS: Yeah, so, again, I'm just</p> <p>16 trying to explain to you that the methodology is in</p> <p>17 place, it's in the lab, it's been published, it's been</p> <p>18 referenced, and we test the same markers over and over,</p> <p>19 so there is no need to every time write this down.</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. But have you ever prepared in connection with a journal</p> <p>22 article you're going to hopefully write after doing</p> <p>23 experiments an outline or an overview or a summary of</p> <p>24 what you're going to do before you then go on and do</p> <p>25 it?</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. So tell me again what meetings this --</p> <p>3 A. SRI.</p> <p>4 Q. -- testing was presented.</p> <p>5 A. SRI March 2018, and then if I recall correctly, ASRM</p> <p>6 October --</p> <p>7 MS. O'DELL: ASRM, is that what you're</p> <p>8 saying?</p> <p>9 THE WITNESS: No, it wasn't ASRM. I forgot</p> <p>10 which the other one -- SGO, SGO, I forgot where I</p> <p>11 submitted, sorry, but I did submit two abstracts and I</p> <p>12 presented them in national meetings, SRI for sure was</p> <p>13 March -- I believe it was SGO.</p> <p>14 MS. O'DELL: For the record, Doctor, what</p> <p>15 does SGO stand for?</p> <p>16 THE WITNESS: Society of Gynecology and</p> <p>17 Oncology.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. In March of 2018?</p> <p>20 A. The SRI meeting, yes, that was the preliminary study.</p> <p>21 Q. The lab notebook you provided includes entries for work</p> <p>22 that occurred after March 2018, correct?</p> <p>23 A. Correct.</p> <p>24 Q. What did you then present in March of 2018?</p> <p>25 A. We presented the work that we did preliminary just to</p>
Page 139	Page 141
<p>1 A. We write the methodology.</p> <p>2 Q. So you have written methodologies for what you're going</p> <p>3 to do before you actually start the experiments?</p> <p>4 MS. O'DELL: Object to the form, that's not</p> <p>5 what he said.</p> <p>6 THE WITNESS: Not this experiment.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. On other occasions you have done that?</p> <p>9 A. Yes.</p> <p>10 Q. On other occasions when you have published articles in</p> <p>11 scientific and medical journals?</p> <p>12 A. Not all the times, no.</p> <p>13 Q. When is it that you do prepare an outline or protocol?</p> <p>14 A. When it is something that is not routinely daily test</p> <p>15 that is performed in our laboratory, something</p> <p>16 different.</p> <p>17 Q. Did you discuss the results of the testing or the</p> <p>18 experiments with anyone outside of the authors on the</p> <p>19 manuscript?</p> <p>20 MS. O'DELL: Objection to form.</p> <p>21 THE WITNESS: Yes, so the answer -- I'm</p> <p>22 sorry, that wasn't the answer. This part of this work</p> <p>23 was accepted and presented at national meetings, was</p> <p>24 presented at SRI, presented at ASRM, and it was open</p> <p>25 for everybody to discuss.</p>	<p>1 show the effect on using just PCR.</p> <p>2 Q. Did you discuss the contents of the manuscript, Exhibit</p> <p>3 Number 7, with anyone besides the authors during the</p> <p>4 time it was being written?</p> <p>5 A. No.</p> <p>6 Q. Did you discuss the contents of the manuscript during</p> <p>7 the time it was being written with attorneys for</p> <p>8 Beasley Allen or any other Plaintiff's Counsel in this</p> <p>9 case?</p> <p>10 MS. O'DELL: Don't discuss -- I'm going to</p> <p>11 instruct you not to answer that question.</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. Doctor, if you would turn to --</p> <p>14 UNIDENTIFIED ATTORNEY: Excuse me, was that a</p> <p>15 yes or no question? You're instructing him not to</p> <p>16 answer whether he discussed the contents?</p> <p>17 MS. O'DELL: Well, the question presupposes</p> <p>18 the subject matter of the discussion and that's the --</p> <p>19 so I'm going to instruct him not to answer the</p> <p>20 question.</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. Doctor, would you turn to Page 12 of Exhibit 7, please.</p> <p>23 Did you prepare the Conflict of Interest section on</p> <p>24 Page 12?</p> <p>25 A. Yes.</p>

36 (Pages 138 to 141)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 142</p> <p>1 Q. For whom did you act as a consultant for a fee?</p> <p>2 A. Beasley Allen.</p> <p>3 Q. Why didn't you disclose Beasley Allen in this Conflict</p> <p>4 of Interest disclosure?</p> <p>5 A. The name you mean?</p> <p>6 Q. Yes.</p> <p>7 A. Just add the name? I didn't do it.</p> <p>8 Q. At the time you prepared this manuscript, you were</p> <p>9 acting as a consultant for Beasley Allen in litigation</p> <p>10 involving the topic of this paper, correct?</p> <p>11 A. Correct.</p> <p>12 Q. But you didn't identify that in the Conflict of</p> <p>13 Interest disclosure that you were acting as a</p> <p>14 consultant in litigation involving this topic for a</p> <p>15 fee, correct?</p> <p>16 MS. O'DELL: Objection to form.</p> <p>17 THE WITNESS: The journal, this is sufficient</p> <p>18 language for the journal.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. But you did not disclose that you were acting as a</p> <p>21 consultant in litigation involving this topic, correct?</p> <p>22 MS. O'DELL: Objection to form.</p> <p>23 THE WITNESS: This is what I disclosed.</p> <p>24 BY MR. HEGARTY:</p> <p>25 Q. At the time you prepared this disclosure, you were</p>	<p style="text-align: right;">Page 144</p> <p>1 A. No reason, I could add this --</p> <p>2 Q. You say in the disclosure that you acted as a</p> <p>3 consultant regarding this topic for a fee. What was</p> <p>4 the fee?</p> <p>5 A. What was the fee?</p> <p>6 Q. Yes.</p> <p>7 A. I think \$600 an hour.</p> <p>8 Q. Was the fee the total amount you gave us for your</p> <p>9 invoices at the beginning of the deposition?</p> <p>10 A. Yes. No?</p> <p>11 MS. O'DELL: Sorry, I was going to object, it</p> <p>12 was a little unclear, but I think you understood his</p> <p>13 question.</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. Doctor, don't you agree that anyone reading this</p> <p>16 article should know that you are a paid expert for</p> <p>17 lawyers who have a financial interest in this subject</p> <p>18 area?</p> <p>19 MS. O'DELL: Object to the form.</p> <p>20 THE WITNESS: Again, my response would be I</p> <p>21 put the conflict of interest that I'm acting as a</p> <p>22 consultant on this topic.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. Don't you think the --</p> <p>25</p>
<p style="text-align: right;">Page 143</p> <p>1 acting as a consultant -- strike that. At the time</p> <p>2 that you prepared this conflict of interest, you were</p> <p>3 acting as a named testifying expert in the</p> <p>4 litigation -- in the talc litigation for plaintiffs</p> <p>5 lawyers, correct?</p> <p>6 A. Is that the same question? Yes.</p> <p>7 Q. So at the time that you prepared this disclosure, you</p> <p>8 were not just a consultant, you were a testifying</p> <p>9 expert witness in litigation, correct?</p> <p>10 MS. O'DELL: Objection to form.</p> <p>11 THE WITNESS: As far as I know, I'm a</p> <p>12 consultant, witness expert to consult in this matter,</p> <p>13 yes.</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. You did not disclose this relationship in the</p> <p>16 acknowledgment, that is, this relationship that you</p> <p>17 were a designated testifying expert in litigation</p> <p>18 involving talc and ovarian cancer, correct?</p> <p>19 A. The language that I wrote here was sufficient by the</p> <p>20 journal.</p> <p>21 MR. KLATT: Objection, nonresponsive.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. Why didn't you disclose in this acknowledgment that you</p> <p>24 were a designated expert on behalf of plaintiffs in</p> <p>25 litigation involving talc and ovarian cancer?</p>	<p style="text-align: right;">Page 145</p> <p>1 A. -- for a fee.</p> <p>2 Q. Don't you think the potential readers of this article</p> <p>3 are entitled to know that you are using this article to</p> <p>4 profit on this topic?</p> <p>5 MS. O'DELL: Objection to form.</p> <p>6 THE WITNESS: This is the language that is</p> <p>7 requested by the journal.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. Don't you think that anyone reading this article would</p> <p>10 want to know that you have a financial interest in this</p> <p>11 topic?</p> <p>12 A. It says clearly fee, for a fee.</p> <p>13 Q. You don't identify, though, the area of this topic in</p> <p>14 which you're consulting, correct?</p> <p>15 MS. O'DELL: Objection to form.</p> <p>16 THE WITNESS: So for the reader of this, our</p> <p>17 readers, it's enough to say I'm a consultant for a fee</p> <p>18 on this topic.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. You are getting paid in this litigation to testify on</p> <p>21 behalf of plaintiffs, correct?</p> <p>22 A. Yes.</p> <p>23 Q. Your testimony is supported by the manuscript, by</p> <p>24 Exhibit Number 7, correct?</p> <p>25 MS. O'DELL: Objection to form.</p>

37 (Pages 142 to 145)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 146</p> <p>1 THE WITNESS: It's -- part of it is in the</p> <p>2 manuscript and part of it is not.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. You stand to benefit financially to the extent</p> <p>5 Plaintiff's Counsel use your article successfully in</p> <p>6 this litigation, correct?</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 THE WITNESS: I didn't understand the</p> <p>9 question.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. You stand to benefit financially to the extent that</p> <p>12 Plaintiff's Counsel use your article in this</p> <p>13 litigation, correct?</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 THE WITNESS: Can you -- I know but I don't</p> <p>16 understand what you really want to say.</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. You stand to benefit financially, make more money by</p> <p>19 Plaintiff's Counsel using your article in this</p> <p>20 litigation, correct?</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 THE WITNESS: No, I'm not aware, how they</p> <p>23 going to make more money by using this?</p> <p>24 BY MR. HEGARTY:</p> <p>25 Q. Well, they will continue to use you as an expert</p>	<p style="text-align: right;">Page 148</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. The rest of the conflict of interest disclosure says</p> <p>3 that no other -- the authors declare -- the other</p> <p>4 authors declare there are no conflicts of interest; do</p> <p>5 you see that?</p> <p>6 A. I do.</p> <p>7 Q. So did any of the other authors consult on this topic</p> <p>8 for a fee, to your knowledge?</p> <p>9 A. To my knowledge, no.</p> <p>10 Q. Were the other authors on this manuscript aware of your</p> <p>11 relationship with the attorneys for Beasley Allen in</p> <p>12 this litigation?</p> <p>13 A. Yes, they are.</p> <p>14 Q. How were they made aware of it?</p> <p>15 A. I made them aware of it.</p> <p>16 Q. When did you make them aware of it?</p> <p>17 A. When we started this whole thing.</p> <p>18 Q. What did you tell them?</p> <p>19 A. I tell them I'm acting as a -- what do you call it -- a</p> <p>20 witness expert in this litigation.</p> <p>21 Q. Did you -- have you told them that you've been</p> <p>22 designated to testify as an expert witness in this</p> <p>23 litigation?</p> <p>24 MS. O'DELL: Objection, asked and answered.</p> <p>25 THE WITNESS: I just said -- shared with them</p>
<p style="text-align: right;">Page 147</p> <p>1 witness in all the cases to the extent they are</p> <p>2 successful in using your article, correct?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: So they can use whatever they</p> <p>5 want. This is my research and my lab. These are the</p> <p>6 results that I stand for.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. Do you think they would pay you to testify in this</p> <p>9 litigation if your results were different in your</p> <p>10 article?</p> <p>11 MS. O'DELL: Object to the form.</p> <p>12 THE WITNESS: This work, negative results or</p> <p>13 positive results, both are results, so they're paying</p> <p>14 for my time to consult. Whether it's positive or</p> <p>15 negative to them doesn't matter.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Well, when you said you're acting as a consultant</p> <p>18 regarding this topic, what is this topic? Is it</p> <p>19 inflammation and cancer? Is it antioxidants? Is it</p> <p>20 talc? How is the reader supposed to know?</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 THE WITNESS: If you read -- the reader will</p> <p>23 read the title, which says Molecular Basis Supporting</p> <p>24 the Association of Talcum Powder Use With Increased</p> <p>25 Risk of Ovarian Cancer; very clear topic.</p>	<p style="text-align: right;">Page 149</p> <p>1 that I was selected to be an expert witness in this</p> <p>2 topic.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. And you told them that before you started the</p> <p>5 experiments?</p> <p>6 A. About, yeah.</p> <p>7 Q. You are the senior author on this paper, correct?</p> <p>8 A. Correct.</p> <p>9 Q. Do you in any way supervise or do you in any way</p> <p>10 supervise any of the work of the other authors?</p> <p>11 A. All the work that is in this manuscript is done under</p> <p>12 my hundred percent supervision.</p> <p>13 Q. How about generally, do you supervise any of the other</p> <p>14 authors?</p> <p>15 A. I do.</p> <p>16 Q. Do they report to you?</p> <p>17 A. Yes.</p> <p>18 Q. Which ones report directly to you?</p> <p>19 A. So Nicole King, Ira, Amy, and that's about all the</p> <p>20 authors here.</p> <p>21 Q. Are you a resource for grant funding for things that</p> <p>22 they work on?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 THE WITNESS: Am I a resource?</p> <p>25</p>

38 (Pages 146 to 149)

Ghassan Saed, Ph.D.

Page 150	Page 152
<p>1 BY MR. HEGARTY: 2 Q. Yes. Do they work on studies that you have received 3 funding for? 4 A. No. 5 Q. Do they otherwise work for you -- let me strike that. 6 Do they work for you -- have they done work for you 7 outside of the work on this manuscript? 8 A. Some of them -- 9 MS. O'DELL: Object to form. 10 THE WITNESS: Some of them did. 11 BY MR. HEGARTY: 12 Q. Do some of them still work for you? 13 A. Yes. 14 Q. Which of the authors still work for you? 15 MS. O'DELL: Object to the form. 16 THE WITNESS: Work for me or work with me? 17 BY MR. HEGARTY: 18 Q. Work for you. 19 A. Work for me? 20 MS. O'DELL: Object to the form. 21 THE WITNESS: So what's work for me means? 22 I'm their supervisor? 23 BY MR. HEGARTY: 24 Q. Yes. 25 A. I'm paying their salary?</p>	<p>1 January 16, 2019. Do you see where it lists SAGE 2 Publications, underneath that Reproductive Sciences? 3 A. This here? 4 Q. Yes, at the top. SAGE and Reproductive Sciences. 5 A. Yes. 6 Q. Reproductive Sciences is a journal that has accepted 7 your article for publication, correct? 8 A. Yes. 9 Q. This exhibit identifies the editorial policies, peer 10 review policies, and other policies of this 11 publication. Are you familiar with all of these 12 policies? 13 MS. O'DELL: Object to the form. 14 THE WITNESS: Some. 15 BY MR. HEGARTY: 16 Q. Would you turn over to Page 5, sorry, Page 3 of 10. 17 Under the section Funding, it states that to comply 18 with the guidance for research funders, authors, and 19 publishers issued by the Research Information Network, 20 RS additionally requires all authors to acknowledge 21 their funding in a consistent fashion under a separate 22 heading. Do you see that? 23 A. Yes. 24 Q. Where in your acknowledgment do you acknowledge the 25 source of your funding?</p>
Page 151	Page 153
<p>1 Q. You're their supervisor. Are you their supervisor? 2 A. Yes, I'm supervisor of Rong Fan, she is my research 3 technician or assistant. I am the Fellow Director for 4 the fellowship of Amy Harper. And let's see who's 5 here, Ira's no longer with us, she went to medical 6 school in New York. 7 Q. Do you prepare evaluations for -- have you prepared 8 evaluations for any of the authors on this paper? 9 A. Previously? 10 Q. Previously. 11 A. Nicole Fletcher. 12 Q. Any others? 13 A. Yearly evaluation because she was a post doc in my lab, 14 and this year I will prepare one for Rong. 15 Q. Reproductive Sciences is -- Reproductive Sciences is 16 published by SAGE Publications, correct? 17 A. I don't know, they keep, they switch different 18 publishers. 19 SAED DEPOSITION EXHIBIT NUMBER 12, 20 SAGE PUBLISHING DOCUMENT, 21 WAS MARKED BY THE REPORTER 22 FOR IDENTIFICATION 23 BY MR. HEGARTY: 24 Q. I'm going to mark as Exhibit Number 12 a printout from 25 the SAGE Publications website, it's printed out on</p>	<p>1 A. Okay, so this is -- this only applies to agencies that 2 require this. So, for example, I got NIH grant, I got 3 funding from NIH, I have to disclose funding from NIH. 4 If there is no funding, if it's internal funding, you 5 don't have to do that. 6 Q. Where does that standard -- where is that standard in 7 this document? 8 A. This is -- I have published in this journal for the 9 last 20 years. This is the protocol that we use. 10 Q. Can you cite for me any anything that came from SAGE 11 Publications saying that that's an appropriate reading 12 of the funding requirements? 13 MS. O'DELL: Object to the form. 14 THE WITNESS: I already told you we published 15 with SRI for several years, and my understanding that 16 if the agency, the funding agency requests that you 17 should add their name to the funding part of it, then 18 you should do that. If it's no funding -- departmental 19 is not considered funding, that's a burden actually, 20 it's not funding. 21 BY MR. HEGARTY: 22 Q. If you look under the section Declaration of 23 Conflicting Interests, you see the last paragraph of 24 that section before For More Information, it reads any 25 commercial or financial involvements that might</p>

39 (Pages 150 to 153)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 154</p> <p>1 represent an appearance of a conflict of interest need</p> <p>2 to be additionally disclosed in the covering letter</p> <p>3 accompanying your article to assist the editor in</p> <p>4 evaluating whether sufficient disclosure has been made</p> <p>5 within the Declaration of Conflicting Interests</p> <p>6 provided in the article. Do you see where I'm reading?</p> <p>7 A. Yes.</p> <p>8 Q. Did you provide such a cover letter to the editor of</p> <p>9 Reproductive Sciences identifying your consulting</p> <p>10 relationship with Beasley Allen?</p> <p>11 A. Okay, so when you go to the website Reproductive</p> <p>12 Sciences and you try to upload your manuscript to be</p> <p>13 considered for review on publication, there are forms</p> <p>14 that -- pages that you go through, and each page you</p> <p>15 have to answer the question before it allows you to</p> <p>16 proceed. So one of the pages was conflict of interest,</p> <p>17 and they, at that level they just want to know if you</p> <p>18 have a conflict of interest, you say "yes" or "no."</p> <p>19 And then later on in the manuscript you identify the</p> <p>20 conflict of interest if there is any.</p> <p>21 Q. When you were asked if you had a conflict of interest</p> <p>22 how did you respond?</p> <p>23 A. Yes.</p> <p>24 Q. Then you went to the next page that that would lead you</p> <p>25 to, and that's where you prepared --</p>	<p style="text-align: right;">Page 156</p> <p>1 A. If I did, yes.</p> <p>2 Q. If you sent a cover letter, do you recall if you</p> <p>3 provided information about the conflict of interest you</p> <p>4 disclosed in your paper or manuscript?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 THE WITNESS: Yeah, if I provided the cover</p> <p>7 letter, will there be a conflict of interest in the</p> <p>8 cover letter?</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. Yes. Do you recall if you described the conflict of</p> <p>11 interest in your cover letter as required under the</p> <p>12 SAGE Publishing guidelines, Exhibit Number 12?</p> <p>13 MS. O'DELL: Objection to form.</p> <p>14 THE WITNESS: Yes, so in our practice I have</p> <p>15 been publishing with this particular journal and other</p> <p>16 journals, I never seen a cover letter saying that we</p> <p>17 have a conflict of interest. It's not a practice of</p> <p>18 talking to the editor and tell them that this is</p> <p>19 what --</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. In any of your prior publications have you ever</p> <p>22 disclosed a conflict of interest?</p> <p>23 A. Yes.</p> <p>24 Q. And do you recall an example of when you disclosed a</p> <p>25 conflict of interest?</p>
<p style="text-align: right;">Page 155</p> <p>1 A. Your manuscript.</p> <p>2 Q. -- the Acknowledgment Section, correct?</p> <p>3 A. No.</p> <p>4 Q. Sorry, the Conflict of Interest Section.</p> <p>5 A. No, no. Okay, so you write -- this is part of the</p> <p>6 format of the manuscript, the acknowledgment, the</p> <p>7 conflict of interest, that's the setup. Like how it</p> <p>8 says abstract, key words, introduction, methods, all</p> <p>9 that, this is part of the format, so this has to be in</p> <p>10 the manuscript, we upload to them.</p> <p>11 Q. What did you type in on that online form when you said</p> <p>12 yes to having a conflict of interest and then it</p> <p>13 directed you to another --</p> <p>14 A. There is no other form, they direct you to upload your</p> <p>15 manuscript. They accepted your yes answer, and then</p> <p>16 they allow you to proceed. If you don't answer, you</p> <p>17 are not allowed to proceed.</p> <p>18 Q. Exhibit Number 12 also says in the paragraph that I</p> <p>19 read to you that in addition to what you just</p> <p>20 described, that you need to include such a disclosure</p> <p>21 in the cover letter accompanying your article. First</p> <p>22 of all, did you send a cover letter with your article?</p> <p>23 A. I can't remember if it was required.</p> <p>24 Q. If you sent a cover letter, do you still have a copy of</p> <p>25 that cover letter?</p>	<p style="text-align: right;">Page 157</p> <p>1 A. When?</p> <p>2 Q. Yes. Do you recall an example of when you disclosed a</p> <p>3 conflict of interest?</p> <p>4 A. Every manuscript you submit you have to disclose a</p> <p>5 conflict of interest, whether it's yes or no, you have</p> <p>6 to.</p> <p>7 Q. Well, let me ask it a different way. Have you ever</p> <p>8 included a conflict of interest statement like the one</p> <p>9 in your manuscript in any prior publication of yours?</p> <p>10 A. Very rare, because I never consult -- I don't consult</p> <p>11 usually in this caliber, but colleagues, co-authors</p> <p>12 have done that, and there are co-authors in my</p> <p>13 publications. Everybody has to disclose.</p> <p>14 SAED DEPOSITION EXHIBIT NUMBER 13,</p> <p>15 SAGE PUBLISHING DOCUMENT,</p> <p>16 WAS MARKED BY THE REPORTER</p> <p>17 FOR IDENTIFICATION</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. We'll mark as Exhibit 13 another printout from the SAGE</p> <p>20 Publications website on the ethics and responsibility</p> <p>21 of authors. Would you look at Exhibit 13, Doctor.</p> <p>22 A. Yes.</p> <p>23 Q. Under the section Authors, it says authors should</p> <p>24 ensure that, and go down several bullet points where it</p> <p>25 reads any real or apparent conflicting or competing</p>

40 (Pages 154 to 157)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 158</p> <p>1 interest is clearly stated on submission of their</p> <p>2 paper. (This would include funding assistance). Do</p> <p>3 you see that?</p> <p>4 A. Where do you -- where is this --</p> <p>5 Q. It's the bullet point, second to last bullet point at</p> <p>6 the very bottom of the page.</p> <p>7 A. Yes.</p> <p>8 Q. So this is saying that any -- an author should ensure</p> <p>9 that any real or apparent conflicting or competing</p> <p>10 interest is clearly stated on submission of their</p> <p>11 paper. (This would include funding assistance). Do</p> <p>12 you see where I'm reading?</p> <p>13 A. Yes.</p> <p>14 Q. And is it your contention that you did that in this</p> <p>15 manuscript?</p> <p>16 A. I did.</p> <p>17 Q. You did not disclose in this manuscript that you</p> <p>18 received funding for this paper by attorneys in</p> <p>19 litigation, did you?</p> <p>20 A. I did, yes, I said consulting for a fee.</p> <p>21 Q. Where do you make reference to consulting for a fee in</p> <p>22 litigation?</p> <p>23 A. That's my --</p> <p>24 MS. O'DELL: Objection to form.</p> <p>25 THE WITNESS: That's my understanding.</p>	<p style="text-align: right;">Page 160</p> <p>1 The first paragraph of the letter makes</p> <p>2 reference to comments of the reviewers being included</p> <p>3 at the bottom of this letter, and we'll get to those</p> <p>4 comments, but you did receive comments back from</p> <p>5 reviewers of this article, correct?</p> <p>6 THE WITNESS: This is the only thing I</p> <p>7 received.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. Did you eventually receive comments back from reviewers</p> <p>10 of the article?</p> <p>11 A. This is the only letter I received.</p> <p>12 Q. In addition to the letter, you did receive comments</p> <p>13 from authors of the -- I'm sorry -- from reviewers of</p> <p>14 the manuscript, correct?</p> <p>15 MS. O'DELL: Objection, asked and answered.</p> <p>16 THE WITNESS: Is this the whole --</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. Let me mark as Exhibit 14 --</p> <p>19 A. Is this the whole letter?</p> <p>20 MS. O'DELL: I think it's two pages.</p> <p>21 THE WITNESS: It's two pages? This is the</p> <p>22 whole e-mail?</p> <p>23</p> <p>24</p> <p>25</p>
<p style="text-align: right;">Page 159</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. You chose to use the words you set out in the Conflict</p> <p>3 of Interest Section, correct?</p> <p>4 A. Yes.</p> <p>5 Q. You agree that your relationship as a consultant does</p> <p>6 present a conflict of interest?</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 THE WITNESS: My relationship?</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. Yes, as a consultant does present a conflict of</p> <p>11 interest, which is why you included a Conflict of</p> <p>12 Interest Statement, correct?</p> <p>13 MS. O'DELL: Object to the form.</p> <p>14 THE WITNESS: We keep going back the same</p> <p>15 circles. What's the question?</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. You agree that your relationship with attorneys for</p> <p>18 Beasley Allen presents a conflict of interest that you</p> <p>19 needed to disclose?</p> <p>20 A. I disclosed that, yes.</p> <p>21 Q. If you would look at the letter on the very back page</p> <p>22 again of Exhibit Number 7.</p> <p>23 MS. O'DELL: Is the intent of the exhibit to</p> <p>24 include all of the communications or just this one?</p> <p>25 MR. HEGARTY: Start with this one.</p>	<p style="text-align: right;">Page 161</p> <p>1 SAED DEPOSITION EXHIBIT NUMBER 14,</p> <p>2 COPY OF LETTER FROM REPRODUCTIVE SCIENCES,</p> <p>3 WAS MARKED BY THE REPORTER</p> <p>4 FOR IDENTIFICATION</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. I'm going to mark as Exhibit 14 in addition to what we</p> <p>7 had received in connection with that manuscript, but</p> <p>8 this is the letter with the reviewer comments included.</p> <p>9 A. Yeah, this is all I received.</p> <p>10 Q. Is Exhibit Number 14 a copy of the letter with the</p> <p>11 reviewer comments at the end?</p> <p>12 A. Okay, this is all I received.</p> <p>13 Q. When you say this, you're talking about --</p> <p>14 A. The letter.</p> <p>15 Q. -- number 14?</p> <p>16 A. Yeah, the e-mail.</p> <p>17 Q. The next paragraph in that e-mail, the second paragraph</p> <p>18 says that the reviewers have recommended publication</p> <p>19 but also suggest some minor revisions to your</p> <p>20 manuscript. Therefore, I invite you to respond to the</p> <p>21 viewer's comments and revise your manuscript. Do you</p> <p>22 see where I'm reading?</p> <p>23 A. Yes.</p> <p>24 Q. Did you respond to the reviewer's comments?</p> <p>25 A. Yes.</p>

41 (Pages 158 to 161)

Ghassan Saed, Ph.D.

Page 162	Page 164
<p>1 Q. Did you respond to reviewer's comments via e-mail?</p> <p>2 A. No, you can't do that.</p> <p>3 Q. How did you respond to viewer's comments?</p> <p>4 A. So you have to log in to Manuscript Central, you have</p> <p>5 to go to Revised Manuscript, and you have to include</p> <p>6 highlighted changes in the revised manuscript, and then</p> <p>7 you have to submit that to the reviewer one more time.</p> <p>8 Q. And did you do that in this case?</p> <p>9 A. Yes.</p> <p>10 Q. Do you still have a copy of the highlighted copy of the</p> <p>11 revisions that you submitted to the reviewers?</p> <p>12 A. Yes, and, also, it's in the website for the journal.</p> <p>13 Q. If you look down at Paragraph 6 of Exhibit 14, it reads</p> <p>14 when submitting your revised manuscript, you will be</p> <p>15 able to respond to the comments made by the reviewers</p> <p>16 in the space provided. So is there actually a space</p> <p>17 provided where you can actually communicate with the</p> <p>18 reviewers?</p> <p>19 A. (Witness shakes head from side to side.) You can't</p> <p>20 communicate with the reviewers.</p> <p>21 Q. Is there any way to respond?</p> <p>22 A. I don't know who they are, yes, you have to write your</p> <p>23 response but to the editor, not to the reviewer. I</p> <p>24 don't know who is the reviewer.</p> <p>25 Q. So did you write a response to the comments to the</p>	<p>1 A. I don't know, I don't know because they -- you write</p> <p>2 them, you write them in a space online, and they</p> <p>3 incorporate them into the manuscript if they agree with</p> <p>4 it, maybe disagree. So they send it to the reviewer,</p> <p>5 and the reviewer will decide, okay, I like this</p> <p>6 explanation, add it to the manuscript, or this</p> <p>7 explanation is already in the manuscript, which I</p> <p>8 recall I said to the reviewer, to the editor.</p> <p>9 Q. You recall saying to the editor that this -- as to this</p> <p>10 comment, it was already in the manuscript?</p> <p>11 A. Yes, I said this has been addressed in this section of</p> <p>12 manuscript; however, this is what we believe the</p> <p>13 molecular mechanism is all about. And he sent it to</p> <p>14 the reviewer, and the reviewer will say I agree, go</p> <p>15 ahead, accept, or I disagree, I think they should edit,</p> <p>16 or we don't like the whole comment.</p> <p>17 Q. Do you still have a copy of your response to this</p> <p>18 reviewer's comment?</p> <p>19 A. Again, this is done on the website.</p> <p>20 Q. Is that comment still on the website, to your</p> <p>21 knowledge?</p> <p>22 A. I don't know, but I can find it.</p> <p>23 Q. Well, what is the mechanism by which the ovary, and not</p> <p>24 the vagina, the cervix, or the endometrium are</p> <p>25 susceptible to talc effects, in your opinion?</p>
Page 163	Page 165
<p>1 editor?</p> <p>2 A. Correct.</p> <p>3 Q. And do you still have a copy of that response?</p> <p>4 A. It's uploaded in the manuscript center, and I do have a</p> <p>5 copy, yes.</p> <p>6 Q. With regard to the reviewer comments, if you look at</p> <p>7 the second page of Exhibit 14, the first sentence under</p> <p>8 Comments and Suggestions, it reads what is the</p> <p>9 mechanism by which the ovary and not the vagina, the</p> <p>10 cervix, or the endometrium are susceptible to talc</p> <p>11 effects? Do you see where I'm reading?</p> <p>12 A. Yes, sorry.</p> <p>13 Q. Did you include any explanation in your revised</p> <p>14 manuscript to explain the mechanism by which the ovary</p> <p>15 and not the vagina and the cervix and the endometrium</p> <p>16 are susceptible talc effects?</p> <p>17 A. It was in the letter and response to the reviewer, to</p> <p>18 the editor, yes, it was in the form that you submit.</p> <p>19 Q. Did you revise your manuscript to include such a</p> <p>20 discussion about the mechanism by which the ovary and</p> <p>21 not the vagina, the cervix, or the endometrium are</p> <p>22 susceptible to talc effects?</p> <p>23 A. I believe I did, I added three sentences to clarify</p> <p>24 that.</p> <p>25 Q. Where in your manuscript are those three sentences?</p>	<p>1 A. So, in my opinion, that talcum powder, talcum particles</p> <p>2 go -- transfer, it's an open access for genital use.</p> <p>3 When they use it for genital use, it goes into the</p> <p>4 ovaries and incorporate into the tissues, and this</p> <p>5 continuously induce chronic inflammation that is linked</p> <p>6 strongly and actually the cause of ovarian cancer. Why</p> <p>7 other tissues don't get it, there are more than one</p> <p>8 explanation to that if you'd like to hear it.</p> <p>9 Q. Well, yeah, because I want to know what you believe to</p> <p>10 be the difference in the ovary versus the other organs.</p> <p>11 A. Yes. First, cancer is a tissue specific like cervical</p> <p>12 cancer, HPV so -- Second is the area in the uterus is</p> <p>13 full of secretion, and there is a dilution factor that</p> <p>14 kick everything out, whereas if it make it -- if the</p> <p>15 particles makes it to the ovaries, they sit there</p> <p>16 indefinitely.</p> <p>17 Q. Anything else?</p> <p>18 A. For now.</p> <p>19 Q. What about the -- you mentioned, though, the uterus.</p> <p>20 What about the vagina and cervix?</p> <p>21 A. What about --</p> <p>22 Q. Why is the ovary affected and not the vagina and</p> <p>23 cervix?</p> <p>24 A. Shall I repeat that, my answer?</p> <p>25 Q. Is it the same reason in your opinion?</p>

42 (Pages 162 to 165)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 166</p> <p>1 A. It's the wash, it's the dilution factor, it's the 2 excretion, it's always excretions, but ovaries are not. 3 Q. And is that opinion somewhere in Exhibit Number 7? You 4 said it already is in the section. In what section is 5 that concept? 6 A. So the peristaltic travel of the talcum particles into 7 the ovary has been actually discussed somewhere. 8 Q. That's over at the bottom of Page 8. Is that the 9 portion of the paper that you say already addresses 10 this comment? 11 A. Yes, part of it. 12 Q. Where else in the manuscript do you address this 13 comment by one of the reviewers? 14 A. I think this is sufficient, in my opinion, to show 15 evidence that there is a transfer of the particles from 16 the vagina and uterus area and fallopian tube into the 17 ovaries, that's substantial. 18 Q. The next comment reads what do the authors believe is 19 the determining factor for the increased sensitivity of 20 the epithelial ovarian cells to talc? You see where 21 I'm reading? 22 A. Where is that? Where is it? 23 Q. In the second comment that begins -- 24 A. Oh, the determining factor. 25 Q. What is -- the second comment is what do the authors</p>	<p style="text-align: right;">Page 168</p> <p>1 the epithelial ovarian cells to talc? 2 A. Chronic inflammation. 3 Q. And how is chronic inflammation -- or strike that -- 4 how are epithelial ovarian cells, how do they have 5 increased sensitivity to chronic inflammation? 6 A. So this is what actually made them in the first place. 7 It's the fact that they are exposed to continuously 8 over time with talcum particles, and that created a 9 chronic inflammation that actually transformed those 10 cells and caused the cells to go, the epithelial 11 ovarian cells to go cancerous with time. 12 Q. So, in your opinion, for purposes of your biologic 13 mechanism for talc causing ovarian cancer, talc must 14 reach the ovary, correct? 15 MS. O'DELL: Object to the form. 16 THE WITNESS: Not necessarily. 17 BY MR. HEGARTY: 18 Q. Well, the processes you just described all involve talc 19 reaching the ovary, correct? 20 A. No. I said any environment that create chronic 21 inflammation to the ovaries, epithelial ovarian cells, 22 normal ones, can or are known to develop this signature 23 of pro-oxidant state. We have published that in 24 several manuscripts. 25 Q. So, in your opinion, where must talc go to cause the</p>
<p style="text-align: right;">Page 167</p> <p>1 believe is the determining factor for the increased 2 sensitivity of the epithelial ovarian cells to talc? 3 How did you respond to that comment? 4 A. This is the core of the actual, the whole manuscript, 5 is about chronic inflammation and its link to ovarian 6 cancer. 7 Q. Did you revise your manuscript in response to this 8 reviewer comment? 9 A. Yes. 10 Q. How did you revise the transcript -- I'm sorry -- the 11 manuscript in response to this reviewer comment? 12 A. So we took the last part, we cut some words out, it 13 says wordy -- 14 Q. I'm not talking about that comment yet. 15 A. Which comment? 16 Q. The determining factor comment. 17 A. I told you, you don't need necessarily to agree with 18 the reviewer comment, you just put it in the -- there's 19 a box when you go online, and you just say we believe 20 that the manuscript is all about why ovarian cancer are 21 sensitive to inflammation. 22 Q. Is that how you responded to this reviewer comment? 23 A. Yes. 24 Q. So what is your opinion as to what you believe the 25 determining factor is for the increased sensitivity of</p>	<p style="text-align: right;">Page 169</p> <p>1 inflammation that you say can cause ovarian cancer? 2 MS. O'DELL: Objection to form. 3 THE WITNESS: Yeah, so I don't know, but what 4 I'm saying is the genital use of talcum powder expose 5 the genital tract, the reproductive tract to chronic 6 inflammation that, according to our 30 years of 7 studies, is linked and the cause of ovarian cancer. 8 BY MR. HEGARTY: 9 Q. Well, where in the genital tract must the chronic 10 inflammation occur to cause ovarian cancer? 11 A. If the environment is chronic and it has chronic 12 inflammation -- so preferred will be -- the first thing 13 will be actual contact, which would be in the ovaries, 14 second would be fallopian tube, and there are many 15 studies now indicating that the source of epithelial 16 ovarian cancer come from fallopian tube, and fallopian 17 tube is very close to the uterus and that close to the 18 cervix and vagina, so that's an open access in the 19 body. 20 Q. So you mentioned -- as far as where the chronic 21 inflammation must consider, you mentioned the ovary and 22 the fallopian tube. Is there any other organ in the 23 reproductive tract that you believe if it becomes 24 inflamed due to talc can lead to ovarian cancer? 25 MS. O'DELL: Object to the form.</p>

43 (Pages 166 to 169)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 170</p> <p>1 THE WITNESS: Yeah, I -- no, I understood 2 your question, but I disagree, that's not what I said. 3 BY MR. HEGARTY: 4 Q. What did you say? 5 A. No. So what I said is the use of talcum powder allows 6 talcum particles, according to our research, we added 7 the particles to the cells, the cells showed 8 inflammatory response. So we expect if the talcum 9 powder enter the genital area, go to -- and I said I, 10 you know, organized them for you, so the most effect 11 will be if they are in the ovary, and we already have 12 evidence, and not just us, every -- all the world know 13 now, that acute inflammation does not cause cancer, is 14 not linked to cancer, it may initiate cancer, but 15 chronic inflammation is the real trigger for cancer in 16 general and ovarian cancer. And we have shown that all 17 these redox balance is altered in ovarian cancer cells. 18 So the first impact, the highest impact will be if the 19 particle is in the ovary, and this has been reported by 20 some people, and the second or less degree, less impact 21 or longer time, maybe it's the same impact but it's a 22 longer time probably, all this need to be further 23 studied, is in the fallopian tube, and then who knows 24 what it does to uterus and cervical area. 25 Q. Well, I thought you said when you responded to the</p>	<p style="text-align: right;">Page 172</p> <p>1 cancer risk? 2 Q. Question is very specific. Can you cite for me any 3 published literature reporting finding chronic 4 inflammation in the presence of talc in the fallopian 5 tubes or ovaries or the endometrium in women using 6 talc? 7 MS. O'DELL: Objection to the form. 8 Epidemiological studies is what the doctor asked you to 9 clarify. Is that what you meant? 10 THE WITNESS: Do you -- 11 BY MR. HEGARTY: 12 Q. I don't think -- I'm not talking about epidemiologic 13 studies. I'm talking about can you cite for me any 14 studies that report finding inflamed tissue in the 15 presence of talc in women using talc on the perineum? 16 MS. O'DELL: Object to the form. 17 THE WITNESS: So your question is any 18 manuscript, any papers, any papers that cite or discuss 19 the presence of inflamed tissues in response to woman 20 using talcum powder. 21 BY MR. HEGARTY: 22 Q. Correct. 23 A. And my answer to you is I don't know any references. 24 What I do know, that there are lots of epidemiological 25 studies that link woman who uses talcum powder are at</p>
<p style="text-align: right;">Page 171</p> <p>1 question, the comment that said the mechanism which the 2 ovary and not the vagina, the cervix, or the 3 endometrium are susceptible, that this washing keeps 4 those organs from being susceptible. So the 5 endometrium is in the uterus, correct? 6 MS. O'DELL: Object to the form. 7 THE WITNESS: Okay. So the question here 8 they are asking about mechanisms in the ovaries, so 9 that's what I responded to. 10 BY MR. HEGARTY: 11 Q. Well, do you consider the endometrium to be a 12 susceptible organ to talc in the sense that it can 13 cause inflammation that can lead to ovarian cancer? 14 A. Probably. 15 Q. Can you cite for me any published scientific or medical 16 article reporting inflammation of the ovaries or 17 inflammation of the fallopian tubes or the endometrium 18 in women using talc? 19 MS. O'DELL: Object to the form. 20 THE WITNESS: So can I report articles for 21 you? 22 BY MR. HEGARTY: 23 Q. Yes. 24 A. There are -- are you talking about gynecological 25 studies that link the use of -- in women to ovarian</p>	<p style="text-align: right;">Page 173</p> <p>1 increased risk of developing ovarian cancer. That is 2 in the literature everywhere. There are some few 3 molecular work also indicating that this also can cause 4 inflammation, oxidative stress, it's out in there. 5 There are some other molecular works that also shows 6 that there is actually gene expression differential, 7 gene expression in exposure to talc, and this is 8 really -- I mean this powder, this particle cause 9 biological changes to the cell, so I am not surprised 10 if it does the same inside the genital tract. 11 Q. The next comment in Exhibit Number 14 says the 12 manuscript is wordy and would benefit from an attentive 13 reduction, do you see that? 14 A. I did. 15 Q. How did you respond to that comment? 16 A. I agreed, and I shaped some words unnecessary 17 references that we have established methodology that we 18 don't need to do, to have. 19 SAED DEPOSITION EXHIBIT NUMBER 15, 20 JANUARY 14, 2019 E-MAIL, 21 WAS MARKED BY THE REPORTER 22 FOR IDENTIFICATION 23 BY MR. HEGARTY: 24 Q. I want to next mark as Exhibit 15 another reviewer 25 comment that we were provided. Do you recognize</p>

44 (Pages 170 to 173)

Ghassan Saed, Ph.D.

Page 174	Page 176
<p>1 Exhibit 15?</p> <p>2 A. This is an e-mail from the editor.</p> <p>3 Q. Yes.</p> <p>4 A. Yes, saying that they accepted the manuscript.</p> <p>5 Q. This is dated January 14, 2019, correct?</p> <p>6 A. Okay.</p> <p>7 Q. Is that right?</p> <p>8 A. Yes, it says so.</p> <p>9 Q. Then again it -- strike that. Below it says Reviewer:</p> <p>10 1, correct?</p> <p>11 A. Yes.</p> <p>12 Q. Comments to the author. Well done.</p> <p>13 A. Yes.</p> <p>14 Q. Was there only one reviewer for purposes of your paper?</p> <p>15 A. Yes, Reviewer: 1.</p> <p>16 Q. In what I marked as Exhibit Number 15 is Reviewer 1's</p> <p>17 comment after you made changes to your paper?</p> <p>18 A. Correct.</p> <p>19 Q. So the peer review for this article had one reviewer,</p> <p>20 correct?</p> <p>21 A. No, I don't know.</p> <p>22 Q. Did you get comments back from any other reviewer?</p> <p>23 A. I review comments, I review manuscripts for many</p> <p>24 journals. If you have no comments or if you have good</p> <p>25 comments, I don't need to show them.</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. I'm going to mark as Exhibit Number 16 a copy of the</p> <p>3 expert report for you we were provided in this case.</p> <p>4 Is Exhibit Number 16 your expert report in this case?</p> <p>5 A. Yes.</p> <p>6 Q. There are large portions of the manuscript that are</p> <p>7 identical to your report, correct?</p> <p>8 A. I don't know about large, but based on it, yes.</p> <p>9 Q. Which was prepared first, the manuscript or the report?</p> <p>10 A. This is November, and the manuscript was September, so</p> <p>11 the manuscript was first.</p> <p>12 Q. Did you conduct the experiments that are described in</p> <p>13 the manuscript for Beasley Allen?</p> <p>14 A. Say that again, please.</p> <p>15 Q. Did you conduct the experiments that are in the</p> <p>16 manuscript for Beasley Allen?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 THE WITNESS: The experiment I did, I did it</p> <p>19 in my lab for me.</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. Was the work that you did on -- in conducting the</p> <p>22 experiments and doing the manuscript independent of</p> <p>23 Beasley Allen or any counsel for Plaintiffs?</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 THE WITNESS: The work that I did in the lab,</p>
Page 175	Page 177
<p>1 Q. Do you know how many reviewers --</p> <p>2 A. No knowledge.</p> <p>3 Q. Let me finish -- do you know how many reviewers</p> <p>4 Reproductive Sciences had for your manuscript?</p> <p>5 A. No.</p> <p>6 MR. HEGARTY: Let's go off the record real</p> <p>7 quick. I need to take just a quick break and we'll be</p> <p>8 right back.</p> <p>9 THE VIDEOGRAPHER: Going off the record at</p> <p>10 2:23 p.m.</p> <p>11 (A short recess was taken.)</p> <p>12 THE VIDEOGRAPHER: We're back on the record</p> <p>13 at 2:28 p.m.</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. Dr. Saed, are there any other communications between</p> <p>16 you and the editors of Reproductive Sciences that we've</p> <p>17 not talked about today?</p> <p>18 A. Not that I'm aware of.</p> <p>19 Q. Do you know when your article is supposed to be</p> <p>20 published?</p> <p>21 A. I don't know.</p> <p>22 SAED DEPOSITION EXHIBIT NUMBER 16,</p> <p>23 EXPERT REPORT,</p> <p>24 WAS MARKED BY THE REPORTER</p> <p>25 FOR IDENTIFICATION</p>	<p>1 no one has any interference in how it's designed, what</p> <p>2 the method should be used, how to analyze the data, how</p> <p>3 to write the manuscript, all that is all mine.</p> <p>4 UNIDENTIFIED ATTORNEY: Objection,</p> <p>5 nonresponsive.</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. Going back to my question, was the experiment you</p> <p>8 conducted and the manuscript that you wrote independent</p> <p>9 of your work with Beasley Allen in this litigation?</p> <p>10 MS. O'DELL: Objection to the form.</p> <p>11 THE WITNESS: So I was paid for my time as a</p> <p>12 consultant, but this work was funded by my lab.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. But going back to the experiments that you did and the</p> <p>15 manuscript that you wrote, were those separate -- was</p> <p>16 that a separate piece of work than what you're doing</p> <p>17 with Beasley Allen?</p> <p>18 MS. O'DELL: Object to the form, asked and</p> <p>19 answered.</p> <p>20 THE WITNESS: Separate means -- what do you</p> <p>21 mean by separate?</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. Separate means unrelated.</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 THE WITNESS: Yeah, we're -- I'm hired as a</p>

45 (Pages 174 to 177)

Ghassan Saed, Ph.D.

Page 178	Page 180
<p>1 witness expert in talc, ovarian cancer and oxidative</p> <p>2 stress, and I am doing work in my lab related to the</p> <p>3 consulting that what I'm doing with Beasley Allen.</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. So was the work that you did in doing the tests and</p> <p>6 preparing the manuscript independent of your</p> <p>7 relationship with Beasley Allen?</p> <p>8 MS. O'DELL: Objection, asked and answered.</p> <p>9 THE WITNESS: I still don't understand the</p> <p>10 independent type.</p> <p>11 BY MR. HEGARTY:</p> <p>12 Q. Well, was it done --</p> <p>13 A. Can you reformat the question, please.</p> <p>14 Q. Well, was that work separate and unrelated to your work</p> <p>15 with Beasley Allen?</p> <p>16 MS. O'DELL: Object to the form.</p> <p>17 THE WITNESS: It was separate, not -- it is</p> <p>18 related, so I don't know about what separate means, but</p> <p>19 it is related, yes, but in what caliber it's related,</p> <p>20 that's what I want to emphasize. They have no saying</p> <p>21 in any of the work that has been done here.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. Would you have done this same work if you were not a</p> <p>24 consultant for Beasley Allen?</p> <p>25 MS. O'DELL: Object to the form.</p>	<p>1 A. Because the whole news and the whole media is all about</p> <p>2 Johnson & Johnson product.</p> <p>3 Q. Did you choose Johnson's Baby Powder because that</p> <p>4 product is in this litigation?</p> <p>5 A. Not in this litigation, but for me, because of the</p> <p>6 media and all these reports that I've been reading and</p> <p>7 the association of woman using Johnson & Johnson Baby</p> <p>8 Powder with increased risk of ovarian cancer.</p> <p>9 Q. Within your lab notebooks, where are the tests that you</p> <p>10 conducted with Fisher Scientific talcum powder?</p> <p>11 A. I can show it to you.</p> <p>12 Q. Okay. You're looking at Exhibit Number 2, the lab</p> <p>13 notebook for the experiments reflected in your --</p> <p>14 MS. O'DELL: I think it's Exhibit 3.</p> <p>15 THE WITNESS: That's Fisher.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. I'm sorry. So Exhibit Number 3, which is the lab</p> <p>18 notebook for the pilot study involved Fisher --</p> <p>19 A. Correct.</p> <p>20 Q. -- talc?</p> <p>21 A. Talc.</p> <p>22 Q. The only talc tested as reflected in Exhibit Number 2</p> <p>23 is Johnson & Johnson, Johnson's Baby Powder?</p> <p>24 A. This one here, initially we used both, and then we</p> <p>25 stopped using Fisher and we continued using Johnson &</p>
Page 179	Page 181
<p>1 THE WITNESS: I would have done the same type</p> <p>2 of rigorous testing because this is my primary focus of</p> <p>3 my laboratory, and anything that is related to</p> <p>4 inflammation, oxidative stress, and ovarian cancer, it</p> <p>5 is what we like to do in our lab.</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. Your experiments involved Johnson's Baby Powder,</p> <p>8 correct?</p> <p>9 A. Correct.</p> <p>10 Q. Where did you purchase the Johnson's Baby Powder that</p> <p>11 you used?</p> <p>12 A. Walgreen across the street.</p> <p>13 Q. Why did you choose to use Johnson's Baby Powder in your</p> <p>14 experiment?</p> <p>15 A. Because I want to see if the use of baby powder, talcum</p> <p>16 powder, has any biological effect on ovarian cancer</p> <p>17 cells.</p> <p>18 Q. Why did you choose the Johnson's Baby Powder brand?</p> <p>19 A. I chose Johnson & Johnson baby powder and I chose</p> <p>20 Fisher.</p> <p>21 Q. Why did you choose the Johnson Baby Powder brand versus</p> <p>22 another brand of talcum powder product?</p> <p>23 A. I chose Fisher.</p> <p>24 Q. Why did you choose Johnson's Baby Powder over another</p> <p>25 commercially available baby powder?</p>	<p>1 Johnson.</p> <p>2 Q. Is there any reference in -- to testing Fisher talcum</p> <p>3 powder in Exhibit Number 2?</p> <p>4 A. I can't remember.</p> <p>5 Q. Well, the first page of your -- strike that.</p> <p>6 MS. O'DELL: Just for the record, can we note</p> <p>7 the page it's turned to in Exhibit 3, what page is</p> <p>8 that, in the lab notebook?</p> <p>9 THE WITNESS: Okay.</p> <p>10 MS. O'DELL: What page is it turned to?</p> <p>11 MR. HEGARTY: It's now on Pages 38 and 39.</p> <p>12 MS. O'DELL: Okay.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. If you look at Page 5 of your manuscript.</p> <p>15 A. Methodology?</p> <p>16 Q. Not of your report, your manuscript, that's Exhibit 7.</p> <p>17 A. Page 5.</p> <p>18 Q. Page 5.</p> <p>19 A. Okay.</p> <p>20 Q. At the top you say Treatment of cells. Talcum powder</p> <p>21 (Fisher Scientific, Catalog #T4-500, Lot#166820) or</p> <p>22 baby powder, then referencing Johnson & Johnson, was</p> <p>23 dissolved in DMSO, et cetera. Do you see where I'm</p> <p>24 reading?</p> <p>25 A. Yes.</p>

46 (Pages 178 to 181)

Ghassan Saed, Ph.D.

Page 182	Page 184
<p>1 Q. Where in your manuscript do you report the results from</p> <p>2 your tests done on Fisher Scientific talcum powder?</p> <p>3 A. We didn't. This is for the previous abstracts that we</p> <p>4 used which is this.</p> <p>5 Q. So none of the data reported in your manuscript was</p> <p>6 data from experiments involving Fisher Scientific</p> <p>7 talcum powder?</p> <p>8 A. In this manuscript, all the data here, as far as I</p> <p>9 remember, they're all done with Johnson & Johnson.</p> <p>10 Q. Did you run the exact same tests that you report in</p> <p>11 your manuscript with Fisher Scientific talcum powder?</p> <p>12 A. No, we only did this with Fisher, which is PCR.</p> <p>13 MS. O'DELL: And what are you pointing to,</p> <p>14 Doctor, just so the record --</p> <p>15 THE WITNESS: Which is the preliminary</p> <p>16 studies that we used to publish for our SRI abstract</p> <p>17 which was presented March of 2018. There was only one</p> <p>18 component, which is PCR, and some few fact -- and some</p> <p>19 few markers. This is -- this was not an extensive and</p> <p>20 comprehensive study as the one described here. This is</p> <p>21 just preliminary to show there is an effect or there is</p> <p>22 no effect.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. What prooxidant or anti-oxidant --</p> <p>25 MS. O'DELL: It's confusing because you're</p>	<p>1 Powder?</p> <p>2 A. Okay. So I'm now referring to this, what's this --</p> <p>3 Q. Exhibit 2.</p> <p>4 A. Exhibit 2 and I did --</p> <p>5 MS. O'DELL: Page --</p> <p>6 THE WITNESS: Here sections PCR, I did ELISA.</p> <p>7 MS. O'DELL: What page does ELISA begin on?</p> <p>8 THE WITNESS: 53.</p> <p>9 MS. O'DELL: Okay.</p> <p>10 THE WITNESS: I did -- all labeled here what</p> <p>11 we did. SNP analysis --</p> <p>12 MS. O'DELL: What page? Starts --</p> <p>13 THE WITNESS: 102.</p> <p>14 MS. O'DELL: Okay.</p> <p>15 THE WITNESS: I did MTT.</p> <p>16 MS. O'DELL: What page?</p> <p>17 THE WITNESS: 106. And statistics final. So</p> <p>18 that's all done with J & J Baby Powder.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Does Exhibit Number 3 contain all the data of your PCR</p> <p>21 tests for Fisher Scientific talcum powder?</p> <p>22 A. Sorry, one more time, please.</p> <p>23 Q. Does Exhibit Number 3 contain all of the data of your</p> <p>24 PCR tests for Fisher Scientific talcum powder?</p> <p>25 A. That we reported this abstract at SRI, yes.</p>
Page 183	Page 185
<p>1 saying this, but you're referring to Exhibit 3, the</p> <p>2 study in Exhibit 3.</p> <p>3 THE WITNESS: This is Exhibit 3?</p> <p>4 MS. O'DELL: Yes.</p> <p>5 MR. FINDEIS: Which page of the exhibit?</p> <p>6 THE WITNESS: 3 is --</p> <p>7 MR. FINDEIS: It's open to which page --</p> <p>8 THE WITNESS: So this is Exhibit 3, Page 38</p> <p>9 onward.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. Which pro-oxidant and anti-oxidant enzyme did you look</p> <p>12 at involving Fisher Scientific talcum powder?</p> <p>13 A. So they are all listed here. I'll tell you in one</p> <p>14 second. Catalase.</p> <p>15 MS. O'DELL: What page?</p> <p>16 THE WITNESS: Page 47, catalase GSR, GPX,</p> <p>17 GST, MPO, nitric oxide, SOD3.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. And you say you only ran --</p> <p>20 A. PCR.</p> <p>21 Q. And what test did you do beyond PCR with Johnson's Baby</p> <p>22 Powder?</p> <p>23 A. Sorry, I just want to make sure that they're all here,</p> <p>24 okay. So, sorry, what's the question?</p> <p>25 Q. What tests did you do besides PCR with Johnson's Baby</p>	<p>1 Q. In your manuscript you report the enzyme data after 72</p> <p>2 hours.</p> <p>3 A. Enzyme?</p> <p>4 Q. I'm sorry, the protein data after 72 hours.</p> <p>5 A. No, I didn't.</p> <p>6 Q. What did you report after 72 hours?</p> <p>7 A. The effect of treatment after 72 hours. That's totally</p> <p>8 different.</p> <p>9 Q. Why did you choose 72 hours?</p> <p>10 A. It was from a previous paper, one of those two, 72</p> <p>11 hours, they did 48 hours, 72 hours, and I picked 72</p> <p>12 because there is data showing very similar, I can't</p> <p>13 remember the reference of it.</p> <p>14 Q. In your report you describe the results of your tests</p> <p>15 only up to 48 hours, correct?</p> <p>16 A. Where is it, my report --</p> <p>17 Q. Over on Page 14.</p> <p>18 A. Page 14.</p> <p>19 Q. In the section Treatment of Cells.</p> <p>20 A. Where does it say that? Here? Treatment of cells.</p> <p>21 Yeah, this is not accurate, 72 hours, this is a typo.</p> <p>22 Q. So you're saying that the reference to 48 hours in</p> <p>23 Exhibit Number -- what is that marked as, your report?</p> <p>24 MS. O'DELL: 16.</p> <p>25 BY MR. HEGARTY:</p>

47 (Pages 182 to 185)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 186</p> <p>1 Q. 16, so you're saying that the reference to 48 hours in 2 Exhibit Number 16 is incorrect and it should be 72 3 hours? 4 A. Correct, because we did all the work with 72 hours. 5 Q. Did you try other durations that are not reported in 6 your report or manuscript? 7 A. No. 8 Q. At the bottom of Page 8 of your manuscript, Exhibit 7. 9 A. Exhibit 7, that's Exhibit 8, oh, I have two, two 10 manuscripts. 11 Q. 7 and 8 are identical. 12 A. Okay. 13 Q. Bottom of Page 7. 14 A. Page 7. 15 Q. You made reference to this before to citing to 16 something called the peristaltic pump; do you see that? 17 A. Page 7. 18 Q. Page 8. 19 A. Oh, sorry, Page 8, I heard 7, sorry. The last 20 sentence. 21 Q. Yes, second to the last line. 22 A. Feature of uterus, yes. 23 Q. That reference is not in your expert report. 24 A. This is my paper, okay. So let's see. 25 Q. Right, but my question is that the reference to the</p>	<p style="text-align: right;">Page 188</p> <p>1 part of your manuscript to 8 through 10. Did counsel 2 for Beasley Allen provide those references to you? 3 A. Absolutely not. 4 Q. So is it your testimony that you came up with -- that 5 you decided on your own to make reference to the 6 peristaltic pump in your manuscript? 7 A. This is not I decide on my own. This is like a 8 collective reading of my reading throughout the whole 9 literature. It's not just -- so the hypothesis that we 10 have been trying to address for the last 30 years of my 11 lab is how -- what's the trigger, what's the initiator 12 for ovarian cancer, and there are many hypotheses out 13 there, and one of the hypotheses is that something come 14 through the genital tract. 15 Q. If you turn to Page 9 in your manuscript, you in the 16 first sentence of the second paragraph, you say in this 17 study, we have shown beyond doubt that talc alters key 18 redox and inflammatory markers, et cetera. Do you see 19 what I'm reading? 20 A. Yes. 21 Q. Have you ever used the phrase "beyond doubt" before in 22 any published article of yours? 23 A. I believe I did. 24 Q. Can you cite for me one where you use that phrase? 25 A. Not now.</p>
<p style="text-align: right;">Page 187</p> <p>1 peristaltic pump is nowhere in Exhibit Number 16, your 2 expert report. Why did you not include that in your 3 expert report? 4 A. Is it not included? I don't know, I trust you. 5 MS. O'DELL: Take a look. 6 THE WITNESS: Let me take a look. So Number 7 8 is -- this is the manuscript, where are the 8 references? So do I have the references here? 9 BY MR. HEGARTY: 10 Q. I'll represent, Doctor, that it's not in there. Do you 11 recall when you came across a reference to this phrase 12 the peristaltic pump? 13 MS. O'DELL: Objection to the form. 14 THE WITNESS: Okay, sorry. 15 BY MR. HEGARTY: 16 Q. Yes, you do you recall when in the writing process for 17 your manuscript you came across a reference to this 18 thing called a peristaltic pump? 19 MS. O'DELL: Objection to form. 20 THE WITNESS: If I recall where I read this 21 manuscript, this reference? 22 BY MR. HEGARTY: 23 Q. Yes, and when. 24 A. No, I don't remember. 25 Q. Were you -- strike that. You made references at that</p>	<p style="text-align: right;">Page 189</p> <p>1 Q. It's true, though, that whatever you found and reported 2 in your article was under the conditions of your 3 experiment, correct? 4 MS. O'DELL: Object to the form. 5 THE WITNESS: Can you -- 6 BY MR. HEGARTY: 7 Q. Everything you describe in this manuscript occurred 8 under the conditions of your experiments, correct? 9 MS. O'DELL: Object to the form. 10 THE WITNESS: So occurred means -- okay, so 11 my response to this, all the experiments that has been 12 performed here, they were performed according to the 13 standard protocols that we have extensively published 14 with. 15 BY MR. HEGARTY: 16 Q. The statement that you make there is based on the 17 results of your cell studies, correct? 18 A. My cell studies, yes. 19 Q. It's not based on any data from in vivo studies, 20 correct? 21 MS. O'DELL: Objection, form. 22 THE WITNESS: There is no need. 23 BY MR. HEGARTY: 24 Q. That's not my question. My question is those 25 statements are not based on any in vivo data, correct?</p>

48 (Pages 186 to 189)

Ghassan Saed, Ph.D.

Page 190	Page 192
<p>1 MS. O'DELL: Object to the form.</p> <p>2 THE WITNESS: So those, again, those results,</p> <p>3 the result, no, this is -- this is what we have shown</p> <p>4 in this manuscript, that's not my opinion of the whole</p> <p>5 situation. So this -- the basis of the sentence is --</p> <p>6 came from the results, the experiments that we did that</p> <p>7 we described here.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. Those results have not been shown in any in vivo</p> <p>10 situation, whether it's human or animal, correct?</p> <p>11 MS. O'DELL: Object to the form.</p> <p>12 THE WITNESS: Similar outcome have been shown</p> <p>13 in -- before, yes.</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. Well, cite for me the published articles reporting the</p> <p>16 same results that you got in an in vivo model.</p> <p>17 MS. O'DELL: Objection, form.</p> <p>18 THE WITNESS: There was no any in vivo</p> <p>19 studies done at the molecular level. This is -- my</p> <p>20 study was the first comprehensive study that actually</p> <p>21 does that.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. What you found was in cell cultures.</p> <p>24 A. These are ovarian cancer cells from patients.</p> <p>25 Q. These are not ovarian cancer cells -- these are not</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. What published literature reports finding the same</p> <p>3 things you report in this study in an animal model?</p> <p>4 A. Not the same things, similar things.</p> <p>5 Q. I'm asking --</p> <p>6 A. Same exact?</p> <p>7 Q. I'm asking can you cite for me any published literature</p> <p>8 reporting the same findings that you report in this</p> <p>9 article in an in vivo model?</p> <p>10 MS. O'DELL: Object to the form.</p> <p>11 THE WITNESS: Again, I repeat the same thing,</p> <p>12 I say I have seen work that has been done in vivo using</p> <p>13 animals, different type of animals, that show an</p> <p>14 association of talcum powder to increased risk of</p> <p>15 ovarian cancer. My work that has been done here in</p> <p>16 cell lines is not many laboratory have done this in</p> <p>17 ovarian cancer because this is our specialty, this is</p> <p>18 what we do. So we don't have -- part of it is done</p> <p>19 probably like oxidative stress as collective like, for</p> <p>20 example, some manuscripts, they measure hydrogen</p> <p>21 peroxide as a marker of oxidative stress, so for</p> <p>22 experts in oxidative stress, you need to do more than</p> <p>23 just that. So I have seen in animals where there are</p> <p>24 some biological effects in vivo.</p> <p>25</p>
Page 191	Page 193
<p>1 normal ovarian cancer cells, correct?</p> <p>2 A. Some are, yes.</p> <p>3 Q. Well, they've been immortalized, correct?</p> <p>4 A. The normal variance they have been immortalized.</p> <p>5 They're sold as such.</p> <p>6 Q. The data that you report in your manuscript has never</p> <p>7 been reported in an in vivo situation, correct?</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 THE WITNESS: So, again, using -- I have seen</p> <p>10 reports in vivo in animals that have shown the</p> <p>11 association of the talc with inflammation, yes.</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. I'm talking about the very results that you report in</p> <p>14 your study --</p> <p>15 A. I don't think anybody did them.</p> <p>16 MS. O'DELL: Let him finish.</p> <p>17 MR. HEGARTY: Let me finish the question.</p> <p>18 MS. O'DELL: Let me object.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. You cannot cite to any published literature showing the</p> <p>21 same results that you found in your cell studies in any</p> <p>22 in vivo model, animal or human, correct?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 THE WITNESS: I have seen in animals, yes.</p> <p>25</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. I'm talking about the biological effects you report in</p> <p>3 your manuscript.</p> <p>4 A. Which include some of this.</p> <p>5 Q. What literature can you cite for me that has shown</p> <p>6 these same biological effects in an in vivo model?</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. The same biological effects you report in your</p> <p>10 manuscript.</p> <p>11 MS. O'DELL: Object to the form, asked and</p> <p>12 answered.</p> <p>13 THE WITNESS: I guess I'm not understanding</p> <p>14 the question because, again, these are cell lines from</p> <p>15 ovarian cancer patients, and doing work with cell lines</p> <p>16 is the closest you can get to in vivo. If there is</p> <p>17 work that has been done to depict all the work I have</p> <p>18 done here, this is none, to my knowledge, but there are</p> <p>19 reports that clearly indicates an in vivo effect.</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. What reports are you referring to?</p> <p>22 A. Animal studies.</p> <p>23 Q. Cite for me the author or name of the animal studies</p> <p>24 you're referring to.</p> <p>25 MR. DONATH: Move to strike, nonresponsive.</p>

49 (Pages 190 to 193)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 194</p> <p>1 THE WITNESS: So, yeah, I think I referenced 2 some animal studies work here. Let's see. This is the 3 manuscript? I'm trying to find references. Yes. 4 Where is that paper? I can't remember this. I know 5 it's in the report. Yeah, it's right here, sorry. I 6 know I referenced it here. 7 BY MR. HEGARTY: 8 Q. How much more time do you need, Doctor? 9 A. It's been a while, so I need to find out exactly where 10 this is, but I know it's here. So it is some cited in 11 reference 50, but that's not the author -- that's not 12 the original reference, this is a cross-reference. 13 Q. You said cited in 50? 14 A. Number 50, but that's a cross-reference, if I recall 15 correctly. 16 Q. You need more time? 17 A. I do. I'm trying to look for it. 18 Q. Let's go off the record. 19 THE VIDEOGRAPHER: Going off the record at 20 2:57 p.m. 21 (An off-the-record discussion was held.) 22 THE VIDEOGRAPHER: Back on the record at 2:59 23 p.m. 24 BY MR. HEGARTY: 25 Q. Doctor, when we went off the record momentarily you</p>	<p style="text-align: right;">Page 196</p> <p>1 rats and mice, not the ovaries, correct? 2 A. No, it was summarize a review of everything, the actual 3 study, yes. 4 Q. The NTP didn't look at ovarian cancer, correct? 5 A. I'm not sure. I read from that study that they have 6 summary, summary, and somewhere there I read that there 7 was in vivo association of the talcum powder use with 8 ovarian cancer. So that's called reference reference. 9 Q. Your report -- 10 A. May I add something? I also read it somewhere else, I 11 cannot remember right now. 12 Q. Your report in your manuscript say that you in your 13 experiments found genotype switches at 72 hours; is 14 that correct? 15 A. Genotype switches, what are you referring to? 16 MS. O'DELL: What page? 17 BY MR. HEGARTY: 18 Q. You report in your manuscript. 19 A. Which particular -- 20 Q. Well, let me ask you about your manuscript. Did your 21 manuscript report genotype switches at 72 hours? 22 A. The effect of talcum 72 hours induced SNP in genetic 23 mutations. 24 Q. And do you claim that those genetic mutations occurred 25 in all cells treated with talc, in your experiments?</p>
<p style="text-align: right;">Page 195</p> <p>1 were going through your references in your report to 2 identify any in vivo animal models that you claim show 3 the same results that you report in your manuscript. 4 Can you cite for us the publications that you contend 5 show the same results as your manuscript in an animal 6 model? 7 MS. O'DELL: Object to the form. 8 You may answer. 9 THE WITNESS: So I am responding that I read 10 in some references and reviews that there was an in 11 vivo animal studies that showed association of talcum 12 powder use with increased risk of ovarian cancer in 13 animal models, and the reference for that is in the NTP 14 studies. 15 BY MR. HEGARTY: 16 Q. That study did not measure the pro-oxidant and 17 anti-oxidant markers that you measure in your study, 18 correct? 19 A. They talk about oxidative stress in general, 20 inflammation in general. 21 Q. But they don't -- that study doesn't measure the 22 pro-oxidant or anti-oxidant markers that you report in 23 your study, correct? 24 A. That study, no. 25 Q. The NTP study concerned findings in the lungs of the</p>	<p style="text-align: right;">Page 197</p> <p>1 A. There is a table actually that summarize the results, 2 and it doesn't show it with all markers, so we can 3 refer to it, so if you look, for example -- 4 MS. O'DELL: What figure? 5 THE WITNESS: The figure Table 2, if you look 6 at GSR, GSR no effect, SOD3 no effect, catalase there 7 is an effect in some cells, not others, you can see 8 that A2780 has no effect, the talc treatment. 9 BY MR. HEGARTY: 10 Q. But with regard to the cells that it did have an 11 effect, SKOV-3, for example, with regard to -- 12 A. SKOV with regard to catalase, for example, has no 13 effect. 14 Q. With regard to -- 15 A. TOV112 with catalase there is an effect. 16 Q. And was that effect in all the cells tested with talc? 17 MS. O'DELL: Object to the form. 18 THE WITNESS: I don't understand your 19 question. 20 BY MR. HEGARTY: 21 Q. Well, don't you -- do you contend that those genotype 22 changes occurred in all cells treated with talc? 23 A. I didn't say that. 24 Q. Did that happen? 25 A. No. What I'm saying is if you treat the cell line,</p>

50 (Pages 194 to 197)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 198</p> <p>1 okay, TOV112, with talc for 72 hours, there will be an 2 increase, an acquisition of this mutation. Now, you're 3 asking if I determined whether all cells in that 4 population got this mutation. 5 Q. Correct. 6 A. The answer is I don't know. 7 Q. Are you able to determine the quantity of cells -- let 8 me back up. How many cells are in the culture? 9 A. Yeah, so this is DNA extracted from 1 million cells 10 treated with 100 microgram per ml of talcum powder. 11 Now, there is another way you can quantitate if we need 12 to proceed further with this. 13 Q. Are you able to estimate the volume of cells that this 14 genotype switch occurred in? 15 MS. O'DELL: Object to the form. 16 THE WITNESS: The volume? 17 BY MR. HEGARTY: 18 Q. Yes, the number. 19 MS. O'DELL: Object to form. 20 THE WITNESS: I just said, no, we can't. 21 This technique will tell you yes or no, doesn't tell 22 you how much -- how many, sorry. 23 BY MR. HEGARTY: 24 Q. So would it tell you, yes, if it -- (coughing in 25 room) -- only one of the 1 ml cells?</p>	<p style="text-align: right;">Page 200</p> <p>1 Q. What do you mean when you say induces significant 2 changes? What does that mean, what does the word 3 significant there mean? 4 A. Got you. So this means marginal change, it's not -- 5 here the words does not imply statistically significant 6 is that you're referring to, although the results were 7 statistically significant, this is referring to the 8 magnitude. 9 Q. And how do you define -- how did you define the 10 magnitude as significant? 11 A. You don't, many readers assume significant is 12 statistically significant. 13 Q. Was the choice of the word significant a subjective 14 word choice by you? 15 A. I chose this word because it applies that there is a 16 significant effect which I know it is. 17 Q. And when you say significant effect, what do you mean? 18 A. I mean both marginal and statistically significant. 19 Q. What does it mean to have a marginal effect? 20 A. Marked like, for example, it is not like 1 versus 1.35, 21 it is 1 versus 3, that's mean marginal. 22 Q. You say about the middle of that paragraph that in all 23 talc treated cells, do you see where I'm reading? 24 A. Yes. 25 Q. There was a significant dose-dependent increase in</p>
<p style="text-align: right;">Page 199</p> <p>1 MS. O'DELL: Object to the form. 2 THE WITNESS: Again, this is not 3 quantitative. This will tell you if there is a 4 mutation or there is no mutation. 5 BY MR. HEGARTY: 6 Q. Without regard to the number of cells the mutation 7 occurred in? 8 MS. O'DELL: Objection to the form. 9 THE WITNESS: Okay. I will repeat myself 10 again. This is -- this technique will tell you if 11 there are population of cells that acquired this 12 genotype. 13 BY MR. HEGARTY: 14 Q. Does it tell you the number of such a population? 15 A. I just said no. 16 Q. If you look at Page 2 of your abstract, I'm sorry, your 17 manuscript, the abstract, looking at the Abstract 18 Section, second line towards the end, you say here 19 we've demonstrated that talc induces significant 20 changes in key redox enzymes and enhances the 21 pro-oxidant state in normal and EOC cells. 22 A. Where are you reading? Sorry. 23 Q. The second line, towards the end of the second line. 24 A. Towards the end of the second line -- here, yes, I see 25 it I see it.</p>	<p style="text-align: right;">Page 201</p> <p>1 pro-oxidants iNOS, nitrate/nitrite, and MPO with a 2 concomitant decrease in anti-oxidants CAT, SOD, GSR, 3 and GPX. Do you see where I'm reading? 4 A. Yes. 5 Q. What do you mean when you use the phrase significant 6 there? 7 A. It is indicated by the P value, so once you have the P 8 value, that's -- indicates statistically significant. 9 Q. And when you say an increase and a decrease as compared 10 to what? 11 A. To untreated. It says all talc treated cells. 12 Q. There is no data that correlates your findings and your 13 experiments to ovarian cancer risk in humans, correct? 14 MS. O'DELL: Objection, form. 15 THE WITNESS: One more time, please. 16 BY MR. HEGARTY: 17 Q. Sure. There is no data that correlates your findings 18 in this manuscript to ovarian cancer risk in women, 19 correct? 20 MS. O'DELL: Objection to form. 21 THE WITNESS: So my data explain, explain and 22 actually classify and characterize epithelial ovarian 23 cancer cells to have a pro-oxidant state, and we were 24 the first lab to actually demonstrate that epithelial 25 ovarian cancer cells manifest a pro-oxidant state by</p>

51 (Pages 198 to 201)

Ghassan Saed, Ph.D.

Page 202	Page 204
<p>1 increasing in these pro-oxidants that we have here and</p> <p>2 decreasing the anti-oxidant that we studied. So this</p> <p>3 is a -- I have written a review article about this, I</p> <p>4 have written a book chapter about this, this is the</p> <p>5 major focus of my lab is to characterize the ovarian</p> <p>6 cancer cells as a pro-oxidant, that they manifest a</p> <p>7 pro-oxidant state and we characterize it.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. There is no data showing that these increases or</p> <p>10 decreases increase the risk of ovarian cancer in women,</p> <p>11 correct?</p> <p>12 MS. O'DELL: Objection to form.</p> <p>13 THE WITNESS: Okay, so there are data that --</p> <p>14 recent data that showing, for example, I'll give you an</p> <p>15 example, myeloperoxidase is a marker of inflammation.</p> <p>16 My lab was the first lab in the entire world to report</p> <p>17 that myeloperoxidase is expressed by epithelial ovarian</p> <p>18 cancer cells, although this marker is only supposed to</p> <p>19 be a myeloid marker, which is a blood marker, a blood</p> <p>20 cells marker, not a nonmyeloid. Several reports later</p> <p>21 they confirm my finding, and not only that, other labs</p> <p>22 have just -- they reported that the SNP that we use</p> <p>23 here, it is correlated with increased risk of ovarian</p> <p>24 cancer, that's reported. That's number one.</p> <p>25 Another example, SOD, catalase, those two</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. And that's been recognized to be associated in a genome</p> <p>3 wide significantly way?</p> <p>4 MS. O'DELL: Object to the form.</p> <p>5 THE WITNESS: I don't know what you mean by</p> <p>6 genome wide.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. Well, you're familiar with what the --</p> <p>9 A. SNP is --</p> <p>10 Q. -- GWAS --</p> <p>11 A. Yes.</p> <p>12 Q. -- the GWAS study is, correct? Are you familiar with</p> <p>13 that?</p> <p>14 MS. O'DELL: Would you repeat the question?</p> <p>15 I couldn't hear it.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. I asked him if he's familiar with what GWAS is.</p> <p>18 A. Yes.</p> <p>19 Q. What is it?</p> <p>20 A. It's the genome wide association where they list all</p> <p>21 the SNPs and their frequency of occurrence and their</p> <p>22 what they call it -- frequency of occurrence in general</p> <p>23 population.</p> <p>24 Q. And what SNPs in your manuscript have been associated</p> <p>25 by the GWAS studies with ovarian cancer?</p>
Page 203	Page 205
<p>1 enzymes and one more -- okay, but for those two, I know</p> <p>2 for a fact that their SNPs has also been reported to be</p> <p>3 associated with increased risk of ovarian cancer in</p> <p>4 human, so that's for the genotype.</p> <p>5 For the markers, there are several studies in</p> <p>6 the literature that talk about alteration of oxidative</p> <p>7 stress and inflammation in ovarian cancer. Our lab,</p> <p>8 other labs have published, repeatedly published this,</p> <p>9 so this is, as far as I'm concerned, this is a fact for</p> <p>10 me, we have documented this, others documented this,</p> <p>11 and to confirm my work with a report from a different</p> <p>12 lab saying there is this myeloperoxidase SNP minus</p> <p>13 463AA correlates with increased risk of ovarian cancer,</p> <p>14 and we have this to be the genotype that changes in</p> <p>15 talc powder, that's incredible to me.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Identify the SNPs that you report in your manuscript</p> <p>18 that have been shown to have reached genome wide</p> <p>19 significance of association with ovarian cancer.</p> <p>20 A. Risk.</p> <p>21 MS. O'DELL: Object to form.</p> <p>22 THE WITNESS: Risk, so the minus, the same</p> <p>23 SNP that we use here, minus 63, 463, which is the MPO</p> <p>24 SNP, this SNP is recognized to be associated with</p> <p>25 increased risk of ovarian cancer in a human.</p>	<p>1 A. So this, okay, we're mixing up two things. I need to</p> <p>2 clarify this. So the GWAS, they identify the SNP.</p> <p>3 Then investigators after the SNP has been identified by</p> <p>4 the GWAS, they pick that SNP and they say, hmm, there's</p> <p>5 a lab that published that myeloperoxidase in ovarian --</p> <p>6 in epithelial ovarian cancer where it's not supposed to</p> <p>7 be there, well, let's do this study where we see if</p> <p>8 this SNP is indeed associated with increased risk of</p> <p>9 ovarian cancer. So that's not part of the GWAS study.</p> <p>10 They use the GWAS study information like I did it.</p> <p>11 Q. That's not my question, Doctor. My question is which</p> <p>12 of the SNPs that you report in your manuscript have</p> <p>13 been shown to be associated with ovarian cancer by the</p> <p>14 GWAS studies?</p> <p>15 MS. O'DELL: Objection to form.</p> <p>16 THE WITNESS: I just said what I have to say.</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. Well, none of the SNPs that you referred to in your</p> <p>19 manuscript have been identified by the GWAS studies as</p> <p>20 being associated with ovarian cancer risk, correct?</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 THE WITNESS: No, it's not correct because I</p> <p>23 repeat again, the GWAS have no responsibility to tell</p> <p>24 you, they don't do studies looking at association.</p> <p>25 They just list SNP and prevalence in general</p>

52 (Pages 202 to 205)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 206</p> <p>1 population, very clear.</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. So it's your contention that the GWAS, the genome wide</p> <p>4 significance of association doesn't list SNPs that are</p> <p>5 associated with ovarian cancer?</p> <p>6 MS. O'DELL: Object to the form.</p> <p>7 THE WITNESS: What I'm saying is, to my</p> <p>8 understanding, GWAS is an information bank where you go</p> <p>9 and you say, okay, there is -- there exists a catalase</p> <p>10 SNP, which is this SNP, this specific sequence that is</p> <p>11 present in .01 percent of general population. Above</p> <p>12 that will be characterized as risk factor. So now in</p> <p>13 the GWAS they identified the MPO SNP, the catalase SNP,</p> <p>14 the SOD SNP, all SNPs that it's like an information</p> <p>15 bank where you go to to find your information and then</p> <p>16 you go and study them. I study them, others study</p> <p>17 them, different labs can study them, but they do it for</p> <p>18 us. It's like the gene sequencing bank, it's the same</p> <p>19 thing, same concept, protein sequence bank. I don't</p> <p>20 need necessarily to go and sequence the whole thing to</p> <p>21 understand, it's already sequenced for me.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. What does it mean for a SNP to reach genome wide</p> <p>24 significance?</p> <p>25 A. So there is a cutoff that they have in their website to</p>	<p style="text-align: right;">Page 208</p> <p>1 you reference in your manuscript and ovarian cancer.</p> <p>2 MS. O'DELL: Object to the form.</p> <p>3 THE WITNESS: So I'm not -- I am objecting to</p> <p>4 the word statistically significant, but I can identify</p> <p>5 several studies that, for example, looking at catalase</p> <p>6 SNP and its association with increased risk of ovarian</p> <p>7 cancer, myeloperoxidase SNP and its association with</p> <p>8 increased risk of ovarian cancer, there was one more</p> <p>9 I'm skipping, and so those two were definitely there.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. Why do you object to my use of the phrase statistical</p> <p>12 significance?</p> <p>13 A. Because I am not sure if they did -- they did molecular</p> <p>14 study or they did a different type of study, so I'm</p> <p>15 just, you know, not familiar with the epidemiological</p> <p>16 studies that they performed.</p> <p>17 Q. Well, cite for me any studies that show, as you say, an</p> <p>18 association between MPO or CAT and ovarian cancer.</p> <p>19 MS. O'DELL: Object to the form.</p> <p>20 THE WITNESS: MPO?</p> <p>21 BY MR. HEGARTY:</p> <p>22 Q. Yes.</p> <p>23 A. The MPO SNP?</p> <p>24 Q. Yes.</p> <p>25 A. That's what we're talking about?</p>
<p style="text-align: right;">Page 207</p> <p>1 each based on epidemiological studies that there is</p> <p>2 association, if it increased over this level, it could</p> <p>3 be associated with diseases.</p> <p>4 Q. Which of the SNPs that you reference in your manuscript</p> <p>5 have been associated with ovarian cancer, in other</p> <p>6 words, which have reached genome wide significance?</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 THE WITNESS: I can answer this. I know for</p> <p>9 a fact it's catalase, not only ovarian but also in</p> <p>10 breast cancer, and they are twins.</p> <p>11 BY MR. HEGARTY:</p> <p>12 Q. Any others?</p> <p>13 A. I'm not -- I can't remember the actual -- for me, the</p> <p>14 GWAS was an information bank where I get my -- the</p> <p>15 information I need to perform the studies, like me and</p> <p>16 others in the same situation.</p> <p>17 Q. Cite for me any published literature that is</p> <p>18 associated -- that has shown a clinical significant</p> <p>19 association between the SNPs that you reference in your</p> <p>20 paper and ovarian cancer.</p> <p>21 A. I'm sorry, one more time.</p> <p>22 MS. O'DELL: Object to the form.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. Identify for me any published literature that shows a</p> <p>25 statistically significant association between the SNPs</p>	<p style="text-align: right;">Page 209</p> <p>1 Q. Yes.</p> <p>2 A. Yes, I can cite.</p> <p>3 Q. Cite for me a study.</p> <p>4 A. I don't remember it now, but there is study.</p> <p>5 Q. Did you cite it in your manuscript?</p> <p>6 A. I believe so. Let's talk -- let's see about where we</p> <p>7 talk about SNP. Okay, were the first to do this --</p> <p>8 sorry -- I would be very happy to provide you with</p> <p>9 these references that I mentioned, MPO and catalase and</p> <p>10 the SNP in ovarian cancer.</p> <p>11 Q. Can you cite for me here today any studies associating</p> <p>12 catalase or MPO with ovarian cancer?</p> <p>13 MS. O'DELL: Object to the form. You mean</p> <p>14 the SNP?</p> <p>15 THE WITNESS: I can't remember where I put</p> <p>16 it.</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. How much time do you need to look, Doctor?</p> <p>19 A. See, I write this every day so I get so overwhelmed.</p> <p>20 Q. Let's go off the record.</p> <p>21 A. So we're looking for catalase SNP for --</p> <p>22 MS. O'DELL: Stay on, if you're -- do you</p> <p>23 need more time, Doctor, or are you --</p> <p>24 THE WITNESS: I'm trying to find it in my --</p> <p>25 MR. HEGARTY: Let's go off the record.</p>

53 (Pages 206 to 209)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 210</p> <p>1 THE WITNESS: I mean I may not even reference</p> <p>2 it here so I don't know.</p> <p>3 THE VIDEOGRAPHER: Going off the record at</p> <p>4 3:23 p.m.</p> <p>5 (An off-the-record discussion was held.)</p> <p>6 THE VIDEOGRAPHER: We're back on the record</p> <p>7 at 3:26 p.m.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. Doctor, when we went off the record I asked you for any</p> <p>10 studies associating catalase or MPO with ovarian</p> <p>11 cancer. You've had a chance to look for such studies,</p> <p>12 and what is your response?</p> <p>13 A. So there's one study by Olson, et al., that was</p> <p>14 published in Gynecology Oncology 2004.</p> <p>15 Q. How do you spell his first name?</p> <p>16 A. O-l-s-o-n, and it's looking at SOD and MPO SNP. There</p> <p>17 is an increased risk of ovarian cancer. I couldn't</p> <p>18 find the catalase one, but it is there, I can search</p> <p>19 for it, it is hundred percent there. There is another</p> <p>20 one looking at Superoxide dismutase published in JBC</p> <p>21 Journal by Yumin, et al.</p> <p>22 Q. How do you spell that?</p> <p>23 A. Y-u-m-i-m, Hu, H-u. And there is one more which is</p> <p>24 about catalase if you -- SNP.</p> <p>25 Q. What is the date of the Yumin article?</p>	<p style="text-align: right;">Page 212</p> <p>1 am -- if you define lead author as corresponding author</p> <p>2 or first author?</p> <p>3 Q. First author.</p> <p>4 A. Is Dr. Belotte, he was an M.D., Ph.D. trained in my</p> <p>5 laboratory. I was his Ph.D. advisor.</p> <p>6 Q. What year? What is the year of the article?</p> <p>7 A. Oh, sorry, 2015.</p> <p>8 Q. What is the name of the article?</p> <p>9 A. Single Nucleotide Polymorphism in Catalase is Strongly</p> <p>10 Associated With Ovarian Cancer Survival.</p> <p>11 Q. So that article doesn't have anything to do with</p> <p>12 ovarian cancer initiation, correct?</p> <p>13 MS. O'DELL: Object to the form.</p> <p>14 THE WITNESS: Is that another question?</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Yes.</p> <p>17 A. Saying --</p> <p>18 Q. In that article, it associated catalase with ovarian</p> <p>19 cancer survival, correct?</p> <p>20 A. Uh-huh.</p> <p>21 Q. It didn't associate catalase with causing ovarian</p> <p>22 cancer, correct?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 THE WITNESS: So in this article what we did,</p> <p>25 we actually, this is -- we identified the SNP and</p>
<p style="text-align: right;">Page 211</p> <p>1 A. What's the data?</p> <p>2 Q. What's the date?</p> <p>3 A. Oh, the date, I'm sorry. Can I look?</p> <p>4 Q. Yes.</p> <p>5 A. So the date was 2005.</p> <p>6 Q. And then you believe there's an article that associates</p> <p>7 catalase to ovarian cancer?</p> <p>8 A. Yes.</p> <p>9 Q. You can't recall that article sitting here today?</p> <p>10 A. I have it here, it's Catalase Nucleotide SNP Strongly</p> <p>11 Associated With Ovarian Cancer, this is by -- from our</p> <p>12 lab and from another lab, also.</p> <p>13 Q. What is the -- who is the first author?</p> <p>14 A. From my lab?</p> <p>15 Q. Well, you said --</p> <p>16 A. This second one, the second one is by -- so this is our</p> <p>17 paper, and there's one here.</p> <p>18 Q. When you say our paper, who's the lead author?</p> <p>19 A. Okay. Can I just tell you the paper? So this is</p> <p>20 published in -- it says The Effect of Catalase SNP and</p> <p>21 Susceptibility to Ovarian Cancer, and this is by --</p> <p>22 published in -- doesn't -- it's in 2017, and it doesn't</p> <p>23 tell me the journal, Journal of Obstetrics and</p> <p>24 Gynecology, Volume 38, 2018, Issue 4.</p> <p>25 And going back to your previous question, I</p>	<p style="text-align: right;">Page 213</p> <p>1 catalase that others also identified, and we looked at</p> <p>2 the presence of the SNP in chemoresistance versus</p> <p>3 sensitive looking at different parameters, and we</p> <p>4 actually reversed the SNP using the CRISPR editing,</p> <p>5 gene editing, and we induced apoptosis, so there was</p> <p>6 like a survival mechanism.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. Doctor, the article you actually cite and which you</p> <p>9 included as an author found that with regard to the</p> <p>10 seven selected SNP study, no association -- you found</p> <p>11 no association with ovarian cancer risk, correct?</p> <p>12 MS. O'DELL: Object to the form.</p> <p>13 THE WITNESS: Which article you talking</p> <p>14 about?</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. The article with the lead author Belotte, Belotte.</p> <p>17 A. Jimmy Belotte, okay, what about it?</p> <p>18 Q. Your article looked at CAT, CYBA, GPX1, GSR, MnSOD,</p> <p>19 MPO, and NOS2, correct?</p> <p>20 A. Yes.</p> <p>21 Q. You found doing the same kind of testing you did here</p> <p>22 that none of those SNPs was associated with ovarian</p> <p>23 cancer risk, correct?</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 THE WITNESS: No.</p>

54 (Pages 210 to 213)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 214</p> <p>1 MS. O'DELL: Excuse me. Object to the form. 2 If you need to see the paper -- 3 THE WITNESS: Yeah, it's been a while but -- 4 MS. O'DELL: If you need to see the paper. 5 SAED DEPOSITION EXHIBIT NUMBER 17, 6 RESEARCH ARTICLE, 7 WAS MARKED BY THE REPORTER 8 FOR IDENTIFICATION 9 BY MR. HEGARTY: 10 Q. I marked as Exhibit 17 the paper. 11 A. Very good. 12 Q. Show me in that paper where you found an association 13 with the listed SNPs and ovarian cancer risk. 14 A. Okay. So there is no -- this study we looked at, this 15 particular SNP and catalase that we found, the other we 16 found that they are not associated with survival, so 17 this study was basically looking at survival of ovarian 18 cancer. So this is not a study meant to study risk. 19 MR. KLATT: Objection, nonresponsive. 20 BY MR. HEGARTY: 21 Q. If you look over at Page 11 of your manuscript. 22 MS. O'DELL: Which page -- 23 MR. HEGARTY: It's Exhibit 7. 24 MS. O'DELL: Well, he just has one manuscript 25 in his hand. Do you know where we are, Doctor?</p>	<p style="text-align: right;">Page 216</p> <p>1 that it? And it's also in your notebook at 34 if you 2 both need it so. 3 THE WITNESS: Can I look at it? 4 BY MR. HEGARTY: 5 Q. Yes, go ahead and look at 34. 6 A. I can't remember if we did the same SNP in both 7 studies, so I just want to make sure that we did that, 8 because there are several SNPs for the same enzyme 9 reported in the GWAS. 10 Q. How long will it take you to look at -- you did the 11 same SNPs in the Belotte article as you did here? 12 A. I have to look at the accession numbers and compare 13 them. 14 Q. Well, we'll maybe get to that, but my question goes 15 back to your reference on Page -- 16 MS. O'DELL: 34. 17 MR. HEGARTY: Your reference to that article 18 on Page 11 of your manuscript, you quote that article 19 as saying that you examined several selected known gene 20 mutations corresponding to SNPs known to be associated 21 with altered enzyme activity and increased cancer risk. 22 What part of that Belotte article shows that the SNPs 23 that you examined are associated with increased cancer 24 risk? 25 THE WITNESS: So if you look at the table,</p>
<p style="text-align: right;">Page 215</p> <p>1 THE WITNESS: Page 11 -- 2 BY MR. HEGARTY: 3 Q. Yes, Page 11. The first sentence of the third 4 paragraph beginning To Elucidate the Mechanism, do you 5 see that? 6 A. Yes. 7 Q. You state later in that sentence, we have examined 8 selected known gene mutations corresponding to SNPs 9 known to be associated with altered enzymatic activity 10 and increased cancer risk. Do you see where I'm 11 reading? 12 A. To elucidate the mechanism, that paragraph? 13 Q. Yes. 14 A. Okay. 15 Q. And at the end of that sentence you cite Reference 28. 16 A. Okay. 17 Q. And Reference 28 is that Belotte article, correct? 18 A. 28 is Belotte, yes. 19 Q. Can you hand me the Belotte article back, please. 20 A. (Witness complied.) 21 Q. In the Belotte article you say of the seven selected 22 SNPs studied, no association with ovarian cancer risk 23 was found. That's what you found, correct, Doctor? 24 MS. O'DELL: Objection to form. If you need 25 to see Belotte -- do you have another copy, Mike, or is</p>	<p style="text-align: right;">Page 217</p> <p>1 Page 3, Dr. Belotte's article, there is a table here 2 that lists what is the SNP, what is the mean allele 3 frequency occurrence, the chromosomal equation, and if 4 it is known nucleotide switch, and the effect of 5 activity. So there are SNPs that affect activity of 6 the enzymes, and if they do, they are, according to our 7 findings, they are associated with anything that alters 8 oxidative stress to the pro-oxidant state can 9 contribute to increased risk. 10 BY MR. HEGARTY: 11 Q. But you in your paper, Exhibit 17, say that the SNPs 12 you studied showed no association with ovarian cancer 13 risk, correct? 14 A. Which one? 15 Q. The Belotte paper. 16 A. Oh, keep saying what paper. 17 Q. You look at the abstract. 18 A. So, again, we're looking at specific SNPs. 19 Q. Correct. 20 A. Right, so -- 21 Q. And in the specific -- 22 A. Some of the SNPs that we looked at when we did this 23 study, they were associated with survival of ovarian 24 cancer, that's what we tested. 25 Q. None of the SNPs --</p>

55 (Pages 214 to 217)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 218</p> <p>1 MR. KLATT: Nonresponsive.</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. Doctor, you also examined whether the SNPs reported in</p> <p>4 this study were associated with ovarian cancer risk,</p> <p>5 correct, not just survival?</p> <p>6 MS. O'DELL: Objection, form.</p> <p>7 THE WITNESS: Give me a moment to see, to</p> <p>8 refresh my memory. This is 2015, so I need to remember</p> <p>9 what we did. I have done many work.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. How much time do you need to study that article?</p> <p>12 A. Just -- okay, so in this study we only did survival,</p> <p>13 the Jimmy Belotte study, this is my -- yeah, so this</p> <p>14 here we only did analysis of survival.</p> <p>15 Q. Doctor, if you turn over to Page 6 of that article at</p> <p>16 the very bottom, third from -- third line from the</p> <p>17 bottom, you write that currently we demonstrated that</p> <p>18 there is no association between the selected SNPs and</p> <p>19 risk of developing ovarian cancer, citing Table 2,</p> <p>20 those are your words, correct?</p> <p>21 A. Yeah, Table 2 is, let's see --</p> <p>22 MS. O'DELL: What were you reading?</p> <p>23 MR. HEGARTY: The bottom of Page 6 of 12.</p> <p>24 THE WITNESS: Yeah, I see that.</p> <p>25</p>	<p style="text-align: right;">Page 220</p> <p>1 with it.</p> <p>2 MS. O'DELL: It is not.</p> <p>3 MR. KLATT: He's perfectly entitled to look</p> <p>4 things up to answer them, but it doesn't count against</p> <p>5 our time.</p> <p>6 MS. O'DELL: He's not looking things up.</p> <p>7 He's looking at the exhibit that had been placed before</p> <p>8 him.</p> <p>9 THE COURT REPORTER: Excuse me --</p> <p>10 (Simultaneous crosstalk.)</p> <p>11 MS. O'DELL: We are on the record.</p> <p>12 And, Doctor, if you are prepared to respond</p> <p>13 to the question, you may do so. If you need a minute,</p> <p>14 let us know that.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. How much time do you need to review the article,</p> <p>17 Doctor?</p> <p>18 A. I'm just asking you, please, where do you see in Table</p> <p>19 2.</p> <p>20 Q. I'm referring to your words at the bottom of Page 6</p> <p>21 that's referring over to Table 2, and I'm asking you is</p> <p>22 it your testimony that you did not investigate the</p> <p>23 association in this paper between these SNPs and</p> <p>24 ovarian cancer risk, is that your testimony?</p> <p>25 MS. O'DELL: Are you quoting a sentence?</p>
<p style="text-align: right;">Page 219</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. Doctor, is it your testimony that in this study you did</p> <p>3 not investigate whether the SNPs listed in Table 2 were</p> <p>4 associated with ovarian cancer risk?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 THE WITNESS: Let me just look at this,</p> <p>7 sorry.</p> <p>8 MR. HEGARTY: Let's go off the record.</p> <p>9 MS. O'DELL: He's just looking at the table.</p> <p>10 Ask him a question, he's entitled --</p> <p>11 MR. HEGARTY: Let's go off the record.</p> <p>12 MS. O'DELL: No, we're not.</p> <p>13 MR. HEGARTY: We're going off the record.</p> <p>14 MS. O'DELL: No, we're not.</p> <p>15 MR. KLATT: We're going to call Judge Pisano.</p> <p>16 MS. O'DELL: Wait a minute. Let me speak.</p> <p>17 If you ask the doctor about his manuscript, he is not</p> <p>18 required to have put to memory every word and table in</p> <p>19 the manuscript. If you ask him about something, he is</p> <p>20 entitled to look at it and reply completely. And to</p> <p>21 somehow suggest if he takes more than 15 seconds we're</p> <p>22 going off the record, that's ridiculous.</p> <p>23 MR. KLATT: It's every single time he's asked</p> <p>24 a question, he wants to look something up. This is</p> <p>25 slow walking the deposition, we're not going to put up</p>	<p style="text-align: right;">Page 221</p> <p>1 What sentence are you referring to?</p> <p>2 MR. HEGARTY: I'm not -- you're not taking</p> <p>3 this deposition of me. I'll let my question stand.</p> <p>4 MS. O'DELL: Object to the form of the</p> <p>5 question, it's unclear. If there's a specific sentence</p> <p>6 you're referring to in the manuscript, you said bottom</p> <p>7 of Page 6, so if there's something you're referring to,</p> <p>8 I'd ask you direct the witness to it.</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. Can you answer my question, Doctor?</p> <p>11 MS. O'DELL: Object to the form.</p> <p>12 THE WITNESS: Where is the -- can you</p> <p>13 please --</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. Bottom of Page 6 for the second time.</p> <p>16 A. Yes.</p> <p>17 Q. I'm reading this to you, it says currently we</p> <p>18 demonstrated that there is no association between the</p> <p>19 selected SNPs and risk of developing ovarian cancer,</p> <p>20 Table 2. Do you see that?</p> <p>21 A. Yes.</p> <p>22 Q. Is it your testimony that this article did not</p> <p>23 investigate an association between the selected SNPs</p> <p>24 and ovarian cancer risk?</p> <p>25 A. In this study that we did with this number of people</p>

56 (Pages 218 to 221)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 222</p> <p>1 that we looked at, we found, okay, that the only</p> <p>2 catalase SNP is associated with ovarian cancer</p> <p>3 survival, none of the other SNPs were associated from</p> <p>4 these patients to increased risk of ovarian cancer.</p> <p>5 Q. Right.</p> <p>6 A. We only did 143, I believe, 94.</p> <p>7 Q. So the sentence that I read to you on Page 11 of your</p> <p>8 manuscript it's citation 28 is wrong, correct?</p> <p>9 MS. O'DELL: Objection to form.</p> <p>10 THE WITNESS: What's the citation?</p> <p>11 BY MR. HEGARTY:</p> <p>12 Q. Well, you support the sentence that says we have</p> <p>13 examined selected known gene mutations corresponding to</p> <p>14 SNPs known to be associated with altered enzymatic</p> <p>15 activity and increased ovarian cancer risk citing 28.</p> <p>16 28 doesn't support a finding that the SNPs you tested</p> <p>17 show increased ovarian cancer risk, correct?</p> <p>18 MS. O'DELL: Object to the form.</p> <p>19 THE WITNESS: What we -- again, this --</p> <p>20 what -- the SNPs that we are used here in this study,</p> <p>21 they were used in response to test the effect of talc</p> <p>22 treatment, talcum powder treatment to the genetic -- to</p> <p>23 the specific genetic mutations. Now, we link survival</p> <p>24 to risk, so, for example, if you look, most of our</p> <p>25 hypothesis --</p>	<p style="text-align: right;">Page 224</p> <p>1 answer it again.</p> <p>2 MS. O'DELL: You can go ahead and finish.</p> <p>3 Stop interrupting.</p> <p>4 THE COURT REPORTER: I cannot take</p> <p>5 everybody --</p> <p>6 MS. O'DELL: Here's my objection. The</p> <p>7 witness is being interrupted while he's trying to</p> <p>8 respond to the question, and so if there's a question</p> <p>9 pending the doctor is trying to answer, you cannot</p> <p>10 interrupt him.</p> <p>11 MR. HEGARTY: Well, the record's going to</p> <p>12 speak for itself as far as his nonresponsiveness to my</p> <p>13 question.</p> <p>14 MS. O'DELL: Were you finished with your</p> <p>15 answer?</p> <p>16 MR. HEGARTY: I withdrew the question.</p> <p>17 MS. O'DELL: Were you finished with your</p> <p>18 answer?</p> <p>19 THE WITNESS: So what I'm trying to tell you,</p> <p>20 I cannot remember that we did the same exact SNP in</p> <p>21 Jimmy Belotte study and this study.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. That was not my question. My question is specific to</p> <p>24 this study.</p> <p>25 A. To the Jimmy Belotte study.</p>
<p style="text-align: right;">Page 223</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. I object to it's nonresponsive. Doctor, you're not</p> <p>3 answering my question. I'm going to withdraw the</p> <p>4 question.</p> <p>5 MS. O'DELL: Don't cut him off if he's</p> <p>6 finishing --</p> <p>7 MR. HEGARTY: He's not finishing, he's</p> <p>8 answering something else.</p> <p>9 MS. O'DELL: He's trying to answer your</p> <p>10 question.</p> <p>11 MR. HEGARTY: I withdrew the question.</p> <p>12 Listen to my question, Doctor. Does the</p> <p>13 Belotte paper show that the SNPs you looked at are</p> <p>14 associated with increased cancer risk?</p> <p>15 THE WITNESS: Ovarian cancer risk.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Ovarian cancer risk.</p> <p>18 A. So what I'm trying to tell you, according to this</p> <p>19 paper, we only tested limited number of patients.</p> <p>20 Q. Listen to my question.</p> <p>21 A. And I'm not sure, I'm answering, trying to answer.</p> <p>22 Q. You're not answering the question. I'm going to</p> <p>23 withdraw the question.</p> <p>24 A. Can I finish?</p> <p>25 Q. I'm going to withdraw the question. I'm going to</p>	<p style="text-align: right;">Page 225</p> <p>1 Q. Correct.</p> <p>2 A. Yes.</p> <p>3 Q. And reading from your study in the abstract, starting</p> <p>4 on the third line it says we sought to evaluate the</p> <p>5 association of SNPs in key oxidant and anti-oxidant</p> <p>6 enzymes with increased risk in survival in epithelial</p> <p>7 ovarian cancer. So you agree in this study that you</p> <p>8 looked at certain specific SNPs with regard to</p> <p>9 increased risk of ovarian cancer, correct?</p> <p>10 A. Those SNPs, yes.</p> <p>11 Q. You found from your study that those SNPs were not</p> <p>12 associated with increased ovarian cancer risk, correct?</p> <p>13 A. Correct.</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 THE WITNESS: Correct.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Can you cite for me any study that has shown the SNPs</p> <p>18 you report, you discuss in your manuscript to occur in</p> <p>19 women using talc?</p> <p>20 MS. O'DELL: Object to the form.</p> <p>21 THE WITNESS: That the SNP that we used in</p> <p>22 this study --</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. In the manuscript.</p> <p>25 A. In the manuscript, any of these SNPs has been</p>

57 (Pages 222 to 225)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 226</p> <p>1 associated with woman using talc?</p> <p>2 Q. Correct.</p> <p>3 A. I don't know.</p> <p>4 Q. Can you report -- can you cite for me any studies</p> <p>5 showing the enzyme activity that you report to have</p> <p>6 occurred with application of talc use to be in women</p> <p>7 using talc?</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 THE WITNESS: So if other people have done</p> <p>10 the same work that I did with samples from woman who</p> <p>11 got ovarian cancer and they used talc?</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. Can you cite for me any study showing your findings as</p> <p>14 to decrease in the expression of anti-oxidant enzymes</p> <p>15 and the increased expression in pro-oxidant enzymes in</p> <p>16 women using talc?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 THE WITNESS: I can cite to you several</p> <p>19 studies that have indicated the pro-oxidant state and</p> <p>20 the anti-oxidant state in several human, animal, in</p> <p>21 vitro studies of cells with ovarian cancer.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. That's not my question. My question, Doctor, is can</p> <p>24 you cite for me any studies showing your findings as to</p> <p>25 decrease in the expression of anti-oxidants and the</p>	<p style="text-align: right;">Page 228</p> <p>1 THE WITNESS: So other than the similarities</p> <p>2 in the mechanism, direct link with woman who use</p> <p>3 specific talc on that day, I don't know.</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. Let's take a break.</p> <p>6 THE VIDEOGRAPHER: We're going off the record</p> <p>7 at 3:49 p.m.</p> <p>8 (A short recess was taken.)</p> <p>9 THE VIDEOGRAPHER: We're back on the record</p> <p>10 at 4:05 p.m.</p> <p>11 BY MR. HEGARTY:</p> <p>12 Q. Doctor, in looking at your manuscript again Page 13,</p> <p>13 I'm sorry, in looking at your report, sorry, Page 13,</p> <p>14 you describe the cell lines that you use for purposes</p> <p>15 of your experiments, is that correct?</p> <p>16 A. In the cell lines section?</p> <p>17 Q. Yes.</p> <p>18 A. Yes.</p> <p>19 Q. Which of those cell lines -- strike that. What sub</p> <p>20 type of ovarian cancer are these cells?</p> <p>21 A. Sorry. Unknown.</p> <p>22 Q. You don't know whether they're high grade, serous,</p> <p>23 endometrioid, mucinous, clear cell?</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 THE WITNESS: When we purchased these cell</p>
<p style="text-align: right;">Page 227</p> <p>1 increase expression of pro-oxidants in women using talc</p> <p>2 on their bodies?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: I don't know.</p> <p>5 BY MR. HEGARTY:</p> <p>6 Q. Can you cite for me any study showing the results --</p> <p>7 showing any of the results in your manuscript to</p> <p>8 occur -- to have occurred in women applying talc to</p> <p>9 their bodies?</p> <p>10 MS. O'DELL: Object to the form.</p> <p>11 THE WITNESS: So let's go back. I have --</p> <p>12 this is important. Good question. My answer is</p> <p>13 simple. The fact that you -- that talc has been shown</p> <p>14 to elicit a molecular response, that is same response</p> <p>15 that you get in the pro-oxidant state that has been</p> <p>16 published by many people in ovarian cancer, that is, to</p> <p>17 my understanding, link talcum powder to increased risk</p> <p>18 of ovarian cancer.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Object as nonresponsive. Listen to my question,</p> <p>21 Doctor. My question is can you cite for me any studies</p> <p>22 showing the findings you report in your manuscript or</p> <p>23 in your expert report in this case to have occurred or</p> <p>24 been reported in women using talc on their bodies?</p> <p>25 MS. O'DELL: Object to the form.</p>	<p style="text-align: right;">Page 229</p> <p>1 lines from ATCC, they have described them where they</p> <p>2 isolated from and what's the patient and all that, but</p> <p>3 I can't remember exactly which one is which.</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. So are any of these cell lines or have any of these</p> <p>6 cell lines been qualified as high grade serous ovarian</p> <p>7 cancer cell lines?</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 THE WITNESS: I can't remember.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. You say that your experiments used what you call --</p> <p>12 well, you say immortalized human fallopian tube</p> <p>13 epithelial cells FT33, is that right?</p> <p>14 A. FT33, yes.</p> <p>15 Q. Those, as you note in your paper, are immortalized cell</p> <p>16 lines, correct?</p> <p>17 A. Correct.</p> <p>18 Q. And such cell lines are considered abnormal or</p> <p>19 precancerous, isn't that correct?</p> <p>20 A. Not necessarily.</p> <p>21 Q. Well, they were modified to essentially live forever,</p> <p>22 correct?</p> <p>23 A. No, it's not correct.</p> <p>24 Q. Well --</p> <p>25 A. They're modified so they can be consistent.</p>

58 (Pages 226 to 229)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 230</p> <p>1 Q. But normal cells are not immortalized cells, correct?</p> <p>2 A. Correct.</p> <p>3 Q. And to immortalize a cell, you have to fundamentally</p> <p>4 change the cell, correct?</p> <p>5 A. Not correct.</p> <p>6 Q. Well, you typically have to induce something like the</p> <p>7 SV40 DNA tumor virus, correct?</p> <p>8 A. Correct.</p> <p>9 Q. And that alters the makeup of the cells, correct?</p> <p>10 A. Not necessarily.</p> <p>11 Q. Well, it essentially shuts off, for example, the P53</p> <p>12 cell, P53 marker, correct?</p> <p>13 A. Oncogene.</p> <p>14 Q. Oncogene, correct? And these cells carry essentially a</p> <p>15 functional equivalent of four critical oncogenes,</p> <p>16 oncogenic mutations in tumor suppression pathways that</p> <p>17 have been implicated in ovarian carcinogenesis,</p> <p>18 correct?</p> <p>19 A. Let me explain to you, I have been conducting research</p> <p>20 all my career using primary cultures of cells</p> <p>21 established from -- fresh from patient tissues as well</p> <p>22 as immortalized cell lines. The problem with using</p> <p>23 primary cultures, the results cannot be reproduced,</p> <p>24 because if you passage the cells, they change their</p> <p>25 phenotype with passages, so researcher agreed upon this</p>	<p style="text-align: right;">Page 232</p> <p>1 THE WITNESS: So, again, I said one of the</p> <p>2 cell lines, I can't remember which, is from high grade,</p> <p>3 high serous grade. The others are not clearly</p> <p>4 identified by the ATCC information provided. But that</p> <p>5 was not my point of my research. My point of my</p> <p>6 research is to see does talcum powder induces or alter</p> <p>7 oxidative stress markers that we know and we have</p> <p>8 published in several documents that is associated with</p> <p>9 ovarian cancer.</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. Can you cite for me any data showing that the</p> <p>12 concentrations of exposure that you used in your</p> <p>13 experiments are similar or the same as would be</p> <p>14 occurring in women using talc on the perineum?</p> <p>15 A. I can't tell you that.</p> <p>16 Q. Can you cite for me any data that shows that the level</p> <p>17 of concentration of talc that you used in your cell</p> <p>18 studies has ever occurred in women applying talc to</p> <p>19 their bodies?</p> <p>20 MS. O'DELL: Object to the form.</p> <p>21 THE WITNESS: My response to this is I</p> <p>22 consider, according to my studies, I consider talc</p> <p>23 powder to be carcinogenic, and in my understanding of</p> <p>24 biology of cancer, there is no minimum threshold beyond</p> <p>25 which you are protected from developing cancer. Every</p>
<p style="text-align: right;">Page 231</p> <p>1 is the best utility that you have in vitro, that you</p> <p>2 can use immortalized cell lines, at least they are</p> <p>3 all -- their machinery of gene expression is controlled</p> <p>4 and it's consistent and reproducible with passages.</p> <p>5 Q. Did you do anything to correlate the cell lines you</p> <p>6 used to, for example, serous ovarian cancer cells in</p> <p>7 vivo?</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 THE WITNESS: Yeah, so from patients, this is</p> <p>10 our -- my next interest to do, to go -- I have</p> <p>11 extensive experience and expertise in isolating primary</p> <p>12 cultures at zero passages from patients' tissues,</p> <p>13 blood, and the fluid, and it is in my mind to do</p> <p>14 further testing of talcum powder and see if we can</p> <p>15 reproduce the effect on those cells.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. When you say those cells, what do you mean?</p> <p>18 A. The primary freshly established cells from different</p> <p>19 histotypes of ovarian cancer.</p> <p>20 Q. Did you do anything --</p> <p>21 A. Because this is not available commercially.</p> <p>22 Q. Did you do anything to establish that the cell lines</p> <p>23 you were looking at are, for example, high grade</p> <p>24 serious ovarian cancer cell lines?</p> <p>25 MS. O'DELL: Object to the form.</p>	<p style="text-align: right;">Page 233</p> <p>1 time you're exposed to the insult. It's like</p> <p>2 radiation, it is a accumulative, it is registered in</p> <p>3 your body; that's my opinion.</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. So your opinion is that one particle of talc is enough</p> <p>6 to cause inflammation to lead to ovarian cancer?</p> <p>7 A. I did not say that.</p> <p>8 Q. Well, how much talc must there be introduced in vivo to</p> <p>9 cause ovarian cancer?</p> <p>10 A. I don't know.</p> <p>11 Q. At what -- strike that. What data shows that a woman</p> <p>12 using talc will have the same level of talc exposure to</p> <p>13 her ovarian cells or fallopian tube cells as you used</p> <p>14 in your experiments?</p> <p>15 MS. O'DELL: Object to the form.</p> <p>16 THE WITNESS: So when you want to test the</p> <p>17 effect of any substance in the biology of the body, you</p> <p>18 always start with cell cultures, cell lines, so this is</p> <p>19 pretty accepted standard. Now, the amount of exposure</p> <p>20 in cell lines, because it's direct and it is an</p> <p>21 isolated environment, it is definitely not -- does not</p> <p>22 correlate with the in vivo and how much you will get</p> <p>23 with that exposure. The answer is I don't know how</p> <p>24 much a woman need to be exposed and for how long to</p> <p>25 develop ovarian cancer in response to talcum powder</p>

59 (Pages 230 to 233)

Ghassan Saed, Ph.D.

Page 234	Page 236
<p>1 use. But what I do know, talcum powder induces -- is a</p> <p>2 carcinogenic and induces similar response to the</p> <p>3 profile that we see in pro-oxidant state that we</p> <p>4 extensively characterize in studies in ovarian cancer</p> <p>5 in our laboratory and others.</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. It induces -- talc induces a similar response to the</p> <p>8 profile that you see in pro-oxidant state in the cell</p> <p>9 cultures that you experimented, correct, experimented</p> <p>10 with, correct?</p> <p>11 MS. O'DELL: Object to the form.</p> <p>12 THE WITNESS: We and others have reported,</p> <p>13 for example, there was a report showing that patients</p> <p>14 with ovarian cancer, their blood is contain high levels</p> <p>15 of pro-oxidants, so that's an indication that ovarian</p> <p>16 cancer -- as a result of getting ovarian cancer your</p> <p>17 blood is -- have high levels of oxidants that we</p> <p>18 characterized. And there are many other studies that</p> <p>19 have shown that -- in vivo that there is an association</p> <p>20 between oxidative stress and the risk of developing</p> <p>21 ovarian cancer.</p> <p>22 BY MR. HEGARTY:</p> <p>23 Q. But none of those studies have shown those effects in</p> <p>24 women using talc, correct?</p> <p>25 A. I don't know.</p>	<p>1 A. The blood of woman with ovarian cancer.</p> <p>2 Q. No studies have reported those same results in the</p> <p>3 blood of women who do not have ovarian cancer but are</p> <p>4 using talc on their bodies, correct?</p> <p>5 A. One more time.</p> <p>6 MS. O'DELL: Object to the form.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. No studies have reported those same results in the</p> <p>9 blood of women who do not have ovarian cancer that are</p> <p>10 using talc on their bodies, correct?</p> <p>11 A. I don't know.</p> <p>12 Q. When you say you don't know, what do you mean?</p> <p>13 A. I don't know if there are studies. So you talking --</p> <p>14 are you referring to the study -- I'm only referring to</p> <p>15 patients with ovarian cancer, blood, their blood have</p> <p>16 high oxidants. Now, if normal, talk about normal</p> <p>17 people with normal woman with no ovarian cancer, they</p> <p>18 have -- I don't know, if they use talc they will have</p> <p>19 higher level of oxidants, maybe that's something we</p> <p>20 need to do.</p> <p>21 Q. You don't know -- you're not aware of any data showing</p> <p>22 high oxidant levels in women using talc who do not have</p> <p>23 ovarian cancer?</p> <p>24 A. I would be very much interested to do it.</p> <p>25 Q. You're not aware of any such studies?</p>
Page 235	Page 237
<p>1 Q. You don't know of any such studies?</p> <p>2 A. I don't know if those studies included in their</p> <p>3 population women that who have used talc or not.</p> <p>4 Q. You can't site for me any studies that have shown the</p> <p>5 levels of pro-oxidant or anti-oxidant states that you</p> <p>6 report in your papers in women using talc, correct?</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 THE WITNESS: I just answered you.</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. And the answer is no?</p> <p>11 A. No, no, I just -- my previous answer is the same.</p> <p>12 Q. Which is what?</p> <p>13 A. Which I said oxidative -- there have been shown that in</p> <p>14 the blood of a woman with ovarian cancer, there is an</p> <p>15 elevated levels of oxidants, and we're saying that if</p> <p>16 talcum powder induces oxidative stress, alter oxidative</p> <p>17 levels and redox balance by increasing oxidants and</p> <p>18 decreasing anti-oxidants, according to our data, that</p> <p>19 is an indication that it is doing -- manifesting the</p> <p>20 pathogenesis of ovarian cancer.</p> <p>21 Q. The studies you're referring to --</p> <p>22 MR. KLATT: Objection, nonresponsive.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. The studies you're referring to have been reported to</p> <p>25 have occurred in women with ovarian cancer, correct?</p>	<p>1 A. No.</p> <p>2 Q. Can you can cite for me anyone in the scientific</p> <p>3 community who has accepted that talcum powder causes</p> <p>4 ovarian cancer by the mechanism that you refer to in</p> <p>5 your report?</p> <p>6 A. Give names?</p> <p>7 Q. Yes.</p> <p>8 A. The co-authors of my manuscript.</p> <p>9 Q. Anyone else?</p> <p>10 A. I'm not aware, this is a very recent study.</p> <p>11 Q. Is it your testimony that the scientific community has</p> <p>12 accepted your opinion as establishing the causal</p> <p>13 mechanism between talc and ovarian cancer?</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 THE WITNESS: My opinion is not out there</p> <p>16 yet, it's -- this is -- the manuscript is still under</p> <p>17 press, it's in press so it's not really out for the</p> <p>18 readers.</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. You agree that the medical community has not generally</p> <p>21 accepted that talc use causes ovarian cancer?</p> <p>22 MS. O'DELL: Object to the form.</p> <p>23 THE WITNESS: That they accept --</p> <p>24 BY MR. HEGARTY:</p> <p>25 Q. Yes.</p>

60 (Pages 234 to 237)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 238</p> <p>1 A. Which community you talking about?</p> <p>2 Q. Well, I'm talking about the medical community.</p> <p>3 A. The doctors?</p> <p>4 Q. Doctors.</p> <p>5 A. Researchers?</p> <p>6 Q. Researchers.</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. You agree that the medical community, doctors and</p> <p>10 researchers, have not generally accepted that talc use</p> <p>11 causes ovarian cancer?</p> <p>12 MS. O'DELL: Object to the form.</p> <p>13 THE WITNESS: I don't know, I really don't</p> <p>14 know if they do or not.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. You include in your report, in particular in the</p> <p>17 summary of your report over on Page 20, in Paragraphs 5</p> <p>18 and 6 that use of Johnson's Baby Powder can cause</p> <p>19 ovarian cancer, and in Paragraph 6 can worsen the</p> <p>20 prognosis of patients with ovarian cancer, correct?</p> <p>21 A. Correct.</p> <p>22 Q. By what methodology did you use to come to those</p> <p>23 opinions?</p> <p>24 A. Okay. So I have to distinguish between opinions versus</p> <p>25 conclusion from results. So here I cite my personal</p>	<p style="text-align: right;">Page 240</p> <p>1 ovarian cancer is in a hypothesis is a cause and</p> <p>2 effect. My opinion is based on that.</p> <p>3 Q. Are the methods that you used to reach those opinions</p> <p>4 published anywhere?</p> <p>5 A. The method that we used to do -- to test the effect of</p> <p>6 talcum powder on reactive oxygen species, oxidative</p> <p>7 stress, and inflammation is very basic methodology --</p> <p>8 let me finish, please -- basic methodology that is</p> <p>9 known since early 70s or even mid 70s, some of it,</p> <p>10 ELISA is a very well method, very standard method, we</p> <p>11 and others use this all the time. PCR is another well</p> <p>12 established method. Every single study now you see PCR</p> <p>13 all over the places. So what the methodology that we</p> <p>14 employed here is really standard methodology, and I'm</p> <p>15 really surprised that this work that has not been done</p> <p>16 till now.</p> <p>17 Q. Are your opinions based solely on the experiments that</p> <p>18 you did that are set out in your manuscript?</p> <p>19 MS. O'DELL: Object to the form.</p> <p>20 THE WITNESS: My opinion is based on the data</p> <p>21 from this manuscript and this work that I did and,</p> <p>22 also, in published literature that identify the</p> <p>23 pattern, the signature of pro-oxidants in ovarian</p> <p>24 cancer.</p> <p>25</p>
<p style="text-align: right;">Page 239</p> <p>1 opinion. Now, my personal opinion is based on my data</p> <p>2 that I got here. The data that I tested, my</p> <p>3 methodology that I used, and the results of this study</p> <p>4 strongly divert -- pushed my opinion towards this.</p> <p>5 Q. My question is a little bit different, Doctor. By what</p> <p>6 published methodology did you use to reach your</p> <p>7 causation opinions in this case?</p> <p>8 MS. O'DELL: Objection, asked and answered.</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. For example, are you familiar with the Bradford Hill</p> <p>11 factors or criteria?</p> <p>12 A. Okay, so are you referring to epidemiological studies?</p> <p>13 Q. No, let me back up. Have you ever heard of the</p> <p>14 Bradford Hill factors?</p> <p>15 A. No.</p> <p>16 Q. Is there -- can you cite for me any published</p> <p>17 methodology that you used to look at the data, look at</p> <p>18 your experiments, and come to the opinions that you set</p> <p>19 out in the summary of your report?</p> <p>20 A. Yes. I just said to you that based on my results and</p> <p>21 my previous finding, previous publications with other</p> <p>22 publications from other laboratories, that all agreed</p> <p>23 that a factor that causes inflammation and alter these</p> <p>24 signature factors, the signature for reactive oxygen</p> <p>25 species the way it does it for -- that simulates</p>	<p style="text-align: right;">Page 241</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. The opinions that you set out in Paragraphs 5 and 6</p> <p>3 have never been published in the peer-reviewed</p> <p>4 literature, correct?</p> <p>5 A. My opinion?</p> <p>6 MS. O'DELL: Object to the form.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. Yes. The opinions in Paragraphs 5 and 6 have never</p> <p>9 been published in the peer-reviewed literature,</p> <p>10 correct?</p> <p>11 MS. O'DELL: Object to the form.</p> <p>12 THE WITNESS: I don't understand published</p> <p>13 means.</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. Well, published in peer-reviewed literature.</p> <p>16 A. As what, as a manuscript?</p> <p>17 Q. In any format. You have never set out the opinions in</p> <p>18 Paragraphs 5 and 6 in any public --</p> <p>19 A. So I read this somewhere else?</p> <p>20 Q. Somewhere else.</p> <p>21 A. I never read this somewhere else.</p> <p>22 Q. So you have never provided your opinions to any of your</p> <p>23 peers in any published article, correct?</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 THE WITNESS: That's very general. What do</p>

61 (Pages 238 to 241)

Ghassan Saed, Ph.D.

Page 242	Page 244
<p>1 you mean?</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. Well, my question is the opinions you said in</p> <p>4 Paragraphs 5 and 6 have never been published anywhere,</p> <p>5 correct?</p> <p>6 MS. O'DELL: Object to the form.</p> <p>7 THE WITNESS: No. What I'm saying is these</p> <p>8 are my own, my own opinion, my own writing, writing.</p> <p>9 If someone stole this and published it, I'm not aware</p> <p>10 of that, but this is my language, my words, my opinion,</p> <p>11 and this is based, as I told you and as I mentioned, on</p> <p>12 my data and the results of this study as well as what</p> <p>13 is known for the strong link of ovarian cancer and</p> <p>14 oxidative stress.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Listen to my question. You have never published the</p> <p>17 opinions of yours set out in Paragraphs 5 and 6 of your</p> <p>18 report, correct?</p> <p>19 MS. O'DELL: Object to the form.</p> <p>20 THE WITNESS: I have published that ovarian</p> <p>21 cancer is characterized and ovarian cancer cells</p> <p>22 manifest a pro-oxidant state, I have published that --</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. Nowhere have you --</p> <p>25 A. -- that can lead to a mechanism to identify --</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. By you.</p> <p>3 A. My opinion?</p> <p>4 Q. Yes.</p> <p>5 A. Has never been -- I never said this before, this</p> <p>6 study --</p> <p>7 Q. Correct.</p> <p>8 A. -- is that what you're saying?</p> <p>9 Q. Before your report.</p> <p>10 A. About specifically talc and ovarian cancer?</p> <p>11 Q. Yes.</p> <p>12 A. Yes.</p> <p>13 Q. And you never said in any other writing that use of</p> <p>14 baby powder worsens the prognosis for patients with</p> <p>15 ovarian cancer?</p> <p>16 A. I didn't write about this subject prior to starting</p> <p>17 these experiments.</p> <p>18 Q. Even in your manuscript, you don't include the opinion</p> <p>19 that talcum powder use causes ovarian cancer, correct?</p> <p>20 A. You cannot include opinions in manuscripts.</p> <p>21 Q. That's not my question. My question is that your</p> <p>22 manuscript does not include your opinion that talcum</p> <p>23 powder use causes ovarian cancer, correct?</p> <p>24 A. I answered you.</p> <p>25 MS. O'DELL: Object to the form.</p>
Page 243	Page 245
<p>1 actually, we did identify a pathogenesis, a mechanism</p> <p>2 that involves these specific pro-oxidants to be unique</p> <p>3 mechanism of survival in ovarian cancer.</p> <p>4 Q. Nowhere have you published in any literature that talc</p> <p>5 use can cause ovarian cancer, correct?</p> <p>6 A. Previous to this study?</p> <p>7 Q. This study -- your report has not been published,</p> <p>8 correct?</p> <p>9 A. No.</p> <p>10 Q. It's not been peer reviewed, correct?</p> <p>11 A. No, my report? No.</p> <p>12 Q. What you say in your report that Johnson's Baby Powder</p> <p>13 exposure can cause ovarian cancer has never been</p> <p>14 published in the medical literature, correct?</p> <p>15 MS. O'DELL: Object to the form.</p> <p>16 THE WITNESS: My report has not published</p> <p>17 yet.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. The opinions in your report that talcum powder exposure</p> <p>20 can cause ovarian cancer have never been published,</p> <p>21 correct?</p> <p>22 MS. O'DELL: Object to the form, by him or</p> <p>23 others?</p> <p>24 THE WITNESS: Okay. By me?</p> <p>25</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. Am I correct?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: Excuse me, one more time. I</p> <p>5 said in manuscripts you are not allowed to publish to</p> <p>6 draw opinions, in manuscripts you're allowed to draw</p> <p>7 conclusions, so conclusions are different than</p> <p>8 opinions. Conclusions are based solely on the results.</p> <p>9 Opinions, you can say it, if you say it, then if they</p> <p>10 accept it, it's fine, but opinions are based on not</p> <p>11 just the study but your opinion in it, too, based on</p> <p>12 your expertise.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Move to strike as nonresponsive. Doctor, listen to my</p> <p>15 question.</p> <p>16 A. I'm trying.</p> <p>17 Q. Your manuscript does not include your opinion that baby</p> <p>18 powder exposure can cause ovarian cancer, you don't say</p> <p>19 that in your manuscript, correct?</p> <p>20 MS. O'DELL: Object to the form.</p> <p>21 THE WITNESS: I have to look in my</p> <p>22 manuscript.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. Doctor, you can't tell me sitting here today --</p> <p>25 A. I'm sorry, I can't remember everything I wrote.</p>

62 (Pages 242 to 245)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 246</p> <p>1 Q. Listen to my question.</p> <p>2 A. Okay.</p> <p>3 Q. Does your manuscript say that Johnson's Baby Powder</p> <p>4 exposure can cause ovarian cancer?</p> <p>5 A. In this specific language?</p> <p>6 Q. Yes.</p> <p>7 A. I have to look.</p> <p>8 Q. Okay. How about do you have to look --</p> <p>9 A. Because you're asking me -- it's not fair, you're</p> <p>10 asking me for a specific language, and I am saying, I'm</p> <p>11 answering back saying that my opinion, it does. Based</p> <p>12 on the results in my manuscript, I concluded that it</p> <p>13 will -- it has increased risk of ovarian cancer, yes,</p> <p>14 somewhere. I have to read. That's what I'm saying. I</p> <p>15 don't remember where I did that.</p> <p>16 Q. Okay.</p> <p>17 A. I have to go and refer to the manuscript. Is that</p> <p>18 fair?</p> <p>19 Q. In Paragraph 6, what do you mean when you say Johnson's</p> <p>20 Baby Powder exposure worsens the prognosis for patients</p> <p>21 with ovarian cancer?</p> <p>22 A. Oh, we're still here? I'm sorry, where --</p> <p>23 Q. Paragraph 6 in your report.</p> <p>24 A. Oh, my report now?</p> <p>25 Q. On Page 21.</p>	<p style="text-align: right;">Page 248</p> <p>1 A. What I know is CA-125 is accepted, it's the only</p> <p>2 accepted marker because that's the only one available,</p> <p>3 although not specific to ovarian cancer, but we use it</p> <p>4 for preliminary following up treatment and diagnosis.</p> <p>5 You can, you know, I can defer to a clinician to answer</p> <p>6 more about that, but what I know is that it is not</p> <p>7 specific to ovarian cancer, endometriosis can increase</p> <p>8 levels of CA-125, some other inflammatory can do that.</p> <p>9 Q. Doctor, listen to my question. My question was that no</p> <p>10 studies have correlated CA-125 levels with ovarian</p> <p>11 cancer risk, correct?</p> <p>12 MS. O'DELL: Object to the form.</p> <p>13 THE WITNESS: Again, I told you, I'm not an</p> <p>14 expert in CA-125 and its clinical utility. What I'm</p> <p>15 trying to tell you is that CA-125 is a marker that</p> <p>16 clinician, OB-GYN oncologist, use to help them diagnose</p> <p>17 and follow up the effect of -- the efficacy of</p> <p>18 treatment. Now, this molecule is a marker of</p> <p>19 inflammation, and we and our results shows clearly that</p> <p>20 talcum powder can induce this inflammatory marker that</p> <p>21 has been clinically used by clinicians to help them</p> <p>22 diagnose and, more importantly, follow up the efficacy</p> <p>23 of treatment.</p> <p>24 BY MR. HEGARTY:</p> <p>25 Q. Dr. Listen, to my question. I'll ask a different</p>
<p style="text-align: right;">Page 247</p> <p>1 A. 21?</p> <p>2 Q. Yes.</p> <p>3 A. Okay, yes, so same, same discussion.</p> <p>4 Q. Listen to my question. My question is what do you mean</p> <p>5 that Johnson's Baby Powder exposure worsens the</p> <p>6 prognosis for patients with ovarian cancer?</p> <p>7 A. Can I answer?</p> <p>8 Q. Yes.</p> <p>9 A. Okay. So based on our results here, we have shown that</p> <p>10 there is a dose response effect of talcum powder on</p> <p>11 these key markers of oxidative stress. That's my</p> <p>12 answer.</p> <p>13 Q. And how do those key -- strike that.</p> <p>14 A. Dose response.</p> <p>15 Q. What is the measure that you apply for worsening the</p> <p>16 prognosis of ovarian cancer?</p> <p>17 A. Is increasing redox balance -- reactive oxygen species,</p> <p>18 tilting the balance, adding more inflammatory markers</p> <p>19 with time with exposure.</p> <p>20 Q. You make reference in your paper to CA-125, when I say</p> <p>21 your paper I'm talking about your report and in your</p> <p>22 manuscript, correct?</p> <p>23 A. Correct.</p> <p>24 Q. No studies have correlated CA-125 levels with ovarian</p> <p>25 cancer risk, correct?</p>	<p style="text-align: right;">Page 249</p> <p>1 question. CA-125 is used only in monitoring disease</p> <p>2 progress in women who have ovarian cancer, correct?</p> <p>3 A. I don't know if that's the only use of it.</p> <p>4 Q. It's not used to diagnose ovarian cancer, correct?</p> <p>5 A. I don't know. I'm not a clinician. I really don't</p> <p>6 know.</p> <p>7 Q. It's not used to determine the cause of ovarian cancer,</p> <p>8 is it?</p> <p>9 A. I don't know, you can ask. I defer these questions to</p> <p>10 a physician, OB-GYN oncologist who can answer you. I</p> <p>11 am a biological chemist, I'm molecular biologist. I</p> <p>12 will answer you within my expertise.</p> <p>13 Q. CA-125 is not used to determine whether women have an</p> <p>14 inflammatory process going on in their bodies, correct?</p> <p>15 MS. O'DELL: Object to the form.</p> <p>16 THE WITNESS: If the levels of CA-125 is</p> <p>17 increased in a woman, my understanding, this is a</p> <p>18 strong indication to an inflammatory process going on,</p> <p>19 yes.</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. You're talking about in women who have ovarian cancer?</p> <p>22 A. It is also increased in women with, yes, with ovarian</p> <p>23 cancer.</p> <p>24 Q. CA-125 is not used to diagnose whether inflammation is</p> <p>25 going on in women who do not have ovarian cancer?</p>

63 (Pages 246 to 249)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 250</p> <p>1 MS. O'DELL: Object to the form.</p> <p>2 THE WITNESS: Ask the OB-GYN oncologist.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. If you look at your manuscript over at Table 2.</p> <p>5 A. Okay.</p> <p>6 Q. What is the mechanism by which talc causes the SNP</p> <p>7 changes or switches you report in this table?</p> <p>8 A. Do I know the mechanism that does that?</p> <p>9 Q. Yes.</p> <p>10 A. Precisely, no, but we have previously published a</p> <p>11 report showing that development of chemoresistance,</p> <p>12 which is an ovarian cancer -- ovarian cancer disease</p> <p>13 that is characterized by even further enhancement of</p> <p>14 oxidative stress, we have published that is associated</p> <p>15 with these SNPs. So the precise mechanism I'm</p> <p>16 proposing that according to my understanding is that</p> <p>17 the higher the oxidative stress level, the more chances</p> <p>18 that you induce these switches, these mutations.</p> <p>19 Q. Can you cite for me any published data showing these</p> <p>20 same or similar type of switches in cells that have</p> <p>21 been exposed to any other substance, whether it's a</p> <p>22 carcinogen or otherwise?</p> <p>23 A. If there is any other substance that induces mutations?</p> <p>24 Q. That induces the kinds of mutations that you report</p> <p>25 here.</p>	<p style="text-align: right;">Page 252</p> <p>1 results in further inhibition of apoptosis and increase</p> <p>2 of survival -- apoptosis, cell death, cell death.</p> <p>3 Q. Doctor, listen to my question. Can you cite for me any</p> <p>4 other substances that have ever been reported to cause</p> <p>5 these kinds of mutations after 72 hours of treatment in</p> <p>6 cell cultures?</p> <p>7 A. I cannot recall now.</p> <p>8 Q. The cell cultures you used are at high oxygen levels,</p> <p>9 are at high oxygen levels than in vivo, correct?</p> <p>10 A. I don't understand the question.</p> <p>11 Q. Well, the cell cultures that you use for purpose of</p> <p>12 your experiments are at higher oxygen levels than these</p> <p>13 cells would experience in vivo, correct?</p> <p>14 A. You mean the whole world of researcher used?</p> <p>15 Q. No, that the cell lines that you used --</p> <p>16 A. The whole world of researcher used, same 20 percent</p> <p>17 oxygen in CO2, okay, it's the same exact standard</p> <p>18 protocol all over the research field. I never heard</p> <p>19 that there's anyone culturing cancer cells in a</p> <p>20 different environment than -- we have done many work</p> <p>21 looking at the effect of hypoxia and hyperoxia on the</p> <p>22 expression of these markers in normal cells. We have</p> <p>23 done several, I have published several publications.</p> <p>24 Let me help you with this information.</p> <p>25 Q. Let me withdraw the question, Doctor. You're going on</p>
<p style="text-align: right;">Page 251</p> <p>1 A. In the literature, there are several, many substance</p> <p>2 that have been associated with certain mutations in the</p> <p>3 DNA, yes.</p> <p>4 Q. Well, let me ask it a different way. Can you cite for</p> <p>5 me any substance that has been shown to cause -- or</p> <p>6 strike that, let me back up. Is it your testimony that</p> <p>7 what you're reporting here -- that you're reporting</p> <p>8 here that talc causes mutations in DNA in 72 hours?</p> <p>9 MS. O'DELL: Object to form.</p> <p>10 THE WITNESS: My results indicates that if</p> <p>11 you treat cells with talcum powder for 72 hours and</p> <p>12 look for whatever showed positive here, some showed</p> <p>13 negative, that there is an induction of this specific</p> <p>14 mutation in response to the treatment of talc.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Can you cite for me any other substance that's ever</p> <p>17 been reported to cause these kinds of mutations after</p> <p>18 72 hours of treatment in cell cultures?</p> <p>19 A. I cannot recall now. I'm sure I can find them. There</p> <p>20 are many in the literature, by the way, but I am citing</p> <p>21 you specifically my work that I have done in my</p> <p>22 laboratory that was shown that when oxidative stresses</p> <p>23 further -- increased and enhanced, we develop some of</p> <p>24 these mutations, cell would acquire these mutations in</p> <p>25 certain key pro-oxidants and anti-oxidant enzymes that</p>	<p style="text-align: right;">Page 253</p> <p>1 not answering my question.</p> <p>2 A. I'm trying.</p> <p>3 Q. No, you're not answering my question.</p> <p>4 A. I'm answering what I understood.</p> <p>5 Q. The tests you conducted, the experiments you conducted</p> <p>6 are higher oxygen levels than cells are exposed to in</p> <p>7 vivo, correct?</p> <p>8 A. I'm trying to -- no, it's not, I'm trying to explain it</p> <p>9 to you.</p> <p>10 Q. They're not higher levels?</p> <p>11 A. What do you mean by in vivo? In blood?</p> <p>12 Q. Cells inside the body.</p> <p>13 A. It's PO20, it's the same.</p> <p>14 Q. So the oxygen levels of the cells in the body are at</p> <p>15 the same level as the oxygen levels of the cells in</p> <p>16 your cell --</p> <p>17 MS. O'DELL: Objection.</p> <p>18 THE WITNESS: No, I said the oxygen levels in</p> <p>19 the circulation in vivo is the same as the oxygen level</p> <p>20 in the media where we culture cells. This is where we</p> <p>21 get it from, not from a dream, we got it from there.</p> <p>22 Now, if you're referring to the oxygen levels that</p> <p>23 cells are exposed to in tissues --</p> <p>24 BY MR. HEGARTY:</p> <p>25 Q. Yes.</p>

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 254</p> <p>1 A. Nobody knows that. There's only one single report that 2 says in a physiology book where I was a student at that 3 time, they're saying 6 percent, 5 to 6 percent. But 4 that is inside the tissues without the circulation. 5 Now, you have to remember all cells get food from 6 circulation, so you will have eventually enough oxygen 7 that you're getting for. So this is within my 8 expertise, I've done many, many work on this. 9 Q. The glucose levels in your cell cultures are also 10 higher than what the cells would experience in the 11 body, correct? 12 A. The glucose level that we use in the media, again, is 13 standard with all of any researcher on the face of this 14 earth use. It is standard accepted levels. So if you 15 are trying to make that what we use is different than 16 in vivo, it could be, but this is what agreed upon in 17 the research community. 18 Q. Move to strike as nonresponsive. Listen to my 19 question, Doctor. Are the glucose levels in cell 20 cultures that you performed for purposes of your 21 experiments higher than the glucose levels of the cells 22 inside the body? 23 MS. O'DELL: Objection, form, asked and 24 answered. 25 THE WITNESS: I don't know.</p>	<p style="text-align: right;">Page 256</p> <p>1 that -- why do your control cell lines have such high 2 levels of Caspase? 3 A. So it is known, as we have previously published and all 4 other researcher who was interested in this, that 5 cancer cells have almost shut down their apoptosis, 6 because they have to increase their survival. So when 7 you compare apoptosis of any cancer cell from any type, 8 okay, you will find their apoptosis is way, way lower 9 than normal cells. Normal cells, they have -- they 10 divide, they die, they reproduce, all the times. 11 Cancer cells don't like to die, they love to survive, 12 so their apoptotic pathways are not normal. 13 Q. So then what you're reporting here are as to control 14 cells, controls in ovarian cancer cells? 15 A. No, no. The controls here are macrophages, it's normal 16 ovarian epithelial, and fallopian tube epithelial. 17 Q. Why are your -- the Caspase levels higher in your 18 controls than in your talc treated cells? 19 A. Maybe I missed the question. I just answered that, 20 right? 21 Q. Well, I don't think you answered my question. 22 A. Well, let me try to understand what you want. 23 Q. Well, the Figure 6 shows that the controls have higher 24 levels of Caspase-3 than the talc treated cells, 25 correct?</p>
<p style="text-align: right;">Page 255</p> <p>1 BY MR. HEGARTY: 2 Q. Aren't the cells that you experiment with in a 3 hyperglycemic state? 4 A. I just told I don't know. 5 Q. Can high glucose levels cause an increase in reactive 6 oxygen species? 7 A. Okay, so -- 8 Q. Can they or can't they? 9 MS. O'DELL: He gets to -- you asked the 10 question, he -- 11 THE WITNESS: There is no yes or no answer. 12 BY MR. HEGARTY: 13 Q. Okay. I withdraw the question. 14 A. If you are trying to take me to say "yes" or "no" to 15 something that I have explanation for, I think you 16 should just listen to my explanation. I am actually -- 17 this field, this field is my field, and I will tell 18 you, okay, I'll tell you that the cancer cells are -- 19 their metabolism is different than normal cells because 20 their uptake, their uptake of glucose, they don't go in 21 aerobic metabolism, they go anaerobic metabolism, so it 22 doesn't matter how much glucose you give them, it 23 doesn't really. 24 Q. If you look over on Page -- Figure 6 of your 25 manuscript, why do your normal cell lines -- strike</p>	<p style="text-align: right;">Page 257</p> <p>1 MS. O'DELL: Object to the form. Do you need 2 to see that in color, Doctor? Would that help? 3 THE WITNESS: Yes, please. 4 MS. O'DELL: (Handing.) 5 THE WITNESS: So here, the control cells, so 6 let's look at the normal cells -- okay, the normal 7 cells -- well, that's the whole idea, the whole 8 objective of this research, the whole point, that if 9 you treat with talcum powder, talcum powder induces -- 10 enhances oxidative stress that stimulate apoptosis 11 pathways and shut them down, inhibit them. So in the 12 treated -- in the treated, they should be lower than 13 the untreated. 14 BY MR. HEGARTY: 15 Q. What are the normal Caspase levels in a normal cell? 16 A. It's different for different cell types, but normal 17 cell types, normal cells always have way higher 18 apoptosis than cancer cells. This is well known 19 phenomenon. 20 Q. At the levels you report in Figure 6? 21 A. It depends on the cells, again, I said, it depends on 22 the cell type. So maybe other people in their work, 23 they have different response. But it is accepted that 24 is cancer cells, all cancer cells, no exception, have 25 lower, way lower apoptosis than normal cells. I</p>

65 (Pages 254 to 257)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 258</p> <p>1 published previously that lower apoptosis in cancer 2 cells is due to overexpression of nitric oxide 3 synthase, which is a pro-oxidant, and myeloperoxidase, 4 which is another pro-oxidant, and they work together to 5 nitrilotate Caspase-3, that's what we're measuring 6 here, and shutting down its activity and its apoptosis. 7 Q. The type of SNP changes that you report in your 8 manuscript can be detected by Sanger sequencing, 9 correct? 10 A. Now, that's -- we're moving from this? 11 Q. Yes. 12 A. Okay, sorry, I thought we were still here. 13 Q. Different question. 14 A. Okay. Give me a -- 15 Q. Can you answer my question? 16 A. What's the question? 17 Q. The type of SNP changes that you report in your 18 manuscript can be detected by Sanger sequencing, 19 correct? 20 A. Yes. 21 Q. Did you use this method? 22 A. No. 23 Q. Have you ever used Sanger sequencing to detect changes 24 in SNPs or to analyze SNPs? 25 A. You mean gene mutations?</p>	<p style="text-align: right;">Page 260</p> <p>1 A. I believe we have published a different study with the 2 same subject. You want me to look for it? 3 Q. Not right now. 4 A. Okay, but we did publish that before. 5 Q. Did you measure changes in peroxide levels as part of 6 your experiment? 7 A. Excuse me, one more time. 8 Q. Did you measure changes in peroxide levels as part of 9 your experiments? 10 A. What is peroxide level? 11 Q. Hydrogen peroxide level. 12 A. Oh, H2O2? 13 Q. Yes. 14 A. Indirectly, yes. 15 Q. When you sat indirectly, what do you mean? 16 A. Because it's the substrate for an enzyme, so it's an 17 enzymatic reaction. 18 Q. Did you find any changes in hydrogen peroxide levels in 19 the talc treated cells? 20 A. We didn't measure the actual H2O2 levels in these 21 cells. We did measure the catalase activity that turns 22 H2O2 to H2O, which is the turnover. 23 Q. Have you ever measured hydrogen peroxide levels in 24 these types of studies? 25 A. Have I measured -- H2O2, I don't think so, directly,</p>
<p style="text-align: right;">Page 259</p> <p>1 Q. Gene mutations, yes. 2 A. So the answer is nowadays no one does this from the 3 research community. There are core facilities, labs 4 that you send to. You don't need -- I don't believe 5 people will in their laboratories that sit down and do 6 experiments that takes forever. They just rather send 7 it to this lab, we have -- every university have this, 8 we have a core facility that you can send to, and then 9 they will do it for you and they will give you the 10 results, so you don't need to do it yourself. 11 Q. Is Sanger sequencing considered more accurate than 12 TaqMan? 13 A. Pretty much I think they are the same level. 14 Q. And you said you have used Sanger sequencing before? 15 A. No, personally no. 16 Q. What is the mechanism by which the SNP change, as you 17 say, talc induces cause the redox changes that you 18 report in your study? 19 A. So talcum powder treatment increase, induces the 20 specific mutations that are associated with altering 21 the activity of the redox, the key oxidant enzymes that 22 the results will be altering the oxidated balance. 23 Q. And what studies show that? 24 A. This study. 25 Q. What studies besides your study, your manuscript?</p>	<p style="text-align: right;">Page 261</p> <p>1 directly H2O2 levels, no. 2 Q. You've referred earlier to the fact that you have 3 published abstracts that have talked about the results 4 of the experiments we've marked as -- let me start 5 again. You mentioned earlier that you published the 6 results of the experiments documented in lab notebooks 7 marked as Exhibits 2 and 3 in the past, correct? 8 MS. O'DELL: Object to the form. 9 BY MR. HEGARTY: 10 Q. You didn't get that question? 11 A. No. 12 Q. You mentioned you had published the results of your 13 experiments that we've been talking about here today in 14 abstracts, correct? 15 A. There was an SRI abstract that I presented at the SRI 16 meeting March of '18, last year, that was reflected or 17 involved this initial work that we did with Fisher with 18 PCR. 19 Q. And you also presented at an SGO meeting, correct? 20 A. I believe I did. 21 Q. In either case did you disclose that you were a 22 consultant for plaintiffs counsel in litigation, 23 correct? 24 A. When you submit the abstract, they will not let you 25 proceed until you -- yes, the answer is yes.</p>

66 (Pages 258 to 261)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 262</p> <p>1 Q. The answer is that you did disclose?</p> <p>2 A. I did disclose, yes.</p> <p>3 Q. It's not included -- the disclosure's not included in</p> <p>4 the abstracts, correct.</p> <p>5 A. They don't have it like that, no.</p> <p>6 Q. When you presented the abstracts, did this involve</p> <p>7 standing there in front of a poster?</p> <p>8 A. Yes.</p> <p>9 Q. And did people come up and talk to you about your</p> <p>10 posters?</p> <p>11 A. Yes.</p> <p>12 Q. Did you identify yourself as an expert in litigation</p> <p>13 involving talc and ovarian cancer?</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 THE WITNESS: No one asked me.</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. Did you tell them that you were?</p> <p>18 A. I didn't volunteer anything.</p> <p>19 Q. Have you provided your opinions in this case to anyone</p> <p>20 outside of plaintiff's counsel or your colleagues on</p> <p>21 the manuscript?</p> <p>22 MS. O'DELL: Object to the form.</p> <p>23 THE WITNESS: So you just asked me if I</p> <p>24 discussed this with people that I presented to in the</p> <p>25 whole meeting.</p>	<p style="text-align: right;">Page 264</p> <p>1 specific.</p> <p>2 Q. Are your opinions in this case premised on talc</p> <p>3 containing asbestos?</p> <p>4 A. (Witness shakes head from side to side.) I don't know,</p> <p>5 no, my opinion has nothing to do with that.</p> <p>6 Q. Are your opinions in any way based on talc having heavy</p> <p>7 metals in them?</p> <p>8 A. No.</p> <p>9 Q. Is it your opinion that talc without asbestos or</p> <p>10 without any other constituents can cause ovarian</p> <p>11 cancer?</p> <p>12 A. The one that I got in this bottle from J & J, yes.</p> <p>13 Q. Is it your opinion, Doctor, that your studies or your</p> <p>14 experiments show that talc increases cellular</p> <p>15 proliferation and decreases apoptosis?</p> <p>16 A. I'm sorry, one more time, one more time.</p> <p>17 Q. Sure. Is it your opinions or is it your opinion that</p> <p>18 talc use increases cellular proliferation and decreases</p> <p>19 apoptosis in normal ovarian cells?</p> <p>20 A. My finding clearly indicates that if you treat cells</p> <p>21 with talcum powder, the results of this treatment is a</p> <p>22 dose response increase in proliferation and decrease in</p> <p>23 apoptosis, yes.</p> <p>24 Q. In normal ovarian cells?</p> <p>25 A. In normal and in cancer cells.</p>
<p style="text-align: right;">Page 263</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. Well, let me ask it a different way because I can see</p> <p>3 where you're confused. We talked about your opinions</p> <p>4 that talc can cause ovarian cancer.</p> <p>5 A. Oh, so we're going back here now?</p> <p>6 Q. Yes, we're going back to your opinions.</p> <p>7 A. Okay.</p> <p>8 Q. Have you ever told anyone at the medical school, at</p> <p>9 Wayne State Medical School that talc use can cause</p> <p>10 ovarian cancer?</p> <p>11 A. I don't recall.</p> <p>12 Q. Have you ever told anyone at Wayne State School of</p> <p>13 Medicine that talc use can worsen the prognosis of</p> <p>14 ovarian cancer?</p> <p>15 A. Again, I don't recall. I don't remember.</p> <p>16 Q. Can you tell for me, when you say you can't recall</p> <p>17 having had a discussion with anyone --</p> <p>18 A. I can't remember that I said that.</p> <p>19 Q. Can you cite for me anyone that you've spoken with at</p> <p>20 the Wayne State School of Medicine where you've told</p> <p>21 them your opinions that talc use can cause ovarian</p> <p>22 cancer or can worsen ovarian cancer?</p> <p>23 A. Other than the co-authors of this study?</p> <p>24 Q. Yes.</p> <p>25 A. I haven't talked to anyone, in my school, to be</p>	<p style="text-align: right;">Page 265</p> <p>1 Q. Cell proliferation does not mean cancer, correct?</p> <p>2 A. Cell -- increase in cell proliferation beyond normal is</p> <p>3 a highlight of cancer cells.</p> <p>4 Q. There is cell proliferation in normal cells in the</p> <p>5 absence of cancer, correct?</p> <p>6 A. So good question. So cell -- normal cells in response</p> <p>7 to agents can be temporally transit induces their</p> <p>8 proliferation, but they come back. Cancer cells don't</p> <p>9 come back. They will proliferate forever.</p> <p>10 Q. But you agree that cell proliferation does not equate</p> <p>11 to cancer?</p> <p>12 A. Okay, I am answering you. According to my knowledge,</p> <p>13 transit, transit or let's say temporary or initial</p> <p>14 induction of proliferation, it is a normal response of</p> <p>15 all normal cells to agents. If this response</p> <p>16 continues, now, this is a hallmark of cancer. It is</p> <p>17 indication that this cell is going that route.</p> <p>18 Q. In the tests you conducted, the results would be</p> <p>19 considered an acute response to talc, correct?</p> <p>20 MS. O'DELL: Object to the form.</p> <p>21 THE WITNESS: Yes, I understand. In cell</p> <p>22 culture you cannot distinguish between acute response</p> <p>23 versus chronic response. In cell culture you cannot do</p> <p>24 that. So in cell culture it is a response.</p> <p>25 Q. That you cannot say would occur in a chronic way?</p>

67 (Pages 262 to 265)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 266</p> <p>1 MS. O'DELL: Objection.</p> <p>2 THE WITNESS: I don't know if this -- okay,</p> <p>3 here's the question, so the answer is you expose cells,</p> <p>4 talcum powder, cells go crazy and they increase their</p> <p>5 proliferation. If they don't come back, so that's the</p> <p>6 response to the acute, if they don't come back and</p> <p>7 there is talcum powder particles in there, and they</p> <p>8 keep provoking the inflammation, that transit goes into</p> <p>9 chronic inflammation. I'm trying to think of</p> <p>10 simulation to in vivo, but in cell culture you cannot</p> <p>11 tell.</p> <p>12 BY MR. HEGARTY:</p> <p>13 Q. Can you cite for me any studies showing increase in</p> <p>14 cell proliferation in the presence of talc in vivo?</p> <p>15 MS. O'DELL: Objection, form.</p> <p>16 THE WITNESS: Very complicated question,</p> <p>17 break it down for me, please.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. I don't know if I can break it down. Can you cite for</p> <p>20 me any study showing an increase in cell proliferation</p> <p>21 in the presence of talc in women using talc?</p> <p>22 A. How would you measure --</p> <p>23 MS. O'DELL: Objection.</p> <p>24 THE WITNESS: How would you measure cell</p> <p>25 proliferation in woman?</p>	<p style="text-align: right;">Page 268</p> <p>1 contaminant decrease in apoptosis is a hallmark of</p> <p>2 ovarian cancer.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. Not my question, Doctor. My question was are there any</p> <p>5 studies showing that an increase in cell proliferation,</p> <p>6 as you showed in your experiments, is associated with</p> <p>7 an increase in ovarian cancer risk?</p> <p>8 MS. O'DELL: Object to the form, asked and</p> <p>9 answered.</p> <p>10 THE WITNESS: Okay, so you're asking if there</p> <p>11 are reports showing that there is the increased</p> <p>12 proliferation is associated with increased cancer risk?</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. Correct.</p> <p>15 A. Okay, again, I'm answering, the answer is I don't know</p> <p>16 because I believe that you cannot measure proliferation</p> <p>17 in vivo.</p> <p>18 Q. Are there any studies showing that a decrease in</p> <p>19 apoptosis, as you showed in your experiments, is</p> <p>20 associated with an increase in ovarian cancer risk?</p> <p>21 A. So I would respond the same way. I would say, again,</p> <p>22 these -- to determine apoptosis, you have to isolate</p> <p>23 the cells from the patient outside and do cell culture</p> <p>24 and look into that, so I'm not aware.</p> <p>25 Q. Are there any studies showing either an increase in</p>
<p style="text-align: right;">Page 267</p> <p>1 BY MR. HEGARTY:</p> <p>2 Q. Well, I'm asking you if you're aware of any such</p> <p>3 studies?</p> <p>4 A. I'm answering. I said how would you measure that? I'm</p> <p>5 not aware, I don't know.</p> <p>6 Q. Are you aware of any studies showing a decrease in</p> <p>7 apoptosis in the cells of women using talc?</p> <p>8 A. Again, these studies only done in cell culture. You</p> <p>9 cannot do this in vivo. This has to be isolated from</p> <p>10 the woman of ovarian cancer who use talc, who didn't</p> <p>11 use talc, and then you look at their cells in culture</p> <p>12 to determine those parameters. You cannot determine</p> <p>13 those in vivo. Although there are pathology they can</p> <p>14 do, they can do proliferation markers like KI67, it's</p> <p>15 been done, it's all over, there are indications, but</p> <p>16 they cannot do this in vivo. This has been done in</p> <p>17 tissues. With woman, yes, you can do it, but to do</p> <p>18 that you have to isolate the cells and then look at the</p> <p>19 cell response.</p> <p>20 Q. Are there any studies showing that an increase in cell</p> <p>21 proliferation, as you showed in your experiments, is</p> <p>22 associated with an increase in ovarian cancer risk?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 THE WITNESS: There are several studies that</p> <p>25 shows that enhanced proliferation and reduce with</p>	<p style="text-align: right;">Page 269</p> <p>1 cell proliferation or a decrease in apoptosis as you</p> <p>2 have shown in your report in women using talc?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: I'm not aware of that.</p> <p>5 MR. HEGARTY: Why don't we take a break, go</p> <p>6 off the record. I need to converse with counsel for</p> <p>7 Imerys about how much time that he needs for his</p> <p>8 questioning.</p> <p>9 MS. O'DELL: Okay.</p> <p>10 THE VIDEOGRAPHER: Going off the record at</p> <p>11 5:04 p.m.</p> <p>12 (A short recess was taken.)</p> <p>13 THE VIDEOGRAPHER: We're back on the record at</p> <p>14 5:26 p.m.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Doctor, in your cell experiments, how did you control</p> <p>17 for cross-contamination?</p> <p>18 MS. O'DELL: I'm sorry, I didn't hear, for</p> <p>19 cross-contamination?</p> <p>20 MR. HEGARTY: Yes.</p> <p>21 THE WITNESS: Cross-contamination, so cross-</p> <p>22 contamination from each -- from the cells that I used?</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. How did you control to keep from mixing up of samples?</p> <p>25 MS. O'DELL: Object to the form.</p>

68 (Pages 266 to 269)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 270</p> <p>1 THE WITNESS: I'm not sure that I understood</p> <p>2 your question. Are you referring to mixing the two</p> <p>3 cell lines, for example?</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. Yes.</p> <p>6 A. With each other?</p> <p>7 Q. Correct.</p> <p>8 A. That's not possible.</p> <p>9 Q. Why is that not possible?</p> <p>10 A. Because each cell line is done in one experiment</p> <p>11 treatment with all the doses on its own.</p> <p>12 Q. What about mixing normal cells with the -- I'm sorry,</p> <p>13 how about mixing control cells with the treated cells,</p> <p>14 is that possible?</p> <p>15 A. What do you mean by control cells, not treated?</p> <p>16 Q. Not treated?</p> <p>17 A. So, also, that's not possible because you -- we divide,</p> <p>18 we grow the cells, one lot, one lot of cells, and then</p> <p>19 we aliquot, we put 1 million cells here, 1 ml cells</p> <p>20 here, and then we separate them and give the different</p> <p>21 doses for each cell lines. And the -- this thing, the</p> <p>22 treatment was repeated for PCR for RNA, for protein for</p> <p>23 ELISA, for proliferation assays, so it's not possible</p> <p>24 that there is a mix between treated and untreated.</p> <p>25 Q. Do you know what positive and negative controls are in</p>	<p style="text-align: right;">Page 272</p> <p>1 There's two different controls, okay. We did negative</p> <p>2 and positive for the treatment, so this is with talc,</p> <p>3 this is with no talc. For the markers, for the</p> <p>4 markers, we have standards that with serial dilution</p> <p>5 tells you exactly how much you expect to get in there.</p> <p>6 Q. Did you use a negative control in your cell studies</p> <p>7 with a known inert substance?</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 THE WITNESS: That's not a negative control</p> <p>10 to me, it does not apply to my study. The only</p> <p>11 negative control that applies to my study is talc with</p> <p>12 no talc.</p> <p>13 BY MR. HEGARTY:</p> <p>14 Q. How can you rule out in your studies that any</p> <p>15 particulate you added to the cell cultures would cause</p> <p>16 the same thing?</p> <p>17 A. Again, we tested several fold. So our study does not</p> <p>18 qualify for a positive positive control that you're</p> <p>19 referring to or a negative negative control.</p> <p>20 Q. How are you able to rule out that glass beads wouldn't</p> <p>21 cause the same --</p> <p>22 A. Glass beads?</p> <p>23 Q. -- effect? How are you able to rule out that some</p> <p>24 inert part, other part -- strike that. How would you</p> <p>25 rule out that any particle wouldn't cause the same</p>
<p style="text-align: right;">Page 271</p> <p>1 cell studies?</p> <p>2 A. I do.</p> <p>3 Q. You did not use positive and negative controls in your</p> <p>4 cell studies, correct?</p> <p>5 A. Not correct.</p> <p>6 Q. Well, I'm going to define positive controls as applying</p> <p>7 a known cancer causing substance to the cells. Is that</p> <p>8 your understanding of positive control?</p> <p>9 A. Not in these studies.</p> <p>10 Q. I'm talking about generally.</p> <p>11 A. Generally a positive control that something that you</p> <p>12 know it's there and you're looking for it.</p> <p>13 Q. What is in general terms a negative control?</p> <p>14 A. A negative control, something you're not looking for,</p> <p>15 it is not there.</p> <p>16 Q. Well --</p> <p>17 A. So there is negative negative and there is positive</p> <p>18 positive.</p> <p>19 Q. Did you do any of your tests -- I'm sorry, did you do</p> <p>20 any of your experiments using any substances known to</p> <p>21 be a carcinogen?</p> <p>22 A. One more time. I will answer you. The answer is no,</p> <p>23 okay, but you're referring to -- so there are two</p> <p>24 different controls, negative and positive for the</p> <p>25 target, and negative and positive for the treatment.</p>	<p style="text-align: right;">Page 273</p> <p>1 effect that you saw in your studies?</p> <p>2 A. Very simple, the untreated didn't show that.</p> <p>3 Q. Well, how do you rule out that the treated cells would</p> <p>4 react the same way regardless of what you put on them?</p> <p>5 In other words, if you put -- how did you rule out that</p> <p>6 any particle would not cause the same thing if you</p> <p>7 mixed it with DMSO and applied it to talc?</p> <p>8 A. Yeah, so we did DMSO control.</p> <p>9 MS. O'DELL: Object to the form.</p> <p>10 THE WITNESS: So we did -- took the talc,</p> <p>11 mixed it with DMSO, took the DMSO, treat the cells with</p> <p>12 DMSO alone and with DMSO and talc. So if the effect</p> <p>13 was due to DMSO, you would see the response in the</p> <p>14 untreated cells.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. Would cornstarch cause the same result?</p> <p>17 A. I did not test it.</p> <p>18 Q. How can you rule out that cornstarch wouldn't do the</p> <p>19 same thing if applied to cells?</p> <p>20 MS. O'DELL: Object to the form.</p> <p>21 THE WITNESS: I didn't rule anything, I did</p> <p>22 not test it.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. Does cornstarch cause cancer?</p> <p>25 A. I did not test it.</p>

69 (Pages 270 to 273)

Ghassan Saed, Ph.D.

Page 274	Page 276
<p>1 Q. Well, in your opinion, does --</p> <p>2 A. In my opinion?</p> <p>3 Q. Yes.</p> <p>4 A. From my information? I don't think so.</p> <p>5 Q. Could you have tested cornstarch in the same way you</p> <p>6 tested talc?</p> <p>7 A. Could I have?</p> <p>8 Q. Yes.</p> <p>9 A. I can use my methodology to test that, yes, of course.</p> <p>10 Q. And are you able to say that no other particle exposed</p> <p>11 in the same way that you would expose cells with talc</p> <p>12 would not have caused the same result?</p> <p>13 MS. O'DELL: Object to the form.</p> <p>14 THE WITNESS: I already answered.</p> <p>15 BY MR. HEGARTY:</p> <p>16 Q. What's your answer?</p> <p>17 A. Okay, I'm saying that in this study, the way this</p> <p>18 study's designed to look at the effect with talc,</p> <p>19 without talc, if you are looking at one marker only,</p> <p>20 then maybe we should consider more, but we're looking</p> <p>21 at several markers at several levels. So we're looking</p> <p>22 at mRNA DNA mRNA protein activity, several levels here.</p> <p>23 Q. But you cannot say that cornstarch wouldn't do the same</p> <p>24 thing as talc did in your experiments?</p> <p>25 A. I did not study cornstarch, so I cannot tell you.</p>	<p>1 A. I didn't say I did not agree. I said I am not -- I</p> <p>2 don't have any molecular data in my laboratory to</p> <p>3 support the direct effect of talcum powder on my</p> <p>4 markers that I studied in my lab, and I would like to</p> <p>5 do that.</p> <p>6 Q. When in relation to the first call that you had with</p> <p>7 Miss Thompson did you agree to serve as a consultant</p> <p>8 for Beasley Allen?</p> <p>9 A. I think it was like October sometime.</p> <p>10 Q. And in between the time of the first call and October,</p> <p>11 did you have any additional calls with anyone from --</p> <p>12 A. We had the meeting September 7, if I remember.</p> <p>13 Q. At the time of that meeting, had you agreed to serve as</p> <p>14 a consultant for Beasley Allen?</p> <p>15 A. I agreed in principle to serve as a consultant for what</p> <p>16 I am an expert in, which is oxidative stress and</p> <p>17 ovarian cancer, and I promised to run data, do some</p> <p>18 work, because I wanted to find out if there is</p> <p>19 molecular evidence to support the effect of talcum</p> <p>20 powder on the markers that I study, which are the</p> <p>21 markers of risk of ovarian cancer.</p> <p>22 Q. And you agreed to serve as a consultant, at least as to</p> <p>23 oxidative stress and ovarian cancer, as of the time of</p> <p>24 the meeting in September?</p> <p>25 MS. O'DELL: Object as to form.</p>
Page 275	Page 277
<p>1 Q. We talked earlier at the beginning of the deposition</p> <p>2 about you receiving a call from Miss Thompson, correct?</p> <p>3 A. Yes.</p> <p>4 Q. Do you know how she came to call you in the first</p> <p>5 place?</p> <p>6 A. From according to her?</p> <p>7 Q. Yes.</p> <p>8 A. Or according to me?</p> <p>9 Q. Well, what is your understanding as to why she</p> <p>10 initiated that initial call, how she came to get your</p> <p>11 name?</p> <p>12 A. She found me on what do you call it -- Med Web, because</p> <p>13 I had published this review article in this very</p> <p>14 prestigious journal called OB-GYN Oncology. Want to</p> <p>15 let me finish?</p> <p>16 MS. O'DELL: Yes, you may finish.</p> <p>17 BY MR. HEGARTY:</p> <p>18 Q. Are you finished?</p> <p>19 A. No.</p> <p>20 Q. How much more is there?</p> <p>21 A. Okay --</p> <p>22 MS. O'DELL: You may finish, Doctor.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. You mentioned that you did not agree to serve as a</p> <p>25 consultant at the time of the first call, correct?</p>	<p>1 THE WITNESS: I agreed to serve as a</p> <p>2 consultant for oxidative stress and ovarian cancer in</p> <p>3 actually the first phone call.</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. With regard to your work in this litigation, have you</p> <p>6 reviewed any of the expert reports of any other experts</p> <p>7 designated by plaintiffs?</p> <p>8 A. Barely I remember one or two, just briefly. I don't</p> <p>9 even remember names.</p> <p>10 Q. Have you reviewed, for purposes of your opinions in</p> <p>11 this case, anything that you did not bring with you</p> <p>12 here today?</p> <p>13 A. Good question, no.</p> <p>14 Q. Are there any necessary changes to your expert report?</p> <p>15 A. As --</p> <p>16 Q. As you sit here today.</p> <p>17 A. As of now today, no.</p> <p>18 Q. Have you ever had your deposition taken before?</p> <p>19 A. No.</p> <p>20 Q. Have you ever been designated to serve as an expert</p> <p>21 witness in any lawsuit?</p> <p>22 A. No.</p> <p>23 Q. You are not a medical doctor, correct?</p> <p>24 A. No.</p> <p>25 Q. You brought with you a copy of your updated CV; is that</p>

70 (Pages 274 to 277)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 278</p> <p>1 correct?</p> <p>2 A. Correct.</p> <p>3 Q. Yes. I'm going to mark this Exhibit Number 18.</p> <p>4 SAED DEPOSITION EXHIBIT NUMBER 18,</p> <p>5 CURRICULUM VITAE,</p> <p>6 WAS MARKED BY THE REPORTER</p> <p>7 FOR IDENTIFICATION</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. The CV you brought with you today, is that your current</p> <p>10 curriculum vitae?</p> <p>11 A. Yes.</p> <p>12 Q. Okay. Thank you. You don't treat ovarian cancer</p> <p>13 patients, correct?</p> <p>14 A. I am not an M.D., I'm not a medical doctor.</p> <p>15 Q. Do you teach any courses?</p> <p>16 A. In the university, yes.</p> <p>17 Q. What courses do you teach?</p> <p>18 A. They are listed here in my CV.</p> <p>19 Q. Listed in your CV?</p> <p>20 A. Yes.</p> <p>21 Q. Do you teach medical students?</p> <p>22 A. I do.</p> <p>23 Q. Those would be listed in your CV?</p> <p>24 A. Everything I teach is listed here.</p> <p>25 Q. What percentage of your time is spent teaching?</p>	<p style="text-align: right;">Page 280</p> <p>1 and ovarian cancer for purposes of developing your</p> <p>2 opinions in this case?</p> <p>3 A. To my best knowledge, yes, only like three papers out</p> <p>4 there.</p> <p>5 Q. I'm sorry?</p> <p>6 A. There are only like three papers out there that I can</p> <p>7 remember.</p> <p>8 Q. Did you do a search yourself for literature concerning</p> <p>9 talc and ovarian cancer?</p> <p>10 A. Yes.</p> <p>11 Q. What search engines or tools did you use?</p> <p>12 A. I used what I always use, the PopMed.</p> <p>13 Q. You say in your report that an enhanced redox state has</p> <p>14 been described with epithelial ovarian cancer.</p> <p>15 A. I'm sorry, one more time.</p> <p>16 Q. Is it your opinion that an enhanced redox state has</p> <p>17 been described in patients with epithelial ovarian</p> <p>18 cancer?</p> <p>19 A. With ovarian cancer patients, yes.</p> <p>20 Q. And enhanced redox state has been described with other</p> <p>21 types of cancer, too, correct? It's not unique to</p> <p>22 ovarian cancer?</p> <p>23 A. Okay, I don't know about other cancer, that's not my --</p> <p>24 what I do. What I do, what I talk about, what I work</p> <p>25 with is ovarian cancer. So we did work in my lab only</p>
<p style="text-align: right;">Page 279</p> <p>1 A. Okay, so we have two types of teaching in our</p> <p>2 institution they consider teaching. We have formal</p> <p>3 courses and then we have hands-on teaching, which is</p> <p>4 required for our residency program and fellowship</p> <p>5 program. I do more of the hands-on for the medical</p> <p>6 doctors for our residents and fellows in the</p> <p>7 department, then I help them write their thesis, design</p> <p>8 their experiments, do the work, so that's my primary --</p> <p>9 I spend almost significant time. I can't tell you</p> <p>10 exactly what I spend on that part, but I do.</p> <p>11 Q. Have you applied to be a full professor at Wayne State</p> <p>12 University?</p> <p>13 A. No.</p> <p>14 Q. Why not?</p> <p>15 A. Applying for a full professor at our institution</p> <p>16 requires current NIH NCI only funding, which is very</p> <p>17 hard to get these days.</p> <p>18 Q. Is it your opinion that talc induces chemoresistance?</p> <p>19 A. Talc induces chemoresistance -- so we -- I have not</p> <p>20 tested that, so this needs to be tested.</p> <p>21 Q. In connection with developing and setting out your</p> <p>22 opinions in this case, did you review all of the animal</p> <p>23 literature looking at talc and ovarian cancer?</p> <p>24 A. All of the literature, no.</p> <p>25 Q. Did you review all of the cell studies looking at talc</p>	<p style="text-align: right;">Page 281</p> <p>1 with ovarian cancer and these markers.</p> <p>2 Q. Has an enhanced redox state been described with other</p> <p>3 diseases besides cancer?</p> <p>4 A. One more time, please.</p> <p>5 MS. O'DELL: Object to form.</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. Has an enhanced redox state been described with</p> <p>8 diseases other than cancer?</p> <p>9 A. I don't know.</p> <p>10 Q. You have done research looking at that pathogenesis of</p> <p>11 tissue fibrosis, correct?</p> <p>12 A. Correct.</p> <p>13 Q. Tissue fibrosis does not increase the risk of</p> <p>14 developing cancer, correct?</p> <p>15 A. Not correct.</p> <p>16 Q. So it's your opinion that having -- that fibrosis</p> <p>17 increases the risk of cancer?</p> <p>18 A. Not correct, that's not my opinion.</p> <p>19 Q. What is your opinion with regard to the relationship</p> <p>20 between fibrosis and cancer?</p> <p>21 A. Good, I like that question. So initially when I</p> <p>22 started all this work, I was interested in tissue</p> <p>23 fibrosis and, in particular, keloids, hypertrophic</p> <p>24 scars, postoperative adhesions development, and</p> <p>25 fibroids, endometriosis, trying to answer one question</p>

71 (Pages 278 to 281)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 282</p> <p>1 in my mind, which is -- which started this whole focus</p> <p>2 of work, why, how come we have an overgrowth that is --</p> <p>3 has similar pathogenesis, yet it's not malignant, for</p> <p>4 example, fibroids, they're benign tumors, they're</p> <p>5 tumors, they're benign, what is the difference between</p> <p>6 what makes this tumor benign versus malignant? So this</p> <p>7 is my focus and my long-term interest in my life is to</p> <p>8 figure out why is this overgrowth that has oxidative</p> <p>9 stress, high this, high this, high this, but it's not</p> <p>10 malignant, fibroids, possibility of adhesions, keloids,</p> <p>11 although some keloids develop -- some fibrosis</p> <p>12 development of cancer, and endometriosis, for example.</p> <p>13 So that's the question that I'm really interested in.</p> <p>14 So that's why we look everything in comparison. I have</p> <p>15 published in here and I have published in here</p> <p>16 extensively.</p> <p>17 Q. You have published that fibrosis causes cancer?</p> <p>18 A. No, I have published that the process of fibrosis is</p> <p>19 very similar to the process of oncogenesis.</p> <p>20 Q. Does fibrosis cause cancer?</p> <p>21 MS. O'DELL: Object to form.</p> <p>22 THE WITNESS: In some cases it may.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. Give me an example of a type of fibrosis that can cause</p> <p>25 cancer.</p>	<p style="text-align: right;">Page 284</p> <p>1 postoperative adhesions development may develop into</p> <p>2 cancer. I'm not aware of that.</p> <p>3 BY MR. KLATT:</p> <p>4 Q. You're not aware of any evidence of that, is that what</p> <p>5 you're saying?</p> <p>6 A. I'm not aware of a certain -- a specific situation</p> <p>7 where a patient developed postoperative adhesions, that</p> <p>8 postoperative adhesions causes some type of cancer</p> <p>9 somewhere.</p> <p>10 Q. I'm going to skip around just to follow up on some</p> <p>11 stuff that Mr. Hegarty brought up during the day. You</p> <p>12 mentioned your company DS Biotech this morning. What</p> <p>13 does DS stand for?</p> <p>14 A. A name I chose.</p> <p>15 Q. The D and the S don't stand for anything in particular?</p> <p>16 A. Oh, sorry, I missed the question. So D is Diamond Saed</p> <p>17 Biotech, that's my partner, used to be long time ago.</p> <p>18 Q. You had a partner named Diamond?</p> <p>19 A. Michael Diamond. When we first initiated this, we</p> <p>20 started it, but then he moved from my institution to</p> <p>21 his institution, and then I acquired the whole company.</p> <p>22 Q. So Dr. Diamond -- is it a Dr. Diamond?</p> <p>23 A. Dr. Diamond, yes.</p> <p>24 Q. He has no affiliation with DS Biotech any longer, is</p> <p>25 that true?</p>
<p style="text-align: right;">Page 283</p> <p>1 A. Keloids, fibroblastoma can develop, endometriosis can</p> <p>2 induce maybe ovarian cancer, there's a link between the</p> <p>3 two.</p> <p>4 Q. Do postoperative adhesions cause cancer?</p> <p>5 A. We don't know.</p> <p>6 Q. Doctor, I'm going to rest for a moment and let my</p> <p>7 colleague representing Imerys ask you some questions as</p> <p>8 well.</p> <p>9 EXAMINATION BY MR. KLATT:</p> <p>10 Q. Hello, Dr. Saed. My name is Mike Klatt and I represent</p> <p>11 Imerys Talc America in this case. Have you ever heard</p> <p>12 of Imerys Talc America before today?</p> <p>13 A. Heard on the news, yes.</p> <p>14 Q. I'm sorry?</p> <p>15 A. Heard about it, yes.</p> <p>16 Q. What do you know about Imerys?</p> <p>17 A. I know that very small thing, mining company.</p> <p>18 Q. How did you learn that?</p> <p>19 A. From the news.</p> <p>20 Q. You said just a minute ago that we don't know whether</p> <p>21 postoperative intra-abdominal adhesions cause cancer;</p> <p>22 is that true?</p> <p>23 A. I am not aware --</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 THE WITNESS: -- that incidence of</p>	<p style="text-align: right;">Page 285</p> <p>1 A. No, for the last even seven, eight years.</p> <p>2 Q. When's the last time you had an NIH NCI grant?</p> <p>3 A. It should be in my CV, really bad memory, although I</p> <p>4 should remember such a great thing. You want me to</p> <p>5 look for it?</p> <p>6 Q. How long's it going to take you?</p> <p>7 A. I don't know, I have to look in my list of grants --</p> <p>8 when was it, when was it -- do you want me to</p> <p>9 approximate?</p> <p>10 Q. Sure.</p> <p>11 A. NIH -- I think it's 2005 -- pending, submitted --</p> <p>12 previously funded, okay, here we go. So I was part of</p> <p>13 the -- I was co-principal investigator in the Wayne</p> <p>14 State University partnership to promote diversity for</p> <p>15 reproductive sciences, that was 3,020,000 something. I</p> <p>16 was a co-investigator with Dr. Michael Diamond as a</p> <p>17 principal investigator to this Wayne State Clinical</p> <p>18 Translational Science Award.</p> <p>19 Q. What year is the question?</p> <p>20 A. So there are many, 2015, 2012, 2012, 2012, this was the</p> <p>21 major one where I was the principal investigator</p> <p>22 looking for adhesions and the role of hypoxia, and that</p> <p>23 was 2012.</p> <p>24 Q. What level NIH grant was that?</p> <p>25 A. That's an RO1.</p>

72 (Pages 282 to 285)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 286</p> <p>1 Q. Can ovulation cause the DNA damage that results in 2 ovarian cancer? 3 A. You are asking my opinion? 4 Q. Yes. 5 A. Or my -- based on science? 6 Q. Well, I hope your opinion's based on science, but what 7 is your opinion? 8 A. Okay. So ovulation theory has been there for a long 9 time, and I don't know if there is a link between 10 ovulation and damage to DNA particular to that. 11 Q. Is ovulation an inflammatory event? 12 A. It is. 13 Q. And in a woman that has a normal reproductive life, 14 that can occur 2, 400 times in her lifetime, correct? 15 A. I am not a reproductive scientist. 16 Q. You don't know? 17 A. I don't know. 18 Q. Woman that has a 40-year reproductive life times 12? 19 A. I do know that. 20 Q. That's 480 ovulatory cycles, correct? 21 A. If you say so, I don't know. 22 Q. You don't know about this? 23 A. I do know -- 24 MS. O'DELL: Object to the form. 25 THE WITNESS: Excuse me, okay, I am not --</p>	<p style="text-align: right;">Page 288</p> <p>1 A. Not correct. 2 Q. You don't know that? 3 MS. O'DELL: Object to the form. 4 THE WITNESS: It's a theory; I just answered 5 you. 6 BY MR. KLATT: 7 Q. Are you aware of the data that lifetime ovulations is 8 directly related to ovarian cancer risk? 9 MS. O'DELL: Object to the form. 10 THE WITNESS: So do you mean that there are 11 data out there that is showing a direct link to normal 12 ovulation process and the development -- increased risk 13 of getting ovarian cancer? 14 BY MR. KLATT: 15 Q. Thank you. 16 MR. LAPINSKI: Doctor, was that an answer or 17 a question? 18 THE WITNESS: That was a question to you. 19 BY MR. KLATT: 20 Q. Well, I'm asking the questions, you're giving me the 21 answers. Are you aware of data that increased number 22 of lifetime ovulations increases ovarian cancer risk? 23 MS. O'DELL: Object to the form. 24 THE WITNESS: And then I answered you, I 25 answered you, if you mean that you're looking for</p>
<p style="text-align: right;">Page 287</p> <p>1 again, I am not a reproductive scientist, so I know as 2 much as anybody know, like ovulation, yes, I do know 3 about it, I know about the ovulation theory, I know 4 that ovulation is cause of inflammation, I do know all 5 that. 6 BY MR. HEGARTY: 7 Q. And is it your opinion, as a scientist who studied in 8 the field you studied, that ovulation can cause ovarian 9 cancer? 10 A. I don't know, it needs to be tested. 11 Q. Even though it's an inflammatory event that occurs 12 every month, correct? 13 A. Maybe that's a natural inflammatory response. 14 Q. But you don't know, one way or the other, correct? 15 A. Yeah, there's a big difference between a naturally- 16 induced inflammatory response versus an external 17 exogenous induced inflammation. 18 Q. Certainly you're aware it's the opinion of many in the 19 field that incessant ovulation does cause ovarian 20 cancer, correct. 21 A. That was just a theory. 22 Q. I'm sorry? 23 A. A theory. 24 Q. And certainly ovarian cancer risk is directly related 25 to number of lifetime ovulations, correct?</p>	<p style="text-align: right;">Page 289</p> <p>1 specific data that linking normal ovulation to 2 inflammation that causes or increases the risk of 3 ovarian cancer, is that what you mean? 4 BY MR. KLATT: 5 Q. I'm simply asking you if you're aware of data that 6 number of lifetime or of ovulations correlates with 7 increased ovarian cancer risk; that's all I'm asking. 8 A. My answer again, I'm aware that this is a theory, and I 9 don't know if it's based on data. 10 Q. Is the mechanism that causes post-surgical adhesions 11 the same mechanism that you think can result in ovarian 12 cancer? 13 A. No, they have similarities but not the same. 14 Q. Can oxidative stress be induced by low vitamin E? 15 A. I don't know. 16 Q. Can oxidative stress be induced by low vitamin C? 17 A. I don't know. 18 Q. Can oxidative stress be induced by low uric acid? 19 A. We never tested that. 20 Q. Can oxidative stress be induced by albumin levels? 21 A. We never tested that. 22 Q. You said you'd never given a deposition before, 23 correct? 24 A. Correct. 25 Q. And you've also never testified in a court before, is</p>

73 (Pages 286 to 289)

Ghassan Saed, Ph.D.

Page 290	Page 292
<p>1 that right?</p> <p>2 A. Correct.</p> <p>3 Q. Early this morning you said that high, very high doses</p> <p>4 of talc were toxic to cells. What did you mean by</p> <p>5 that?</p> <p>6 A. We tried 1,000 micrograms per ml, 1,000 micrograms per</p> <p>7 ml, induced toxicity, so decreased viability, yes.</p> <p>8 Q. How are you defining toxicity at this time?</p> <p>9 A. Decreases cell viability.</p> <p>10 Q. Does that mean decrease in cell number?</p> <p>11 A. No, I said cell viability.</p> <p>12 Q. What does that mean?</p> <p>13 A. Death.</p> <p>14 Q. Okay.</p> <p>15 A. Okay.</p> <p>16 Q. Do you agree with me that CA-125 levels can be</p> <p>17 increased or elevated by pregnancy?</p> <p>18 A. I don't know this information.</p> <p>19 Q. Can CA-125 levels be increased during the menstrual</p> <p>20 period?</p> <p>21 A. I am not an OB-GYN oncologist, I am not an expert in</p> <p>22 this. I defer this to a clinician.</p> <p>23 Q. Can CA-125 levels be increased by women who have</p> <p>24 uterine fibroids?</p> <p>25 A. Again, I gave you my answer.</p>	<p>1 Q. And in the lower right-hand corner there's two page</p> <p>2 numbers. One's a stamped page number that we call a</p> <p>3 Bates Number, and the other is a handwritten page</p> <p>4 number, correct?</p> <p>5 A. This and this? Yes.</p> <p>6 MS. O'DELL: Yes.</p> <p>7 BY MR. KLATT:</p> <p>8 Q. When were those handwritten page numbers added to the</p> <p>9 lab book?</p> <p>10 A. I don't know.</p> <p>11 Q. Because we had gotten a black and white copy of the lab</p> <p>12 book, and there were no page numbers on it, so were</p> <p>13 they added recently?</p> <p>14 A. No, definitely not. They should have them, you should</p> <p>15 have them in your black, white and black.</p> <p>16 Q. Would you look at Exhibit 1 handwritten Page 31 Bates</p> <p>17 Number, and I'll just say the last two Bates Numbers</p> <p>18 02.</p> <p>19 A. Page 2, you said?</p> <p>20 Q. Yes, Page 02 is the stamp number and Page 31 --</p> <p>21 A. Yes.</p> <p>22 Q. -- is the handwritten number.</p> <p>23 A. I'm looking at it.</p> <p>24 Q. Down at the bottom it says cells doubled in one day.</p> <p>25 What's that referring to?</p>
Page 291	Page 293
<p>1 Q. Can CA-125 be increased by coronary heart disease?</p> <p>2 A. I don't know.</p> <p>3 Q. Can you look at Exhibit Number 1, please, which I</p> <p>4 believe is the copy of your lab book.</p> <p>5 A. Lab report, okay.</p> <p>6 Q. And I'm going to -- does your copy have the Bates</p> <p>7 Numbers down on the right-hand corner?</p> <p>8 MS. O'DELL: He's looking at the actual lab</p> <p>9 notebook.</p> <p>10 MR. KLATT: Is it Bates Numbered?</p> <p>11 MS. O'DELL: Not the lab notebook, no. We</p> <p>12 have not made markings on this.</p> <p>13 MR. KLATT: Do you have a copy of Exhibit 1?</p> <p>14 Let's make sure we're referring --</p> <p>15 MS. O'DELL: I think that may be yours, and,</p> <p>16 Mike, if you wouldn't mind directing us to the page</p> <p>17 number that's written on the actual book itself.</p> <p>18 MR. KLATT: Yeah, I'll give both the Bates</p> <p>19 number and the page number.</p> <p>20 MS. O'DELL: That would be good.</p> <p>21 BY MR. KLATT:</p> <p>22 Q. Are you looking now at Exhibit 1, Doctor?</p> <p>23 A. Yes.</p> <p>24 Q. And it's a copy of the lab notebook, correct?</p> <p>25 A. Yes.</p>	<p>1 A. Okay, so when you culture the cells, you want to get --</p> <p>2 cells divide and they double, so you want to have them</p> <p>3 in the stage -- that's just a notation that the cell</p> <p>4 doubled so we can start the experiment.</p> <p>5 Q. And so were these cells doubling each day?</p> <p>6 A. No, no, not necessarily. This is just to follow up the</p> <p>7 progress of cell growth. And then we take from that 1</p> <p>8 million cells, and then we start, because the space for</p> <p>9 the cell is very important, so if they don't double in</p> <p>10 one day, it means that the space is not good and they</p> <p>11 are overcrowded, so now we split them. So this is an</p> <p>12 indication that they're ready for us so we can use.</p> <p>13 Q. Did you try to measure cell proliferation in the</p> <p>14 presence of talc by BRDU incorporation?</p> <p>15 A. What is PRDU?</p> <p>16 Q. BRDU incorporation, are you familiar with that method?</p> <p>17 A. BRDU? I've never heard of that.</p> <p>18 Q. What about Ki-67, did you use that method --</p> <p>19 A. No.</p> <p>20 Q. -- in your experiments to measure cell proliferation?</p> <p>21 A. As I stated earlier, Ki-67 is used by pathologists</p> <p>22 mainly or researchers in tissue sections.</p> <p>23 Q. My question is did you use it in this --</p> <p>24 A. No.</p> <p>25 Q. -- experiment? Did you try to count cells to measure</p>

74 (Pages 290 to 293)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 294</p> <p>1 proliferation using a hemocytometer?</p> <p>2 A. Okay, for cell proliferation we use MTT assay, that's</p> <p>3 even more accurate than what you're referring to, but</p> <p>4 we always count cells with hemocytometer to start with</p> <p>5 1 million cells, this is how we start.</p> <p>6 Q. But did you try to measure cell proliferation in your</p> <p>7 experiments by using a hemocytometer in cell counting?</p> <p>8 A. Cell proliferation cannot be measured by cell count.</p> <p>9 Q. Would you agree with me that MTT is not the optimal</p> <p>10 method to measure cell proliferation?</p> <p>11 A. It is one of the best methods we have tested.</p> <p>12 Q. It simply measures cell metabolism, doesn't it?</p> <p>13 A. It measures the -- it differentiates between cells,</p> <p>14 cells that incorporate the dye versus cells that it</p> <p>15 doesn't incorporate the dye, which means it</p> <p>16 differentiates between viable cells and proliferative</p> <p>17 cells.</p> <p>18 Q. And if you increase the metabolism of a certain number</p> <p>19 of cells, that will increase the dye level even if you</p> <p>20 don't have a greater number of cells?</p> <p>21 A. I don't know about metabolism that you're throwing in</p> <p>22 here.</p> <p>23 Q. You don't know about that?</p> <p>24 A. No.</p> <p>25 Q. Can you look again, referring to Exhibit 1, and I'm</p>	<p style="text-align: right;">Page 296</p> <p>1 A. Oh, that's a different question. I thought you were</p> <p>2 talking about the sample ID refers to what. That's my</p> <p>3 answer.</p> <p>4 Q. I'm talking about in your experiment.</p> <p>5 A. In my experiment, we took like, for example, normal</p> <p>6 macrophages from one plate, and we divided that into</p> <p>7 two. One plate got treatment, the other plate no</p> <p>8 treatment. And then we continue, we isolated RNA.</p> <p>9 Q. So for, for example, let's take Sample ID 357, EL1 5</p> <p>10 micrograms of talc?</p> <p>11 A. Yes.</p> <p>12 Q. That was on one plate?</p> <p>13 A. Okay, let me explain this one more time. So you</p> <p>14 take -- this is the stock samples, we call it 356,</p> <p>15 okay. We split that into -- we take -- we can --</p> <p>16 that's why when you said one plate, it's not true,</p> <p>17 because we take one, two, three, four plates, okay, so</p> <p>18 each plate will get the treatment like 5 micrograms, 20</p> <p>19 micrograms, 100 micrograms.</p> <p>20 Q. I understand that. I'm just talking about Sample 357?</p> <p>21 A. 357 is 1 million cells of macrophages treated with 5</p> <p>22 microgram per ml of talc.</p> <p>23 Q. And it was one plate?</p> <p>24 A. 1 million cells, one plate.</p> <p>25 Q. And then from that you took mRNA, correct?</p>
<p style="text-align: right;">Page 295</p> <p>1 referring to the Bates Stamped page that ends in -- the</p> <p>2 stamp number is 03 and the handwritten Page 32.</p> <p>3 A. Yes.</p> <p>4 Q. And there's a list there of sample IDs, is that</p> <p>5 correct?</p> <p>6 A. Correct.</p> <p>7 Q. And are those the cell lines that you tested in your</p> <p>8 experiments?</p> <p>9 A. Yes, in this experiment.</p> <p>10 Q. And I want to make sure I understand, for each sample</p> <p>11 ID, let's just take the first one Sample ID 356, the</p> <p>12 EL1 untreated, so would that sample represent one plate</p> <p>13 of those cells?</p> <p>14 A. The 356?</p> <p>15 Q. Right?</p> <p>16 A. It represents an aliquot of normal macrophages with no</p> <p>17 treatment with talc.</p> <p>18 Q. And is it one plate of cells?</p> <p>19 A. It could be one if we need or two or three or four,</p> <p>20 depends on --</p> <p>21 Q. What was it in this case?</p> <p>22 A. Any sample that carry this number is a normal</p> <p>23 macrophages, you can have it in one plate, two plates,</p> <p>24 five plates, 10 plates.</p> <p>25 Q. And what did you have it in your experiment?</p>	<p style="text-align: right;">Page 297</p> <p>1 A. Correct.</p> <p>2 Q. And then from the mRNA from that one plate of cells,</p> <p>3 you took -- or created CDNA, correct?</p> <p>4 A. Correct.</p> <p>5 Q. And then at the end of the day, you measured that CDNA</p> <p>6 three separate times, correct?</p> <p>7 A. Correct.</p> <p>8 Q. And from the process I just described, that all</p> <p>9 originated for 357 from that one plate that was treated</p> <p>10 with 5 micrograms of talc, correct?</p> <p>11 A. One plate, yes.</p> <p>12 Q. And did you do that for each of the cell lines listed</p> <p>13 Samples 356 through 386?</p> <p>14 A. Yes, let me explain something here. So we --</p> <p>15 Q. That's all I needed.</p> <p>16 A. Okay. Can I explain something?</p> <p>17 Q. Sure.</p> <p>18 A. So I know what you're referring to that this is called</p> <p>19 N = 1, but we have even better and more precise way of</p> <p>20 measuring this very old method of doing it. We chose</p> <p>21 to do instead of repeat the same one three times, so</p> <p>22 N = 3, we actually chose three different normal cells</p> <p>23 and three different ovarian cancer cells, and that is</p> <p>24 more powerful than using the same one three times.</p> <p>25 Q. Okay.</p>

75 (Pages 294 to 297)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 298</p> <p>1 MR. LOCKE: Can I just make an objection. 2 Those are the kind of answers that your counsel can ask 3 you the question so you can give an explanation. All 4 of the defendants don't have time to question you, so 5 "yes" or "no" would be helpful, particularly at this 6 point where we're really running out of time. 7 MS. O'DELL: Well, he's been asking specific 8 questions about plates, and for it not to be clear, and 9 he needs to -- he needs to give a responsive answer. 10 MR. LOCKE: We're wasting time. 11 BY MR. KLATT: 12 Q. What I want to know is for 357 and all the sample IDs 13 listed here, there was one individual plate for each 14 sample ID treated with a certain level of talc, 15 correct? 16 A. Correct. 17 Q. Easy, Doctor. 18 A. Thank you. 19 Q. Gene expression, measuring gene expression is not the 20 same thing as measuring gene mutations, correct? 21 A. Gene expression refers to mRNA levels that is reflected 22 in protein levels. 23 Q. Gene expression is something that occurs all the time 24 in our bodies every day, correct? 25 A. Correct.</p>	<p style="text-align: right;">Page 300</p> <p>1 Q. The major source of ROS comes from inside the cells 2 from mitochondria, correct? 3 A. Not accurate answer, no. 4 Q. Can you distinguish between ROS produced inside the 5 mitochondria of the cell from ROS produced outside the 6 cell? 7 A. There are some enzymes that are produced from the 8 mitochondria like SOD in different forms, and there are 9 SODs that are produced from the membrane of the cell 10 and the cytoplasm, so it depends. 11 Q. Do you agree that the persistent generation of cellular 12 ROS is a consequence of aging? 13 A. I didn't study aging. 14 Q. You haven't said that before? 15 A. That -- 16 Q. The persistent generation of cellular ROS is a 17 consequence of aging. 18 A. I don't remember. Aging of the cells or aging of 19 people? 20 Q. Aging of people. 21 A. I don't remember I said that. 22 Q. You didn't sequence the DNA in your studies to 23 determine mutations, correct? You only used the SNP 24 gene assay? 25 A. I used the SNP gene assay, yes.</p>
<p style="text-align: right;">Page 299</p> <p>1 Q. It's how we live as people, right? 2 A. Yes. 3 Q. If we didn't have gene expression, we'd be dead? 4 A. I don't know why you're saying that. 5 Q. Is it true? 6 A. Of course. 7 Q. You would agree with me that a reactive oxygen species, 8 and can we call that ROS for short, Doctor? 9 A. Yes, I'm thinking, reactive oxygen and reactive 10 nitrogen species, let's call them oxidants. 11 Q. I'm sorry? 12 A. Oxidants. 13 Q. Oxidants? Well, what if I'm specifically asking about 14 ROS, reactive oxygen -- 15 A. You can, it depends on which one you would specify I 16 would answer, yes. 17 Q. Okay. So if I say ROS, can we agree I'm talking about 18 reactive oxygen species? 19 A. Yes. Which one, though? You have to tell me. 20 Q. As a category. 21 A. Okay, keep going. 22 Q. ROS aren't the same thing as inflammation, correct? 23 A. Not correct. 24 Q. ROS are a part of normal cell physiology, correct? 25 A. Normal levels of ROS found in cells, yes.</p>	<p style="text-align: right;">Page 301</p> <p>1 Q. You realize the same company that made the SNP gene 2 assay that you used also makes a gene mutation assay? 3 A. No, I'm not aware of that. 4 Q. You're not aware of that? 5 A. No. 6 Q. But so, therefore, you did not use that company's gene 7 mutation assay in your experiments, correct? 8 MS. O'DELL: Object to the form. 9 THE WITNESS: I used the core facility at our 10 institutions, and this is what they ran and this is 11 what I have. 12 BY MR. KLATT: 13 Q. So you did not use the gene mutation assay made by the 14 same company that makes the SNP assay that you used in 15 your studies, correct? 16 MS. O'DELL: Object to the form. 17 THE WITNESS: The core facility ordered the 18 kits, and they are the one who choose which company to 19 buy it from. I have no influence in that. 20 BY MR. KLATT: 21 Q. So was the core facility the one that decided to use 22 the SNP assay rather than the gene mutation assay or 23 was that your decision? 24 A. That was what is available in the core facility, and I 25 said I want to use it.</p>

76 (Pages 298 to 301)

Ghassan Saed, Ph.D.

Page 302	Page 304
<p>1 Q. But you were unaware that the same company that makes</p> <p>2 the SNP assay also makes a gene mutation assay; is that</p> <p>3 true?</p> <p>4 MS. O'DELL: Object to the form.</p> <p>5 THE WITNESS: I don't even know what company</p> <p>6 you're talking about.</p> <p>7 BY MR. KLATT:</p> <p>8 Q. Do you know what company made the SNP assay?</p> <p>9 A. The core facility ordered the SNP kit, they just give</p> <p>10 you -- I'm interested in doing the SNP mutation and</p> <p>11 this is what we run, so please run these samples for</p> <p>12 me.</p> <p>13 Q. Did you ask them not to use a gene mutation assay?</p> <p>14 A. Not to use? I didn't ask them, no.</p> <p>15 Q. Would you agree with me that the determination of the</p> <p>16 redox state of a cell is determined by far more enzymes</p> <p>17 and proteins and substances than just the ones you</p> <p>18 looked at in your talc studies?</p> <p>19 MS. O'DELL: Object to the form.</p> <p>20 THE WITNESS: We -- in my studies we looked</p> <p>21 at there are many enzymes, but we're looking at key</p> <p>22 enzymes that control the redox balance.</p> <p>23 BY MR. KLATT:</p> <p>24 Q. Object, nonresponsive. Do you agree with me that redox</p> <p>25 balance in cells is controlled by far more enzymes,</p>	<p>1 A. Saying it, I don't recall saying it.</p> <p>2 Q. Do you recall writing it?</p> <p>3 A. Maybe, but that does not agree with what you just said,</p> <p>4 what you read.</p> <p>5 Q. Can oxidative stress both promote apoptosis and promote</p> <p>6 cell survival?</p> <p>7 A. Oxidative stress is a balance, so it's not just simple</p> <p>8 process. So the outcome of this balance promote</p> <p>9 proliferation, promote survival, and decrease</p> <p>10 apoptosis.</p> <p>11 Q. Can oxidative stress be both pro-tumorigenic and</p> <p>12 anti-tumorigenic?</p> <p>13 A. You mean marker, some certain markers of oxidative</p> <p>14 stress? Is that what you're referring to?</p> <p>15 Q. Sure.</p> <p>16 A. Certain markers of oxidative stress can have -- can</p> <p>17 induce tumors and can inhibit tumor, I'm not really</p> <p>18 aware of that.</p> <p>19 Q. Are you aware of any study case report or case series</p> <p>20 that says that women that use talc in the external</p> <p>21 genital area have increased fibrosis or adhesions</p> <p>22 anywhere in their reproductive tract?</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 THE WITNESS: Have I -- am I aware of people</p> <p>25 use talcum powder is linked to development of</p>
Page 303	Page 305
<p>1 proteins, and substances than you looked at in your</p> <p>2 talc studies?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: And I answered. I said</p> <p>5 these -- the one we looked at are the main, there are</p> <p>6 others, but they're not major players. Those are, the</p> <p>7 one we studied are the major contributor to the overall</p> <p>8 pro-oxidant state of the cell.</p> <p>9 BY MR. KLATT:</p> <p>10 Q. And some of those enzymes in some cancers are pro-</p> <p>11 tumorigenic and some of those same enzymes in other</p> <p>12 cancers are anti-tumorigenic, correct?</p> <p>13 A. I'm not aware of that.</p> <p>14 Q. You haven't said that before?</p> <p>15 A. Said that exact word? No.</p> <p>16 Q. Do you recall ever saying this: Decreasing oxidative</p> <p>17 stress and increased SOD promotes apoptosis in the</p> <p>18 cancer cell lines studied, but multiple other studies</p> <p>19 performed using other cell lines have shown the</p> <p>20 opposite, that decreased SOD can promote apoptosis?</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 THE WITNESS: So this -- I said that? Or you</p> <p>23 took this from my --</p> <p>24 BY MR. KLATT:</p> <p>25 Q. I'm asking if you recall saying that?</p>	<p>1 possibility of adhesions?</p> <p>2 BY MR. KLATT:</p> <p>3 Q. I'm asking you a very specific question. Are you aware</p> <p>4 of any articles in the medical or scientific</p> <p>5 literature, any case studies, any case reports of women</p> <p>6 who used external talc having increased adhesions,</p> <p>7 fibrosis, granulomas anywhere in their reproductive</p> <p>8 tract?</p> <p>9 MS. O'DELL: Object to the form.</p> <p>10 THE WITNESS: What do you mean by external?</p> <p>11 BY MR. KLATT:</p> <p>12 Q. What does external mean to you?</p> <p>13 A. I'm asking you.</p> <p>14 Q. I'm asking the questions, Doctor.</p> <p>15 A. Okay, I understand, I just want to clarify.</p> <p>16 Q. Do you understand what external talc application means?</p> <p>17 MS. O'DELL: You didn't say that, you just</p> <p>18 said external, so, anyway.</p> <p>19 If you understand his question, answer the</p> <p>20 question or define what you mean.</p> <p>21 BY MR. KLATT:</p> <p>22 Q. Let me ask the question again. Are you aware of any</p> <p>23 study in the medical or scientific literature, case</p> <p>24 report, that shows that external genital application of</p> <p>25 talc results in increased fibrosis, granulomas, or</p>

77 (Pages 302 to 305)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 306</p> <p>1 adhesions anywhere inside the female reproductive</p> <p>2 tract?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: I'm not aware.</p> <p>5 BY MR. KLATT:</p> <p>6 Q. Are you aware that according to studies, anywhere from</p> <p>7 30 to 50 percent of U.S. women have used talc in the</p> <p>8 external genital area?</p> <p>9 A. I'm sorry, say that again, sorry.</p> <p>10 Q. Are you aware from studies that anywhere from 30 to 50</p> <p>11 percent of U.S. women have used talcum powder in the</p> <p>12 external genital area?</p> <p>13 A. I'm not sure about the number.</p> <p>14 Q. Are you aware of any epidemic of granulomas, fibrosis,</p> <p>15 or adhesions in women who use externally applied</p> <p>16 genital talc?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 THE WITNESS: I don't know if -- I don't know</p> <p>19 if any relation between talc powder use and adhesions.</p> <p>20 BY MR. KLATT:</p> <p>21 Q. Is there a way to measure the redox state directly</p> <p>22 inside of cells?</p> <p>23 A. Very difficult.</p> <p>24 Q. Can it be done?</p> <p>25 A. The data will not be very reliable.</p>	<p style="text-align: right;">Page 308</p> <p>1 look and see if I have any other notes.</p> <p>2 THE VIDEOGRAPHER: Going off the record at</p> <p>3 6:18 p.m.</p> <p>4 (An off-the-record discussion was held.)</p> <p>5 THE VIDEOGRAPHER: Back on the record at 6:19</p> <p>6 p.m.</p> <p>7 BY MR. KLATT:</p> <p>8 Q. Doctor, in your PCR studies, did you normalize for</p> <p>9 actin?</p> <p>10 A. Yes.</p> <p>11 Q. And how did you do that?</p> <p>12 A. So we did PCR for beta-actin.</p> <p>13 Q. And where is that indicated in your lab --</p> <p>14 A. It is page -- every experiment we did with PCR we ran</p> <p>15 beta-actin, and if you go to Page -- what's this page</p> <p>16 here --</p> <p>17 MS. O'DELL: What's the ending Bates Number</p> <p>18 on there?</p> <p>19 BY MR. KLATT:</p> <p>20 Q. There may be a Bates Number in the lower right hand</p> <p>21 corner.</p> <p>22 A. 10.</p> <p>23 Q. Okay. I'm with you.</p> <p>24 A. Are you there?</p> <p>25 Q. Yes.</p>
<p style="text-align: right;">Page 307</p> <p>1 Q. Is there a method to do that?</p> <p>2 A. You can measure H2O2, you can measure nitrosylation,</p> <p>3 degree of nitrosylation of protein, we have done that</p> <p>4 with Caspase-3 and S-nitrosylation of Caspase-3 as a</p> <p>5 measure of how the level of antioxidants. The accurate</p> <p>6 way to measure it is to measure the key players</p> <p>7 together to have the complete picture.</p> <p>8 Q. Those two methods that you just named, did you use</p> <p>9 those in any of your talc studies?</p> <p>10 A. What methods?</p> <p>11 Q. The methods you just listed for me which were a way to</p> <p>12 directly measure the redox state of cells.</p> <p>13 A. Measuring all markers? Oh, the other method, yes, they</p> <p>14 are listed here.</p> <p>15 Q. Did you use those?</p> <p>16 A. I'm sorry, I'm missing you. Am I use ever in my lab or</p> <p>17 in this study?</p> <p>18 Q. In the talc studies.</p> <p>19 A. The S-nitrosylation of Caspase-3, we did not use in</p> <p>20 this study.</p> <p>21 Q. And there was one other method that you mentioned.</p> <p>22 A. The H2O2.</p> <p>23 Q. Did you use that method in your talc --</p> <p>24 A. No, we used it for catalase activity indirectly.</p> <p>25 Q. Can we go off the record for a second. I just need to</p>	<p style="text-align: right;">Page 309</p> <p>1 A. It's even cut off from here, I don't know why. But you</p> <p>2 see the standard curve?</p> <p>3 Q. Yes.</p> <p>4 A. Okay, so what we do here, we do a realtime RT-PCR where</p> <p>5 we design a small oligo that is flanked by the primers,</p> <p>6 and we order that to be synthesized, and we know the</p> <p>7 concentration, we dilute it down, and we create a</p> <p>8 standard curve, and we use this standard curve to</p> <p>9 extrapolate the results and normalize for our level of</p> <p>10 mRNA with the treatment.</p> <p>11 Q. Can I ask you a question. On Page 10, that indicates</p> <p>12 raw data, correct?</p> <p>13 A. Page 10?</p> <p>14 Q. The page you were just looking at.</p> <p>15 A. I just want to see, it's not clear here. I just want</p> <p>16 to see what page is this here. I'm with you.</p> <p>17 MS. O'DELL: What's the question, Mike?</p> <p>18 BY MR. KLATT:</p> <p>19 Q. Looking at Page 10 on Exhibit 1, and I'm not talking</p> <p>20 about the lab page number, I'm talking about the Bates</p> <p>21 Number, if you look for Sample 356, you see to the</p> <p>22 right there's numbers 285995.18, 273439.209?</p> <p>23 A. Uh-huh.</p> <p>24 Q. And 409589.891?</p> <p>25 A. Correct.</p>

78 (Pages 306 to 309)

Ghassan Saed, Ph.D.

Page 310	Page 312
<p>1 Q. If you turn to the next page, those numbers are</p> <p>2 replicated for Sample 356.</p> <p>3 A. What next page?</p> <p>4 Q. The very next page in the --</p> <p>5 A. Here?</p> <p>6 Q. Yeah.</p> <p>7 A. Okay. Where are they? 356, this is copies per</p> <p>8 micrograms of CDNA.</p> <p>9 Q. And that corresponds to those numbers, those same three</p> <p>10 numbers on the previous page, correct?</p> <p>11 A. So this is the copy number, 28274095, yeah, I see</p> <p>12 they're the same.</p> <p>13 Q. But for the 357 sample, the numbers don't correspond</p> <p>14 between those two pages, correct?</p> <p>15 A. Correct.</p> <p>16 Q. And can you explain why?</p> <p>17 A. So that's why we normalize, because you will have</p> <p>18 different copy numbers all the time, so we normalize</p> <p>19 it.</p> <p>20 Q. Can you go to the next page, which would be notebook</p> <p>21 page -- handwritten Page 39 and Bates Number 11.</p> <p>22 A. 39? I'm still on the same page, right?</p> <p>23 MS. O'DELL: That's where we were I thought,</p> <p>24 unless I was confused about your question.</p> <p>25 BY MR. KLATT:</p>	<p>1 A. Yeah. Is it Page 41?</p> <p>2 MS. O'DELL: You're on Page 11?</p> <p>3 MR. KLATT: Correct.</p> <p>4 MS. O'DELL: So I think it's this page.</p> <p>5 THE WITNESS: Oh. Isn't it this page?</p> <p>6 MS. O'DELL: No, I think it's back, if I'm</p> <p>7 not mistaken.</p> <p>8 THE WITNESS: Oh, here. We were on this</p> <p>9 page, right?</p> <p>10 BY MR. KLATT:</p> <p>11 Q. I'm confused because you're looking at the real lab</p> <p>12 notebook and I'm looking at --</p> <p>13 A. No, no, no, we were on the same page. I thought you</p> <p>14 asked me to go to a different page. I see that column.</p> <p>15 Q. Just so we're on the same wavelength --</p> <p>16 A. I see it.</p> <p>17 Q. -- I'm referring to Page 11 Bates Number, correct?</p> <p>18 A. Picogram per microgram for RNA.</p> <p>19 Q. Right.</p> <p>20 A. 4.58, the first number.</p> <p>21 Q. 4.58?</p> <p>22 A. Uh-huh.</p> <p>23 Q. Right, and if you go -- that whole column's full of</p> <p>24 numbers, correct?</p> <p>25 A. This column, yes.</p>
Page 311	Page 313
<p>1 Q. Well, Bates Number -- my Bates Number's cut off, excuse</p> <p>2 me, my handwritten number's cut off so I'm going to the</p> <p>3 Bates Number, which is 11.</p> <p>4 MS. O'DELL: Okay, it's Page --</p> <p>5 THE WITNESS: The next page.</p> <p>6 BY MR. KLATT:</p> <p>7 Q. Okay. And do you see the column toward the right</p> <p>8 called picograms per microgram of RNA?</p> <p>9 A. Where is that?</p> <p>10 Q. The third column from the right-hand side.</p> <p>11 A. On Page -- in this page, right?</p> <p>12 Q. Page 11, Bates Stamped Page 11.</p> <p>13 A. This is the page, okay, this is the page. So you're</p> <p>14 looking at microgram?</p> <p>15 Q. Picograms per microgram per RNA, do you see that</p> <p>16 column?</p> <p>17 A. I see copies per microgram for RNA, I see copies per</p> <p>18 microgram for RNA, thintogram (sic) per microgram for</p> <p>19 RNA. Is what you're looking at?</p> <p>20 Q. I'm looking right here, picograms per micrograms RNA</p> <p>21 the third column from the right.</p> <p>22 A. 1, 2, 3, that's called thintogram (sic).</p> <p>23 Q. And what's the first number in that column?</p> <p>24 A. 125. Is that what you're looking at?</p> <p>25 Q. I think we're not looking in the same place.</p>	<p>1 Q. And then to the right of that you have an average,</p> <p>2 correct?</p> <p>3 A. Yes.</p> <p>4 Q. Sometimes you average two of the three numbers,</p> <p>5 sometimes you average all three numbers.</p> <p>6 A. Correct.</p> <p>7 Q. Why do you only average two of the three numbers</p> <p>8 sometimes?</p> <p>9 A. If we have outlier, really high, different.</p> <p>10 Q. And what's your criteria for throwing out an outlier?</p> <p>11 A. So if you have 4.5, 4.3, and 6.5, that's an outlier.</p> <p>12 Q. What's your threshold for classifying something as an</p> <p>13 outlier to not include it in your calculations?</p> <p>14 A. So if the two numbers match, the closer they match and</p> <p>15 the higher the outlier is is what we determine.</p> <p>16 Q. So do you always throw out the outlier of the three</p> <p>17 values?</p> <p>18 A. Not always, not necessarily.</p> <p>19 Q. So I'm just trying to figure what's your criteria</p> <p>20 for --</p> <p>21 A. So if they are like, for example, close like, for</p> <p>22 example, here, if we don't know that it is an outlier,</p> <p>23 like, for example, here, 3.6, 4.3, 3.2, it's very hard</p> <p>24 to determine an outlier, but if you have 6 and 6 and 7,</p> <p>25 it is not hard.</p>

79 (Pages 310 to 313)

Ghassan Saed, Ph.D.

Page 314	Page 316
<p>1 Q. Do you have a certain numerical criteria that you use</p> <p>2 to classify something as an outlier that you're going</p> <p>3 to exclude from your calculations?</p> <p>4 A. I just told you.</p> <p>5 Q. What's the numerical value?</p> <p>6 A. I don't have a numerical value.</p> <p>7 Q. You just eyeball it?</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 THE WITNESS: No, no, no, no, please, so I</p> <p>10 just said that if the two numbers, okay, agrees very</p> <p>11 close, the closer the two numbers together and the more</p> <p>12 further is the other number, that is considered an</p> <p>13 outlier to me.</p> <p>14 BY MR. KLATT:</p> <p>15 Q. But, again, you don't have any numerical formula that</p> <p>16 you follow to make that determination, correct?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 THE WITNESS: I told you what I follow.</p> <p>19 BY MR. KLATT:</p> <p>20 Q. When it's close together, you exclude the third one.</p> <p>21 When it's further apart, you --</p> <p>22 A. I did not say that.</p> <p>23 MS. O'DELL: Object to the form.</p> <p>24 BY MR. KLATT:</p> <p>25 Q. Then please explain numerically how you make the</p>	<p>1 RE-EXAMINATION BY MR. HEGARTY:</p> <p>2 Q. Doctor, I'm showing you what I'm marking as Exhibit 19.</p> <p>3 Do you recognize Exhibit 19?</p> <p>4 A. It looks like the abstract we submitted to SGO.</p> <p>5 Q. This abstract in the middle refers to testing done at</p> <p>6 48 hours; is that correct?</p> <p>7 A. 48 hours is a typo everywhere you see it, I acknowledge</p> <p>8 that.</p> <p>9 Q. So you reported 48 hours in this abstract to SGO?</p> <p>10 A. Correct. It is wrong. All the work that I did it's 72</p> <p>11 hours.</p> <p>12 SAED DEPOSITION EXHIBIT NUMBER 20,</p> <p>13 ABSTRACT,</p> <p>14 WAS MARKED BY THE REPORTER</p> <p>15 FOR IDENTIFICATION</p> <p>16 BY MR. HEGARTY:</p> <p>17 Q. I'm going to mark as Exhibit Number 20 another abstract</p> <p>18 of yours; is that correct?</p> <p>19 A. Where is it -- talcum powder -- where was this?</p> <p>20 Q. Do you recognize this abstract?</p> <p>21 A. March 2018, okay.</p> <p>22 Q. In the middle you report treating cells at 0, 200, and</p> <p>23 500 micrograms per milliliter; is that correct?</p> <p>24 A. Yes, that was the initial study that we did.</p> <p>25</p>
Page 315	Page 317
<p>1 decision to exclude one of the three values --</p> <p>2 A. Okay.</p> <p>3 Q. -- or include it.</p> <p>4 A. One more time. So if the two number -- we have three</p> <p>5 numbers, right, three values. If two of the three</p> <p>6 values are very close, the closer they are together,</p> <p>7 and they are more further from the third one, that</p> <p>8 third one qualifies for outlier.</p> <p>9 Q. How close do the two have to be to exclude the third?</p> <p>10 A. Very close, have to be very close.</p> <p>11 Q. Numerically how --</p> <p>12 A. I don't know, I don't have a numerical value.</p> <p>13 Q. That's all the questions I have, Doctor.</p> <p>14 MR. HEGARTY: How much time do we have left?</p> <p>15 THE VIDEOGRAPHER: Two minutes left.</p> <p>16 MS. O'DELL: Do you have questions?</p> <p>17 MR. LOCKE: I do have a few.</p> <p>18 MS. O'DELL: You've got two minutes.</p> <p>19 MR. LOCKE: I know you've got some, too.</p> <p>20 MR. HEGARTY: I do.</p> <p>21 MR. LOCKE: Go ahead, Mark.</p> <p>22 SAED DEPOSITION EXHIBIT NUMBER 19,</p> <p>23 ABSTRACT SUBMITTED TO SGO,</p> <p>24 WAS MARKED BY THE REPORTER</p> <p>25 FOR IDENTIFICATION</p>	<p>1 Q. And that data is reflected in the notebooks we looked</p> <p>2 at?</p> <p>3 A. It's here, yes.</p> <p>4 MR. KLATT: Which notebook?</p> <p>5 MS. O'DELL: Exhibit 3.</p> <p>6 SAED DEPOSITION EXHIBIT NUMBER 21,</p> <p>7 ABSTRACT FROM SRI,</p> <p>8 WAS MARKED BY THE REPORTER</p> <p>9 FOR IDENTIFICATION</p> <p>10 BY MR. HEGARTY:</p> <p>11 Q. I'm going to mark next as Exhibit Number 21 another</p> <p>12 abstract of yours from SRI; is that correct?</p> <p>13 A. SRI, March 16, this one is -- what is the title --</p> <p>14 yeah, talcum powder -- yes.</p> <p>15 Q. In the method section you report treating cells with</p> <p>16 1,000 micrograms per milliliter of talc; is that</p> <p>17 correct?</p> <p>18 A. That's a typo that's 100.</p> <p>19 Q. That's another mistake?</p> <p>20 A. Yes, it's 100.</p> <p>21 MS. O'DELL: I think your time's gone.</p> <p>22 MR. HEGARTY: Okay. Well, we --</p> <p>23 THE WITNESS: And all those are the</p> <p>24 preliminary that we did.</p> <p>25 MR. HEGARTY: We have request for several</p>

80 (Pages 314 to 317)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 318</p> <p>1 documents to be produced, so we can go on the record 2 before we finish the deposition. And then, also, we 3 reserve the right, as we indicated at the beginning of 4 the deposition, to seek additional time because of the 5 late productions and, also, because of the 6 nonresponsive nature Dr. Saed has been throughout the 7 deposition. 8 MS. O'DELL: I think the objection for one 9 was objection for all, I think you made that rule, 10 Mike, but I'm glad you put -- we're going to go off the 11 record, and I may have a few questions for Dr. Saed. 12 Before I do, I will say I think to state that Dr. Saed 13 has not been responsive in his answers today is a 14 misstate. The record and his testimony will be 15 reflective that he was attempting to respond to the 16 questions, very difficult technical questions, and so 17 he's attempted to do his best, and as we said before, 18 we've complied with all the orders of the Court and the 19 Notice of Deposition, and we'll oppose efforts at this 20 point for any additional time with him. So let's go 21 off the record. 22 MR. HEGARTY: And to the extent that you 23 don't have any additional questions, I just want to go 24 back on the record and make a note of the additional 25 documents we want from Dr. Saed. We can do it now or</p>	<p style="text-align: right;">Page 320</p> <p>1 actually, maybe I should do it this way, I apologize. 2 If you would, let me hand to you what was marked as the 3 lab notebook for your -- the experiments that were done 4 to and reported on in your manuscript and your report, 5 Exhibit 1. Do you see those? 6 A. Yes. 7 Q. And if you turn to I think it was Page 57, Bates Number 8 57 -- make sure I'm at the right page. Let me know 9 when you get there, Doctor. 10 A. 57? 11 Q. Uh-huh. 12 A. This page? 13 Q. Maybe I wrote the page down -- oh, yeah, it's actually 14 84 in -- it's 57 in there and it's 84 in your main lab 15 notebook. You recall a number of questions about or 16 two questions at least that I recall, and it refers to 17 Page 84 in Exhibit 2 that corresponds to Bates Number 18 57 of Exhibit 1, do you recall that, and there was -- 19 you were asked about a missing data table -- 20 A. Correct. 21 Q. -- that did not make it into the scanned version. 22 A. Correct. 23 Q. Is the data contained in the table on Page 57 of the 24 scanned -- excuse me -- 84 of the lab notebook 25 contained in the figure below?</p>
<p style="text-align: right;">Page 319</p> <p>1 we can do it at the end. 2 MS. O'DELL: Why don't we wait until the end. 3 MR. HEGARTY: Okay. 4 THE VIDEOGRAPHER: Going off the record at 5 6:32 p.m. 6 (A short recess was taken.) 7 THE VIDEOGRAPHER: We're back on the record 8 at 6:56 p.m. 9 EXAMINATION BY MS. O'DELL: 10 Q. Doctor, I wanted to follow up on a few questions. 11 First, when you were acting as a consultant, you 12 referred to yourself as a consultant a number of times 13 today, was it your understanding as a consultant you 14 were also an expert witness? 15 A. Yes. 16 Q. And so during all the time that you were conducting the 17 studies that you testified to today, that you were 18 preparing certain publications, you were working as an 19 expert witness? 20 MR. KLATT: Objection, leading. 21 BY MS. O'DELL: 22 Q. Were you working during that time period as an expert 23 witness? 24 A. Yes. 25 Q. Okay. Let me see if I can direct you back to --</p>	<p style="text-align: right;">Page 321</p> <p>1 A. Yes. 2 Q. And was that figure included in the version that was 3 provided to defense counsel? 4 A. Yes. 5 Q. Okay. I've got one more situation like this. If 6 you'll turn to page -- let me get it -- it's 62 at the 7 Bates Stamp Number version, Exhibit 1, and for the lab 8 notebook it's Page 87. 9 A. Yes. 10 Q. And I think in this instance there was a table on 11 Page 87 of the lab notebook that was not scanned in the 12 electronic version. Is the data that's contained in 13 the table on Page 87 also in the figure that was 14 produced to Defendants? 15 MR. HEGARTY: Objection, form. You can 16 answer. 17 THE WITNESS: Yes. 18 BY MS. O'DELL: 19 Q. You were also asked a series of questions about your 20 manuscript and the use of the word marginal. Do you 21 recall that discussion? 22 A. Yes. 23 Q. What did you intend by the use of the word marginal? 24 A. I meant marked increase, marked difference. 25 Q. Okay. Let me change directions with you. We got your</p>

81 (Pages 318 to 321)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 322</p> <p>1 notebook that's been marked or two notebooks that have</p> <p>2 been marked Exhibit 11, and does that contain your</p> <p>3 expert report in this case as well as the references</p> <p>4 noted in your expert report?</p> <p>5 A. Correct.</p> <p>6 Q. And do you have any changes that you would like to make</p> <p>7 in your expert report?</p> <p>8 A. Yes, I do.</p> <p>9 Q. Okay.</p> <p>10 A. So I think during that note there were some references</p> <p>11 that were mislabeled, so I would like to --</p> <p>12 Q. Tell us what page you're on.</p> <p>13 A. Page 10, I'd like to add -- where it says 49, I would</p> <p>14 like to add 51 there.</p> <p>15 Q. And when you say 51, do go --</p> <p>16 A. Reference number 51.</p> <p>17 Q. Okay.</p> <p>18 A. Okay. And next page, Page 11, where it says 50 on the</p> <p>19 top of the page, first line, I'd like to add the NTP</p> <p>20 study 1993.</p> <p>21 Q. Okay.</p> <p>22 A. And on Page 12, I'd like to remove 4575.</p> <p>23 Q. Okay. And where is that on Page 12?</p> <p>24 A. On the middle paragraph.</p> <p>25 Q. All right.</p>	<p style="text-align: right;">Page 324</p> <p>1 BY MS. O'DELL:</p> <p>2 Q. You were asked a number of questions about your</p> <p>3 manuscript today. In your manuscript you state that</p> <p>4 your findings provide a molecular mechanism for linking</p> <p>5 genital talcum powder use to increased ovarian cancer</p> <p>6 risk?</p> <p>7 A. Yes.</p> <p>8 Q. And does that statement relate to the pathogenesis of</p> <p>9 ovarian cancer?</p> <p>10 A. Yes.</p> <p>11 Q. Does pathogenesis refer to the molecular mechanism that</p> <p>12 results in the development of a disease?</p> <p>13 A. Yes.</p> <p>14 Q. Also, in relation to your manuscript, has your</p> <p>15 manuscript been peer reviewed and accepted for</p> <p>16 publication?</p> <p>17 A. Yes.</p> <p>18 Q. Is the use of immortalized cells in laboratory research</p> <p>19 generally accepted in your field?</p> <p>20 A. Yes.</p> <p>21 MR. HEGARTY: Objection, form.</p> <p>22 BY MS. O'DELL:</p> <p>23 Q. Is it widely accepted?</p> <p>24 MR. HEGARTY: Objection, form.</p> <p>25 THE WITNESS: Yes.</p>
<p style="text-align: right;">Page 323</p> <p>1 MR. HEGARTY: I'm sorry, we're not getting</p> <p>2 realtime.</p> <p>3 MS. O'DELL: Let's go off the record. Do you</p> <p>4 need that or can we move on?</p> <p>5 MR. HEGARTY: No, I need it. I just wanted</p> <p>6 to see what he just said, and I can't, I obviously</p> <p>7 can't see it so --</p> <p>8 MS. O'DELL: Off the record.</p> <p>9 THE VIDEOGRAPHER: Going off the record at</p> <p>10 7:03 p.m.</p> <p>11 (An off-the-record discussion was held.)</p> <p>12 THE VIDEOGRAPHER: We're back on the record</p> <p>13 at 7:05 p.m.</p> <p>14 BY MS. O'DELL:</p> <p>15 Q. You may continue, Doctor?</p> <p>16 A. Yes. So the Page 12, the middle paragraph, I would</p> <p>17 like to delete references 4575 from the whole</p> <p>18 paragraph, they don't belong there.</p> <p>19 Q. Okay.</p> <p>20 A. That's it.</p> <p>21 Q. Anything else? Okay. Doctor, do in vitro models</p> <p>22 reliably predict the pathogenicity of potentially</p> <p>23 harmful particulates or other carcinogens in humans?</p> <p>24 MR. HEGARTY: Objection, form.</p> <p>25 THE WITNESS: Yes.</p>	<p style="text-align: right;">Page 325</p> <p>1 BY MS. O'DELL:</p> <p>2 Q. Is it a generally accepted practice for researchers in</p> <p>3 your field to correlate findings from immortalized</p> <p>4 cells to in vivo application in humans?</p> <p>5 A. Yes.</p> <p>6 Q. In terms of the studies that you have conducted on</p> <p>7 talc, you mentioned that you use multiple types --</p> <p>8 multiple lines of each type of cell; do you recall</p> <p>9 that?</p> <p>10 A. Yes.</p> <p>11 Q. How many lines of or types of ovarian cells did you</p> <p>12 use?</p> <p>13 A. Three different ovarian cancer cell lines and three</p> <p>14 different normal cell lines.</p> <p>15 Q. And what's the reason for doing that?</p> <p>16 A. The reason is to get a rebox finding to show that it is</p> <p>17 not repeated three times but the finding is reproduced</p> <p>18 from three different normal or three different ovarian.</p> <p>19 Q. And could another scientist with your expertise in and</p> <p>20 background in research, could they replicate the</p> <p>21 studies that you've conducted?</p> <p>22 A. Yes.</p> <p>23 Q. In terms of the outcomes for oxidative stress and</p> <p>24 inflammation that you saw demonstrated in your studies,</p> <p>25 are there any alternative explanations for those</p>

82 (Pages 322 to 325)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 326</p> <p>1 results?</p> <p>2 MR. HEGARTY: Objection, form.</p> <p>3 THE WITNESS: That talcum powder induces</p> <p>4 inflammation that leads to increased risk of ovarian</p> <p>5 cancer.</p> <p>6 BY MS. O'DELL:</p> <p>7 Q. Are there any other alternative explanations other than</p> <p>8 the presence of talc treating a cell?</p> <p>9 A. This is a direct experiment showing isolated effect.</p> <p>10 Q. Based on your academic training and years of experience</p> <p>11 studying ovarian cancer, does the cause and effect</p> <p>12 observed in your studies make sense?</p> <p>13 MR. HEGARTY: Objection, form.</p> <p>14 THE WITNESS: It does.</p> <p>15 BY MS. O'DELL:</p> <p>16 Q. In terms of the particular data that you evaluated, I</p> <p>17 want to ask you to take a look at I think it was Bates</p> <p>18 Number Page 11 of Exhibit 1, and you were asked some</p> <p>19 questions about occasions when you averaged two</p> <p>20 findings?</p> <p>21 A. Outliers.</p> <p>22 Q. Yes. So address the outliers --</p> <p>23 A. Yeah, so what I forgot to say that when I was asked</p> <p>24 by -- this whole statistics, I did not touch. This was</p> <p>25 done by a professional, by a statistician, and the</p>	<p style="text-align: right;">Page 328</p> <p>1 RE-EXAMINATION BY MR. HEGARTY:</p> <p>2 Q. Doctor, in connection with your work in this</p> <p>3 litigation, did the lawyers for Plaintiff provide you</p> <p>4 with any medical or scientific literature?</p> <p>5 A. No.</p> <p>6 Q. So none of the materials we marked as Exhibit Number 11</p> <p>7 were provided by Counsel for Plaintiffs?</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 THE WITNESS: Yeah, this was copied and</p> <p>10 provided by them, the references I made.</p> <p>11 BY MR. HEGARTY:</p> <p>12 Q. In connection with you -- strike that. In connection</p> <p>13 with any other testing you have done involving cell</p> <p>14 cultures, have you ever served as an expert witness or</p> <p>15 a consultant in litigation involving the same topic of</p> <p>16 those experiments?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 THE WITNESS: I never served, as I stated, as</p> <p>19 an expert witness in any litigation.</p> <p>20 BY MR. HEGARTY:</p> <p>21 Q. In connection with any experimental testing you've done</p> <p>22 involving cell cultures, have you ever served as a paid</p> <p>23 expert for plaintiffs lawyers on the same topic for</p> <p>24 which you were doing those experiments?</p> <p>25 MS. O'DELL: Object to the form.</p>
<p style="text-align: right;">Page 327</p> <p>1 results, his finding is in the section in the notebook.</p> <p>2 He determined everything.</p> <p>3 Q. Would you have published your results even if they had</p> <p>4 shown there was no biological effect?</p> <p>5 MR. HEGARTY: Objection, form.</p> <p>6 THE WITNESS: Of course.</p> <p>7 BY MS. O'DELL:</p> <p>8 Q. Is it a standard cell culture technique generally</p> <p>9 accepted in your field to split the cell culture right</p> <p>10 after the cells have -- (coughing in room) -- in a</p> <p>11 24-hour period?</p> <p>12 A. It is.</p> <p>13 Q. Is it a standard cell culture technique that's</p> <p>14 generally accepted in your field to start experiments</p> <p>15 right after splitting the cells?</p> <p>16 A. Cells have to reach confluency and then you split them,</p> <p>17 yes.</p> <p>18 Q. And it's generally accepted to begin your experiments</p> <p>19 right after that point?</p> <p>20 A. Correct.</p> <p>21 MS. O'DELL: Nothing further.</p> <p>22 How long was that?</p> <p>23 THE VIDEOGRAPHER: 14 minutes.</p> <p>24 MR. HEGARTY: Give me a second.</p> <p>25</p>	<p style="text-align: right;">Page 329</p> <p>1 THE WITNESS: Have I been hired by and paid</p> <p>2 for by another? I'm sorry --</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. Other lawyers at the same time you were doing cell</p> <p>5 culture tests involving the same topic that you were</p> <p>6 consulting with them on.</p> <p>7 MS. O'DELL: Object to the form.</p> <p>8 THE WITNESS: No.</p> <p>9 BY MR. HEGARTY:</p> <p>10 Q. You said in response to counsel's question that when</p> <p>11 you used the word marginal, you meant marked. What</p> <p>12 is -- where is a written definition for marked?</p> <p>13 A. Marked.</p> <p>14 Q. I think I said that, but where is a published standard</p> <p>15 for what marked means?</p> <p>16 A. This is marked is to me, but we can go the</p> <p>17 statistically significance. To me, when you have an</p> <p>18 increase of 1 versus 6 fold, that's a marked increase.</p> <p>19 Q. Is there a written standard for what constitutes a</p> <p>20 marked increase?</p> <p>21 A. No.</p> <p>22 MS. O'DELL: Object to the form.</p> <p>23 BY MR. HEGARTY:</p> <p>24 Q. When I asked you not long ago if you had any revisions</p> <p>25 to your expert report, you answered no. Do you recall</p>

83 (Pages 326 to 329)

Ghassan Saed, Ph.D.

Page 330	Page 332
<p>1 telling me that?</p> <p>2 MS. O'DELL: I don't recall the question</p> <p>3 being asked.</p> <p>4 BY MR. HEGARTY:</p> <p>5 Q. I did ask. I asked you, Doctor, didn't I, if you had</p> <p>6 any -- if you needed to revise in any way your report.</p> <p>7 Do you recall me asking that?</p> <p>8 MS. O'DELL: Object to the form.</p> <p>9 THE WITNESS: Probably I forgot that those</p> <p>10 references need to be done.</p> <p>11 BY MR. HEGARTY:</p> <p>12 Q. When did this revelation come to you?</p> <p>13 A. I mean I don't --</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 THE WITNESS: I'm not sure, we've been</p> <p>16 through many, many, many questions, so I don't really</p> <p>17 remember be accurately.</p> <p>18 BY MR. HEGARTY:</p> <p>19 Q. Well, I asked that you question about --</p> <p>20 A. Make you did, I'm not denying, maybe you did, but I'm</p> <p>21 saying there are too many things that we're covering</p> <p>22 today in very small time.</p> <p>23 Q. Well, did you discover the need to make those revisions</p> <p>24 before today?</p> <p>25 A. Yes, they actually they were marked in my -- with my</p>	<p>1 A. What's the name of the lady I met today --</p> <p>2 MS. O'DELL: Michelle.</p> <p>3 THE WITNESS: Michelle, I just met her today.</p> <p>4 Sorry, I'm not good at names.</p> <p>5 MS. O'DELL: Alastair.</p> <p>6 THE WITNESS: And Alastair, we met today.</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. You testified a moment ago that an in vitro model</p> <p>9 reliably predicts that, I think, pathogenesis of</p> <p>10 potentially harmful particles and other carcinogens --</p> <p>11 let me back up and find that testimony -- you said</p> <p>12 do -- you agreed with the question that in vitro models</p> <p>13 reliably predict the pathogenesis of potentially</p> <p>14 harmful particulates or other carcinogens in humans.</p> <p>15 Do you recall agreeing with that statement?</p> <p>16 A. Yes.</p> <p>17 Q. What data does it take for an in vitro model to</p> <p>18 reliably predict the carcinogenicity of a particle?</p> <p>19 A. What data?</p> <p>20 Q. Is it your testimony that in vitro models by themselves</p> <p>21 reliably predict the carcinogenicity of a particle to a</p> <p>22 human?</p> <p>23 A. Yes.</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 THE WITNESS: They do.</p>
Page 331	Page 333
<p>1 handwriting, this is my handwriting, they were marked</p> <p>2 with my handwriting.</p> <p>3 Q. When did you make those handwritten marks?</p> <p>4 A. Last night, I was reviewing this, and I -- what I</p> <p>5 understood maybe your question as if I want to make</p> <p>6 something to the text, but this is like probably the</p> <p>7 end notes without the references.</p> <p>8 Q. Did you meet with counsel for Plaintiffs yesterday?</p> <p>9 A. Did I meet with -- yes, I did.</p> <p>10 Q. For how long?</p> <p>11 A. I can't remember, three, four hours, five hours, I</p> <p>12 don't know.</p> <p>13 Q. From when to when?</p> <p>14 A. When was it, 10 maybe to 2, 3.</p> <p>15 Q. Who did you meet with?</p> <p>16 A. The three -- Leigh, Margaret, John, right, and who</p> <p>17 else -- I think that's it right, I don't remember,</p> <p>18 Leigh, Margaret, John, and Dan.</p> <p>19 Q. At any point in time during your consultation with</p> <p>20 Plaintiff's Counsel, have you met with any other</p> <p>21 lawyers that you've not identified here today?</p> <p>22 A. Have I met at any point?</p> <p>23 Q. At any point.</p> <p>24 A. I met Allison, right?</p> <p>25 Q. Any others who we haven't talked about?</p>	<p>1 BY MR. HEGARTY:</p> <p>2 Q. Cite for me an instance when a carcinogen has been</p> <p>3 identified in humans based solely on an in vitro model.</p> <p>4 A. I can't remember.</p> <p>5 Q. When have you ever classified a substance as a</p> <p>6 carcinogen based on the result in an in vitro model?</p> <p>7 A. In vitro model is a good predictor to determine whether</p> <p>8 a substance is carcinogenic or not, if the same effect</p> <p>9 is replicated in vivo.</p> <p>10 Q. You did not replicate your results in an in vivo model,</p> <p>11 correct?</p> <p>12 A. Not yet.</p> <p>13 Q. You were asked with regard to your experimental results</p> <p>14 whether there was any other alternative explanation for</p> <p>15 the results. What did you do to rule out alternative</p> <p>16 explanations for the results that you found in your</p> <p>17 testing?</p> <p>18 A. Because treatment without talc did not induce it, we're</p> <p>19 doing a comparison, very simple comparison with and</p> <p>20 without, and with did this, without, this didn't do.</p> <p>21 Q. You claim that your test results show that talc</p> <p>22 increases the risk of ovarian cancer. How did you show</p> <p>23 by your test results that talc increases the risk --</p> <p>24 I'm sorry -- yeah, increases the risk of ovarian</p> <p>25 cancer?</p>

84 (Pages 330 to 333)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 334</p> <p>1 A. One more time, please.</p> <p>2 Q. How do you remember test results show that talc</p> <p>3 increases the risk of ovarian cancer?</p> <p>4 A. By showing that the treatment with talcum powder</p> <p>5 induces the same oxidative oxidant and anti-oxidant</p> <p>6 profile that we observe in epithelial ovarian cancer</p> <p>7 cells.</p> <p>8 Q. But no study has shown those results in women using</p> <p>9 cosmetic talc, correct?</p> <p>10 MS. O'DELL: Object to the form.</p> <p>11 THE WITNESS: So you're saying there's no</p> <p>12 studies out there showing woman using the talc powder</p> <p>13 have increased any of these markers?</p> <p>14 BY MR. HEGARTY:</p> <p>15 Q. Correct.</p> <p>16 A. I think you asked me the same question before.</p> <p>17 Q. Let me ask it a different way, if you -- I already</p> <p>18 asked you the same question. How do you go from your</p> <p>19 test results to concluding there's an increased risk of</p> <p>20 cancer with applying talc to the body?</p> <p>21 MS. O'DELL: Object to the form.</p> <p>22 THE WITNESS: Again, as I stated, the</p> <p>23 treatment of ovarian cancer cells, three different</p> <p>24 ovarian cancer cell lines and three different normal</p> <p>25 cells with talcum powder induces a profile of oxidative</p>	<p style="text-align: right;">Page 336</p> <p>1 I don't understand what you're trying to do, seriously.</p> <p>2 BY MR. HEGARTY:</p> <p>3 Q. Well, have you ever reported finding a pro-oxidative or</p> <p>4 an anti-oxidative state in normal ovarian cells?</p> <p>5 MS. O'DELL: Object to the form.</p> <p>6 THE WITNESS: As compared to what?</p> <p>7 BY MR. HEGARTY:</p> <p>8 Q. As compared to nothing.</p> <p>9 A. How you not compare to nothing?</p> <p>10 Q. Right.</p> <p>11 A. So we comparing ovarian cancer to normal cells.</p> <p>12 Q. My question is simply in normal cells, have you ever</p> <p>13 found pro-oxidative or anti-oxidative state?</p> <p>14 A. We found -- okay, maybe I know what you want me to say.</p> <p>15 So there are the players, the key oxidants and key</p> <p>16 anti-oxidants, they are expressed in all cells</p> <p>17 including normal. Now, the amount of -- the degree of</p> <p>18 expression, that what gets screwed up and altered when</p> <p>19 you develop -- you start -- cells start developing that</p> <p>20 oncogenesis phenotype.</p> <p>21 Q. I need to leave Mr. Klatt a minute or two. You</p> <p>22 mentioned that you would still have published your</p> <p>23 article if you found no biologic effect. Do you recall</p> <p>24 answering that question?</p> <p>25 A. Correct.</p>
<p style="text-align: right;">Page 335</p> <p>1 stress that we in our lab have extensively published</p> <p>2 and characterized for ovarian cancer cells.</p> <p>3 BY MR. HEGARTY:</p> <p>4 Q. You characterized that state in ovarian cancer cells,</p> <p>5 correct?</p> <p>6 MS. O'DELL: I'm sorry --</p> <p>7 THE WITNESS: State?</p> <p>8 BY MR. HEGARTY:</p> <p>9 Q. Well, the pro-oxidant and anti-oxidant state, you've</p> <p>10 characterized that to exist in ovarian cancer cells,</p> <p>11 correct?</p> <p>12 A. We characterized that there is an enhanced pro-oxidant</p> <p>13 state in -- that manifest in ovarian cancer cells, yes.</p> <p>14 Q. You've not done any studies showing a pro-oxidant or</p> <p>15 decreased anti-oxidant state in normal ovarian cancer</p> <p>16 cells, correct?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 THE WITNESS: Normal ovarian cancer?</p> <p>19 BY MR. HEGARTY:</p> <p>20 Q. Yes. I'm sorry -- you have not shown a pro-oxidative</p> <p>21 or anti-oxidative state in normal ovarian cells?</p> <p>22 A. In response to what?</p> <p>23 Q. In response to anything.</p> <p>24 MS. O'DELL: Object to the form.</p> <p>25 THE WITNESS: That's a very vague question.</p>	<p style="text-align: right;">Page 337</p> <p>1 Q. Is it your belief that anyone would publish your paper</p> <p>2 if you showed no biologic effect?</p> <p>3 MS. O'DELL: Object to the form.</p> <p>4 THE WITNESS: Anyone not me, you talking</p> <p>5 about me?</p> <p>6 BY MR. HEGARTY:</p> <p>7 Q. Yes, any publisher.</p> <p>8 A. That it would be published, yes, I would consider this</p> <p>9 a very positive and very negative, same thing.</p> <p>10 Q. But do you think a journal would publish --</p> <p>11 A. Absolutely, it's a finding.</p> <p>12 Q. What is that based on?</p> <p>13 A. It's a finding.</p> <p>14 Q. Have you ever approached a journal and had them publish</p> <p>15 an article on a negative finding?</p> <p>16 A. I don't know what you call negative.</p> <p>17 Q. Well, showing no biologic --</p> <p>18 A. That's not negative, that's a huge finding.</p> <p>19 Q. Okay. All right.</p> <p>20 You have questions, Mike? Go ahead.</p> <p>21 RE-EXAMINATION BY MR. KLATT:</p> <p>22 Q. Dr. Saed, are you aware that a plaintiff's expert named</p> <p>23 John Godlesky has tested dozens of women's ovarian,</p> <p>24 reproductive, and peritoneal tissue, and found many,</p> <p>25 many nontalc particles, foreign particles in that</p>

85 (Pages 334 to 337)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 338</p> <p>1 tissue; are you aware of that?</p> <p>2 A. No.</p> <p>3 Q. If you tested those other foreign particles that aren't</p> <p>4 talc in the same test that you tested talc, could you</p> <p>5 get the same results?</p> <p>6 MS. O'DELL: Object to the form.</p> <p>7 THE WITNESS: I didn't test them.</p> <p>8 BY MR. KLATT:</p> <p>9 Q. But is it possible that if you tested them, you could</p> <p>10 get the same results?</p> <p>11 A. If I didn't test them, I will not give you an answer.</p> <p>12 Q. I'm sorry?</p> <p>13 A. I did not test them.</p> <p>14 Q. So you have no idea whether any other foreign particle</p> <p>15 other than talc would result in the same findings you</p> <p>16 found for talc, correct?</p> <p>17 MS. O'DELL: Object to the form.</p> <p>18 BY MR. KLATT:</p> <p>19 Q. Because you haven't done the test.</p> <p>20 A. When I test, I will tell you.</p> <p>21 Q. So you can't give us any information on what any other</p> <p>22 particles other than talc would do under the tests that</p> <p>23 you -- let me finish -- the tests that you submitted</p> <p>24 talc to, correct?</p> <p>25 MS. O'DELL: Object to the form.</p>	<p style="text-align: right;">Page 340</p> <p>1 many questions as I can in 20 seconds. You're the</p> <p>2 first expert to reach the conclusions that you have in</p> <p>3 your report, is that correct?</p> <p>4 MS. O'DELL: Object to the form.</p> <p>5 THE WITNESS: That were looking at the</p> <p>6 molecular mechanism and molecular effect of talcum</p> <p>7 powder?</p> <p>8 BY MR. LOCKE:</p> <p>9 Q. Right.</p> <p>10 A. I wasn't the first one.</p> <p>11 Q. Who did it before?</p> <p>12 A. Was Shukla and there was the -- what was the other guy</p> <p>13 name, I can't remember names, but there were two or</p> <p>14 three papers that look at molecular mechanisms,</p> <p>15 molecular effects.</p> <p>16 Q. Okay.</p> <p>17 MS. O'DELL: I'm sorry, time's up.</p> <p>18 MR. LOCKE: I'm going to still object to not</p> <p>19 being able to ask a couple quick questions here.</p> <p>20 MS. O'DELL: Tom, I'm sorry, I mean this</p> <p>21 is between --</p> <p>22 MR. LOCKE: You're cutting me off.</p> <p>23 MS. O'DELL: I've tried to be very</p> <p>24 accommodating, but this is between you and your</p> <p>25 co-counsel.</p>
<p style="text-align: right;">Page 339</p> <p>1 THE WITNESS: I only can give you information</p> <p>2 to the experiments that I did and --</p> <p>3 BY MR. KLATT:</p> <p>4 Q. And you didn't do any tests on any foreign particles</p> <p>5 other than talc, correct?</p> <p>6 A. Correct.</p> <p>7 Q. And has all your testing on talc been paid for by the</p> <p>8 Beasley Allen firm?</p> <p>9 MS. O'DELL: Object to the form.</p> <p>10 THE WITNESS: My time?</p> <p>11 BY MR. KLATT:</p> <p>12 Q. Well, the testing, yeah, the time that you spent</p> <p>13 testing talc.</p> <p>14 MS. O'DELL: Object to the form.</p> <p>15 THE WITNESS: No, testing is not -- what are</p> <p>16 you trying to -- we already discussed this. Time, they</p> <p>17 paid for my time for consultation, I paid for the</p> <p>18 expenses from the lab. We already talked about that.</p> <p>19 MR. KLATT: Okay. Anybody else?</p> <p>20 MR. LOCKE: Yeah. Are you finished?</p> <p>21 MR. KLATT: Yes.</p> <p>22 EXAMINATION BY MR. LOCKE:</p> <p>23 Q. I just want to clarify for you, Doctor --</p> <p>24 MS. O'DELL: You've got 20 seconds.</p> <p>25 MR. LOCKE: Okay, well, I'm going to ask as</p>	<p style="text-align: right;">Page 341</p> <p>1 MR. LOCKE: No, it's really not.</p> <p>2 MS. O'DELL: Yes, it is, it is.</p> <p>3 MR. LOCKE: Okay. We'll be back with this</p> <p>4 witness.</p> <p>5 MR. HEGARTY: Do you have anything further?</p> <p>6 MS. O'DELL: I have nothing further.</p> <p>7 MR. HEGARTY: I just want to put on the</p> <p>8 record several document requests, and I certainly don't</p> <p>9 expect you to agree to them right now.</p> <p>10 We would like copies of Dr. Saed's prior</p> <p>11 drafts of his manuscript; copies of any correspondence</p> <p>12 with OB-GYN Oncology and its reviewers, whether it's in</p> <p>13 his possession or maintained on a website; any cover</p> <p>14 letters accompanying submissions of the manuscript to</p> <p>15 either OB-GYN Oncology or Reproductive Sciences; all</p> <p>16 communications with Dr. Saed, between Dr. Saed and</p> <p>17 Beasley Allen and other plaintiffs lawyers with regard</p> <p>18 to his manuscript; and the budget that Dr. Saed</p> <p>19 prepared for his manuscript; as well as all accounting</p> <p>20 documents, invoices, or other original documents that</p> <p>21 memorialize the expenses, costs, et cetera, hours</p> <p>22 worked on the manuscript that we -- that are reported</p> <p>23 in Exhibit Number 5.</p> <p>24 MS. O'DELL: You're referring to the budget</p> <p>25 officer at Wayne State?</p>

86 (Pages 338 to 341)

Ghassan Saed, Ph.D.

<p style="text-align: right;">Page 342</p> <p>1 MR. HEGARTY: Correct, and the documents that</p> <p>2 Sharon Pepe used to put together the numbers that are</p> <p>3 reported in that exhibit. And those are at least the</p> <p>4 document requests that I can think of right now, but we</p> <p>5 reserve the right to go back and look at the transcript</p> <p>6 to see if there are any additional requests, and we</p> <p>7 will make them in a timely manner.</p> <p>8 MS. O'DELL: We will be happy to meet and</p> <p>9 confer on all of those items, some of which we might</p> <p>10 work an agreement out, some of which we might need some</p> <p>11 assistance by the Court.</p> <p>12 THE VIDEOGRAPHER: This concludes the</p> <p>13 deposition. We're going off the record at 7:29 p.m.</p> <p>14 (The deposition was concluded at 7:29 p.m.)</p> <p>15</p> <p>16</p> <p>17</p> <p>18</p> <p>19</p> <p>20</p> <p>21</p> <p>22</p> <p>23</p> <p>24</p> <p>25</p>	<p>1 -----</p> <p>2 E R R A T A</p> <p>3 -----</p> <p>3 PAGE LINE CHANGE</p> <p>4</p> <p>5 REASON: _____</p> <p>6</p> <p>7 REASON: _____</p> <p>8</p> <p>9 REASON: _____</p> <p>10</p> <p>11 REASON: _____</p> <p>12</p> <p>13 REASON: _____</p> <p>14</p> <p>15 REASON: _____</p> <p>16</p> <p>17 REASON: _____</p> <p>18</p> <p>19 REASON: _____</p> <p>20</p> <p>21 REASON: _____</p> <p>22</p> <p>23 REASON: _____</p> <p>24</p> <p>25 REASON: _____</p>

EXPERT REPORT OF JACK SIEMIATYCKI MSc, PhD
On
TALCUM POWDER USE AND OVARIAN CANCER

Jack Siemiatycki, MSc, PhD, FCAHS

106 Columbia Avenue

Westmount, Quebec, Canada

November 16, 2018

TABLE OF CONTENTS

1. My mandate.....	1
2. My credentials, expertise and experience	1
3. Overview of my methodology.....	4
4. The science of epidemiology.....	5
4.1 Some basic measures and notions used in epidemiology	6
4.2 Bradford Hill “guidelines”	18
5. Epidemiologic evidence regarding talc and ovarian cancer	23
5.1 IARC review and evaluation of talcum powder products.....	23
5.2 Information consulted for the present review.....	25
5.3 My methodology for this review.....	26
5.3.1 Selecting studies for review	26
5.3.2 What were women exposed to in body powders?	29
5.3.3 Routes of exposure	31
5.3.4 Questionnaire items on use of talc powders	32
5.3.5 Metrics of exposure	33
6. My meta-analyses regarding talcum powder products and ovarian cancer: data included and results	33
6.1 Features of the studies.....	33
6.2 Association between binary variable talc powdering and all types of ovarian cancer combined – data and results	34
6.2.1 Individual studies and results on binary exposure variable	34
6.2.2 Strategy for Main analysis and sensitivity analyses.....	35
6.2.3 Results of meta-analyses on binary exposure variable for all ovarian cancers.....	38
6.2.4 Other contemporaneous meta-analyses on binary exposure variable for all ovarian cancers.....	39
6.3 Dose-response – cumulative exposure, duration and frequency.....	42
6.4 Subtypes of ovarian cancer - in particular, serous invasive tumors	45
6.5 Conclusion from meta-analyses and dose-response considerations	47
7. Misconceptions and possible biases	47
7.1 Some prominent misconceptions in reviewing the evidence	48
7.2 Alternative explanations - Biases and errors.....	53
7.2.1 Bias due to non-response or non-participation.....	53
7.2.2 Recall or reporting bias.....	54
7.2.3 Non-differential (or random) error in recall or reporting of exposure to powders.....	55
7.2.4 Short follow-up periods for disease ascertainment.....	57

Report on talcum powder use and ovarian cancer

Jack Siemiatycki

7.2.5	Diagnostic error	57
7.2.6	Initiation of powdering as a result of ovarian cancer.....	58
7.2.7	Confounding	59

17.	Curriculum Vitae – Jack Siemiatycki	141

1. My mandate

I have been retained to assess the epidemiologic evidence regarding the **general causation** between perineal (or genital) use of talcum powder products and risk of ovarian cancer. The question is: "Can application of talcum powder products in the perineal region cause ovarian cancer?"

All of my opinions in this report are stated to a reasonable degree of scientific certainty.

2. My credentials, expertise and experience

I am a tenured Professor of epidemiology at the University of Montreal and an Adjunct Professor of epidemiology at McGill University in Montreal. I have received prestigious national research awards in Canada, such as National Health Scientist Salary Award, Medical Research Council Distinguished Scientist Award, Canada Research Chair in Environment and Cancer and, currently, I hold the Guzzo-Cancer Research Society Chair in Environment and Cancer. I am an elected fellow of the Canadian Academy of Health Sciences. I was awarded a lifetime achievement award by the Canadian Society for Epidemiology and Biostatistics, the premier professional organisation in our discipline.

Trained in statistics and in epidemiology, I have devoted most of my research career to investigating links between environmental, occupational and lifestyle factors and various types of cancer. My research has been both substantive – namely, looking at particular factors and their possible relationship to particular cancers - and methodological – namely, exploring how to evaluate and enhance the validity of epidemiologic research through various prisms: study design, data collection methods and statistical analysis. Of my approximately 250 research publications, about one quarter would be considered to have methodological focus.

I have held various leadership positions, including the elected presidency of the Canadian Society for Epidemiology and Biostatistics, and elected membership on the Board of the American College of Epidemiology. I have been invited to serve on over 160 Boards, Scientific Councils and Expert Panels for a host of governments, universities or research agencies. Examples include: Board of Directors of the Canadian National Cancer Institute, member of expert panel tasked with recommending priorities for action under the

Canadian Environmental Protection Act, member of external peer review panel of the Epidemiology branch of the US National Cancer Institute (NCI), member of two different expert advisory bodies to research projects at the NCI, consulted by President Clinton's Cancer panel, member of external peer review panel for the Helmholtz German national medical research agency, Chair of the Scientific Council of the largest prospective study of causes of cancer being conducted in France, and others of that nature.

I have been associate editor of the American Journal of Epidemiology and the International Journal of Environmental Health. In addition, I have served as reviewer for about 20 journals. I have served as a chair and as a member of grant review panels for major Canadian scientific funding agencies.

My research programme has been well funded by Canadian funding agencies for over 35 years. I have conducted research and published on the carcinogenicity of a large number of agents in the occupational environment (e.g. asbestos, silica, welding fumes) and in the general environment (e.g. smoke from wood stoves, urban air pollution) and lifestyle factors (e.g. smoking, alcohol, use of cell phones).

I have taught and supervised epidemiology students and many of my former trainees are now faculty members in universities around the world.

I have had a long association with the International Agency for Research on Cancer (IARC). IARC is the premier institution in the world for cancer epidemiology and for environment and cancer research. It has several mandates, including the organisation and compilation of standardised high quality data on cancer incidence around the world, the conduct of original research, and the evaluation of the carcinogenicity of different agents with which humans come into contact. The latter is achieved through a process that involves identifying chemical or physical agents for evaluation, convening specially selected international expert panels that are mandated to review all pertinent evidence on the topic and write a thorough review culminating in an evaluation of whether the agent(s) are human carcinogens. Since the inception of this program in 1971, there have been about 120 meetings held and approximately 1100 agents have been evaluated.

A particular point of pride for me is that over the years, research results from my team have been cited as part of the information base on 69 of the 1100 agents that have been evaluated, probably making my team the most cited epidemiology team in the history of the IARC Monograph program.

My association with IARC began when I did a post-doctoral fellowship there in 1977-79. Over the intervening years I have collaborated with scientists at IARC on various research projects. I was a member of the 18-member Scientific Council of IARC from 2006 to 2010 including two years as elected Chairman of the Council. The Scientific Council oversees all of the scientific activities at IARC; its members are named by the member states of IARC. I have been invited to sit on IARC Monograph international expert panels for 5 of the 60 panels convened in the past 25 years. One of the IARC Monograph panels of which I was a member was tasked with evaluating: "Carbon black, titanium dioxide and non-asbestiform talc." Out of the 16 invited experts who participated in the meeting as members of the Working Group, I was selected to chair the meeting.

Subsequent to the IARC meeting and the report of the meeting, a small subgroup of members of the IARC Working Group, of which I was a member, conducted and published a meta-analysis of the results of the studies that had been available to the IARC Working Group (Langseth, 2008)

Although I have not personally produced original data collection studies on the topic, I am well qualified to review the epidemiologic evidence. I have participated in two published reviews of the issue. The methodologic expertise and analytical skills required to critically review and evaluate such evidence is generic to the vast area of environmental epidemiology of cancer. I am routinely asked by journals and grant agencies to provide expert opinions on topics for which I have not produced original data collection studies, but that are within the purview of my expertise. The invitation by IARC to chair the meeting at which talc was evaluated is testimony to the fact that my competence and expertise in this matter are internationally recognized by peers. I do not claim expertise in various adjoining domains that inform this issue, including physiology, pathology, clinical oncology, experimental toxicology, geology and mineral chemistry. However, I do have the

expertise and skill to assimilate information that is provided by experts in these areas. I have previously submitted a report on my review of the evidence regarding talcum powder products and ovarian cancer in October 2016.

I have previously served as an expert witness for plaintiffs in one U.S. court case, and that was a talc litigation in Los Angeles in 2017. (Eva Echeverria, BC628228, Johnson and Johnson Talcum Powder Cases, CA JCCP No. 4872), and I testified that the genital use of talcum powder products can cause ovarian cancer.

I have served as an expert witness in two Canadian court cases, neither having to do with talc or hygiene powders or ovarian cancer. One case dealt with a class action lawsuit on behalf of a town in Canada adjoining a Canadian military base where there had allegedly been a spill of trichloroethylene that seeped into the water table of the town. The residents claimed that the contamination had caused cases of cancer. I was an expert for the defence, the Canadian government, and I testified in 2012. (Province of Quebec Superior Court file 200-06-000038-037).

The other case was a class action on behalf of Quebec residents who contracted cancer and had been smokers, claiming that the tobacco companies were responsible for their diseases. I was an expert for the plaintiffs and I testified in 2014. (Province of Quebec Superior Court file 500-06-000076-980).

In my work as an expert for legal cases, my time is billed at the rate of \$450 per hour for research, report preparation, communications with counsel, participation in depositions, and testimony in court.

3. Overview of my methodology

The basis of my opinions derive from my education, training, experience, research and what is accepted within the community of leading scientists practicing in the field of epidemiology. My opinions are based on my review of the relevant materials, published in the scientific literature and/or produced in this case; including internal company documents, as well as relevant depositions, reports and testimony in the talcum powder product litigation. To reach my conclusions, I have employed the same scientific

methodology and rigor that I use in my research, in my publications and in the consulting and advising that I carry out on behalf of governments, public health agencies and research institutes. This includes a review of the relevant published literature, expert judgment to assess the quality and meaning of the various studies that were reviewed, and syntheses of the available evidence and any other pertinent medical and scientific evidence of which I am aware. The methods I used to derive and present my opinions are those used in general in the assessment of causal relations in medicine and public health, and more specifically in epidemiology. The methods are based on the experience and insight I have accumulated over 40 years of research, consulting, reviewing and student supervision, from discussions and interactions with leading epidemiologists, service on multiple IARC panels, and from reading evolving ideas in the scientific literature, including such seminal works as Bradford Hill's (Hill 1965) writings on assessing causality.

My opinions may be further supplemented and refined, subject to results that may come from further medical and scientific study and research and the continued review of additional information and discovery materials produced in this litigation.

4. The science of epidemiology

This section is designed to provide a non-specialist reader with information and definitions about epidemiology and biostatistics that are needed to understand the basis of my evaluation on talcum powder products and ovarian cancer. I do not present in this section the actual data and evidence regarding talcum powder products and ovarian cancer.

Epidemiology is the science of occurrence of diseases in human populations. It is concerned with the patterns of disease occurrence and also with identifying the factors that influence disease occurrence. These two sets of concerns are sometimes referred to respectively as descriptive epidemiology and analytic epidemiology. The first addresses such issues as the incidence of the disease in different geographic areas, in different time periods, or at different ages and sexes. The second addresses more focused questions on the specific environmental and/or lifestyle and/or genetic factors that might influence the incidence of disease.

The word “epidemiology” has the same etymologic roots as the word “epidemic”, which signifies that, initially, epidemiology grew out of the study of epidemics. Such epidemics were often of a microbial origin (e.g. viruses, bacteria, parasites). But increasingly in the 19th and especially in the 20th century, it became clear that the etiology (i.e. causation) of chronic diseases such as cancer could also be elucidated by studying their patterns of occurrence.

While there were many studies carried out in the early to mid-20th century that we would now qualify as epidemiological in nature, the discipline of epidemiology and its methods started to become formalized in the 1950’s and 1960’s. There are now departments of epidemiology in most large universities that have health science research and teaching activities and there are many national and international societies of epidemiology.

Epidemiology is characterized by its mainly observational and non-experimental approaches. It is a discipline that is not primarily based in the laboratory; rather it is based in society. That is the source of its strength, and its weakness. Because it deals with people in the reality of their lives, it is the most pertinent approach to understanding the links between people’s lifestyles and environments and their health and disease. However, because it is based in society, it by necessity confronts the extreme complexity of human lifestyles, environments and diseases. And because we cannot experiment with people’s lives, we cannot control the conditions in which people are exposed. The methods of epidemiologic research are complex and differ from study to study. Statistical methods play an important role in trying to tease out the role of different variables and in determining whether the observed results may be attributable to chance, to bias or to real effects of putative risk factors. It is usually necessary to assemble evidence from several data-collection studies on a given topic before being able to draw inferences about causality.

4.1 Some basic measures and notions used in epidemiology

In this section I will review a number of concepts that need to be understood in order to properly understand my review of the evidence regarding talc powder and ovarian cancer. It is intended for readers who may not be expert in epidemiology. In this section I will not necessarily tie the concepts and definitions to the talc-ovarian cancer issue; that part will

be left for later. For now, I am simply introducing the non-epidemiologist reader to terminology and concepts with which she/he may not be very familiar.

Prevalence of disease. The prevalence of a disease refers to the proportion of a population who are living with the disease at any given point in time.

Incidence of disease. The incidence of a disease refers to the proportion of a population who are newly diagnosed with the disease during a certain period of time. The bridge between incidence rate and prevalence rate is the average duration of the disease, or how long people live with it before they are cured or pass away. In fact, while incidence and prevalence are foundational concepts in epidemiology, it is only incidence that figures prominently in the evaluation of carcinogenicity of talc.

Risk of disease. The risk of disease is a term that can refer to incidence or prevalence. The meaning should be clear from the context in which it is used. For studies of cancer, it almost always refers to incidence of disease. This is the way I will use the term in this report.

“Cause” of disease. A cause of a disease is any agent or characteristic (environmental, lifestyle or genetic) that increases the probability of getting the disease or it may simply advance or hasten the onset of the disease. It may act alone or it may act in concert with other factors over a lifetime to cause the disease. It may act immediately (e.g., cyanide as a cause of poisoning; lack of seat belt use as a cause of car accident mortality) or it may take many years for the effect to become manifest (e.g., lack of physical activity as a cause of obesity). There may be many different causes for the same disease. (See explanation of Multifactorial Etiology below.)

Risk factor. As defined in the Dictionary of Epidemiology (Last 2001), a risk factor is an aspect of personal behavior or life-style, an environmental exposure, or an inborn or inherited characteristic, that, on the basis of epidemiologic evidence, is known to be associated with a health-related condition. The term *risk factor* is used rather loosely and depending on the context it can refer to a factor that directly causes a disease or a factor that is a strong marker for the proximal cause of the disease. As it is often used, I will

mainly use the term “risk factor” as a synonym for the noun “cause” of the disease. (eg. “Smoking is a risk factor for lung cancer.”)

Association. As defined in the Dictionary of Epidemiology (Last 2001), association refers to the degree of statistical dependence between two or more events or variables. Events are said to be associated when they occur more frequently together than one would expect by chance. Association does not necessarily imply a causal relationship.

Risk among unexposed (R_u) refers to the risk of disease among persons who are not (or were not) exposed to the agent under investigation. In this case, it would refer to the risk of getting ovarian cancer among women who *have never* used talc in the perineal region.

Risk among exposed (R_e) refers to the risk of disease among persons who are (or were) exposed to the agent under investigation. In this case, it would refer to the risk of getting ovarian cancer among women who *have* used talc in the perineal region.

Relative Risk: $RR = R_e/R_u$ = Risk among exposed/Risk among unexposed

When $RR > 1.0$, it indicates that exposure to the agent increases the risk of developing the disease. When $RR < 1.0$, it indicates that exposure to the agent prevents the disease.

When $RR = 1.0$, it indicates that the exposure to the agent has no bearing on the risk of getting the disease.

95% Confidence interval (95% CI). This refers to the precision of an estimate of a parameter. When we estimate the 95% CI for the RR, we are approximately saying that we are 95% certain that the true parameter underlying the study is within these limits. (The true interpretation is more subtle.)

Statistical significance of an association: Statistical significance is a measure of the departure of a set of data from some null hypothesis. Most commonly in epidemiology, the null hypothesis would state that there is no association between a factor and a disease. The null hypothesis can be operationalized in different ways, such as that the $RR = 1.0$, or that there is no trend between the degree of exposure and the RR. Once a study is conducted, the results can be compared with the expected results based on the null hypothesis, and the discrepancy from the null hypothesis is measurable with probabilities. This is done

either by computing a p-value or a confidence interval. If the p-value is very small or the confidence interval does not include the null value, then we say that an observed association between the putative risk factor and the disease is unlikely to be due to chance alone.

It is important to note that while statistical significance is a tool for assessing whether an observed association is attributable to chance alone, it is not a very effective tool for establishing the absence of an association. That is, the absence of statistical significance is not tantamount to proof of the absence of an association. The absence of statistical significance can be due to the true absence of an association, but it can also be due to the study not having sufficient statistical power or to bias or confounding in the research methods. Furthermore, it should be noted that the conventional dichotomization of results as “statistically significant” or not, based on a particular cutpoint on the p-value scale (eg. $p = 0.05$), is a gross simplification. The compatibility of the data with the null hypothesis of no association is in truth on a continuous scale and the dichotomization is arbitrary and potentially misleading, especially when the observed p-value is close to the arbitrary cutpoint.

In practice, epidemiologists have been moving away from using and reporting p-values and statistical significance, as it has become clear that the main contribution of an individual study is to provide an estimate of the relative risk and its range of plausible values, embodied in a confidence interval.

Cohort studies and case-control studies: Epidemiologic research projects can take many different forms. The two most common types of analytic epidemiologic studies are cohort studies and case-control studies. (Rothman, Greenland, & Lash 2008)

In a cohort study, it is typical to enrol a large number of subjects, determine which ones are or have been exposed to the factor of interest (e.g., talc) and follow them for some period of time to evaluate whether those who were exposed subsequently experienced different disease rates from those who were not exposed.

In a case-control study, by contrast, we start with people who have the disease under study (e.g. ovarian cancer) and a set of controls who do not have the disease, and we collect data

to determine whether the cases and the controls had different histories of exposure to the factor under study (e.g. talc).

It may be said that a cohort study proceeds from the cause to the effect, whereas a case-control study starts from the effect and backtracks to the cause. There are many variants on these basic designs. These descriptions of these types of study are somewhat simplified.

It is sometimes claimed that a prospective cohort design produces more valid and reliable RR estimates than a case-control study. But this is incorrect as a generalization. The validity and reliability are not determined by the overall architecture of the study, but rather by the specifics of the study, including how the study subjects were assembled, the nature of the variables under study (exposure, disease, confounders), exactly how the information was collected, the statistical power, and so on. There may be many reasons why a particular case-control study is more valid than a particular cohort study.

Relative Risk (RR) and Odds Ratio (OR). The cohort study design leads naturally to the estimation of risk of disease among exposed, and risk of disease among unexposed, and then to the ratio of those two, which is the RR. In case-control studies, because of the way the study samples are selected, it is impossible to estimate the risk of disease or the ratio of the two risks, R_e/R_u . However, under certain conditions which are well met in studies of cancer, it is possible to estimate an approximation of the RR. This is called the odds ratio, referred to as OR. In the rest of this report, I will consider evidence obtained from both cohort studies and case-control studies, and I will refer to the findings of these studies as RRs, even if technically speaking, the results from case-control studies are ORs.

Bias, confounding, effect modification. The aim in an epidemiologic investigation of a putative risk factor is to derive an accurate estimate of the RR between exposure to the agent and the disease at issue. Because the investigator does not control the conditions in which people live and are exposed to different agents and their willingness to participate in research, there are many potential sources of distortion in epidemiologic research. While there are many sources of distortion, they can be bundled into a few large families of sources of distortion.

Bias refers to a systematic distortion in study findings, resulting from the way the study was designed or the way the data are collected. Specific examples of types of bias will be discussed below as they pertain to talc and ovarian cancer.

Confounding is sometimes considered to be a type of bias, and sometimes it is considered a type of distortion on its own. This is merely a semantic distinction. Confounding refers to the situation where the association under study between factor F and disease D is distorted because there is a third factor X which happens to be correlated with F and which is a cause of disease D. For instance if we want to study the association between occupational exposure to talc in mines (factor F) and lung cancer (disease D), we need to be mindful of whether cigarette smoking (factor X) is more common in talc miners than in the rest of the population. Confounding differs from other types of bias in that it depends on relationships among different variables in the population, rather than characteristics of the study design and data collection.

Effect modification refers to the phenomenon whereby a given factor has a different effect in one sub-population than in another. If we study the association between that factor and the disease in the entire population without distinguishing the two sub-populations, we might end up with an estimate of the association that does not convey accurately the association in either sub-population. For instance, if it were the case that a certain genetic characteristic G increases the risk of pre-menopausal ovarian cancer but has no impact on post-menopausal ovarian cancer, then a study of the association between G and ovarian cancer that does not discriminate by menopausal status, would find an RR result somewhere between the null value among post-menopausal women and the true RR value among pre-menopausal women. Depending on the proportions of pre- and post-menopausal women in the sample, the overall RR might be so close to the null, that we might erroneously conclude that there is no association at all. In this example, it might actually be quite simple to detect the effect modification, since age is always recorded and menopausal status is usually recorded and investigators are sensitized to the possible effect modification of female cancers by hormonal status. Other potential effect modifiers may not be so easily available and they might not be on the radar screens of investigators. Effect modification can in some unusual circumstances completely wipe out a true causal

association (as when the agent causes cancer in some people but prevents cancer in others!). But generally, if there is a causal effect of the agent in one stratum of the population and no association in another stratum, and if we fail to stratify the population according to the effect modifier, it will have the effect of producing an overall RR that is lower than it truly is in the sensitive stratum and higher than it truly is in the insensitive stratum.

Effect modification is closely related to and sometimes synonymous with interaction or synergism.

Publication bias refers to the tendency for some evidence never to “see the light of day”. Namely, when results are “negative” or “null”, it may be that investigators never bother to submit them for publication, or alternatively that editors refuse to publish them. This happens, most likely, when the hypothesis under study is not particularly topical or controversial, and when the study is small.

In this section I have briefly outlined some potential sources of distortion of a typical epidemiologic study. I have done this in a high-level generic way. Below, after presenting results of my review of pertinent literature on powders and ovarian cancer I will return to commenting on the possible impact of such distortions in this body of literature.

Exposure variable and exposure metric

An **exposure variable** can be anything that can influence the occurrence or outcome of disease. The term is used for such disparate entities as external components of what we eat, drink, breathe, hear or see and microbiological organisms, chemicals or forms of radiation.

Depending on the nature of the variable, information on an exposure variable can often be ascertained from epidemiologic study participants by questioning them. This is the case for variables like cigarette smoking or use of talc powders. For some variables, like exposure to a virus or to specific air pollutants or occupational chemicals, it is usually necessary to invoke more intensive data collection methods to ascertain exposure.

An ***exposure metric*** signifies a way of defining a variable for statistical analysis. The simplest metric is a binary variable: exposed or unexposed. For most exposure variables, like exposure to talc powder, there can be a very wide range of degree of exposure. And it is pertinent to create more nuanced exposure metrics that take into account the degree of exposure that different people have experienced, metrics such as duration of exposure, intensity or frequency of exposure and even cumulative measures of exposure over long periods of time.

Measurement error. Whenever we are measuring a variable in an epidemiologic study, be it smoking, or weight, or socio-economic status, or blood pressure, or any other variable, it is virtually inevitable that there will be some degree of error in the measurement. There are ways of collecting data that make them more or less likely to involve error, but it is almost impossible to ensure that variables are measured with perfect validity and precision. Even such a variable as the diagnosis of ovarian cancer is subject to differences of opinion among pathologists and oncologists and the presence or absence and the histologic type of tumour is not a guaranteed 100% perfect diagnosis. The ascertainment of the lifetime history of talc exposure by means of an interview with a woman in middle age or later in life is certainly susceptible to the caprices of memory and the way the questions are formulated may influence the validity of respondents' reports of lifetime exposure patterns. It is likely that habits that were performed regularly are more reliably recalled than activities that were sporadic or that only occurred many decades earlier. Similar issues arise for all other variables collected in such studies. We refer to measurement error as random (or non-differential) if the degree of measurement error does not differ between cases and controls in case-control studies or between exposed and unexposed in cohort studies. As a general rule of thumb, it can be asserted that random (or non-differential) measurement error has a predictable distorting effect on the RR. Namely, while there are some rather obscure exceptions, non-differential measurement error tends to attenuate the RR towards the null value of 1.0, and the more measurement error, the greater the attenuation. A full explanation for why this is so is quite technical and can be found in advanced epidemiology textbooks, such as Rothman, Greenland and Lash 2008. A very simple explanation is that the presence of measurement error in assigning exposed vs

unexposed status leads to dilution of both the exposed group and the unexposed group. That is, the ostensible exposed group (i.e. the folks who will be labelled as exposed based on the study data collection) will contain some folks who are truly unexposed and the ostensible unexposed group will contain some folks who are truly exposed. If there really is a difference in risk between the true exposed group and the true unexposed group, this difference will be watered down by the inadvertent inclusion in each group of folks who are really in the opposite group. An analogy is the cross-contamination of two cans of paint. Suppose we have a can of pure white paint and a can of pure red paint. Suppose we have a way of quantifying the difference in color tone between the two paints. Then suppose we take some spoonfuls from the red can and pour them into the white can, and likewise take a few spoonfuls of the white paint and pour them into the red can. Now the color contrast between the two cans has been attenuated. The color contrast in this example is like the relative risk in an epidemiological study which has been attenuated because the exposed and unexposed groups have been cross-contaminated.

Dose-response. It is important not only to assess whether there is an association between a variable and a disease when the variable is defined in a binary (exposed vs unexposed) way, but also when the variable is defined in a quantitative or semi-quantitative way. When we analyse the risk as a function of the degree or duration or intensity of exposure, we refer to this as a dose-response (or exposure-response) analysis. The example of the smoking and lung cancer is instructive about the value of different metrics, though it cannot be assumed that all risk factors act the same way. Studies using the binary metric for smoking (smoker/non-smoker) have been very consistent and persuasive in demonstrating an association between smoking and lung cancer. Further, when data are collected and analysed regarding the degree of smoking, it becomes clear that there is a monotonic dose-response relationship. That is, the more smoking, the higher the risk. And the quantitative metric that manifests the strongest association with lung cancer is the cumulative amount smoked over the lifetime. This is perfectly logical. Since the cumulative exposure metric embodies information on duration and on intensity, it can hardly be less predictive of risk than either of the dimensions alone.

We cannot assume that there is a universal form of a dose-response relationship for every true causal relationship. Most commonly, in toxicology and epidemiology, the relationship between exposure and risk is monotonic; that is, as one increases, so does the other. This can include linear relationships (i.e. where a straight line on a graph describes the relationship) or exponential or many other curvilinear forms. It is also possible that there may be a threshold effect (the risk only becomes apparent after a certain level of effective exposure) or some other non-standard relationship.

Both the qualitative metrics (ever/never) and quantitative metrics (a lot of use compared with a little use) are valid and useful metrics.

Sample size refers to the number of participants in the study. As a generalization, large studies produce more statistically stable and precise estimates than small studies. In fact the stability of estimates or precision of estimates is not a simple function of the number of participants, or subjects, in a study. The precision of estimates depends, among other things, on the type of epidemiologic design.

In a case-control study the main determinants are the numbers of cases and controls and the prevalence of exposure in the two groups; in a cohort study the main determinants are the numbers of participants, prevalence of exposure, and the incidence of the disease of interest over the period of follow-up in the exposed and unexposed groups.

There is sometimes confusion about the notion of sample size when we compare cohort studies with case-control studies. The operational aspect of an epidemiologic study of cancer that most influences the precision of an estimate of RR is not the total number of participants; rather, it is the smaller number between the number of exposed cases of disease and the number of unexposed cases. In a typical prospective cohort study, one might need to enroll 100,000 participants in order to end up with a certain number of cases (say, 500 cases) of the disease of interest (e.g. ovarian cancer). In a case-control design we might only need to enroll around 500 cases and 1500 controls to achieve the same statistical power as would be achieved by a cohort study of 100,000. The formal justification for this assertion is quite mathematical, and has to do with the fact that a sample of a population can give very accurate estimates of the characteristics of an entire

population. Thus, the simple comparison of 100,000 participants in a cohort study and 2,000 participants in a case-control study is in no way a valid marker for the relative statistical power of the two hypothetical studies. There are admittedly other advantages and disadvantages of the cohort vs the case-control design, and reviewers should consider the various aspects before deciding on the relative weight to give to the results of the different studies. But it is definitely not appropriate to merely compare the numbers of participants as an indicator of study validity.

While precision is based on multiple factors and different ones in case-control and cohort studies, there is a parameter which embodies the different factors quite well, and which is common to both case-control and cohort studies, namely, the number of exposed cases. For this reason, in laying out the various study results below, in addition to the relative risk estimates and their confidence intervals, I will show the numbers of exposed cases.

While it may affect the precision of estimates of RR, the size of the study does not in itself systematically affect the estimates of RR. That is, it is not the case that small studies produce systematically exaggerated RR estimates or systematically low RR estimates. However small studies can produce more wildly divergent RR estimates than large ones, in either direction, towards the null or away from the null.

Meta-analysis and pooled analysis: There are two distinct ways that evidence from multiple studies can be combined to derive a new overall statistical summary or synthesis of those studies, a meta-analysis and a pooled analysis. A meta-analysis uses the published results from each study and averages those results using some optimal weighting procedures. In order to implement a meta-analysis it is necessary to find all relevant studies on a topic that have published results in a fairly standardized way. The statistical algorithms typically used to average the results from different studies also provide statistics that evaluate how heterogeneous are the results from the different studies. The interpretation of such heterogeneity statistics is not straightforward. If the results from different studies are homogeneous, it adds to the confidence in the meta-estimate. If they are heterogeneous, it may indicate that the association is really different in different populations, or that there are some methodological characteristics of the different studies

that have influenced the results in different ways. Unless a significant methodological flaw can be identified that has caused the heterogeneity, the best overall estimate remains the meta-estimate.

A pooled analysis is one in which the investigator gets access not only to the published results from different studies, but rather to the individual data of every person in the studies. The latter is harder to achieve because it requires high buy-in and input from the investigators of the original studies; a meta-analysis is much easier to organise. Because a pooled analysis allows for standardization in the definition of variables and statistical models, it can be a more powerful means of summarizing data than the original studies themselves.

Multifactorial etiology of disease. Chronic diseases such as cancer are multifactorial in two distinct ways. On the one hand, each case of disease results from the unfortunate conjuncture of a combination of factors (these might include for example, genetic predisposition, diet, environmental pollutant, occupational exposure, medical intervention, viral infection, lifestyle habits, etc.) which combine over a lifetime to initiate and promote development of the disease. In this sense, each of the factors that are part of the combination for that person was a necessary contributor to the disease process, although it was not sufficient on its own to provoke the disease. Despite the fact that none of the factors were sufficient to produce the disease on their own, each of the contributory factors may be considered to be a cause of the disease. The disease would not have arisen if any of the contributory factors had been absent. This is one meaning of the multifactorial etiology of disease.

The second meaning is that the combination of factors that induce cancer in one person may not be the same as the combination that induces cancer in another person. Indeed, at the population level, there may be many combinations of causal factors for the same disease. Some factors may be common to different combinations. For example, it may be that in one case of lung cancer, the combination of factors included genetics, exposure to air pollution, exposure to radon in the home, and smoking; while in another person, the

combination of factors included genetics, insufficient dietary consumption of anti-oxidants like carotene, exposure to asbestos, and smoking.

Some characteristics of carcinogens and epidemiologic research on cancer: The following characteristics of most known carcinogens provide a framework for some of the thinking behind the design and interpretation of epidemiologic studies of cancer.

- There is typically a long induction period between exposure to a carcinogen and appearance of the disease. Thus, if a study has not allowed for a sufficient passage of time between the exposure and the disease, the result may report that there is no risk, where in fact there is a risk, but insufficient time has elapsed to make the risk visible.
- There is variability in the carcinogenic potency of different carcinogenic agents; some induce much greater relative risks than others.
- For any given carcinogen, the degree of risk due to exposure generally increases as the exposure level increases, but the shape of the dose-response curve may differ from one carcinogen to another.
- Most known human carcinogens were first discovered as such either by means of astute observation of a clinician noticing a cluster of cases among people who shared a common characteristic (such as working in a particular workplace) or by means of epidemiological research. In most cases, there was no known mechanism to explain the association at the time. Where the mechanisms have been elucidated, they were usually discovered subsequent to the epidemiologic demonstration of a causal relationship. (Siemiatycki 2014)

4.2 *Bradford Hill “guidelines”*

Because of the complexities of epidemiologic research, there has been some concern with how epidemiologic evidence should be used to draw causal inferences. Various authors have written about the types of information that might be considered in assessing whether a body of evidence demonstrates a causal relationship. A set of guidelines, developed in the context of the Surgeon-General’s Report on Smoking and Health (1964) and authored by

Bradford Hill in 1965, has achieved a wide consensus in the epidemiologic community as a pedagogical guide. Hill himself referred to these guidelines as “aspects” or “features” or “characteristics” of an association, and warned against treating them as “hard-and-fast rules of evidence that must be obeyed”. (Hill, 1965) He deliberately avoided referring to them as “criteria.”

Since Hill wrote those thoughts at the beginning of the era of modern epidemiology, without the benefit of decades of practical experience in the way those thoughts were taken up, and how they applied to issues other than smoking and cancer, it is understandable that the practice of evaluation of causality has evolved. A first observation, often overlooked, is that Hill took as a starting point for his writings that chance had been considered as an explanation for the smoking-cancer association and determined to be unlikely. In the historic context of 1964-1965 and the debates around smoking and cancer, this was a reasonable assumption to make, but for any other putative associations, this must be considered. Over the years, respected authors have paraphrased and updated these aspects in various ways, and this will undoubtedly continue. For instance, leading textbooks of epidemiology as well as the Reference Guide on Epidemiology of the Manual on Scientific Evidence (2011) all have different formulations of Hill’s guidelines.

In the light of 50 years of practical experience after these guidelines were written, and based on my practical experience of evaluating causality in many forums and on many topics, I would paraphrase (and modernize) Hill’s guidelines as follows:

Strength of the association: This can be measured by different parameters, but for cancer studies it is usually measured by the magnitude of the relative risk or odds ratio.

Statistical significance of the association: While this guideline was not explicitly listed by Hill, it is nonetheless in practice an implicit and distinct consideration in assessing causality. If the estimated RR is quite high, indicating a strong association, but is based on a very small study with low precision, this might be solely due to statistical variability. (For instance, when we flip a balanced coin 10 times, we do not always end up with 5 heads and 5 tails. Sometimes, by chance, we may end up with 6 heads and 4 tails. Does this prove that the coin was not balanced?) Evaluating the role of statistical chance as a possible

explanation of the observed association is important. As explained above, the absence of statistical significance is not strong evidence of an absence of a real relationship.

Dose-response relation: If the relative risk increases when the exposure increases, it enhances the likelihood that the observed association is really causal. There are some counter-examples however where the effect is only observed after a threshold of exposure has been crossed. There are various ways to assess whether there is a dose-response relation. Hill pointed out that the main challenge is to establish reliable and measurable quantification of exposure. In studies of lifestyle habits like use of talcum powder products, the most common way is to estimate the RR in increasing categories of exposure metrics such as duration (years) of usage, or intensity of usage (frequency per day or per week or per month), or cumulative amount of usage (a combination of duration and frequency).

Absence of bias: There are many forms of bias that can infiltrate an epidemiologic study. It enhances the likelihood of a true causal association if we can confidently exclude all the plausible sources of bias explanations for the observed findings. This guideline can also be considered as a component of a guideline to consider other possible explanations for the association.

Temporality: It is clear that the exposure should precede the outcome (i.e. the disease). To ascertain whether the cancer was a result of the exposure or the exposure occurred after the cancer onset seems like a simple thing, but sometimes it can be difficult to ascertain with certainty.

Cessation of exposure: It would add to the credibility of the association if it had been demonstrated that subjects who cease exposure to the agent experience reduced risks of disease compared with those who continue to be exposed. In practice this is an extremely difficult characteristic to demonstrate, partly because of the difficulty or even ethical impossibility of changing people's habits for scientific experimentation purposes. But occasionally there may be a "natural experiment" wherein large numbers of people cease their exposure and the effects can subsequently be measured in an epidemiologic fashion.

Specificity of the association: It was believed that individual risk factors have specific pathological effects, and Hill posited that if we observe that a given agent is associated with

many different pathologies, it increases the likelihood that these are somehow spurious observations, resting on some type of bias in the studies of that agent. In reality, this Hill characteristic has fallen out of usage in the intervening years with the demonstration that some agents can indeed provoke multiple different pathologies. Examples include cigarette smoking, ionizing radiation and asbestos fibers.

Consistency of findings between studies (or replication of findings): Because epidemiologic research is susceptible to errors from random variability and from different kinds of study biases, before accepting the apparent association as a generalized phenomenon, it is important to see that similar results are replicated in different studies. When these different studies also encompass different study populations in different communities, it enhances the generalizability of the inferences. Generally speaking, the observation of consistent results in different studies adds to the credibility of an inference that there really is a causal relationship.

Coherence with other types of evidence: In the case of tobacco and cancer, it was seen that the historic trend in lung cancer mortality rates in the US and UK followed quite closely the national trends in consumption of tobacco, with a 20 year lag. This was interpreted by Hill as corroboration of the results observed in case-control and cohort studies. Epidemiologic evidence of coherence could conceivably take many forms, and the opportunity to assess coherence is something that is specific to the factor under investigation. Assessment of coherence with historic mortality trends would only be possible in the case of a factor whose exposure in the population changed quite dramatically over time in a way that can be documented, and for which the attributable fraction of the disease due to that factor is very high. This was the “perfect storm” of circumstances that allowed for an assessment of the tobacco-lung cancer association by means of time trend correlations.

Analogy: Hill reasoned that if a factor is somehow similar to another factor that has already been shown to be a risk factor for the disease, then it increases the plausibility of a similar impact due to that putative factor. This is such a vague guideline, with no clear implementation suggestions, that it is not often referred to and rarely implemented.

Biologic plausibility: This guideline can encompass many dimensions of information, including physiology (can the agent or its metabolites reach the organ?), animal carcinogenesis (does the agent produce tumours in experimental animals?), cell studies that reveal mechanistic data, and other biologic information on the toxicology of the agent.

Implementing Hill's guidelines: As Hill himself insisted, sophisticated users of these guidelines do not use them as a formal checklist. He summarized his views as follows:

« What I do not believe ... is that we can usefully lay down some hard-and-fast rules of evidence that must be obeyed before we accept cause and effect. None of my nine viewpoints can bring indisputable evidence for or against the cause-and-effect hypothesis and none can be required as a *sine qua non*. What they can do, with greater or less strength, is to help us to make up our minds on the fundamental question - is there any other way of explaining the set of facts before us, is there any other answer equally, or more, likely than cause and effect? »

The authors of the Reference Guide on Epidemiology of the Manual on Scientific Evidence (2011) clearly stated that Hill's guidelines are not formal criteria, but rather are more in the nature of a memory aid to help us review the evidence about any given causal association. They stated it this way: "There is no formula or algorithm that can be used to assess whether a causal inference is appropriate based on these guidelines."

I have served on many panels to review evidence of causality on one topic or another, including on several IARC Monograph panels that reviewed evidence of carcinogenicity. The IARC process, like the others I have participated in, does not use the Hill guidelines in any rigid formal way. The ideas embodied in Hill's guidelines permeate our thinking about how to evaluate causality, but the operationalization of these guidelines is specific to the problem and to the expert making these determinations. Thus any suggestion that Hill's "aspects" or "features" or "characteristics" of an association should be used as a formal checklist of criteria is simplistic and wrong. To do so would contradict the opinions of experienced epidemiologists, the Manual on Scientific Evidence, and Bradford Hill himself.

In this section, I have laid out and explained the Bradford Hill guidelines in a generic way. Below, in section 8, I will consider how these apply in the context of the talcum powder – ovarian cancer issue.

5. Epidemiologic evidence regarding talc and ovarian cancer

Following some reports in the early 1980's that raised questions about a possible link between use of cosmetic talc powder by women and the risk of ovarian cancer, there were several epidemiologic studies on the topic. By the early 2000's the issue was garnering some attention in the scientific community. The International Agency for Research on Cancer, the premier agency for evaluation of carcinogens, decided to conduct a review of the issue in 2006. Following that review, there have been further studies conducted on the topic.

In the context of a legal action, my mandate is to review all relevant scientific evidence available to date, in order to provide the court with my opinion regarding the link between talc powder exposure and ovarian cancer. The methodology I employed is the same one I have used in my career as an internationally recognized researcher.

5.1 IARC review and evaluation of talcum powder products

As mentioned above in Section 2, the International Agency for Research on Cancer (IARC) is the premier institution in the world for cancer epidemiology and for environment and cancer research. One of its mandates is the evaluation of the carcinogenicity of different agents with which humans come into contact, and this mandate is carried out by the Monograph Programme of IARC. This is achieved through a process that involves identifying chemical or physical agents for evaluation, convening specially selected international expert panels that are mandated to review all pertinent evidence on the topic and write a thorough review culminating in an evaluation of whether the agent(s) are human carcinogens.

In February 2006, there was such an IARC Monograph meeting to evaluate some agents, including talc. The IARC Working Group comprised 16 highly respected and recognized scientists from around the world; I was asked to Chair the Working Group. We reviewed all

the evidence that was available up to that point in time. This certainly included epidemiologic evidence, but it also included evidence from experimental toxicology, physiology, molecular biology and other domains. The IARC Monograph programme has a formal system for classifying agents. The Working Group must classify an agent into one of the following categories:

- 1 Carcinogen
- 2A Probable carcinogen
- 2B Possible carcinogen
- 3 Not classifiable
- 4 Not carcinogen

After reviewing the evidence, the panel concluded that talc was a “possible carcinogen”, based primarily on evidence regarding the association between dusting powders and ovarian cancer. Here is the definition of this category from the IARC Monograph:

“Group 2B: The agent is possibly carcinogenic to humans.

This category is used for agents for which there is *limited evidence of carcinogenicity* in humans and less than *sufficient evidence of carcinogenicity* in experimental animals.”

This 2B categorization was based on the panel’s decision that there was “limited evidence of carcinogenicity in humans”, which is in turn defined by IARC as follows:

“Limited evidence of carcinogenicity in humans: A positive association has been observed between exposure to the agent and cancer for which a causal interpretation is considered by the Working Group to be credible, but chance, bias or confounding could not be ruled out with reasonable confidence.”

Subsequent to the completion of the IARC Monograph on talc, a subgroup of the epidemiologists who were on the IARC Working Group, including myself, reviewed the evidence again, but with a view to producing a meta-analysis of the results from the most informative studies conducted to that time. This resulted in the paper by Langseth et al. (2008). This paper was not an IARC publication.

5.2 Information consulted for the present review

In preparation for formulating my current opinions on this topic I assessed, researched, reviewed and consulted a large number of documents, including, but not limited to: all original epidemiological studies published on this topic, all meta-analyses and opinion pieces, experimental toxicology, molecular biology, mechanistic studies, and the IARC Monograph on talc which reviewed all informative studies that had been published before 2006. I was given access to and also reviewed the various expert reports and depositions that have been submitted in various talc cases, either on behalf of the Plaintiff or Defendant, and various internal company documents obtained in discovery.

I systematically reviewed the lists of references of all relevant studies referenced in the IARC report as well as in various meta-analyses and in all recent articles on the topic to identify yet more relevant publications on talc and cancer.

Because some studies have been published in multiple papers and because some papers have included reports on multiple studies, there is not a one-to-one relationship between studies and published papers.

Additionally, I considered evidence regarding the toxicology of talc by reviewing the toxicology evaluation conducted by the IARC Working Group, the summary of talc's putative toxicology referenced in various scientific publications, and the expert reports of various scientific/medical experts in this case.

The central focus of my review is on the epidemiologic evidence.

A complete listing of the documents I consulted, as well as references cited explicitly in this report, is provided in the Bibliography. The Bibliography is in two Parts; Part A comprises all the publications and reports that can be found in publicly available scientific literature. Part B comprises company documents or documents from reports or testimonies of experts.

5.3 My methodology for this review

Table 1 lists the steps I undertook to accomplish my mandate.

5.3.1 Selecting studies for review

To aid in the present assessment of whether or not there is a causal relationship between talcum powder exposure and ovarian cancer, I carried out an up-to-date review of the scientific literature, primarily the epidemiologic literature, concerning the association between use of talc powder and risk of ovarian cancer. This involved meta-analyses to estimate the effect of having ever used perineal powdering, and an assessment of evidence regarding dose-response.

The first task was to find the relevant publications and to set out the distinct pieces of epidemiologic evidence, namely the results of different studies. Based on a number of reviews on the topic of talc and ovarian cancer, including the IARC report, I systematically went through the reference lists to identify all publications that seemed to contain results on the topic. I further conducted a Pubmed search and this did not produce any new informative publications that had not already been identified. In preparation of the meta-analysis, I eliminated from consideration papers that were outside the bounds of what a meta-analysis should contain (i.e. eliminate review articles, commentaries, meta-analyses, and articles that do not really pertain to the issue of perineal talc and ovarian cancer). From the 40 publications that remained, namely those that contained original results on the association between powdering and ovarian cancer, I extracted all results showing RRs between talc powdering and ovarian cancer, and I had these results put into a Filemaker database. This was a value-free exercise. I made no judgement at that stage about relevance or quality of the study or the published results. It was only an attempt to lay out in one “place” the whole of the evidence and to prepare for subsequent analyses. There were over 730 results in this database. On average each publication contained about 18 different RR results of various aspects of talc powder exposure and various types of ovarian cancer. Some contained fewer and some contained many more. (For instance, one study publication contained 180 results, with varying types of ovarian cancer and varying definitions of exposure to powdering.)

In deciding which results to include in a meta-analysis I had to respect the following principles:

- The results have to pertain to the issue of risk of ovarian cancer in relation to use of talc-based powders.
- Where there are sufficient numbers of results to support meta-analyses, there can be meta-analyses for different types of ovarian cancer, and for different routes of exposure to talc-powders.
- In each meta-analysis, each study should only provide one result, so as to avoid double-counting evidence.
- The decision about inclusion of a study should in no way be influenced by whether or not a particular study demonstrated high risks or low risks.

While these seem like simple principles to respect, there were complicating features of the scientific literature:

- Some studies were reported in multiple publications, sometimes the same study subjects were analysed and reported in different ways and sometimes different subsets of the study population were included in different publications. Sometimes the authors fail to clearly enunciate how the data used in one of their papers overlaps with data used in another of their papers from the same study.
- Different studies used different questions about powder use in their questionnaires, and sometimes the same study reported results by different ways of asking about or defining exposure.
- A given study may have presented one result or many results, each addressing a different definition of the talc exposure variable and different way of grouping the ovarian cancer cases.
- Different studies dealt differently with the histologic sub-types of ovarian cancer, sometimes grouping them all, or sometimes separating them, or sometimes reporting both grouped and separate results for different sub-types.

- Different studies used different metrics for analysing powder exposure and estimating its corresponding RR.
- Different studies dealt differently with the challenge of adjusting powder-related risks for possible confounding by other factors.

Decisions had to be made regarding which types of exposure to consider, which types of ovarian cancer to consider, which metrics of exposure to consider and which studies and publications to consider. It is necessary to be rigorous in making such decisions ahead of time, rather than “cherry-picking” results from different studies that appear to support one theory or another.

Appendix Table A1 provides a list of those 40 publicly available publications that have included some original results that might pertain to the association between powdering and ovarian cancer. **Appendix Table A1** shows which publications were included and which papers were excluded from my meta-analyses. For each of the 14 excluded papers, the table also shows the reason. Some papers were excluded because the results did not pertain to ovarian cancer and powdering in the perineal region. Some papers were excluded because the results presented therein were subsumed by a subsequent publication by the same research team or as part of a pooled analysis of multiple studies. Notwithstanding my intention to identify all unique studies and to extract a best “bottom line” result from each study, the nature of the studies and how they were analysed and reported led to many judgement calls. It must be acknowledged that there can be differences of opinion among equally competent and equally well-motivated scientists in how to choose among the different publications and the different results within publications.

Fortuitously, and unbeknownst to me at the time, two other sets of investigators (Berge et al 2018; Penninkilampi et al 2018) carried out separate meta-analyses on this topic at about the same time as I was carrying out mine, and this gives an opportunity to do some cross-comparison of different reviews and meta-analyses. I will comment on these after presenting the results of my meta-analyses.

5.3.2 What were women exposed to in body powders?

Talc has been the main ingredient of body powders used by women over the past century. “Talc particles are normally plate-like. When viewed under the microscope in bulk samples or on air filters, they may appear to be fibers ... Talc may also form as true mineral fibers that are asbestiform; asbestiform describes the pattern of growth of a mineral that is referred to as a ‘habit’. Asbestiform talc fibers are very long and thin.”(IARC 2010) The structure of platy talc is characterized by a hexagonal sheet arrangement of silicon-oxygen tetrahedral groups in a common plane which creates a double-sheeted structure. These sheets are easily separated which accounts for the “silky” or “smooth” feel of talcum powder products (IARC, 2010). As a mined mineral, the precise chemical and physical characteristics of talc are in part determined by the particular geological formations from which it is extracted. The local conditions can also produce “impurities” in the extracted talc including asbestos, quartz and various metals. It is claimed that cosmetic talcum powder products normally contain >98% talc (Zazenski *et al.*, 1995) but the purity may have been lower in the past. (IARC 2010) When I refer to talc or talcum powder products in this report, I am referring to commercially available talcum powder products and all constituent elements contained in those products.

Asbestos is a commercial term that comprises six minerals that occur in the asbestiform habit: actinolite, anthophyllite, chrysotile, grunerite, riebeckite and tremolite. Similarly to talc, these six minerals can occur in a non-asbestiform habit. Some types of asbestos are found in the same geological formations as talc.(IARC 2010)

By the 1970’s it was reported that asbestos fibers were found in commercial talcum powder (Cralley 1968; Rohl 1976), though there was some doubt expressed regarding the quantification of the exposure and the ability to discriminate between asbestiform and non-asbestiform talc. (Krause 1977; IARC 2010) The talc industry was constrained to remove asbestos from talcum powder products. Representatives of the industry have claimed that talcum powders were free of asbestos fibers since the 1980’s (Hopkins 2018; Pier 2018), but this assertion has increasingly come under doubt as number of labs have

reported finding asbestos fibers in talcum powder products. (Blount 1991; Paoletti 1984; Gordon 2014; Longo et al 2017; Longo et al 2018; Blount deposition 2018; Pier deposition 2018) These various studies that have reported finding asbestos in historic talcum powder samples have been challenged by other reports that failed to find meaningful amounts of asbestos in historic talcum powder samples. (CIR 2013; Anderson 2017) These various findings and opinions are somewhat complicated by the fact that both talc and asbestos have varied chemical and physical characteristics and various methods can be used to measure them.

What is clear is that asbestos, and all forms thereof, has been evaluated to be carcinogenic. It has long been recognized that inhalation of asbestos carries with it a risk of lung cancer and of mesothelioma, a cancer of the lining of the lungs, as well as larynx cancer. What has only recently been recognized is that women who are exposed to asbestos experience an excess risk of ovarian cancer. (Straif 2009; IARC 2012) This conclusion was based on five studies; a subsequent meta-analysis reported that the RR of ovarian cancer among asbestos-exposed women was a highly statistically significant 1.77 (1.37-2.28). (Camargo 2011) The route of exposure that generates risk of ovarian cancer among women exposed to asbestos is not clear, but inhalation and migration of asbestos particles to the ovaries has been proposed as a credible biologically plausible mechanism. (Miserocchi 2008)

Among the metals detected in talcum powder products are some which are recognized carcinogens, namely nickel and chromium. It is not known how widespread was the "contamination" of talcum powder products by these metals and how high were the concentrations in the entire commercial production of talcum powder products of the past several decades, and how these exposures measure up to exposures that may cause cancer. However, evidence that asbestos and some other known carcinogens have been detected in some commercial cosmetic talcum powder products and credible mechanisms that such particles can translocate to the ovaries is an important consideration in deriving an opinion on biological plausibility, and I will consider it below in my section on biological plausibility of a causal link between talcum powder products and ovarian cancer.

Alternative formulations of baby powder include cornstarch formulations, which have become available in the past 30 years. It was possible for women to purchase and use cornstarch products or talcum powder products. Most epidemiological studies have not tried to ascertain whether the women in their studies used talc-based or cornstarch-based formulations and many women may have been unaware of the composition of the powders they used at different times. It is impossible to ascertain with certainty from most of the publications whether the reported epidemiologic results pertain to talc-based powders or cornstarch-based powders or both. Those studies that did report results for cornstarch had few women self-reporting use of cornstarch and the risk estimates were rather imprecise and unstable. For those studies that did report separately the findings for talc-based and cornstarch-based formulations, I used the results for talc-based powders. For those that did not make such distinction, I used the results combining all types of powders as reported. If it turns out that there is an increased risk associated with talc but not with cornstarch, the inability to discriminate the two in statistical analyses would have the effect of diluting the estimates of risk due to talc. That is, the RR estimates would be attenuated.

5.3.3 Routes of exposure

Some studies reported results based on particular ways of using the powders, such as on feet or perineal use or use after bathing or use on sanitary napkins or use on diaphragms or use by male partners, and so on. And many studies just reported results for all routes of perineal exposure combined. For my Main analyses, I aimed to use the reported results pertaining to all types of perineal use combined. Where the results were reported for individual routes of exposure rather than all perineal use combined, I identified the one that came closest to powdering in the perineal area from all routes.

The number of studies providing results pertaining to any of those specific routes of exposure was much less than the number providing evidence for all routes combined and insufficient to provide reliable meta-analysis results for route-specific estimates of RR. Among the route-specific reports, the one that had most often reported RR results was exposure from dusting of sanitary napkins. I will conduct a separate meta-analysis regarding the risk of ovarian cancer in relation to use of powder on sanitary napkins.

5.3.4 Questionnaire items on use of talc powders

In the case of exposure to cosmetic talc powder, the most common and realistic way of ascertaining exposure has been to question women. But there are many ways this can be done, and indeed many types of questionnaires have been used. A very simple format that has been used is to ask a question such as “have you ever used powders in your genital area?” But, the validity of the response would be enhanced if the question is framed in a more specific manner, so long as the respondent can be expected to know the answer to the more specific question. One possibility would be: “have you ever used powders that contained talc on your genital area more than once a week for at least 6 months of your life? This would include powdering your genital area directly or powdering your underwear or powdering your diaphragm or powdering your sanitary napkin.” There are scores of ways such questions can be asked, and there has been variability in the methods of questioning among the different studies of powder use and ovarian cancer. In most studies, the questionnaire question about Ever Use was actually about Ever Regular Use, not Ever Occasional Use.

Among women who used powders, there can be an enormous range of usage from a few occasions in a lifetime to profuse daily usage. Among the many dimensions of talcum powder exposure that might influence the risk of cancer are the following: manner in which the talc was applied, age at which exposure began; if it ended, age at which it ended and years since it ended, frequency of use per day, week or per month, multiple applications including to genitals, undergarments, sanitary napkins, etc., and whether and how that varied at different ages. Some studies have used a single simple question, while others have used scores of questions to get at the lifetime history and many facets of powder use.

While I believe there are quality differences between the different studies in the way talc powder data have been collected, I have refrained from imposing my judgement about the quality of the questionnaire data on the selection of studies to include in meta-analyses.

5.3.5 Metrics of exposure

I used the reported results for the binary metric Ever Regular Use vs Never Regular Use, given the limitations of the available data, and using the investigators' decisions about how best to measure this. While this may seem like a simple tactic to implement, some studies were reported in such a way that in fact I had to make "judgement calls" about which of the reported results came closest to the desired metric.

For "dose-response" assessment, I used three pertinent metrics of exposure: duration (years), intensity/frequency (uses per day, week or per month), and cumulative number of applications, measured sometimes in absolute numbers or sometimes in quantiles. Of the three, the most meaningful is the cumulative number of applications.

6. My meta-analyses regarding talcum powder products and ovarian cancer: data included and results

6.1 Features of the studies

Following the exclusions indicated in Appendix Table A1, **Appendix Table A2** shows the studies that ended up being included in one or more of my meta-analyses, and brief descriptions of administrative and contextual features of each study. **Appendix Table A3** shows, for the same studies, some information about the talcum powder exposure variable and the covariates used by the authors in their control for confounding.

Appendix Table A2 shows that most studies were conducted in the USA. All but three were case-control studies and of the case-control studies, all but four used some type of population control series. Most studies had fieldwork data collection in the 1970's and 1980's; only a few studies started data collection after 2000. Table 3 shows for each study what exposure variable I was able to use to approach the notion of Ever exposed regularly to talc powder in the perineal region. Different studies had different questions in the questionnaire and different studies reported different variables. The questionnaires usually elicited lifetime use that was more than very sporadic, with terms like "regular" use. Only the Gonzalez 2016 study failed to ask about lifetime exposure before the interview; they asked about usage only in the preceding 12 months. The Gates 2010 study

asked about use of talc up to 1982 but not afterwards. Some studies asked separately about different routes of exposure and then rolled them together in statistical analyses, while some rolled all routes of exposure together in their questioning. The term that I show in Appendix Table A3 is the term that the authors reported in their publication of results; it is sometimes rather cryptic. Appendix Table A3 also shows which variables that the authors reported having used as adjustment variables. Sometimes these are variables that were explicitly included in final statistical models, and sometimes these were dealt with in a more indirect way such as a staged analysis in which a screening is conducted using a change-in-estimate procedure.

All meta-analyses were conducted using the well-known package Comprehensive Meta-Analysis Version 3. (Borenstein, M., Hedges, L., Higgins, J., & Rothstein, H. Biostat, Englewood, NJ 2013; <https://www.meta-analysis.com/index.php?cart=BFZW2135997>)

6.2 Association between binary variable talc powdering and all types of ovarian cancer combined – data and results

6.2.1 Individual studies and results on binary exposure variable

Table 2 shows RR results, as well as the corresponding 95% confidence intervals, for each informative study included in the Main meta-analysis or in any sensitivity analyses. (I will explain this distinction below.) As I explained in Section 4.1, the single number which reflects quite well the statistical strength of a study, be it case-control or cohort, is the number of exposed cases, and I have included this parameter in Table 2. Table 2 shows the RR reported in each study by Ever (regular) use of powder in the perineal region (all routes of perineal exposure including direct powdering on genital area, on sanitary napkins, on underwear and on diaphragms). The table shows results for all types of ovarian cancer combined.

Before conducting any meta-analyses, we can peruse the results in Table 2 to observe certain patterns.

Of the 33 RR results shown in Table 2, two are below 1.0, one equals 1.0, and 30 are greater than 1.0. On the null hypothesis that there is no true association between powdering with

talc and ovarian cancer, we would expect as many of the RR estimates to be above 1.0 as to be below 1.0. The observed distribution (2 below and 30 above) is clearly and strongly in defiance of the null hypothesis. Further if we rank the RR estimates from lowest to highest, the median value, the one in the middle, would be 1.34.

This informal analysis does not take into account that the 33 estimates in Table 2 are not strictly independent of each other. There are various ways to carve out independent sets of results from this list of results in Table 2, and the meta-analyses will be designed to do that. But no matter how the studies are configured, it will be found that one or two of the RR estimates are below 1.0 and somewhere between 20 and 26 are above 1.0. Such an imbalance cannot be due to chance.

6.2.2 Strategy for Main analysis and sensitivity analyses

An investigator typically has in mind a strategy for analysing and presenting the results. There may be some judgement or assumptions involved in deciding on the strategy. The investigator may wish to see how the results would be affected if other judgements or assumptions were made. In other words, how robust are the results to alternative judgements and assumptions. Such alternative analyses are referred to as *sensitivity analyses*.

There were several dilemmas in selection of studies and results to include in the meta-analysis. I made decisions in each case that I believe provides the best basis for a meta-analysis. But in deference to other possible decisions that might have been made, I conducted some sensitivity analyses as well. I list what the dilemmas were and which options were selected for Main analyses and for sensitivity analyses.

a. Terry 2013 and Wu 2015. The Terry 2013 paper brought together data from 8 different research teams. Some of those teams had previously published their results on talc and ovarian cancer and some had not. Normally, a pooled analysis would take precedence over the individual component studies. In this case, however, there were complicating factors. The Los Angeles component study of Terry 2013 (Wu, Pike and colleagues) was conducted in stages and the Terry 2013 pooled analysis only had access to the early stage. Subsequently, Wu and colleagues carried on with their data collection, and published a

more complete set of results from their study in Wu 2015. The Terry 2013 paper contained 208 exposed cases from the Los Angeles study, whereas the Wu 2015 paper contained 701 exposed cases. In the entire Terry 2013 paper there were 2600 exposed cases. Ideally, we would wish to exclude from the 2600 exposed cases in the Terry 2013 paper, the 208 exposed cases that came from the early Los Angeles data. But that information was not available. Thus there is an 8% overlap between the exposed cases in the Terry 2013 paper and those in the Wu 2015 paper.

I adopted the following strategy. For the Main analysis, I included both Terry 2013 and Wu 2015. The 8% overlap of exposed cases is unfortunate but I believe its impact would be trivial, and in any case we will have some empirical evidence of its impact from a sensitivity analysis.

I conducted sensitivity analyses using a different strategy. The Terry 2013 paper contained a table in which the individual results of the 8 component studies were reported. I used the results as reported there for 6 of the 8 component studies, for which the Terry paper contained the latest results. For the Los Angeles study I used the result reported in Wu 2015 which was much more complete than the L.A. study result in Terry 2013. The eighth study was the study of Cramer that was one of the components of Terry 2013 but that was also reported subsequently in Cramer 2016. It is not clear whether the Cramer 2016 paper contains more up to date data than the corresponding component in Terry 2013, but it possibly does.

To summarize, the Main analysis contained pooled result from Terry 2013 and the result from Wu 2015. There were sensitivity analyses that dropped the pooled result from Terry 2013, but included the (apparent) latest published result for each of the 8 components.

b. Nurses Health Study. This cohort study was initiated in 1976 and was not a study of talcum powder products and ovarian cancer. The study involved a wide-ranging annual questionnaire which inquired about many health related issues. In 1982 there was a very succinct question about use of body powders. The cohort has been followed-up to ascertain the occurrence of cancers (or other diseases). There was a publication that contained results on talc and ovarian cancer from this study in 2000 (Gertig 2000); later, after more

years of follow-up there were two further papers presenting results on talc and ovarian cancer (Gates 2008 and Gates 2010). Clearly the Gertig result did not belong in my meta-analysis, since it was subsumed by subsequent analyses, but the choice between the Gates 2008 and Gates 2010 was not so obvious. Gates 2008 was based on a nested analysis of a subset of the cohort that probably entailed better control for confounding. Gates 2010 was based on the entire cohort and thus on a much larger sample size. The two RR estimates from the Gates papers are quite different from one another (RR=1.24 in Gates 2008 and RR=1.06 in Gates 2010). It is not clear whether the difference in results is due to the different design and analytic procedures used in the two papers. The authors did not comment on the inconsistent results.

My Main analysis included Gates 2010 but not Gates 2008. Some sensitivity analyses contained Gates 2008, but not Gates 2010.

It should be noted that whereas I did not use the Gertig paper results in the meta-analysis of Ever / Never Use of talcum powder products, I did use some dose-response results from Gertig because subsequent publications from the Nurses' Health Study did not present such results.

c. Schildkraut (2016). This was a case-control study of ovarian cancer among African American women. The fieldwork and interviewing was carried out from 2010 to 2015. The authors speculated that publicity surrounding two class action lawsuits on talc and ovarian cancer in 2014 may have subsequently induced bias in the validity of reporting of talc exposure. Consequently, in their analysis and report, they presented two sets of results, one for all women in the study, and another for those interviewed before 2014. It is impossible for me to evaluate the validity of the speculation, as it was for the authors. Consequently I will use the results from the entire sample and those from the pre-2014 sample. I refer to the entire Schildkraut study result as Schildkraut A and the pre-publicity result as Schildkraut B.

The Main analysis contained Schildkraut A. Some sensitivity analyses contained Schildkraut B.

d. Shushan (1996). This ovarian cancer case-control study, conducted in Israel, reported results on talc and ovarian cancer, but the report was quite cryptic regarding the data collection and the talc exposure variable.

The Main analysis excluded Shushan 1996. Some sensitivity analyses included Shushan 1996.

6.2.3 Results of meta-analyses on binary exposure variable for all ovarian cancers

Figure 1 shows the printout from the Comprehensive Meta-analysis (CMA) package for the Main meta-analysis for the association between ever regular use of talc powder in the genital area and all types of ovarian cancer combined. 21 RR results were used in the Main meta-analysis, but the Terry 2013 study represents 8 different study teams and 10 distinct studies. In the forest plot, I have ordered the studies in increasing magnitude of the RR estimate. It can be seen that only one study produced an RR estimate to the left of the null value of 1.0, while 19 studies produced an RR estimate to the right of the null value of 1.0.

The meta-estimate of RR is 1.28 with a 95% confidence limit from 1.19 to 1.38. The p-value is too small to register in 2 digits. This is a very highly statistically significant result. The probability of this result being attributable to chance is vanishingly small.

The 21 RR estimates in this Main meta-analysis had a fairly low p-value for heterogeneity, 0.07, but it was not statistically significant. This means that there was considerable variation in RR results across the studies, but this might have been due to chance. That there is significant variation in RR estimates is not surprising. The different studies were conducted among different populations, using different methodologies. It would be surprising if there was no variation. It is nevertheless true that in the current state of knowledge the best estimate of RR is the meta-estimate of 1.28.

Table 3 shows the results of the Main meta-analysis again and contrasts it with the results of seven sensitivity analyses that embody alternative plausible strategies for selecting studies and selecting results within studies. These alternative strategies had almost no effect. The meta-estimates of RR varied in a narrow range from 1.26 to 1.30. Even the lowest of these would lead to the conclusion that there is a highly significant association.

It can be affirmed, quite confidently, that the apparent overall elevated risk for women who had ever used such powders is not an artefact of chance variation. This conclusion is not new. It has been stated by the authors of previous meta-analyses. However, I believe this conclusion is based on the most current and reliable data now available.

From a statistical point of view, each of the studies listed in Table 2, except for one or two outliers, shows a 95% confidence interval that overlaps substantially with the confidence interval of the meta-RR estimate (1.19 – 1.38). Further, the majority of the study-specific confidence intervals (including 2 of the 3 cohort studies) include the overall meta RR of 1.28. This shows that there are few if any studies that are not compatible with the overall RR estimate.

6.2.4 Other contemporaneous meta-analyses on binary exposure variable for all ovarian cancers

I started to conduct my meta-analyses in 2015 and revised it in 2018. Towards the end of my analyses, I discovered that two other teams of researchers were carrying out meta-analyses on the same topic at almost the same time. The simultaneous and independent conduct of these three meta-analyses provides a unique opportunity to cross-validate the methodologies and results. (I knew nothing about the two others and I assume they did not know either about mine or the other meta-analysis.) It is sometimes portrayed that meta-analysis is a fairly automated procedure which should produce identical results irrespective of who carries it out. This is far from true.

Even before the statistical part of the meta-analysis is conducted, the author of a meta-analysis has to assemble all of the relevant data. That usually consists of two steps: identifying all informative studies on the topic and identifying the relevant result from each study to include in the meta-analysis. There are many ways to do these steps, and it is not surprising that different, equally competent, investigators may make different decisions about how to identify the studies and how to identify the most relevant results. This is particularly true in the area of observational epidemiology research, as opposed to clinical trials research. Research designs and methods of conduct and reporting are much more standardized in clinical trials research than they are in observational epidemiology. In the

area of research on talc and ovarian cancer (which is observational) there are many opportunities for judgement of the author of the meta-analysis to come into play, and in section 5.3.1 I have listed some of the decisions that I made, in the way I managed the selection of studies.

The two other meta-analyses were conducted by Berge et al (2018) and by Penninkilampi et al (2018). They conducted rather different search procedures than I did. Since I had already participated in the IARC review and the Langseth 2008 paper, I already had a head start on collecting the relevant scientific literature. **Appendix B** shows a 3-way comparison of the studies that were included in the meta-analyses by the three authors, and the data from each study that were judged to be most relevant by each author.

As a generalization, it can be seen that the three synchronous meta-analyses identified more or less the same studies and that in general they extracted the same result from each study; but this was not always the case. For my own meta-analysis, I was comforted to note that there was no study that was identified by one of the other meta-analyses that I had missed in my search of the literature (Appendix Table A1).

One of the main points of discordance in procedure was how the three analyses dealt with the Terry 2013 study. Namely, in my Main analysis I used the result of the pooled Ever/Never RR that was quoted by the Terry study, and dropped from consideration the various component studies of the Terry analysis. By contrast, the two others (Berge and Penninkilampi) adopted the strategy of using the results of the individual component studies rather than the overall pooled result. Berge 2018 used the results of the individual component studies as reported by Terry 2013, for most component studies, but for two component studies they used results that were reported in publications that gave results with additional cases. Penninkilampi 2018 also used individual component study results rather than the Terry 2013 pooled result. There are trade-offs between these different approaches. I prefer to use the Terry 2013 pooled result for two reasons. First, a pooled analysis with a standard set of covariates and a standard statistical model is considered superior to a meta-analysis of the components study results. Second, each publication tends to show a variety of results, and the author of the meta-analysis has to choose a

“best” one to represent the “bottom line” from each study. In the Terry pooled analysis, it was the investigators of the original studies, who were also co-authors of the pooled analysis, who chose which would be the “best” result to represent the study, and this in my opinion is more reliable than outside authors making that decision.

Table 4 shows the meta-RR results from each of the three meta-analyses. Notwithstanding the differences in choices and strategies of the three meta-analyses, the meta-RR results are quite similar, ranging from 1.22 (1.13 – 1.30) in the Berge analysis, to 1.28 (1.19 – 1.38) in my analysis, to 1.31 (1.24-1.39) in the Penninkilampi analysis. These three sets of results are really quite close to each other.

The methodology I used is sound and reliable and consistent with the high standards of my discipline. The strategy and decisions I made in relation to the studies selected and the data abstracted from each informative study is consistent with that methodology I use in my professional practice, and that has earned me recognitions and honors throughout the world.

The results shown in Table 4, are in the same “ballpark” as the meta-analysis previously conducted by Langseth 2008 and they are based on a larger pool of accumulated publications. This indicates that recent evidence is consistent with older evidence and reinforces the consistency of the evidence.

6.2.5 Meta-analysis on powdering of sanitary napkins

Tables 2-4 pertain to RRs for the combination of all routes of exposure to the perineum, including direct dusting and dusting on sanitary napkins, diaphragms, underwear, and condoms. When such an exposure variable was not provided in the paper, I used the one that came closest, with priority to dusting on the body directly. Most studies did not report RR results for every route of exposure separately. For the studies that did so, the numbers exposed were much lower than for all routes combined and there was limited statistical power in those analyses. Of the different routes, the dusting on sanitary napkins was generally the most commonly reported route apart from direct dusting. Consequently I assembled the data pertaining to dusting on sanitary napkins and conducted a meta-analysis of those results.

Table 5 shows both the individual studies that had results on sanitary napkin dusting and the meta-analysis result for those studies. The meta-RR was 1.08 (95%CI 0.89 - 1.31), heterogeneity $p=0.09$. Given the overlap between the confidence intervals between this meta-RR estimate for sanitary napkin powdering and the meta-RR for powdering the perineal area via any route (1.28; 95%CI 1.19 - 1.38), it cannot be affirmed that the result for sanitary napkins is statistically significantly lower than the meta-RR results in Table 3 for all routes of exposure; but the tendency is in that direction.

Berge 2018 and Penninkilampi 2018 also meta-analysed the data on use of powder on sanitary napkins. By contrast with my results, Berge 2018 reported an RR of 1.00 (95% CI 0.84-1.16) and Penninkilampi 2018 reported an RR of 1.15 (95% CI 0.94-1.41). Since their publications do not make it clear which studies and which results were used in these analyses, I cannot see easily what explains the discordance among the three meta-analyses for sanitary napkins powdering. In any case, it certainly appears that the RR was lower for application to sanitary napkins than it was for general perineal application. The interpretation of this finding is not self-evident. The different routes of exposure may entail very different frequency of exposure. For instance, whereas use of powders on sanitary napkins might involve exposure on only a few days per month, regular use on the perineal region often involves daily or near daily application. I am unaware of any evidence that would address the question of whether regular use on sanitary napkins leads to greater or lesser delivery of talc particles to the portal to the ovary than does regular powdering on the perineal region.

In any case, irrespective of the evidence regarding sanitary napkin exposure, the results in Tables 2 and 3 clearly show an association between exposure to talc in the perineal region and risk of ovarian cancer.

6.3 Dose-response – cumulative exposure, duration and frequency

An important part of the evaluation of causality is to determine whether the results display any kind of dose-response pattern. Tables 6 to 8 show results for various quantitative metrics of exposure.

Trends by cumulative exposure: **Table 6** shows results from five publications that presented results based on a cumulative amount metric. Four of the studies were based on counts of numbers of powderings, while the Cook 1997 result was based on counts of the number of days on which powdering occurred. As can be seen by perusing the column of numbers of exposed cases, the Terry 2013 results dwarf the others in terms of the statistical information they contain. The Schildkraut study, with about one-tenth as many subjects as the Terry study, nevertheless has as many subjects as the other three studies combined. The relative statistical power of the different studies is also manifested in the width of the confidence intervals.

The evaluation of the statistical significance of a trend is not a methodologically straightforward endeavour. Of particular concern is the question of whether or not the test for trend among subjects in different “dose” categories should include or exclude the unexposed category. My view is that it depends on whether or not the study results for Ever/Never exposure are part of the buffet of results presented by the authors. Namely, if the only result presented is a dose-response analysis, then it is appropriate to include the unexposed category as part of the study results. If the Ever/Never result is presented and then a dose-response analysis is conducted, it is preferable to maintain statistical independence of the two analyses by excluding the baseline unexposed category from the dose-response analyses. I will interpret the data from these studies in light of this interpretation of trend tests.

The three smallest studies in Table 6 show no evidence of a dose-response pattern. However, the estimates are so imprecise, as evidenced by the very wide confidence intervals, that they are virtually uninformative regarding the presence or the absence of dose-response.

When looking at the Terry 2013 results, which assemble data from eight teams and 10 studies, the confidence limits are much tighter and the estimates of RR much more precise. The p-value for trend (excluding the unexposed group) is 0.17. Nevertheless, with a reference value of RR=1.0 among unexposed, and with point estimates of RR in four quartiles of cumulative exposure of 1.14, 1.23, 1.22, and 1.32, these results are certainly

compatible with the presence of an underlying dose-response relationship. Note that the absence of statistical significance of the trend among the four exposed subsets is not equivalent to the demonstration of an absence of dose-response. Similarly, the Schildkraut 2016 study results, while based on only two lifetime cumulative “dose” categories with point estimates of 1.16 and 1.67, are also compatible with a dose-response pattern.

Trends by duration of exposure: **Table 7** shows the results of those studies that presented RRs by duration of use. The Terry 2013 pooled analysis did not report results by duration of use; however, some of its constituent studies did so and are included here. The numbers in each of the duration categories in each of these studies is quite small, and consequently the RR estimates are very imprecise, with wide confidence intervals. The categorisation of duration differed quite a bit among the studies and it is not easy to compare results between studies. There is no indication of a dose-response relationship in these results. Though, the wide confidence intervals make it impossible to affirm that there is evidence against dose-response. Further, the largest study showing results by duration of use, Wu 2015, did find a significant increase in risk with increasing duration.

Trends by intensity of exposure: **Table 8** shows results of those studies that reported by intensity (i.e. frequency) of usage. This ignores duration of usage. Like the results in Table 7, the results in individual studies are based on rather small numbers and they entail imprecise estimates of RR. Also like Table 7, the pattern of results is equivocal. There is no clear evidence for or against an underlying dose-response.

The Berge 2018 paper also looked at dose-response. They only looked at trends by duration of usage and frequency of usage, analogous to my Tables 7 and 8. However they actually fitted continuous variable models and found that there were significant trends in risk by duration and by frequency of exposure. They did not examine trends by cumulative exposure, and in particular they did not use the results from the Terry 2013 pooled analysis, which in my view is the most informative evidence available on dose-response.

Penninkilampi 2018 looked at risk according to long duration of usage and found no trend. They also looked at cumulative exposure with total number of applications, and they reported a slightly higher RR for women with greater than 3600 applications (RR=1.42)

compared with women who had fewer than 3600 applications (RR=1.32). I cannot determine from the paper which studies were included in this analysis and in particular whether the pooled Terry 2013 dataset was included. While the Terry 2013 and Penninkilampi 2018 papers both contained some results on dose-response, they are not included in Tables 6-8 because they are not original data collection studies; like mine, their's is a review of other studies which are contained in Tables 6-8. As indicated above, all other things being equal, the best metric of the three quantitative ones is the cumulative exposure metric, and that is the one that happens to provide the most statistically reliable data. Thus, the evidence from Table 6 overrides the weaker evidence from Tables 7 and 8. The evidence from the Terry 2013 paper is the most important piece of evidence we have on dose-response. The evidence from the Terry 2013 paper is compatible with the presence of a dose-response relationship between use of powder and ovarian cancer.

6.4 Subtypes of ovarian cancer - in particular, serous invasive tumors

Most studies that provide results on RR between talc powder and ovarian cancer provide results for all types of ovarian cancer combined. Less than half of the published studies have also provided results of the associations between talc powder exposure and various subtypes of ovarian cancer.

To the extent that talc exposure might have different effects on different subtypes of ovarian cancer, there would be a clear advantage to segregating the evidence by type of ovarian cancer and evaluating the evidence for each subtype. The serous-invasive subgroup comprises over half of all cases, and the rest are split among several other histology-behaviour subgroups (mucinous, endometrioid, clear cell, others, and these can be further subdivided by invasive or borderline). Those latter subgroups entail very small numbers each and barely provide enough data, in most studies, to produce informative risk estimates. In those studies, where results were presented by histologic-behaviour subgroups, it is my judgement that there is no strong consistent pattern indicating that one subtype has higher risk than another. Of course, there is variability in point estimates of RR, but on the one hand the variability in RR estimates between ovarian cancer subtypes within studies is not greater than would be expected from chance variability (mostly, the

confidence limits overlap considerably), and on the other hand, from study to study, it is not always the same subtype that seems to have the highest or lowest relative risks.

In the largest assembly of cases subdivided by histologic subtype, the Terry 2013 pooled analysis, the results by subtype were as follows:

- Serous: n=1197; RR=1.24(1.13-1.35)
- mucinous: n=94; RR=1.06 (0.82-1.36)
- endometrioid: n=304; RR=1.20 (1.03-1.40)
- clear cell: n=187; RR=1.26 (1.04-1.52).

Other than serous invasive tumors, there is no other subtype for which there are sufficient numbers of studies and sufficiently precise estimates of RR in each study to provide reliable estimates of the overall RR. While the results for endometrioid and clear cell tumors show risks that are closely aligned with those for serous tumors, the result for mucinous tumors are so imprecise, because of the very small numbers of such tumors, that the estimated RR of 1.06 is very unreliable.

Consequently, and because there were multiple studies apart from Terry 2013 that presented results for serous tumors, I decided to conduct a meta-analysis for serous/invasive ovarian cancers, but not for other subgroups. The meta-analysis on serous invasive tumors will indirectly inform us also about the relative risks for other types of ovarian cancer. Namely, if the RR for serous invasive tumors is similar to that for all ovarian tumors, it will imply that the risks for other types (the complement of serous invasive tumors) will not be very different from the overall RR. If the RR for serous invasive tumors is much greater than that for all ovarian tumors, it will imply that the risks for other types (the complement of serous invasive tumors) are lower than the overall RR. Similarly, if the RR for serous invasive tumors is much lower than that for all ovarian tumors, it will

imply that the risks for other types (the complement of serous invasive tumors) are higher than that for all ovarian cancer.

Table 9 shows all the studies that reported results concerning the link between talc exposure and serous/invasive tumors. There were 8 informative studies, including Terry 2013, which carried by far the most statistical weight. The meta-RR estimate for serous/invasive tumours was 1.25 (1.1.15- 1.36). This is very similar to meta-RR for all ovarian tumors, albeit based on a smaller number of informative studies. Thus there is no persuasive evidence in these studies, taken as a whole that the effect of talc differs by histologic subtype of epithelial ovarian cancer. That is, with such a tiny difference in RRs between that for all ovarian cancers combined and that for serous invasive ovarian cancers, it can be safely inferred that the RR for other types of ovarian cancer (the complement of serous invasive) would not be far from the overall RR of 1.28.

6.5 Conclusion from meta-analyses and dose-response considerations

My opinion, based on up-to-date data and meta-analyses, is that the RR between ever perineal use of talcum powder products and ovarian cancer (all types combined) is 1.28 (95%CI 1.19-1.38). This result is highly statistically significant.

We can rule out random variability as a possible explanation for the apparent excess risks. Further, the examination of results according to the “amount” of exposure, and notably the cumulative exposure variable used by Terry 2013, shows that the higher the exposure, the higher the risk.

Such a pattern of findings can have only two possible explanations: it must be the result of some sort of bias or confounder that operated in multiple studies or it must be the result of a real causal association.

7. Misconceptions and possible biases

In reaching my opinions, I have objectively looked at the data and scientific literature and considered the points of view of others who do not share the conclusions I have reached. There are generally two sources of disagreement: misconceptions of epidemiologic or

statistical concepts which I address below in Section 7.1 and professional judgement of the likelihood of errors and biases in the various epidemiological studies, which I address in Section 7.2.

7.1 Some prominent misconceptions in reviewing the evidence

Table 10 lists some prominent misconceptions, and I will address them here.

Misconception: "Cohort studies are more valid and informative than case-control studies."

As can be seen in Table 2, the case-control studies tended to produce higher RR estimates than the cohort studies. It has sometimes been claimed that cohort studies are more valid than case-control studies. There is no theoretical or practical reason why such a blanket assertion should be universally true. There are many factors that influence the validity of a particular result in a particular study and it cannot be reduced to any simplistic assertion that cohort studies are more valid than case-control studies, or vice versa. In the next section, I will go through a number of potential sources of distortion of results from epidemiologic studies, and I showed that some of them might occur in cohort studies, some in case-control studies, and some in both. Some of these distortions very likely occurred in some or all of these studies that provide data on talc and ovarian cancer. On balance, I believe the results of each of these case-control studies concerning female use of powders and ovarian cancer are credible, and perhaps more so (for reasons given in section 7.2), than the analogous results of each of these cohort studies.

Misconception: "Hospital-based case-control studies are more valid and informative than population-based case-control studies."

In a case-control study, the design objective is to define a study base, or a population base, in which the cases might occur, and to identify representative samples of cases and of controls in that study base. The purpose of a control group is to provide an estimate of the prevalence of exposure to the factor under study in the base population that gave rise to the cases. In many instances, the best source of controls for case-control studies is a population list of some sort. But sometimes using a population list is not feasible or

desirable, and an alternative can be to select controls from among hospital patients with conditions other than ovarian cancer. This was done in some of the ovarian cancer case-control studies.

The most common generalization made by epidemiologists is that population-based case-control studies are more valid than hospital-based case-control studies. In fact, neither this nor the opposite statement that I articulated as a Misconception, is universally correct. Validity of a case-control study depends on the specific design features and circumstances of the study.

It is possible that some types of hospital controls have patterns of usage of powders that are different from those of women in the general population, either because the powders are actually causally associated with the diseases that those women have or because their disease or condition that led them to be hospitalised induces some women to take up the use of such powders. If such a mechanism was present in a hospital-based case-control study, it would likely lead to an artificially attenuated RR, not an artificially inflated RR.

Misconception: "Counting the number of statistically significant results is a valid way of assessing consistency of results among multiple studies."

This misconception betrays a lack of understanding of statistical significance. As can be seen in Table 2, several of the individual studies listed in my meta-analysis did not find a statistically significant increase in RR. This has been cited by some as evidence that there is no real causal link.

In fact, meta-analysis is a method that was developed precisely because counting significant results is an invalid way of synthesising knowledge. Namely, a result from a single study may fail to achieve statistical significance either because there is no risk in that study, or because the statistical power of the study was limited. Meta-analysis was developed in order to combine evidence from multiple studies that may be under-powered on their own, but when combined show an effect that might be statistically significant. The meta-analysis cannot conjure a statistically significant meta-RR if the individual study RRs do not systematically lean in the direction of an excess risk, and they do so in the area of talc and ovarian cancer to a degree that cannot be explained by random fluctuation.

Misconception: "You cannot prove causality with an RR less than 2.0."

There is nothing in epidemiologic theory or practice that justifies such a statement. Indeed, this assertion about an $RR \geq 2.0$ threshold does not exist in epidemiology. There are many well-established causal relations where the RR is less than 2.0. Table 11 lists a number of such examples. In clinical medicine also, it is very common to strive to find therapies that reduce the risk of death from some disease by as little as 10%, and several such discoveries are well documented and have been integrated in medical practice, even though the change in risk is small.

Misconception: "If a product has been used for a long time it must be safe."

It has been argued that since talc powder has been used for many decades by millions of women (and men and children), it has stood the test of time and should be considered safe. This is a specious argument.

Most agents in our environment or in our lifestyle which are now considered dangerous were used for decades or centuries without falling under a cloud of suspicion. These include such factors as cigarette smoking (many cancers and cardiovascular disease), asbestos (lung cancer), sunlight (skin cancer), ingesting very hot liquids (esophageal cancer), and many others.

Misconception: "Government agencies provide the most reliable and authoritative statements regarding the lack of carcinogenicity of talc."

Various national and international agencies have websites which list carcinogens. Examples are: National Cancer Institute (NCI), National Toxicology Program Report on Carcinogens (NTP-RoC), International Agency for Research on Cancer (IARC). It can be argued that these agencies, which undoubtedly have scientific credibility, would not put on their websites information that is out of date or invalid. However, that claim is false.

IARC has a rigorous evaluation process which is considered quite authoritative throughout the world, including in the U.S. But the evaluation is carried out at a certain point in time. The last time talc was evaluated by IARC was in 2006. Based on the evidence available then, the panel rated talc as a "possible" carcinogen. Additional evidence has been accumulated

and come to light since then, but there has not been a new evaluation by IARC. (There are potentially thousands of agents to evaluate, and IARC has resources to only evaluate a few each year. Thus they cannot keep re-evaluating the same ones as soon as new evidence is published.)

NTP-RoC is a congressionally-mandated program whereby the agency is obligated to periodically publish lists of known and suspected carcinogens. Unlike IARC, it appears that the people who make the decisions are internal RoC scientists, rather than external experts, with advice from outside experts. Also unlike IARC, the biennial reports only contain listings of those agents that have been deemed to be definite or likely carcinogens, so there does not seem to be a statutory listing of all agents that have been considered. From the minutes of a meeting of the Board of Scientific Counsellors of NTP held in 2000, it appears that the issue was deferred. I am not aware that the RoC has conducted a subsequent review of talc; although, when renominated in 2004, NTP deferred to IARC.

NCI provides a website for doctors where they indicate for each type of cancer, what are the known risk factors. Based upon my understanding, they do not carry out a rigorous evaluation along the lines of the IARC evaluations or even the NTP evaluations. It is a rather superficial process compared with the IARC process and it depends on the existing knowledge of the committee members which in a short time opines about possible associations between each of the scores of cancer types and scores of potential risk factors. This is not to argue that the members of these committees are less expert than the members of the IARC committees, but the NCI committee members have a short time (apart from their main jobs) to review hundreds of possible factor-cancer associations, whereas the IARC committee members have weeks to review just a few.

Scientists and public health agencies regularly consult the IARC evaluations and those of the NTP. The NCI website for doctors is not considered an up-to-date and cutting edge source of information. This is, of course, no reflection on the gravitas of the NCI as a whole, which has much more invested in its original research mission than in its website for doctors.

There are other organizations which may put some information about causes of cancer on their websites. Importantly, I have not seen any agency or organization, including the FDA, that conducted a rigorous evaluation of the epidemiologic and non-epidemiologic studies like we did at IARC in 2006.

Misconception: "A biological mechanism must be proven before we can establish causality"

There are innumerable examples in medical history of discoveries of risk factors or treatments that did not require knowledge of the mechanisms of pathogenesis in order to determine causality. I have compiled a few such examples from medical history and show them in **Appendix C**.

Very often, the initial suggestion was met with scepticism from the vantage point of biologic plausibility. In fact, very seldom have the essential features of biologic plausibility been worked out by the time the epidemiology has convincingly demonstrated that the association is causal. This can be asserted for the early discoveries such as the cancer causing effects of certain chemicals in dye production facilities, certain metals in various heavy industry facilities, certain emissions of combustion of fossil fuels, ionising radiation, and even cigarette smoking. In most of these examples, it was decades after the epidemiologic evidence became convincing that credible mechanistic theories were proven; though, for some, the biologic mechanisms remain unknown.

Indeed in the guidelines of the IARC Monographs, it is stated that if there is "sufficient" evidence of a risk of cancer from epidemiologic studies, then irrespective of the evidence from animal experimentation and other biologic evidence, the agent in question should be considered a Group 1 carcinogenic agent. My point here is that the demonstration of a proven biologic mechanism is not a prerequisite for demonstrating that an agent is a human carcinogen. Reliable empirical epidemiologic evidence of an association is a sufficient basis for demonstrating causality; the presence of a credible biologic mechanism enhances the degree of proof, though that often lags decades behind the general recognition of causality, as exemplified by the examples in Appendix C.

It is not my opinion that we should ignore or set aside consideration of biologic plausibility. As Hill (1965) indicated in outlining the thought process for establishing causality, biologic plausibility is one of the dimensions to be considered. But, he also cautioned that, “this is a feature I am convinced we cannot demand”. Thus, as I have done in other contexts in regard to other putative carcinogens, I am able to draw causal inferences about talc irrespective of whether a causal mechanism has been proven.

Misconception: “Bradford Hill criteria comprise a checklist of necessary conditions”

As I explained in section 4.2, the “aspects” that Hill listed are not “criteria” and they are not necessary. This point has been made and is widely accepted by epidemiologists. The list of “aspects” in Hill’s original paper have been rephrased and reworked in many textbooks and by most agencies that refer to them. They provide a framework and not a checklist.

7.2 Alternative explanations - Biases and errors

Before inferring that the strong statistical evidence that use of powder in the perineal area by women is associated with ovarian cancer may represent a causal relationship, I considered alternative explanations for these observations. In this section I will consider a number of potential sources of distortion of the risk estimates, under various rubrics. Some of the potential sources of distortion are unique to cohort studies, some are unique to case-control studies, and some can affect both types.

7.2.1 Bias due to non-response or non-participation

This is a potential source of bias in case-control studies.

Among all potential cases and controls who meet the study’s eligibility criteria, some participate and some don’t. The most common reasons for non-participation are: refusal; inability of the researchers to contact the person because they moved or are too sick or died or are otherwise unavailable; if access to the subject is via the treating physician or medical staff, there could be obstacles at that level. If the factor under study, hygiene powder use, is correlated with the likelihood of participation and if the participation rate is low, this could lead to biased estimates of RR. Such bias could artificially inflate or deflate the RR depending on how the various variables are related to each other. If response rates

are low, say below 70%, and differential both by case-control status and by exposed – non-exposed status, this could lead to biased RR estimates. For such a bias to explain the outcomes seen, it would require quite strong associations between likelihood of participation and powder use, and quite strong differences in such associations between cases and controls. In my opinion, it is very unlikely in the context of these studies that response rate differentials would be great enough to induce such large bias.

7.2.2 Recall or reporting bias

This is a potential source of bias in case-control studies.

Because the exposure history is collected retrospectively, it is subject to both non-differential recall errors (see below), and to recall or reporting bias between cases and controls. Cases and controls may have different motivation and proclivities to recall and report use of powders. If it were true that cases had a greater tendency to over-report powdering history or if controls had a greater tendency to under-report powdering, then this would lead to an artefactual exaggeration of the RR.

There are a few possible causes of such differential reporting. First, it might be hypothesized that there is a general tendency for cases in case-control studies to acknowledge behaviours or exposures with much greater frequency than controls just because they are more invested in the research than are controls. They may wrack their brains during the interview to find instances of the queried behaviour or exposure that controls don't pay much attention to during the interview, because the controls just "want to get the interview over with". If this were the case, we would systematically see elevated RRs from case-control studies for all manner of variables in all kinds of studies. But in my experience, this does not occur. (I have conducted many case-control studies, each study eliciting information on many lifestyle factors and exposures. It has not been the case that cases systematically report more exposures than controls.) Furthermore, and more pointedly, if such a phenomenon were operative in these case-control studies of ovarian cancer, we would see elevated RRs when women were questioned about the use of powders on other parts of their bodies than the perineal area. In fact, several studies did ask such questions. In the Terry 2013 analyses, based on very large numbers of women, the

overall RR for ever use of hygiene powder on non-genital areas of the body was 0.98 (0.89-1.07), in stark contrast to the analogous result for genital use of 1.24 (1.16-1.33). In other words, when questioned about powdering in non-genital areas, controls were as likely to say “yes” as cases. Clearly there was no tendency for cases to indiscriminately report exposures more frequently than controls.

A second possible reason for such a situation to arise is if there was widespread knowledge about powdering being under suspicion for ovarian cancer. In such a situation women who have heard about this might internalize the notion that powdering may have caused their cancer, and they might ruminate with such intensity on the notion that they might imagine that they had used powders at some point in the past. But for most of the period of data collection in these studies, there was very little public discussion of a possible linkage between powdering and ovarian cancer and I doubt if more than a handful of the thousands of women interviewed in these studies would have heard of such a hypothesis before being interviewed.

In my opinion recall bias is not likely to have produced the kinds of RRs we see in these studies.

7.2.3 Non-differential (or random) error in recall or reporting of exposure to powders

This is a potential source of bias that would affect both case-control and cohort studies, but not exactly in the same ways.

Reporting past history of activities and exposures is always subject to some degree of error; it can result from ambiguity or misunderstanding of the questions, failures of memory, or inattention. And this is certainly true for history of powdering. If such error is non-differential (i.e. equally present for cases and controls in the case-control context) it has an effect on RR estimates that is rather predictable. Namely, as I explained above, it has the effect of artifactually decreasing the RR. The degree of attenuation is roughly proportional to the degree of error or misclassification. If there really is a causal association between powdering and ovarian cancer, then we can be rather certain that the true RR is higher than what we can see in the various studies that have reported RRs.

Furthermore, we might make some reasonable inferences about the impact of reporting error on dose-response trends as well as on the overall RR. It is reasonable to surmise that the amount of reporting error is quite a bit higher for the details of past usage (duration of usage, intensity and frequency of past usage) than it is for the simple fact of usage. That is, there is less error in a woman's report of whether or not she ever used powders on a regular basis than in her report of the details of the usage, even if powdering behaviour may be a relatively stable habit. The consequence of this is that the RR based on ever/never usage (Table 2) is less subject to artefactual attenuation than the RRs based on categorizing the duration or intensity or cumulative amount of usage (Tables 6-8). This is a possible explanation of why there has been a much clearer signal of elevated RR for ever/never usage than there has been for dose-response.

There is likely to be more measurement error of exposure to powders in cohort studies than in case-control studies, for several reasons. First, because the cohort study questionnaires attempted to broach topics that could be relevant to many types of cancer and indeed many diseases, the questions posed in the cohort study questionnaires about talc powder use tended to be much briefer and probably less effective at eliciting valid information than the questionnaires used in case-control studies of ovarian cancer. For instance, the cohort studies did not elicit information on timing or duration of past usage, and one of the cohort studies did not even attempt to elicit information about use of talcum powder products over 12 months before the interview. Second, whereas a case-control design involves a woman looking backwards over her life from the time of incident cancer onset and thereby addressing the entire relevant period of potential exposure, the woman in a cohort study reports on her past usage as of a certain point in her life, but there may be 10-20 years subsequent in which her habits could have changed, and of which the cohort study has no knowledge. The women in the cohort studies were "locked into" their exposure category at baseline of the cohort study. If there were women who in fact started using powders after the baseline, they would be incorrectly labelled as non-users. And, if there were indeed a risk associated with use of talc powders, the risk estimate would be diluted by the incorrect inclusion of users among non-users. Accordingly, the longer such subjects are followed, the more likely such misclassification is to occur.

The age at which information is collected is a relevant consideration. In most case-control studies, the mean age of the study subjects was between 50 and 60. In the NHS cohort study the mean age at baseline questionnaire was around 40 and in the WHI it was over 60. In each study, women were asked about their past history of powder usage. Clearly the WHI women had a further stretch of time to consider than the women of the NHS and even of the case-control studies.

A particular form of measurement error may well have occurred in the Gonzalez 2016 study and produced even more attenuation of RR estimates. Namely, in their brief questionnaire on talc exposure, the question was formulated to ask women about their use of powders in the 12 months preceding the interview. While exposure to talc over the past 12 months may be correlated with exposure over the entire etiologically relevant period, which might go back decades in the life of the woman, the correlation is probably weak, and this is another source of measurement error.

7.2.4 Short follow-up periods for disease ascertainment

This is a potential source of bias that would affect cohort studies.

In a cohort study, if the period of follow-up after baseline is relatively short; and if the latency period between exposure and cancer is long, the excess risk may not be detectable because cases that would occur after long latency have not had time to occur. If this did occur, it would lead to an artificially low RR estimate.

This could have been an issue in the initial publication from the NHS, the Gertig 2000 paper. As of the Gates 2008 and Gates 2010 analyses of the NHS, the follow-up period was probably long enough and this bias should have abated. For the WHI study it was likely an issue in the Houghton 2014 paper, and it would remain so until there is much longer follow-up. It would also be an issue in the Gonzalez 2016 paper from the Sister Study, which had only 6 years of follow-up after exposure was ascertained.

7.2.5 Diagnostic error

This is a potential source of bias that would affect both case-control and cohort studies, but not exactly in the same ways.

The diagnosis of cancer is never error-free. And details of histology and staging are even more error-prone. Further, there are trends in diagnostic criteria and methods over time, as well as in the terminology and classifications used. So what we observe in these various studies of ovarian cancer represents imperfect estimates of true biologic/pathologic status. The impact of such “errors” is mainly the same as exposure measurement error, namely it would tend to artificially reduce RR estimates. Since most case-control studies start from hospital-based cancer diagnoses as the point of entry, they usually have reasonably valid diagnostic information.

In general, cohort studies tend to be more vulnerable to this source of error and bias, because disease diagnosis information is often obtained from sub-optimal sources, such as the information provided by the study subject or her family, or information obtained from death certificates. In the three cohort studies included in the meta-analysis, there were high quality verifications of diagnostic information that had been provided by the women or their families. But such verification may not be as reliable as information coming straight from hospital pathology or oncology services. I expect that this was not a major issue here, but to the extent that it did operate, it too would have led to some additional attenuation of RR estimates, as I explained above.

7.2.6 Initiation of powdering as a result of ovarian cancer

This is a potential source of bias that would affect case-control studies.

It has been speculated that women with early symptoms of ovarian cancer might take up the use of powders to help with relief of their symptoms. If so they might report that they used powders before their cancer was diagnosed and this could artificially inflate the RRs. While the women are usually questioned about the period before their cancer was diagnosed, there could be some “telescoping” so that women who start dusting after diagnosis respond in the affirmative to the questionnaire.

In the same vein, it has been speculated that treatment for ovarian cancer might produce side effects that could be relieved by powdering. And again, it might be posited that women ignore the instruction to refer the exposure question to the time before the onset of the cancer.

If the early symptoms of ovarian cancer provoke some women to start dusting the perineum to relieve some of the discomfort, or if the treatment provokes women to start dusting, this would lead to an artefactual excess RR.

I have not found any empirical evidence to support this hypothesis.

In the few datasets I have seen which describe the age distribution of initiation of powdering, there were very few patients who started in the year or two before diagnosis of the cancer. I am inclined to believe that it is virtually a non-issue, and that if it operated at all, it would only have operated on a handful of the thousands of women who were part of the various case-control studies.

7.2.7 Confounding

This is a potential source of bias that would affect both case-control and cohort studies.

If women who use powders are also more likely to be exposed to other risk factors for ovarian cancer, then it might distort the relationship between powdering and OC. The direction and the degree of distortion (bias) that would be induced depends on two components, a) the true association between the confounder and ovarian cancer, and b) the association between the confounder and dusting behaviour. Thus, depending on the direction of these two component associations, the confounding can result in artificially decreased or increased RRs. Typically, the degree of confounding is much lower than the strength of the association between the confounder and ovarian cancer. In order for a confounder to induce an artificial RR of 1.25 for dusting, it would have to have an RR much greater than 1.25 with ovarian cancer and a fairly strong correlation with dusting behaviour. Given that the main studies have controlled for the main risk factors, I consider it unlikely that this operates. Table 1 shows the covariates that were controlled for in each study, and while there is some variability between studies in the list of covariates, the main known potential confounders (age, BMI or weight, parity) have been controlled for in almost all studies. It should be noted that while smoking is a well-established risk factor for many types of cancer, it is not a risk factor for ovarian cancer; thus, there is no need to control for smoking status in studies of ovarian cancer.

A thorough and reliable investigation of potential confounders was conducted by Cramer (2016); in the large database of New England-based studies, they explored the potential confounding effect of a host of personal characteristics including demographic, reproductive, hormonal, comorbidities, activities, and exposures. None of the covariates that they explored had any meaningful confounding effect on the association between talc and ovarian cancer.

7.2.8 Publication bias

This is a potential source of bias that would affect case-control and cohort studies.

This refers to the tendency for some evidence never to “see the light of day”. Namely, when results are “negative” or “null”, it may be that investigators never bother to submit them for publication, or alternatively, that editors refuse to publish them. This happens, most likely, when the hypothesis under study is not particularly topical or controversial, and when the study is small. In the talc-ovarian cancer literature this would have been more likely in the pre-2000 era when there was much less scientific interest in the hypothesis linking talc to ovarian cancer. As a sensitivity analysis, I conducted a meta-analysis on the subset of studies in Table 2 that had at least 20 exposed cases. That is, I eliminated the studies from that stratum of the universe of studies that were most susceptible to publication bias. The resulting meta-RR was almost identical to those shown in Table 4. Because this has been a somewhat controversial topic in epidemiologic circles over the past 20 years, I doubt if there were large important studies with null findings on talc-ovarian cancer that went unpublished.

In their meta-analyses, Berge 2018 and Pennikilampi 2018 both showed funnel plots of the results. These are meant to detect so-called publication bias. Both of those analyses concluded that there was no publication bias.

In summary, I consider that the observed association between talc and ovarian cancer is not an artefact due to publication bias.

7.2.9 Summary comments regarding biases and errors

While the results of epidemiologic studies strongly supports the hypothesis of an association between perineal use of powders and risk of ovarian cancer, we must be wary of potential sources of error and bias that can distort an association before concluding that this association is causal. I have therefore gone through the plausible sources and types of error and bias that could potentially explain the positive association seen across the relevant studies to ascertain how likely it is that each such type was actually operative and, if so, what the nature of the impact may have been. These evaluations are based on my professional opinion as an epidemiologist having conducted, reviewed, and evaluated many hundreds if not thousands of epidemiologic studies.

Of the various types of error listed, some could artificially inflate the RR estimates and some could artificially decrease the RR estimates. Some are likely to have occurred and some are unlikely to have occurred. The one that certainly occurred and that has a non-trivial attenuating effect on RRs is random exposure misclassification (section 7.2.3). As explained above, if there is a true association, then the true RR is almost certainly greater than the estimates seen in these studies and in the resulting meta-analyses. Other types of error and bias that are highly likely to have occurred are the two that are specific to cohort studies. Namely, the Nurses' Health Study papers (Gates 2008 and Gates 2010) almost certainly suffered from an attenuated RR estimate because of the compromised reference category of "unexposed" while the Women's Health Initiative paper (Houghton 2014) and the Sister Study paper (Gonzalez 2016) almost certainly suffered from a too short follow-up period (section 7.2.4). In my opinion, the occurrence and the possible impact of other listed types of bias and error are more speculative, and less likely.

Consequently, in my opinion, the observed association between talcum powder products and ovarian cancer is unlikely to be explained by any methodological problems with the studies.

8. Bradford Hill guidelines applied to talc and ovarian cancer

The Reference Guide on Epidemiology of the Manual on Scientific Evidence (2011) states: "There is no formula or algorithm that can be used to assess whether a causal inference is

appropriate based on these guidelines.” These guidelines are simply aspects that might be considered in assessing causality. I will give my assessment of how the evidence regarding talcum powder products and ovarian cancer fit into those aspects. I will use the version listed in the Reference Manual on Scientific Evidence. While there is no objective basis or scientific precedent or “scientific jurisprudence” for quantification or weighting of the various “aspects”, to help the reader to understand the relevance that I attached to each “aspect” in my evaluation, I will provide an informal ranking of the importance that I attach to each aspect, in the specific context of the assessment of causality of evidence regarding talcum powder products and ovarian cancer. I will list the aspects in descending order of importance that I attach to them.

My opinions are briefly summarized in **Table 12**.

Highly important aspects in my weighting

There is a set of B-H aspects that are utterly inter-related and cannot be disassociated one from the other. In combination, they represent the most important aspect to consider in evaluation of causality of talcum powder for ovarian cancer. These include strength of association, dose-response, consideration of biases, and consistency of findings.

Strength of the association. This can embody both the magnitude of the RR and its statistical significance. The meta-RR estimate is 1.28. That means that the best estimate from the epidemiologic literature is that women who regularly used talcum powder products in the genital area had 28% higher risk of ovarian cancer than women who did not use such powders. As I illustrate in Table 11 with a few examples, this RR is in line with many well-recognized risk factors for cancer and other diseases. For example, it is well accepted now that people living in an urban neighborhood in which the air is highly polluted with particulate matter have between 5% and 10% excess risk of lung cancer compared with people living in a less polluted urban neighborhood. Also, it is well accepted now that workers exposed to a solvent called trichloroethylene have about a 40% higher risk of kidney cancer compared with workers not exposed to trichloroethylene. Thus, the 28% increase of ovarian cancer for women who used talcum powders is in line with many recognized risk factors. This increased risk as manifested by the meta-RR is highly

statistically significant. (Note that the statistical significance of individual studies is irrelevant to the consideration of causality; it is the totality of evidence embodied in the meta-analysis that counts.) Such a high and significant meta-RR could not have occurred by chance. This is a very important factor in how I view the evidence of causality, and it supports causality.

Dose-response relationship. If the relative risk increases when the exposure increases, it enhances the likelihood that the observed association is really causal. In studies of lifestyle habits like use of talcum powder products, the most common way is to estimate the RR in increasing categories of exposure metrics such as duration (years) of usage, or intensity of usage (frequency per day or per week or per month), or cumulative amount of usage (a combination of duration and frequency). The most sensitive of these metrics is the cumulative amount. I evaluated the published studies reported on risks according to the different metrics. By far, the most important set of results on dose-response is that from the Terry 2013 pooled analysis of 10 studies using the cumulative exposure metric. And, the next most important from a statistical weight point of view is that from Schildkraut 2016. In both of those studies, there is a clear indication of increasing risk with increasing cumulative exposure. Since the statistical power to detect a trend is less than the power to detect an overall risk, it is not surprising that the p-value for trend does not attain the conventional 0.05 level, but it remains true that these studies support a dose-response. This is an important consideration in my assessment of causality, and the evidence on dose-response that our IARC committee had available in 2006 was much less persuasive than the evidence available now.

Consideration of alternative explanations - absence of bias. There are many potential sources of bias in observational research, including in epidemiology. It is important to consider the presence of bias in each study performed or reviewed in an evaluation of causality. The possibility of bias is so multifaceted that it is impossible to reliably assign an explicit score to the likelihood of bias in a study or in a body of studies. It is also important to understand that identifying a potential source of bias is not tantamount to identifying the presence of bias. In section 7.2, I have reviewed the potential role of several types of biases and errors

that can bedevil such research. I concluded there that none of those factors would cause the apparent associations.

Consistency of findings between studies (or replication of findings). Because epidemiologic research is susceptible to errors from random variability and from different kinds of study biases, before accepting the apparent association as a generalized phenomenon, it is important to see that similar results are replicated in different studies. When these different studies also encompass different study populations in different communities, it enhances the generalizability of the inferences. Generally speaking, the observation of consistent results in different studies adds to the credibility of an inference that there really is a causal relationship. In my review of the published epidemiological studies and meta-analysis, I am impressed by the consistently elevated risk across studies. Almost all of the 30 or so studies have produced an RR greater than the null (neutral) value of 1.0. If there really were no association between talcum powder use and ovarian cancer, we would expect to see as many RRs lower than 1.0 as higher than 1.0. The pattern we see is like flipping a coin 30 times and getting a heads 28 or 29 times. The individual study RRs are not all necessarily statistically significant, but that is irrelevant because most individual studies did not have sufficient statistical power to detect RR in the range of 1.2-1.4. It is the statistical significance of the meta-RR, representing the combined evidence that has the requisite power, and that excess RR is highly statistically significant. I place great weight upon this evidence of causality and, here, believe it to be amongst the most important findings.

Moderately important aspects in my weighting

Temporal relationship. Exposure should be seen to have preceded disease. It is almost a logical truism. This is the only aspect that Bradford Hill considered to be necessary. In all of the studies I reviewed, the information elicited about talc exposure concerned the time period before cancer onset. Since it is so obviously important, the reader may wonder why I place lesser weight on this aspect. It is simply because the presence of this condition of temporality is so obvious in these studies.

Biological plausibility (coherence with existing knowledge). It is both conventional and natural to consider whether any putative association is biologically plausible. The notion of

biological plausibility is multi-faceted. In the case of talcum powder products and ovarian cancer, it can include such issues as: how such powders have been used, female anatomy and physiology, toxico-kinetics and toxicology of talc, in vitro and in vivo mechanisms of carcinogenesis, and others.

The first thing to note about this aspect that Bradford Hill listed is that it is called “biological plausibility”, not “biological proof”. That is, there was never any implication that a determination of causality should rest on a demonstrated proven biological mechanism. Hill was always reserved about this aspect, stating that it was not an essential prerequisite to establishing causality. As I have mentioned above, it has been common in the history of medicine and epidemiology for the elaboration of a validated biological mechanism to come much later than the discovery and demonstration of a causal association. Appendix C gives a handful of such examples but there are scores more.

Insofar as the issue of talcum powder products and ovarian cancer is concerned, there is evidence to support a few biologically plausible mechanisms. First of all, there are two possible routes that talcum powder products can take to reach the ovaries. There is published evidence that talcum powder products (and its constituents and contaminants) that are applied to the vaginal area can migrate from there to the fallopian tubes and ovaries (Venter 1979; Henderson 1986; Heller 1996) or to pelvic lymph nodes. (Cramer 2007) In addition, as has been hypothesized and partially demonstrated in the discussion of asbestos and ovarian cancer, such particles might reach the ovaries via inhalation and translocation. (Miserocchi 2008; IARC 2012) Once the particles reach the ovaries, carcinogenesis can be triggered by the inflammation engendered by the particles. (Ness 1999; Ness 2000) There is considerable evidence that inflammation is an important mechanism for carcinogenesis (Coussens and Werb 2002; Grivennikov 2010). Alternative plausible mechanisms of carcinogenicity include talc induced oxidative stress (Buz’Zard 2007; Saed 2017; Fletcher 2018), and genotoxicity (Shukla 2009).

The evidence that commercial cosmetic talcum powder products have been shown to contain asbestos, fibrous talc, and heavy metals (Blount 1991; Paoletti 1984; Longo et al 2017, Crowley report 2018) provides a reasonable basis for hypothesizing that these

chemicals may contribute to the carcinogenicity of the talcum powder products. Asbestos is a well-known carcinogen, as are chromium and nickel compounds. It is plausible that any of these, in contact with the ovaries, can be carcinogenic.

The fact that there are credible biologically plausible mechanisms by which talcum powder products can reach the upper genital tract causing an inflammatory response, along with the presence of asbestos fibres and other carcinogens is an important consideration in support of my opinion that the genital use of talcum powder products can cause ovarian cancer.

Aspects of lesser importance in my weighting

Cessation of exposure. It is rare that there is valid evidence available to assess the impact of cessation of exposure in an observational study. In the studies on talcum powder and ovarian cancer, there is no evidence one way or the other concerning the effect of cessation of exposure. This aspect is not applicable and I place almost no weight on it.

Specificity of the association. This aspect is premised on the notion that an agent-disease association is more likely to reflect a causal association if the agent is not also associated with other diseases. In the 1960's, this seemed like a reasonable argument. In light of evidence from the past 60 years, this argument is no longer made and this aspect has fallen out of usage with the demonstration that some agents can indeed provoke multiple different pathologies. Examples include cigarette smoking, ionizing radiation and asbestos fibers.

So, I do not place much stock in this aspect. However, if I did, I would have to say that genital exposure to talc is associated with ovarian cancer and no other morbidity, which supports the 'specificity' of the relationship."

Analogy

Hill argued that if the agent is similar to another agent that has been shown to be a cause of the disease, then the agent under investigation is more likely to be a cause. The fact that exposure to asbestos fibers can cause cancers in lung, larynx mesothelial tissue and ovaries (IARC 2012) can indicate that, by analogy, talc, which is similar in some respects, might be

able to induce carcinogenesis. Thus, there is an argument for an analogy between talc and asbestos. While this aspect supports causality in Hill's framework, I consider it much less important an aspect than the ones listed above.

Coherence with other types of knowledge: Coherence with other knowledge can encompass a multitude of possibilities. This aspect is both vague and very open-ended, with no real operational instruction on how to use it. Hill gave an example in his paper, but the example was only applicable to tobacco and lung cancer. This is an aspect that, if it can be demonstrated, can enhance the likelihood of causality, but its absence cannot detract from causality. I don't consider it to have much weight in this context.

9. Contrast with IARC Monograph and other reviews

The 2006 IARC Monograph meeting, which I chaired, found that a causal relationship was "possible" between perineal talc powder exposure and ovarian cancer. I concurred with that evaluation.

It is now my professional opinion, based on the totality of the evidence that, to a reasonable degree of scientific certainty, the causal relationship between perineal talc powder exposure and ovarian cancer is "probable. "

What has changed in the years since the IARC review?

The RR estimates in Table 2 are remarkably consistent in showing a highly statistically significant excess risk. The number of published study results and scientific literature addressing the epidemiology, toxicology, molecular biology, and mechanistic studies has increased since 2006, and the evidence of excess risk has been consistently demonstrated across the past three decades.

The various possible biases that are on the table remain substantially similar to the ones that were considered by the IARC panel. At the time, we were not convinced that the apparent excess risk could be explained by those potential biases or confounding. As stated above, my review of the relevant studies and potential biases has led me to conclude that bias does not explain the consistent increased risks seen across the credible studies.

There is important new information with regard to the issue of dose-response. Contrary to the impression that the IARC panel had of a total absence of dose-response, and even a possible trend in the opposite direction, the results of three recent publications, Terry 2013 and Schildkraut 2016, using cumulative exposure metrics, and Wu 2015 using duration of exposure, all demonstrate a clear compatibility with a dose-response relationship. The recent meta-analysis of Berge 2018 supports the presence of dose-response in both duration and frequency of use. The most convincing of these is the Terry 2013 pooled analysis, which assembled a larger dataset than all other attempts to assess dose-response combined. Clearly, earlier reviews could not have integrated the results from these recent studies.

It is my opinion, based upon the above the data, there is evidence of a dose-response relationship. Penninkilampi 2018 has recently expressed a similar opinion.

10. Conclusion

The totality of evidence demonstrates that perineal or genital use of talcum powder products is associated with ovarian cancer. Based on contemporary data, my estimated RR between ever perineal use of talc powder products and ovarian cancer (all types combined) is 1.28 (95%CI 1.19-1.38). The body of epidemiologic evidence is remarkably consistent in demonstrating an excess risk. The evidence summarized in Table 6 is compatible with the presence of a dose-response relationship between cumulative exposure to talcum powder products and ovarian cancer. There are various potential sources of bias in these studies, some of which could have inflated the true RR estimate and some of which would have deflated the true RR estimate. Apart from random measurement error, which is inevitable in such studies and which tends to deflate the RR estimates, there is no certainty that the other potential biases were in fact operative and to what degree. It is my opinion, however, that neither bias nor confounding explains the consistent positive association seen across studies. Additionally, there are biologically plausible mechanisms by which talcum powder products can cause ovarian cancer.

Based on the totality of the evidence, it is my opinion, to a reasonable degree of scientific certainty, that the perineal use of talcum powder products can cause ovarian cancer. Given the seriousness of ovarian cancer and its associated morbidity, this causal risk represents an important public health issue.

11. Tables

Table 1. Steps in my evaluation of general causation between talcum powder product use and ovarian cancer

1. Identify all epidemiology study papers that present results on talc and Ovarian Cancer.
2. Extract all RR results from every paper into a database.
3. Determine which of the papers and results present truly independent relevant results.
4. Extract from each study the RR for Ever/Never use of talc in the genital area in relation to OC risk.
5. Conduct a Meta-analysis.
6. Examine the evidence about a possible dose-response relationship.
7. Consider issues of bias, confounding and other sources of error in the various studies.
8. Consider relevant opinion pieces, review articles, and agency reports.
9. Consider opinions from experts regarding possible biological mechanisms.
10. Consider all relevant aspects of association to infer causation.
11. Write report.

Table 2. Relative risk estimates between ever regular use of talcum powders products¹ in the perineal area and ovarian cancer², from various studies used in the Main Meta-analysis or in one or more of seven sensitivity analyses

Tzonou 1993	?	6	1.05	0.28	3.98
Whittemore 1988	?	67	1.36	0.91	2.04
Wong 1999	?	157	1.0	0.8	1.3
Wu 2015	?	701	1.46	1.27	1.69

1. In all of these studies the exposure was defined as ever use of powder in the perineal area. In most studies it was further explicitly indicated that the use was regular.
2. In this table we report the result for all types of ovarian cancer combined. With the exception of the Harlow 1989 study that was restricted to borderline tumours, we have assumed that all studies included both borderline and invasive tumours, although this was not always clear in the publications.
3. RR or OR.
4. The confidence intervals are the ones reported by the authors of the respective studies. However in its implementation procedures, the Comprehensive Meta-analysis package recomputes them to be symmetric around the point estimate, on a log scale. Consequently, in the printout of the forest plot of meta-analyses, the printed confidence interval is not always identical to the one shown in this table.
5. Estimated based on Table 1 of Gates 2010.
6. The Schildkraut 2016 case-control study presented two sets of results that both have some legitimacy for the present purpose. Schildkraut 2016A shows the results for all subjects who were interviewed in the study from 2010-2015. Schildkraut2016B shows the results for those subjects who were interviewed before 2014, and who, according to the authors, were not susceptible to having been tainted by publicity from a class action suit.

Table 3. Main meta-analysis and sensitivity analyses conducted on the association between ever regular use of talcum powder products in the perineal area and ovarian cancer (all types combined).

Studies in meta-analysis	N*	RR-estimate				Heterogeneity	
		Meta-RR	95% CI		p-value	I ²	p-value
<i>Main Meta-Analysis - list in Figure 1 Forest plot</i>	21	1.28	1.19	1.38	0.00	32.9	0.07
<i>Sensitivity analyses</i>							
Substitute Gates 2008 for Gates 2010	21	1.30	1.21	1.40	0.00	22.9	0.16
Substitute Schildkraut B for Schildkraut A	21	1.27	1.17	1.37	0.00	30.8	0.08
Add Shushan	22	1.29	1.19	1.39	0.00	33.8	0.06
Substitute List A** for Terry	27	1.27	1.19	1.35	0.00	26.2	0.10
Substitute List A for Terry and Gates 2008 for Gates 2010	27	1.29	1.21	1.37	0.00	16.6	0.22
Substitute List A for Terry and Schildkraut B for Schildkraut A	27	1.26	1.18	1.34	0.00	24.5	0.12
Substitute List A for Terry and add Shushan	28	1.28	1.20	1.36	0.00	27.4	0.09

*N: Number of RRs that went into the meta-analysis. This is not synonymous with the number of studies because some RRs (e.g. Terry 2013, Cramer 2016) embody multiple studies.

**List A studies: Cramer 2016; Wu 2015; Terry-Aus 2013; Terry-DOV 2013; Terry-Haw 2013; Terry-HOP 2013; Terry-NCO 2013; Terry SON 2013

Table 4. Comparison of results of three contemporaneous and independent meta-analyses of the association between ever regular use of talcum powder products in the perineal area and ovarian cancer.

Meta-analysis author	N*	Meta-RR	95% CI	Heterogeneity p-value
Siemiatycki 2018	21	1.28	1.19-1.38	0.07
Berge 2018	27	1.22	1.13-1.30	0.02
Penninkilompi 2018	26	1.35	1.24-1.39	0.31

* Number of published RR estimates that went into the meta-analysis. This does not necessarily correspond to the number of studies, since, for example, the Terry 2013 pooled estimate used in the Siemiatycki meta-analysis embodied 10 studies.

Table 5. Relative risk estimates between ever regular use of talcum powder products on sanitary napkins and ovarian cancer, and results of meta-analysis.

Author	Number exposed cases	RR ¹	95% CI ²	
Chang 1997	51	1.26	0.81	1.96
Cook 1997	38	0.9	0.5	1.5
Cramer 1999	20	1.45	0.68	3.09

Rosenblatt 2011	55	0.82	0.58	1.16
Whittemore 1988	5	0.62	0.21	1.80
Wong 1999	13	0.9	0.4	2.0
Meta-analysis		1.08	0.89	1.31
p-value for heterogeneity = 0.09				

1. RR or OR.
2. The confidence intervals are the ones reported by the authors of the respective studies. However in its implementation procedures, the Comprehensive Meta-analysis package recomputes them to be symmetric around the point estimate, on a log scale. Consequently, in the printout of the forest plot of meta-analyses, the printed confidence interval is not always identical to the one shown in this table.

Table 6. Relative risk estimates between subgroups defined by cumulative exposure measures¹ and ovarian cancer², from various studies.

Author	Cumulative applications ³	Number exposed cases	RR ⁴	95% C.I.	
Cook 1997 ⁴	< 2000	20	1.8	0.9	3.5
	2001-5000	24	1.6	0.9	2.9
	5001-10000	21	1.2	0.6	2.4
	>10000	28	1.8	0.9	3.4
Harlow 1992	<1000	18	1.3	0.7	2.7
	1000-10000	54	1.5	0.9	2.4
	>10000	42	1.8	1.0	3.0
Mills 2004	Quartile 1	18	1.0	0.6	1.8
	Quartile 2	28	1.8	1.1	3.0
	Quartile 3	34	1.7	1.1	2.7
	Quartile 4	20	1.1	0.6	1.8
	10000+	18	0.87	0.48	1.57
Schildkraut 2016	≤3600	92	1.16	0.83	1.63
	>3600	152	1.67	1.23	2.26
Terry 2013 ⁵	Quartile 1	534	1.14	1.00	1.31
	Quartile 2	541	1.23	1.08	1.41
	Quartile 3	542	1.22	1.07	1.40
	Quartile 4	586	1.32	1.16	1.52

1. These were all studies that collected information on perineal use of hygiene powders in such a way as to allow construction of a cumulative measure. All of these were case control studies.
2. In this table we report the result for all types of ovarian cancer combined, as reported by the authors.
3. For the Cook study the metric was the number of days on which the woman had ever applied the powder. For the other studies the metric is based on an estimate of the total number of applications.

4. RR or OR.
5. This study was based on a pooling of studies from 8 teams. Two of the teams (Cramer 2016 and Rosenblatt 2011) published separate analyses of risk by cumulative number of applications. But these are not shown here because they are rendered redundant by the Terry 2013 pooled results.

Table 7. Relative risk estimates between subgroups defined by duration of use¹ and ovarian cancer², from various studies.

Author	Duration of use	Number exposed cases	RR ⁴	95% C.I.	
Chang 1997	<30	60	1.7	1.1	2.6
	30-40	71	1.4	1.0	2.2
	>40	41	0.9	0.5	1.4
Cramer 1999	<20 years	55	1.9	1.2	3.0
	20-30 years	32	1.3	0.8	2.3
	>30 years	59	1.4	0.9	2.3
Cramer 2016	< 8 years of use	133	1.31	1.03	1.68
	8-19 years of use	126	1.31	1.02	1.68
	20-35 years of use	147	1.35	1.07	1.70
	>35 years of use	129	1.33	1.03	1.71
Harlow 1992	<10 years	14	1.2	0.5	2.6
	10-29 years	49	1.6	1.0	2.7
	> 30 years	51	1.6	1.0	2.7
Houghton 2014	<9 years	135	1.09	0.88	1.36
	10+ years	97	1.02	0.80	1.30
Ness 2000	<1 year	17	2.0	1.0	4.0
	1-4 years	76	1.6	1.1	2.3
	5-9 years	40	1.1	0.8	1.9
	>10 years	233	1.2	1.0	1.5
Mills 2004	<3 years	18	1.0	0.6	1.8
	4-12 years	32	1.9	1.2	3.0
	13-30 years	29	1.5	0.9	2.3
	>30 years	21	1.2	0.7	2.1

Author	Duration of use	Number exposed cases	RR ⁴	95% C.I.	
Rosenblatt 2011	1-9 years	33	1.39	0.85	2.28
	10-19 years	29	1.46	0.87	2.45
	20-34 years	30	1.28	0.78	2.10
	35+ years	19	0.91	0.51	1.62
Schildkraut 2016	≤20 years	101	1.33	0.95	1.86
	>20 years	144	1.52	1.11	2.07
Whittemore 1988	1-9 years	34	1.6	1.0	2.6
	10+	50	1.1	0.7	1.7
Wong 1999	1-9 years	39	0.9	0.6	1.5
	10-19 years	49	1.4	0.9	2.2
	>20 years	101	0.9	0.6	1.2
Wu 2015	Per 5 years of exposure	1273	1.14	1.09	1.20

1. These were all studies that collected information on perineal use of hygiene powders in such a way as to allow construction of a measure of duration.
2. In this table we report the result for all types of ovarian cancer combined, as reported by the authors.
3. Years of case ascertainment or follow-up: For case-control studies this indicates the years in which cases were ascertained and data collected; for cohort studies it indicates the years of enrolment and follow-up.
4. RR or OR.

Table 8. Relative risk estimates between subgroups defined by measures of frequency of use¹ and ovarian cancer², from various studies.

Author	Frequency of use	Number exposed cases	RR ⁴	95% C.I.	
Booth 1989	Rarely	6	0.9	0.3	2.4
	Monthly	7	0.7	0.3	1.8
	Weekly	57	2.0	1.3	3.4
	Daily	71	1.3	0.8	1.9
Chang 1997	<10 per month	76	1.8	1.2	2.7
	10-25 per month	54	1.1	0.7	1.7
	Per 10 applications per month		0.9	0.7	1.1
Cramer 1999	<30 per month	64	2.2	1.4	3.6
	30-39 per month	59	1.7	0.8	1.8
	≥40 per month	23	1.7	0.8	3.1
Cramer 2016	1-7 days per month	220	1.17	0.96	1.44
	8-29 days per month	110	1.37	1.05	1.78
	>30 days per month	205	1.46	1.20	1.78
Gates 2008	<1 per week	18	0.98	0.54	1.79
	1-6 per week	22	1.01	0.57	1.79
	Daily	35	1.44	0.88	2.37
Harlow 1992	<5 per month	32	1.5	0.8	2.7
	5-29 per month	24	1.2	0.6	2.2
	≥30 per month	58	1.8	1.1	3.0

Author	Frequency of use	Number exposed cases	RR ⁴	95% C.I.	
Mills 2004	<1 per week	34	1.3	0.9	2.1
	1-3 per week	31	1.6	0.7	1.8
	4-7 per week	41	1.7	1.1	2.6
Schildkraut 2016	<Daily	88	1.12	0.80	1.58
	Daily	158	1.71	1.26	2.33
Whittemore 1988	1-20 per month	41	1.3	0.8	2.0
	>20 per month	44	1.5	0.9	2.2

1. These were all studies that collected information on perineal use of hygiene powders in such a way as to allow construction of a measure of frequency of use.
2. In this table we report the result for all types of ovarian cancer combined, as reported by the authors.
3. Years of case ascertainment or follow-up: For case-control studies this indicates the years in which cases were ascertained and data collected; for cohort studies it indicates the years of enrolment and follow-up.
4. RR or OR

Table 9. Relative risk estimates between ever regular use of talcum powder products¹ in the perineal area and invasive serous ovarian cancer, from various studies.

Author	Number exposed cases	RR ²	95% CI ³	
Cook 1997	71	1.7	1.1	2.5
Gates 2010	131 ⁴	1.06	0.84	1.35
Harlow 1992	60	1.4	0.9	2.2
Houghton 2014	105	1.13	0.84	1.51
Mills 2004	42	1.77	1.12	2.81
Schildkraut 2016	165	1.38	1.03	1.85
Terry 2013	1197	1.24	1.13	1.35
Wong 1999	136	1.2	0.7	2.1
Meta-analysis		1.25	1.15	1.36

p-value for heterogeneity 0.06

1. In all of these studies the exposure was defined as ever use of powder in the perineal area. In most studies it was further explicitly indicated that the use was regular.
2. RR or OR.
3. The confidence intervals are the ones reported by the authors of the respective studies. However in its implementation procedures, the Comprehensive Meta-analysis package recomputes them to be symmetric around the point estimate, on a log scale. Consequently, in the printout of the forest plot of meta-analyses, the printed confidence interval is not always identical to the one shown in this table.
4. Estimated based on Table 1 of Gates 2010.

Table 10. Some major misconceptions in reviewing evidence on talc and ovarian cancer

1. Cohort studies are more valid and informative than case-control studies.
2. Hospital-based case-control studies are more valid and informative than the population-based case-control studies.
3. Counting the number of “statistically significant” results is a valid way of assessing the consistency of results among multiple studies.
4. If a product has been used for a long time, it must be safe
5. You cannot prove causality with an RR less than 2.0.
6. Government agencies provide a reliable up-to-date source of scientific information.
7. A biological mechanism must be proven before we can establish causality
8. Bradford-Hill “aspects” represent a recipe list of necessary ingredients.

Table 11. Selected examples of some of the recognized causal associations that have RR less than 2.0

Agent	Disease	Approximate RR
Urban air pollution	Lung cancer	1.09 ¹
Trichloroethylene	Kidney cancer	1.32 ²
Diesel engine emissions	Lung cancer	1.42 ³
Benzene	Leukemia	1.72 ⁴
Domestic radon gas	Lung cancer	1.29 ⁵
Second hand cigarette smoke	Lung cancer	1.64
Intermittent intense sun exposure	Melanoma of the skin	1.61 ⁶
Estrogen-progestin menopausal therapy	Breast cancer	1.59 ⁷

Fruit and vegetable intake and the risk of cardiovascular disease, total cancer and all-cause mortality – a systematic review and dose-response meta-analysis of prospective studies, *International Journal of Epidemiology* 43(3):1029-1056. (This RR estimate is computed from the reciprocal of the High fruit and vegetable variable that was reported by the authors. That is, 1/0.92).

Table 12. Bradford Hill aspects in relation to perineal talc exposure and ovarian cancer

Aspect	Brief comment	Weight in evaluating causality
Strength of the association	There are stronger associations and there are weaker associations	High
Dose response relationship	Reasonably clear increase in risk with increasing exposure	High
Consideration of alternative explanations – absence of bias	Yes considered, and none is compelling	High
Replication of the findings	Very strong, almost all studies support association	High
Temporal relationship	Exposure preceded disease in all studies	Moderate
Biological plausibility	There are plausible mechanisms	Moderate
Cessation of exposure	Not applicable.	Less
Specificity of the association	Yes, talc is not associated with a multitude of diseases	Less
Coherence with other knowledge	Could be similar to asbestos carcinogenicity	Less
Analogy		Less

12. Figures

Figure 1. Meta-analysis of relative risk of ovarian cancer (all types combined) among women who regularly used talc powder in the perineal area, based on all informative studies, studies ordered by magnitude of RR.

Model	Effect size and 95% interval				Test of null (2-Tail)		Heterogeneity				Tau-squared			
Model	Number Studies	Point estimate	Lower limit	Upper limit	Z-value	P-value	Q-value	df (Q)	P-value	I-squared	Tau Squared	Standard Error	Variance	Tau

13. Appendix A

Appendix Table A1. Papers that contain some results on the association between exposure to perineal talc and ovarian cancer, and whether the paper was included in my meta-analyses of the binary Ever/Never exposed variable

Author	Included/excluded	Reasons for exclusion
Booth 1989	Core Inclusion	
Chang 1997	Core Inclusion	
Chen 1992	Core Inclusion	
Cook 1997	Core Inclusion	
Cramer 1982	Core Inclusion	
Cramer 1995	Excluded	Included in Terry 2013 and in Cramer 2016
Cramer 1999	Excluded	Included in Terry 2013 and in Cramer 2016
Cramer 2005	Excluded	Included in Terry 2013 and in Cramer 2016
Cramer 2016	Excluded when Terry 2013 is included	Considerable overlap between this and the Terry 2013 NEC component
Eltabbakh 1998	Excluded	Cases were peritoneal cancer and controls were ovarian cancer
Gates 2008 ²	Included in one sensitivity analysis	Overlap with Gates 2010

Author	Included/excluded	Reasons for exclusion
Gates 2010 ²	Included in all analyses except one sensitivity analysis	This may be a more complete analysis than Gates 2008, but the degree of overlap is unclear.
Gertig 2000	Excluded	Subsumed in Gates 2008 and Gates 2010
Godard 1998	Core inclusion	
Gonzalez 2016	Core inclusion	
Green 1997	Excluded	This appears to be an analysis of a subset of the subjects in Purdie 1995
Hankinson 1993	Excluded	Numerical results were not presented.
Harlow 1989	Core inclusion	
Harlow 1992	Core inclusion	
Hartge 1983	Core inclusion	
Houghton 2014	Core inclusion	
Jordan 2007	Excluded	Benign tumours only
Kurta 2012	Excluded	Included in Terry 2013
Langseth 2004	Excluded	Not based on perineal application of cosmetic powder.
Lo-Ciganic 2012	Excluded	Same study as Kurta 2012 and included in Terry 2013.
Merrit 2008	Excluded	Included in Terry 2013

Author	Included/excluded	Reasons for exclusion
Mills 2004	Core inclusion	
Moorman 2009	Excluded	Included in Terry 2013
Pike 2004	Excluded	Included in Terry 2013
Purdie 1995	Core inclusion	
Ness 2000	Core inclusion	
Rosenblatt 1992	Core inclusion	
Rosenblatt 2011	Core inclusion	
Schildkraut 2016	Core inclusion	
Shushan 1996	Included in sensitivity analysis	Unclear on how they obtained data on talc exposure or what the route of exposure was
Terry 2013	Included in Main analysis, but replaced by component studies in sensitivity analyses	
Tzonou 1983	Core inclusion	
Whittemore 1988	Core inclusion	
Wong 1999	Core inclusion	
Wu 2015	Core inclusion	

Appendix Table A2. Some administrative and contextual information on the studies used in the following tables

Author	Study location	Years of case ascertainment/ follow-up¹	Type of study
Booth 1989	London, Oxford UK	1978-1983	Case-control; Hospital controls
Chen 1992	Beijing Cancer Registry	1984-1986	Case-control; Population controls
Cook 1997	Washington State	1986-1988	Case-control; Population controls
Cramer 1982	Boston	1978-1981	Case-control; Population controls
Cramer 2016	New England	1992-2008	Case-control; Population controls
Gates 2008 ²	USA – NHS study	1976-2004	Case-control nested in Cohort (US nurses)
Gates 2010 ²	USA – pooled 2 cohorts of nurses NHS and NHSII	1976-2004 1989-2005	Cohort (US Nurses)
Godard 1998	Montreal, Canada	1995-1996	Case-control; Population controls
Gonzalez 2016	Puerto Rico and 11 States USA	2003-2014	Cohort
Harlow 1989	Washington State	1980-1985	Case-control; Population controls
Harlow 1992	Boston	1984-1987	Case-control; Population controls

Author	Study location	Years of case ascertainment/ follow-up¹	Type of study
Hartge 1983	Washington, DC	1974-77	Case-control; Population controls
Houghton 2014	USA	1993-2012	Cohort (WHI)
Mills 2004	California	2000-2001	Case-control; Population controls

Purdie 1995	Australia	1990-1993	Case-control; Population controls
Rosenblatt 1992	Baltimore	1981-1985	Case-control; Hospital controls
Schildkraut 2016	USA	2010-2015	Case-control; Population controls
Shushan 1996	Israel	1990-1993	Case-control Population controls
Terry 2013	Pooled 8 studies: USA & Australia	1984-2008	Case-control; Population controls
Terry-AUS 2013	Australia	2002-2006	Case-control Population controls
Terry – DOV ³ 2013	Washington State	2002-2009	Case-control Population controls
Terry – HAW 2013	Hawaii	1993-2008	Case-control Population controls

Author	Study location	Years of case ascertainment/ follow-up¹	Type of study
Terry – HOP 2013	Pennsylvania, Ohio, Western NY State	2003-2008	Case-control Population controls
Terry – NCO 2013	North Carolina	1999-2008	Case-control Population controls
Terry – NEC 2013	Massachusetts, New Hampshire	1992-2006	Case-control Population controls
Terry – SON 2013	Southern Ontario	1989-1992	Case-control Population controls
Terry – USC 2013	Los Angeles County	1992-1998	Case-control Population controls
Tzonou 1983	Athens	1989-1991	Case-control; Controls – hospital visitors
Whittemore 1988	San Francisco	1983-1985	Case-control; Hospital & population controls
Wong 1999	Buffalo	1982-1992	Case-control; Hospital controls
Wu 2015	Los Angeles County	1992-2008	Case-control; Population controls
1.	Years of case ascertainment or follow-up: For case-control studies this indicates the years in which cases were ascertained and data collected; for cohort studies it indicates the years of enrolment and follow-up.		
2.	The Gates 2008 and Gates 2010 papers are both derived from the U.S. Nurses Cohort. The latter represent results for all cases diagnosed up to 2006 and analysed in the cohort framework. The former represents results for a sub-set of cases that were selected for a nested c-c analysis. The number of exposed cases was not given in the Gates 2010 paper.		
3.	Terry – DOV 2013: the information in Terry 2013 is updated information included in Rosenblatt 2011.		

Appendix Table A3. Covariates used in the analyses and exposure variables in the studies used in the following tables.

Author	Exposure variable selected	Covariates used in analysis
Booth 1989	At least monthly use	Since the authors did not present results for “ever” exposed, I calculated the OR from crude numbers in their tables. Therefore the OR presented is a crude one. However, results presented in Table 7 adjusted for age and social class
Chen 1992	Dusting perineum or lower abdomen > 3 months	Education
Cook 1997	Lifetime perineal application	Age
Cramer 1982	Any use as dusting powder and/or on sanitary napkins	Parity; menopausal status
Cramer 2016	Any talc use	Age; study center (MA, NH); BMI; primary relative with breast or ovarian cancer; parity; OC use; tubal ligation
Gates 2008 ¹	Regular genital talc use (1 per week or more)	Age; OC ² use; parity; BMI; post-menopausal hormone use
Gates 2010 ¹	Regular genital talc use (1 per week or more)	Age; BMI; physical activity; smoking; family history of breast or ovarian ca; OC use; tubal ligation; hysterectomy; age menopause; estrogen use
Godard 1998	Ever use of talc on perineum	Age; reproductive factors; OC use; tubal ligation; alcohol use; breast and abdominal surgery
Gonzalez 2016	Talc use in the past 12 months	Race; body mass index; parity; duration of oral contraceptive use; baseline menopause status; and patency

Author	Exposure variable selected	Covariates used in analysis
Harlow 1989	Any genital talc use	Age; county; parity; OC use
Harlow 1992	Any genital talc use	Age; county; parity; marital status; education; religion; weight; use of sanitary napkins; douching
Hartge 1983	Any genital talc use	Race; age; gravidity
Houghton 2014	Combined use: longest duration of use among the applications to genitals, sanitary napkins and diaphragms	Age; race; OC use; HRT ³ use; family history of ovarian ca; age at last birth; BMI; smoking; tubal ligation; parity
Mills 2004	Ever use of talcum powder in genital area	Age; race/ethnicity; OC use; breast-feeding
Ness 2000	Genital rectal talc use	Age; parity; family history of ovarian ca;
Purdie 1995	Ever used talc in perineal region	Age; parity; duration of OC use; education; BMI; smoking; family history of ovarian ca
Rosenblatt 1992	Ever use of bath talc	Number of live births
Schildkraut 2016	Regular use of talc, cornstarch, baby or deodorising powder – at least once a month for 6 months	Age at diagnosis/interview; study site; education; tubal ligation; parity; BMI duration of OC use first degree family history of breast or ovarian cancer; and interview year
Shushan 1996	Talc use – never, seldom, moderate, a lot	Crude OR

Author	Exposure variable selected	Covariates used in analysis
Terry 2013 – all components of the pooled analysis	Genital powder use	Age; OC use; parity; BMI; tubal ligation; ethnicity; race; tubal ligation; hysterectomy; breastfeeding
Tzonou 1983	Ever use of talc in perineal region	Age; years of schooling; weight before onset of the disease; age at menarche; menopausal status and age at menopause; parity and age at first birth; tobacco smoking; coffee drinking; consumption of alcoholic beverages; hair dyeing; use of analgesics and tranquilizers/hypnotics
Whittemore 1988	Talcum powder used on any two of perineum, sanitary pads and diaphragm	Age; race; hospital; parity
Wong 1999	Ever use of talc on genital region or thighs	Age; income; education; geographic location; OC use; smoking; family history of ovarian ca; age at menarche; menopausal status; tubal ligation or hysterectomy
Wu 2015	Genital talc use >1 year	Age; race/ethnicity; interviewer; reproductive variables; sociodemographic variables; medical history; hormonal variables; BMI.
1.	The Gates 2008 and Gates 2010 papers are both derived from the U.S. Nurses Cohort. The latter represent results for all cases diagnosed up to 2006 and analysed in the cohort framework. The former represents results for a sub-set of cases that were selected for a nested c-c analysis. The number of exposed cases was not given in the Gates 2010 paper.	
2.	OC: oral contraceptive	
3.	HRT: hormone replacement therapy

15. Appendix C

Examples of historic discoveries made on the basis of empirical observation of an association, without the existence of a validated biological mechanism of action.

- Jenner (18th century) discovered that smallpox could be prevented by “vaccinating” people. This was based on observation of the effect of exposure to cowpox. He had no idea about viruses or the biology of smallpox. He only knew that the “association” he observed between vaccination and the prevention of smallpox was so strong as to convince him it was causal. Millions of lives were saved as a result.
- Snow (19th century) discovered that cholera was caused by something in the water supply. He did not know what the pathogen was or how it produced the disease, but he showed with sufficient epidemiologic proof that drinking water from a polluted source produced much higher rates than drinking water from a clean source. Despite the ignorance of biological mechanisms, the public health authorities acted on his findings and thereby greatly reduced the incidence of cholera.
- Rheumatic fever and rheumatic heart disease were quite common causes of disease and death, striking relatively young people. For many decades it was recognized that there was an association between infection with the streptococcus bacterium and rheumatic heart disease, but it was not understood how the bacterium could have such an effect. The lack of understanding of the biological mechanisms did not get in the way of prevention of rheumatic heart disease by preventing and treating streptococcus infection.
- In the 1930’s and 1940’s, it was noticed that communities with high natural levels of fluoride in the water had much lower levels of dental caries than communities with low fluoride levels. Additional observational research confirmed the clear causal relationship and this led to extensive use of fluoride in various ways to reduce dental disease. But, all this occurred

before the mechanisms by which fluoride acted on teeth were understood. And, indeed the mechanisms are still not fully understood.

- In the late 1940's and early 1950's, evidence was accumulating that cigarette smokers had higher rates of lung cancer than non-smokers. This "association" was ridiculed at the time, among other reasons, because there was no proven biological mechanism. Attempts to replicate smoking-related lung cancer incidence in laboratory animals were largely unsuccessful. Nor was there a deep understanding of the cellular processes that allow the inhalation of cigarette smoke to culminate in a tumor. Scores of studies later and many decades later, the outlines of a credible biological mechanism began to emerge. The absence of a proven biological mechanism did not hinder the US Surgeon General and other national bodies from concluding that there was a causal link as early as the 1960's.
- Many chemicals have been found to be carcinogenic as a result of epidemiologic studies among workers. Examples of these are asbestos, silica, nickel compounds, chromium compounds, benzene, and others. Some of these discoveries go back to the first half of the 20th century, and, for most of them, many decades passed between the time they were recognized as carcinogens, on the basis of epidemiologic associations, and the elaboration of credible mechanisms of how they induce cancer. (Siemiatycki 2015) Most known carcinogens were first discovered empirically by medical doctors or epidemiologists, usually as part of large data collection activities or just plain astute observation on the part of medical doctors.

GENERAL INFORMATION

Work address

Université de Montréal
Research Center of CHUM
850 rue St Denis, Montréal, QC, Canada H2W 1V1

Tel: (514) 890-8166
Fax: (514) 412-7106
E-mail: j.siemiatycki@uMontréal.ca

EDUCATION

1967 B.Sc. (mathematics); McGill University
1970 M.Sc. (mathematical statistics); McGill University
1976 Ph.D. (epidemiology and medical statistics); McGill University
1977 Post-doctoral (cancer epidemiology); International Agency for Research on Cancer, Lyon

CURRENT ACADEMIC APPOINTMENTS

Professor, Department of Social and Preventive Medicine, Université de Montréal (since 2001)
Cancer Research Society-Guzzo Research Chair in Environment and Cancer, Université de Montréal (since November 2007)
Adjunct Professor, Department of Epidemiology, Biostatistics and Occupational Health, McGill University. (since 1979)
Fellow, Canadian Academy of Health Sciences (since 2008)

PREVIOUS ACADEMIC APPOINTMENTS AND WORK EXPERIENCE

1967-71 Research Fellow; Department of Epidemiology and Health, McGill University.
1970-72 Research Director; Pointe St. Charles Community Clinic, Montréal.
1978 Consultant; International Agency for Research on Cancer, Lyon.
1978-2001 Assistant, then Associate (1979), then full Professor (1983):
Epidemiology Research Center, Institut Armand-Frappier, Laval, Québec.
1982-1986 Associate member, McGill Cancer Center, McGill University.
1996-1997 Visiting Scientist. International Agency for Research on Cancer, Lyon.
2001-2015 Canada Research Chair (Tier 1), Université de Montréal (resigned 2011).
2003-2009 Affiliate Scientist. McLaughlin Centre for Pop'n Health Risk Assessment, Univ of Ottawa.

SIGNIFICANT INTERNAL ADMINISTRATIVE APPOINTMENTS

1982-86 Director, Équipe associée de l'Institut de Recherche en Santé et Sécurité du Travail sur les cancers professionnels (affiliated research team of the Quebec Institute for Occupational Health and Safety on Occupational Cancer).
1988-91 Director, Epidemiology Research Center, Institut Armand-Frappier.
1990-98 Director, Équipe prioritaire de recherche en épidémiologie environnementale du FRSQ. (Priority research team in environmental epidemiology)
1998-2001 Member, Governing Council (Conseil d'administration). Institut national de la recherche scientifique, Université du Québec.
2000-2007 Coordinator. Program of Research in Environmental Epidemiology of Cancer (PREECAN), a national program funded by the National Cancer Institute of Canada.
2002-2005 Associate Director for Population Health Sciences, Research Center of the University of Montréal Hospital Center.

- 2006-2007 Director, Epidemiology program, PhD public health, Université de Montréal.
2006-2014 Director, Axe risques à la santé (Health Risks Division). Centre de recherche du Centre hospitalier de l'Université de Montréal.

SIGNIFICANT INSTITUTIONAL COMMITTEES

- 1979-80 Member of faculty committee to negotiate a collective agreement with the Institut Armand-Frappier administration.
1982-92 Member, Research Council. Institut Armand-Frappier.
1998-2001 Member, Institutional advisory council. Institut Armand-Frappier. Institut national de la recherche scientifique
2002-2006 Comité de direction. Centre de recherche du CHUM
2002-2017 Member, Various committees of the Dept Med Soc et Preventive, including Promotions, and Recruitment.
2006-2009 Member, Various committees established to set up a new School of Public Health at l'Université de Montréal
2006-2014 Comité Scientifique de la Recherche du CHUM.

CURRENT MAJOR EXTERNAL BOARDS, SCIENTIFIC COMMITTEES (INVITED)

1. Chair of Scientific Advisory Committee of CONSTANCES, a large prospective cohort established in France, under aegis of INSERM, Ministère de la Santé, and other agencies. Since 2011.
2. Member of Comité national d'épidémiologie en cancérologie. Ministère de la Santé et des Services sociaux, Quebec. Since 2014.
3. Member, Advisory committee to Directors of Cartagene, a Quebec population cohort.

PAST MAJOR EXTERNAL BOARDS, SCIENTIFIC COMMITTEES, CONSULTATIONS (INVITED)

1. Expert consultative committee to Commission de la santé et sécurité du travail du Québec on the epidemiologic function of the CSST. 1979-80.
2. President of Organizing Committee of Annual Congress of Quebec Public Health Association, Montréal. 1982.
3. Consultative committee of International Agency for Research on Cancer on feasibility of SEARCH programme. 1982.
4. Canadian representative. International Joint Commission (U.S. and Canada) Committee on the Assessment of Human Health Effects of Great Lakes Water Quality. 1982-89.
5. Task Force on Chemicals in the Environment and Human Reproduction Effects in New Brunswick. 1983-85.
6. Chairman and organizer of international workshop sponsored by International Agency for Research on Cancer, Lyon, on use of job exposure information in cancer case-control studies. 1984.
7. Quebec Government Consultative Committee on Alachlor. 1985-86.
8. Chairman and organizer of the International Joint Commission Workshop on the Role of Epidemiology in Assessing the Effects of Great Lakes Water Quality on Human Health, Scarborough, March 1988. 1986-88.
9. Priority Substances Advisory Panel. Panel established under terms of Canadian Environmental Protection Act by Health and Welfare Canada. 1988.
10. Working Group on Electromagnetic Fields under auspices of Health Effects Institute. 1991.
11. Consultative Committee on Environment-related Cancer Surveillance, LCDC, Health and Welfare Canada. 1993-1996.
12. Consultative Committee on an Investigation of Lung Cancer and Environmental Tobacco Smoke, Environmental Health Directorate, Health Canada. 1994-1995.
13. Working Group on Evaluation of Carcinogenicity of Carbon Black, Printing Trades and Various Substances. Monograph Programme. International Agency for Res. on Cancer, Lyon, 1995.

14. Working Group on Human Cancer Risks associated with Chrysotile Asbestos. World Health Organization (IPCS) Geneva, June 1995.
15. Secretariat on Evaluation of Chemopreventive Effect of Aspirin and Other NSAIDS for Cancer. International Agency for Res. on Cancer, Lyon, Apr. 1997.
16. Chair. Symposium on Health Risks of Water Disinfection By-products. Convened by Health Canada. Ottawa. May 1997.
17. Working Group. Meeting on Species-specificity in response to carcinogens. Monograph Programme. International Agency for Res. on Cancer, Lyon, Nov. 1997.
18. Board of Directors. Canadian Society for Epidemiology and Biostatistics. 1997-1999.
19. Working Group. Evaluation of Carcinogenicity of Various Industrial Substances. Monograph Programme. International Agency for Res. on Cancer, Lyon, Feb. 1998.
20. Canadian Coalition on Cancer Surveillance. 1997-2002.
21. External site review panel. U.S. National Cancer Institute Epidemiology Branch. June 1999.
22. Organizing Committee for Medical Research Council Workshop on Privacy of Health Data. 1999-2000.
23. Organizing Committee, EPI2001. Joint North American Congress of Canadian Society for Epidemiology and Biostatistics, Society for Epidemiologic Research, American Public Health Association (Epid) and American College of Epidemiology, Toronto, 14 – 16 June 2001. 1999-2001.
24. Coordinator of national initiative of the public health community to provide guidance on the structures and functioning of the new Canadian Institutes of Health Research. 1999-2000.
25. Organizing Committee. World Congress of the International Epidemiological Association, Montréal, 18-22 August 2002. 2001-2002.
26. President. Canadian Society for Epidemiology and Biostatistics. 2001-2003. Member of Board. 1997-1999.
27. Working Group. Evaluation of Carcinogenicity of Various Substances. Monograph Programme. International Agency for Res. on Cancer, Lyon, 2003.
28. Jury of Consensus Conference on risks and benefits of vaccination for hepatitis B. For Minister of Health of France. Organized by INSERM and ANAES. Paris 2003.
29. Public Advisory Panel. Vinyl Council of Canada. 1998-2004.
30. Advisory Panel. U.S. National Cancer Institute Brain Tumor Study. 1998-2003.
31. Scientific Advisory Committee. Boeing/UAW Workers' Health Studies. 1999-2005.
32. Institute Advisory Board. Canadian Institutes for Health Research – Institute of Circulatory and Respiratory Health. 2001-2005.
33. National Occupational Research Agenda (NORA). Joint consultative committee for US National Cancer Institute and US National Institute for Occupational Safety and Health. 2002-2005.
34. Canadian Cancer Surveillance Alliance. Consultative committee of Health Canada, Canadian Cancer Society, Provincial Cancer Registries, Statistics Canada. 2002-2003.
35. Co-president. Organizing Committee of Joint SER-CSEB Congress, Toronto 27-30 June 2005. (2004-2005).
36. Chair. Monograph Program Meeting. International Agency for Research on Cancer (WHO), France. February 2006.
37. Advisory Committee on Research Ethics and Databanks. Quebec Health Research Council (FRSQ). 2003-2011.
38. Board of Directors. American College of Epidemiology. 2003-2006.
39. Board of Directors. National Cancer Institute of Canada. 2003-2007.
40. Member Scientific Council International Agency for Research on Cancer (WHO). Lyon, France 2005-2009.
41. Elected Chair. Scientific Council International Agency for Research on Cancer (WHO). Lyon, France 2008-2009.
42. Scientific Advisory Council Canadian Partnership Against Cancer 2007-2009.
43. Advisory Committee. Occupational Cancer Research Centre of Ontario. Since 2009.
44. Working Group on Cancer Prevention, CPAC, 2007-2010.

45. Subgroup Chair and Working Group Member. Evaluation of Carcinogenicity of Non-Ionizing Radiation, Radiofrequency Electromagnetic Fields. Monograph Programme. International Agency for Research on Cancer, Lyon May 2011.
46. Member of Scientific Advisory Board of Bordeaux cancer research center SIRIC-BRIO, Bordeaux France. Since 2013.
47. Member of external review panel. Helmholtz Center Munich Research Institute. Germany. July 2011.
48. Conseil Scientifique de l'Institut de Recherche en Santé Publique (IReSP). Under aegis of INSERM and Ministère de la Santé, France. 2004-2009.
49. Adviser and expert witness for legal team conducting a major class action lawsuit against the Canadian tobacco industry. 2007-2014.

OTHER SIGNIFICANT EXTERNAL CONSULTATIONS (INVITED)

1. Consultation with Quebec Ministry of Justice regarding compensation for homeowners who were advised to use formaldehyde-base home insulation - 1983.
2. Invited participant. Workshop convened by the Science Council of Canada on the future of Epidemiology in Canada, Ottawa - 1985.
3. Consultation with Government of Alberta regarding the evaluation of a report alleging significant health impact in the environment of a sour-gas plant - 1985.
4. Consultation with Quebec Ministry of Environment regarding health effects of residency near an abandoned toxic waste site in LaSalle, Quebec - 1987.
5. Invited participant. Workshop convened by Canadian Public Health Association, Environment Canada and Health and Welfare Canada on Environmental Impact Assessment, Ottawa - 1987.
6. Invited participant. Annual workshops convened by Health Protection Branch of Health and Welfare Canada to discuss the role of Canada in the SEARCH programme of the International Agency for Research on Cancer, Ottawa - 1987-1989.
7. Consultation with Quebec Cree Band Council regarding a research proposal to study developmental effects of consuming fish with high mercury levels - 1989.
8. Invited participant. Workshop convened by Ontario Industrial Disease Standards Panel on the use of epidemiologic data in workers' compensation, Toronto - December 1989.
9. Invited participant. Workshop convened by National Academy of Sciences (U.S.) on Carcinogenicity of Complex Mixtures, Tucson, Arizona - Jan 1990.
10. Invited participant. Workshop convened by Laboratory Centers for Disease Control, Health and Welfare Canada on Multiple Chemical Sensitivities, Ottawa - May 1990
11. Member of expert advisory panel to the pan-Canadian case-control study of electromagnetic fields and childhood leukemia. Sponsored by Canadian Electrical Assoc, EPRI (U.S.A.), Health and Welfare Canada. 1990-1996.
12. Organizer of Workshop to Plan a Pan-North American Case-control Study of Lung Cancer. Sponsored by Health and Welfare Canada. Toronto. March 1991.
13. Invited participant. Workshop convened by Environmental Health Directorate of Health and Welfare Canada, on Environmental Epidemiology in Canada. Ottawa. March 1992
14. Invited participant. Workshop convened by Harvard Center for Risk Analysis on implementing a new type of risk assessment. Maryland. April 1992.
15. Member of Technical Advisory Panel for epidemiology studies of foundry workers - CIIT. Research Triangle Park, N.C. Feb. 1993
16. Consultant to Health Effects Institute - Asbestos Research, on Options for Characterizing Worker Activities in Buildings, Boston. Feb. 1993.
17. Advisory panel to Laboratory Centers for Disease Control, Health and Welfare Canada, on Environmental Epidemiology under the Green Plan. March 1993.
18. Member of External Advisory Committee. Champlain Adirondack Biosphere Environmental Health Sciences Center, University of Vermont. 1993.
19. Consultant to Michigan Cancer Foundation on a variety of epidemiologic studies. 1993-1996.

20. Invited to address President Clinton's Panel on Cancer regarding priorities in cancer research. Bethesda, MD. April 1994.
21. Invited participant. Science and Technology Review Consultation. Government of Canada. Montréal. September 1994.
22. Invited participant. Strategic planning workshop to reduce Environmental Tobacco Smoking exposure. Laboratory Centre for Disease Control. Health Canada. Oct 1995.
23. Invited participant. Meeting to establish new priorities for funding. National Health Research and Development Programme of Canada. Montréal. Feb 1996.
24. Chair Scientific Advisory Committee for the Dalhousie University study of health effects of environmental and occupational pollution in the area of the Sydney, Nova Scotia steel industry. 1996.
25. Member of two Ministerial missions of the Quebec and Canadian governments to France to discuss with French experts the risks associated with low level exposure to chrysotile asbestos. Paris. Oct 1996.
26. Chair. Meeting of collaborators of European network of studies on lung cancer and smoking.
27. International Agency for Res. on Cancer, Lyon. June 1997.
28. Member of Canadian scientific delegation to United Kingdom to discuss with British experts the risk associated with low level exposure to chrysotile asbestos. London, Sept. 1997.
29. Symposium chair. Workshop to discuss methods of predicting numbers of cases of mesothelioma to be expected in various countries. Paris. Dec. 1997.
30. Invited participant and subgroup reporter. Peer Review on Hazard Assessment and Dose-Response Characterization for the Carcinogenicity of Formaldehyde by the Route of Inhalation. Health Canada and U.S. EPA. Ottawa. March 1998.
31. Co-chair. Workshop to explore the feasibility of an international collaborative study on use of cellular phones and risk of cancer. International Agency for Research on Cancer. Lyon. Feb 1999.
32. Panellist. Consensus Meeting for a Proposed Integrated National Health Surveillance Network. Health Canada. 1999.
33. Invited participant. Medical Research Council Summit Meeting on the new Canadian Institutes of Health Research. Toronto. June, 1999.
34. Invited participant. Planning group for an Institute of Population Health Research in CIHR. Jul-Dec 1999.
35. Invited speaker. Workshop for a Canadian Institute for Genetics Research. May 2000.
36. Invited participant. Workshop to explore the use of prospective cohorts to investigate gene-environment interactions in cancer etiology. National Cancer Institute. Rockville, MD. May 2000.
37. Invited participant. Founding meeting of Canadian Association for Workplace Safety and Health. Montréal. Jan 2001.
38. Invited participant. Workshop to advise Canadian Foundation for Innovation on its role in supporting population health research in Canada. Toronto, Feb 2001.
39. Invited participant. Consultative committee to advise Cancer Care Ontario on priorities in environmental cancer. April 2001.
40. Invited participant. Workshop on national priorities in cancer research. Institute for Cancer Research. CIHR. Toronto. May 2001.
41. Invited participant. Delphi process to advise Canadian Institutes of Health Research on priorities in cancer research. October-December 2001.
42. Invited participant. Delphi process to advise Cancer Care Ontario on priorities in cancer prevention. November-April 2002.
43. Session Chair. NIOSH workshop "Applying New Biotechnologies to the Study of Occupational Cancer", Washington, D.C. May 2002.
44. Member of Advisory Panel. U.S. National Cancer Inst. Study of a Cohort of Chinese Workers Exposed to Benzene. 2002- .
45. Invited participant. Delphi process to advise Cancer Care Ontario on priorities in cancer prevention. November-April 2002.
46. Session Chair. NIOSH workshop "Applying New Biotechnologies to the Study of Occupational Cancer", Washington, D.C. May 2002.

47. Organizer and Session Chair. International Epidemiological Association Meeting. Occupation and Health. Montréal. August, 2002.
48. Co-Organizer and Session Chair. Epidemiological Association Meeting. Asbestos and mesothelioma. Montréal. August, 2002.
49. Session Chair. Epidemiological Association Meeting. Environment and Health. Montréal Aug, 2002.
50. Invited participant. CIHR National Forum to devise a National Research Programme for Environmental Health. Ottawa. Sept 2002.
51. Invited participant. CIHR national forum on privacy of health data. Ottawa, November, 2002.
52. Member. Environmental and Occupational Carcinogens Advisory Group. Canadian Cancer Society. 2002 - 2004.
53. Participant. Meeting to discuss the establishment of a prospective childhood cohort in Canada. CIHR-IPPH. March 2004.
54. Member of working group on national cohort project. National Cancer Research Initiative. January-June 2004.
55. Member of advisory group on development of IDEES, Université de Montréal. January-June 2004.
56. Member, ad-hoc group to explore the feasibility of a Canadian cohort on cancer and chronic disease. 2004-2008.
57. Invited participant. Workshop to discuss the enhancement of population health research in Canada. CIHR-IPPH. June 2004.
58. Invited participant. Workshop on occupational cancer surveillance. Occupational Cancer Research & Surveillance Project (Cancer Care Ontario and the Ontario Workplace Safety & Insurance Board). February 2005.
59. Invited participant. Workshop on long-term large-scale cohorts. CIHR, December 2005.
60. Member. Advisory Scientific Committee. IBM – University of Alabama project on health of IBM manufacturing plant workers. 2006 - 2008.
61. Advisor and meeting participant. Ontario Workplace Safety and Insurance Board. Recommendations on how to develop occupational cancer research in Ontario. Toronto, 2005.
62. Invited participant. Workshop to estimate the burden of occupational cancer in the United Kingdom. UK Health and Safety Executive. Manchester. June 2006.
63. Advisory Committee to British Energy Networks Association. Workshop on the Future Needs of Electromagnetic Fields Occupational Studies in the Electric Utility Industry. Edinburgh. September 2006.
64. Advisory Committee. IARC Monograph Programme Planning of Special Volume 100. Lyon. September 2006.
65. Grant Review Panel. IVRSP. Paris. September 2006.
66. Advisory Committee to CCRA and ICR (CIHR) on the nature of a national cohort platform. Toronto, September 2006.
67. Invited participant. Comité d'éthique de la recherche de la faculté de médecine (CERFM) : Discussion d'un projet soumis pour la création d'une banque de données et de matériaux biologiques (Research Ethics Committee of the Faculty of Medicine: Review of a submitted project to create a bank of data and biologic samples). Université de Montréal. March 2007.
68. Invited participant. Workshop to Design and Implement the Ontario Cohort Consortium Research Platform. Toronto. June 2007.
69. Invited participant. Canadian Cancer Research Agencies. Strategic Planning Consultation in Montréal. May 2009.
70. Invited participant. IARC-NORA workshop to identify gaps of knowledge on occupational carcinogens, Lyon. June 2009.
71. Consultant. State of the science workshop: evaluation of epidemiological data consistency for application in regulatory risk assessment. US EPA and Johns Hopkins School of Public Health. Baltimore. September 2010.
72. Consultant. World Health Organisation. Re-evaluation of Risk Assessments related to DDT exposure. Geneva. November 2010.

73. Invited participant. WHO workshop to develop international guidelines for control of environmental carcinogens. Asturias. March 2011.
74. Session Chair. Discovering occupational carcinogens. Congress of Epidemiology. Montréal June 2011.
75. Invited co-organiser. Symposium of Environment and Cancer. Canadian Cancer Research Conference. Toronto. November 2011.
76. Invited organiser and Chair. Symposium on Cellphones and Cancer. American Association for Cancer Research. Chicago, April 2012.
77. Member Scientific Program Committee for the 2013 Canadian Cancer Research Conference, Toronto. November 2013.
78. Member of Advisory Committee to National Cancer Institute (U.S.) study on carcinogenicity of diesel emissions. 2017.

HONOURS

1. Biographee in various Who's Who in America versions. Since 1982
2. Perron-Desrosiers Prize. Granted by the Governing Council of the Institut Armand-Frappier. 1985.
3. Invited to give the annual Elizabeth Stern Memorial Lecture in U.C.L.A. School of Public Health. 1985.
4. National Health Scholar. National Health Research and Development Programme of Canada. 1988-1998.
5. Visiting Scientist Award. International Agency for Research on Cancer, Lyon. 1996-97.
6. Prix d'excellence. Institut national de la recherche scientifique. Université du Québec. 1999.
7. Distinguished Scientist Award. Medical Research Council, Canada. 1999-2004.
8. Canada Research Chair in Environmental Epidemiology and Population Health. 2001-2015.
9. Distinguished Scientist Lecturer. US National Cancer Institute. Division of Cancer Epidemiology and Genetics. 2006.
10. Cancer Research Society-Guzzo Chair in Environment and Cancer. Since 2007.
11. Fellow Canadian Academy of Health Sciences. Since 2008.
12. Geoffrey R Howe Distinguished Contributions Award, Canadian Society for Epidemiology & Biostatistics. 2011.
13. Ranked top Canadian public health researcher in terms of research productivity by Jarvey et al. 2012.

GRANT REVIEW, JOURNAL REVIEW AND PERSONNEL REVIEW

Associate Editor

American Journal of Epidemiology (1989-1998)

International Journal of Environmental Health (1991-)

Contributing Editor

Journal of Public Health Policy (1982-87)

American Journal of Industrial Medicine (1996-)

The Open Epidemiology Journal (2007-)

Chairman of grant review panels

National Health Research and Development Programme. Canada. (1990-94)

National Cancer Institute of Canada (1994-1995)

Member of grant review panels

40 times

External referee for tenure or promotion of personnel in other institutions

15 times

THESES

ABSTRACT

Ovarian cancer is one of the most common gynaecological neoplasms, especially in industrialised countries. The aetiology of the disease is not well understood, except that inherited mutations in the breast cancer genes BRCA-1 and BRCA-2 account for up to 10% of all cases,¹ and child-bearing, oral contraceptive use and breast-feeding reduce the risk.² Some environmental exposures, notably talc and asbestos, have been suspected as ovarian carcinogens.

Talc refers to both mineral talc and industrial products that contain mineral talc. Mineral talc occurs naturally in many regions of the world and is valued for its softness, platyness, and ability to absorb organic matter. Mineral talc occurs naturally in a platy (flat) form, but may also occur as asbestiform fibres, which describes its physical form and does not imply the presence of asbestos. The purer forms (approximately 90% mineral talc) are used for cosmetic and hygiene products including baby powders and feminine hygiene products. Perineal use of cosmetic talc is a common practice in the United Kingdom, North America, Australia and some other countries. To our knowledge accurate estimates of prevalence of use of cosmetic talc are not available. However, the use for female hygiene of body powders, baby powders, talcum powders and deodorising powder, most of which contain cosmetic talc in varying amounts, has been reported to be as high as 50% in some countries.³

From pathological studies it is known that particles and fibres that enter the body can migrate to distant organs. For instance, asbestos fibres have been found in ovaries from women exposed to asbestos.^{4,5} Analogously, following perineal application, talc particles can migrate from the vagina to the peritoneal cavity and ovaries.⁶ A majority of women experience retrograde menstruation⁷; this suggests a mechanism by which talc particles can travel through the female reproductive tract to the ovaries. Furthermore, epidemiological studies have shown decreased risks of ovarian cancer after tubal ligation and/or hysterectomy, suggesting that removing a pathway by which carcinogenic substances can reach the ovaries reduces the risk.^{8,9}

The association between talc use in the perineal region and ovarian cancer was investigated in one cohort study,¹⁰ and 20 case-control studies.^{11–30} In the cohort study, arguably the strongest study because of its partly prospective ascertainment of exposure, there was no association between cosmetic talc use and risk of all subtypes of ovarian cancer combined. The various case-control studies provided indications of either a significant excess risk (10 studies) or non-significant excess risk or

null (10 studies), with odds ratios (ORs) ranging from 1.0 to 3.9. None of the studies reported relative risks below 1.0. The population-based case-control studies,^{11 15–17 20–26 28–30} included studies with 112–824 ovarian cancer cases, and had odds ratios ranging from 1.1 to 3.9 (fig 1). The hospital-based case control studies^{12–14 18 19 27} included studies with 77–462 cases, and reported odds ratios between 1.0 and 2.5. Pooled odds ratios were calculated by fixed effects model. As shown in figure 1 pooled ORs were 1.40, 1.12 and 1.35 for population-based, hospital-based and all case control studies combined, respectively. Some studies^{13 14 22 23 26 28} tried to assess exposure-response associations, in terms of frequency of use or length of use in years but found no clear trend.

Methodological factors such as recall bias should always be considered in case-control studies. It could have been a problem had there been widespread publicity about the possible association between use of body powder and cancer. The International Agency for Research on Cancer (IARC) working group considers that there has not been widespread public concern about this issue and therefore considers it unlikely that such a bias could explain the consistent findings. Another source of recall bias could result from the fact that women with the cancer tend to remember or over-report their use of body powder. The influence of this type of recall bias cannot be ruled out.

Eight of the population-based case-control studies^{11 16 22–24 26 28 29} were identified, by the IARC working group as being most informative in terms of size of the studies, whether the studies were population-based, participation rates and adjustments of confounding variables. The selected studies included at least 188 cases and had participation rates ranging from 60% to 75%. Among these eight studies, the prevalence of perineal use of talc-based body powder among controls ranged from 16% to 52%. The relative risks of ovarian cancer among body powder users were homogeneous across this set of eight studies, each of which indicated a 30–60% increase in risk. Among the other 12 case-control studies, most also reported relative risks of this magnitude or higher.

Information on talc use in infancy is generally insufficient in the case-control studies. However, in one study the exposure to baby powder was reported by 42.2% of the cases and 40.5% of the controls.¹⁵ In several of the other studies patients were asked about age at first use of perineal talc, as an indicator for use in infancy or other periods of life.

Only four case-control studies^{16 23 29 30} and one cohort study¹⁰ provided results by histological type. In four of these studies, in particular the cohort study, there were hints of higher risks of serous tumours related to talc exposure.

Figure 1 Results from case-control studies contributing data on perineal talc use and ovarian cancer. Results are presented as odds ratios (ORs) and their corresponding confidence intervals (95% CIs) and represented by squares and lines, respectively. Results are separated in 14 population-based and six hospital-based case-control studies. Pooled ORs for all population-based studies combined and all hospital-based studies combined are given. OR pooling by fixed effect models (Mantel-Haenszel method).

Before 1976, talc was to some extent contaminated with asbestos, so that the early studies relating talc to ovarian cancer may have been confounded by the asbestos.³¹ However, the association between talc exposure and ovarian cancer is as strong in recent studies,^{28–29} as in earlier ones, diminishing the likelihood that all these results are influenced by contamination of talc by asbestos.

To summarise the evidence in favour of an association, a very large number of studies have found that women who used talc experienced excess risks of ovarian cancer; some results were statistically significant and some were not. There was some indication in the cohort study of an increase in serous tumours. The evidence of talc migrating to the ovaries lends credibility to such a possible association. The main epidemiological evidence against the association is the absence of clear exposure-response associations in most studies, as well as the absence of an overall excess risk in the cohort study.

On balance, the epidemiological evidence suggests that use of cosmetic talc in the perineal area may be associated with ovarian cancer risk. The mechanism of carcinogenicity may be related to inflammation.³²

The carcinogenicity of non-asbestiform talc was assessed by a monograph working group at IARC in 2006.³³ After considering biases and possible confounding factors, the IARC working group concluded that the epidemiological studies provided

limited evidence for the carcinogenicity of perineal use of talc-based body powder, and classified this use as possibly carcinogenic to human beings (that is, group 2B).³⁴

PROPOSAL: TO RESEARCH COMMUNITY

The current body of experimental and epidemiological evidence is insufficient to establish a causal association between perineal use of talc and ovarian cancer risk. Experimental research is needed to better characterise deposition, retention and clearance of talc to evaluate the ovarian carcinogenicity of talc.

The majority of the epidemiological studies carried out so far have been among American women. It would be instructive to seek evidence in other countries where perineal use of talc has been common.

While there has been some efforts to measure the degree of use, these have mainly been measured simply as the reported years of use. It is possible that the ostensible lack of exposure response trends is the result of crudeness of the exposure metric used. Therefore, it is important that future studies, irrespective of study design, devote some effort to better assessment of exposure. The use of body powders should be assessed both in terms of calendar time and age of the subject. Subjects should be asked about lifetime use, including age at initial use (infancy, childhood, teenager years, adulthood), age at which they stopped using such powders, gaps in the lifetime period of use

What this study adds

- Epidemiological evidence suggests that use of cosmetic talc in the perineal area may be associated with ovarian cancer risk. The IARC has classified this use of talc as possibly carcinogenic to human beings (group 2B).
- The mechanism of carcinogenicity may be related to inflammation. This paper focus on the high degree of consistency in the studies accomplished so far, and what should be the focus in future studies.

and frequency and nature of use (daily, during certain seasons of the year, only while menstruating). Another important question is whether the use of body powder was before or after tubal ligation or hysterectomy.

Individuals' answers to questions about use of brand names over time may be unreliable, and therefore, in future studies, investigators should try to ascertain, either from government or industry sources, the composition of the powders used in different time periods by different brand names and, in particular, to ascertain whether the exposure may have included some contamination by asbestos and also whether the exposure was to talc or a non-talc product. Statistical analyses should attempt to assess risk separately for the categories of powders: talc containing asbestos, talc not containing asbestos, non-talc product. Further, exposure metrics should take into account the age, duration and intensity of exposure. As well as analyses for all ovarian tumours combined, there should, if possible, be analyses by histological subtype and by invasiveness of the tumour.

While it would not be reasonable to envisage establishing a costly long-term prospective cohort study just to study this association, any long-term cohort study that is being set up to study cancer among women should collect information about talc use if the study is being conducted in a country where such use has been widespread.

In summary, future studies should focus on seeking evidence in talc-exposed female populations worldwide, collecting reliable information on age at initial use of body powder, exposure assessments and dose response associations.

24	discussing Group Research Topics 285	24	A Good morning. Nice to meet you.
25		25	Q We met just before the deposition

3 (Pages 6 to 9)

Jack Siemiatycki, Ph.D.

Page 10	Page 12
<p>1 started, but my name is Kimberly Branscome, and I 2 am here to ask you questions today on behalf of 3 Johnson & Johnson. 4 Is that all right? 5 A Thank you. Yes. 6 Q All right. We are taking your 7 deposition today in the case of In Re: Johnson & 8 Johnson Talc Litigation, MDL. 9 Is it your understanding that you have 10 been designated as a testifying expert in that 11 case? 12 A Yes. 13 Q When were you first contacted about 14 serving as an expert witness in the MDL 15 litigation? 16 A I believe it was in the spring or summer 17 of 2018, but I'm not positive about that. 18 Q Who contacted you? 19 A Ms. Parfitt. 20 Q Have you communicated with any other 21 lawyers regarding your work on the talc MDL? 22 A I've had a couple of meetings with 23 Ms. Parfitt and her colleagues that she works 24 with. 25 Q Can you identify the individuals with</p>	<p>1 anyone else present at those meetings? 2 A No. 3 Q You didn't have anyone from your team, 4 for example, present? 5 A No. 6 MS. PARFITT: Objection. Form. 7 BY MS. BRANSCOME: 8 Q What did you do to prepare for your 9 deposition today? 10 A Do you mean from the beginning of my 11 involvement in the MDL case back last summer or do 12 you mean just in the last few days? 13 Q Let's take it more broadly. 14 What have you done to develop your 15 opinions in this case, and then specifically to 16 prepare for your deposition? 17 A I reviewed -- I rereviewed the 18 literature about talc and ovarian cancer, 19 scientific literature. I evaluated it, I wrote a 20 report about it. And in the last few days, I went 21 over all of the -- not all, but a lot of the 22 material that I had gone through initially and 23 just clarified for myself, looked for any issues 24 that I had missed the first time around, things 25 like that.</p>
Page 11	Page 13
<p>1 whom you have met in addition to Ms. Parfitt? 2 A Yes, there are two, and they are here 3 present. Chris Tisi and Alastair -- 4 MR. FINDEIS: Findeis. 5 THE WITNESS: Say that again. 6 MS. PARFITT: Findeis. 7 THE WITNESS: And that's -- thank you. 8 BY MS. BRANSCOME: 9 Q How many meetings have you had to 10 prepare for your expert opinions in the MDL? 11 A One yesterday and one about a month -- 12 about three weeks ago. 13 Q Where did those meetings take place? 14 A Here. 15 Q And by "here," do you mean in Montreal? 16 A In Montreal, yes. 17 Q How long did each meeting last? 18 A Yesterday's was about four, five hours 19 maybe. Four or five hours. And the earlier one, 20 I guess all told, about ten hours maybe. 21 Q Did the ten-hour meeting take place over 22 one day? 23 A Over two days. 24 Q In addition to the attorneys that you 25 just identified for the record and yourself, was</p>	<p>1 Q As part of your review of materials in 2 preparation for today, did you identify anything 3 in your review that changed the opinions that you 4 have offered in the expert report in the MDL? 5 A No. Those opinions remain valid. 6 Q When you say that you rereviewed the 7 scientific literature in preparation for the 8 development of your opinions in the MDL, what did 9 you mean by "rereviewed"? 10 A Well, I had reviewed -- I've reviewed 11 evidence around talc and ovarian cancer on a few 12 different occasions. The first time was in 2006 13 when I was on an international review committee on 14 the topic. Then in 2015, '16, '17, in preparation 15 for another litigation regarding talc and ovarian 16 cancer. Then in the summer/fall of 2018, in 17 preparation for writing a report that was 18 submitted for this case. And then in the last 19 week or two, roughly speaking, I went over all of 20 that. So I refer to that as a rereview. 21 Q Have you ever discussed your deposition 22 with any of -- of the other experts designated by 23 the plaintiffs in the MDL? 24 A No, I haven't. 25 Q Have you discussed your expert opinions</p>

4 (Pages 10 to 13)

Jack Siemiatycki, Ph.D.

Page 14	Page 16
<p>1 with any of the other experts designated by the 2 plaintiffs in the MDL? 3 A No, I haven't. 4 Q Are you aware of the list of experts 5 that have been designated by the plaintiffs in the 6 MDL? 7 A I'm aware of at least some of them. I'm 8 not sure if I'm aware of all of them, but I'm 9 aware of some of them. 10 Q Who specifically are you aware of? 11 A Singh, McTiernan, Laura Plunkett. And 12 there are a few more, and I could look it up. 13 Q I'd like to start by just marking the 14 deposition notice for your deposition as 15 Exhibit 1. 16 Dr. Siemiatycki, you will see two large 17 binders over there in front of you. This will be 18 tab 1. 19 So I'd like -- 20 A I see it. 21 Q I'd like to mark for identification 22 the document behind tab 1, which is 23 Dr. Siemiatycki's deposition notice as Exhibit 1 24 to this deposition. 25 MS. PARFITT: Do you want to give me --</p>	<p>1 your deposition that were submitted by plaintiffs' 2 counsel in the MDL. And this one we actually will 3 need to mark a copy, because it's not in your 4 binder. 5 (Exhibit No. 2 was marked for 6 identification.) 7 MS. BRANSCOME: Do you have an extra 8 copy, Michelle? 9 MS. PARFITT: I do. Not a worry. I got 10 it. 11 BY MS. BRANSCOME: 12 Q Dr. Siemiatycki, have you ever seen the 13 document that has been marked as Exhibit 2, which 14 is the plaintiffs' general objections to your 15 deposition notice? 16 A I'm not sure. 17 MS. PARFITT: I will represent for the 18 record that's not been provided to 19 Dr. Siemiatycki. 20 BY MS. BRANSCOME: 21 Q All right. So if you could, 22 Dr. Siemiatycki, did you bring any materials with 23 you today to the deposition? 24 A Yes, I brought a lot of documents, just 25 in case.</p>
Page 15	Page 17
<p>1 Do you want me to just mark them? Will 2 that help you, instead of reaching across the 3 table? It's up to you. I can put the stickers on 4 it. 5 (A discussion was held off the record.) 6 (Exhibit No. 1 was marked for 7 identification.) 8 BY MS. BRANSCOME: 9 Q Dr. Siemiatycki, are you familiar with 10 the document that we have just marked as 11 deposition Exhibit 1? 12 A I've seen something like this. I'm -- 13 not reading through it, I'm not sure if it's 14 exactly the same document that I have seen before, 15 but I guess this is kind of the standard format of 16 notice that is sent to experts ahead of time. So 17 I've seen -- I've seen that. 18 Q Do you understand that what has been 19 marked as Exhibit 1, which is the notice for your 20 deposition, requests that you bring certain 21 documents with you to this deposition? 22 A Yes. 23 Q All right. And just for completeness 24 and at the request of plaintiffs' counsel, I will 25 also mark as Exhibit 2 the general objections to</p>	<p>1 Q Can you identify for me, and we can 2 start with a general category first, if that's 3 helpful, the materials that you brought with you 4 today to your deposition? 5 A Well, I brought my report. I brought an 6 addendum to my report, which I think has been 7 provided to you. 8 MS. PARFITT: Yes, that was the table. 9 THE WITNESS: It's a long -- it's a set 10 of -- 11 MS. PARFITT: I have a copy of that if 12 you wish to have it marked. Do you want it -- if 13 you give me a number, I will put it on this one. 14 BY MS. BRANSCOME: 15 Q Let's see. Yeah, let's go ahead and 16 mark the addendum to your expert report as 17 Exhibit 3. 18 (Exhibit No. 3 was marked for 19 identification.) 20 BY MS. BRANSCOME: 21 Q Dr. Siemiatycki, could you just confirm 22 for the record that what we have marked as 23 Exhibit 3 is in fact the complete addendum to your 24 MDL expert report? 25 A I -- I believe it is. I believe it is.</p>

5 (Pages 14 to 17)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 18</p> <p>1 Q What else did you bring with you today?</p> <p>2 A I'm not sure if this is the right time</p> <p>3 to mention it, but there were a couple of -- in</p> <p>4 the past few days I picked up a couple of typos in</p> <p>5 my report, and I've hand scribbled them on my</p> <p>6 copy, and I can tell you about those very quickly,</p> <p>7 but I'm not sure if this is now the right time for</p> <p>8 this or later.</p> <p>9 Q I will ask you about any corrections</p> <p>10 that you have, but it is good to know that the</p> <p>11 report you brought with you has some handwriting</p> <p>12 on it, so we will make sure to mark that copy.</p> <p>13 A Okay.</p> <p>14 Q What else did you bring with you today?</p> <p>15 A I brought -- well, I brought three</p> <p>16 binders of material that were part of the -- the</p> <p>17 references to my report.</p> <p>18 MS. PARFITT: And if I may, I provided</p> <p>19 counsel in advance of the deposition a thumb drive</p> <p>20 that contains all of Dr. Siemiatycki's report but</p> <p>21 also the references related to that report.</p> <p>22 THE WITNESS: I brought a couple of</p> <p>23 binders -- well, more than a couple. It looks</p> <p>24 like five binders of different documents that I</p> <p>25 thought might be useful in answering questions</p>	<p style="text-align: right;">Page 20</p> <p>1 Agency for Research on Cancer, of the meeting held</p> <p>2 in Lyon in 2006. The book was published in 2010,</p> <p>3 and it contains an evaluation of talc</p> <p>4 carcinogenicity as of 2006.</p> <p>5 The next one is a textbook of</p> <p>6 epidemiology that is probably considered the most</p> <p>7 respected one in the field at this point, authored</p> <p>8 by Rothman, T -- R-O-T-H-M-A-N, Greenland,</p> <p>9 G-R-E-E-N-L-A-N-D, and Lash, L-A-S-H.</p> <p>10 MR. KLATT: Dr. Siemiatycki, is there a</p> <p>11 particular edition or is there --</p> <p>12 THE WITNESS: Oh, yeah. Yeah, this one</p> <p>13 is third edition. Thank you.</p> <p>14 The fourth one is kind of a handbook</p> <p>15 called Dictionary of Epidemiology, edited by</p> <p>16 Porta, P-O-R-T-A, which is kind of a very basic</p> <p>17 book of definitions.</p> <p>18 And the fifth one is called An</p> <p>19 Introduction to Meta-Analysis. The first author</p> <p>20 is Borenstein, B-O-R-E-N-S-T-E-I-N.</p> <p>21 BY MS. BRANSCOME:</p> <p>22 Q All right. Focusing first on the books</p> <p>23 that you brought with you, why did you bring with</p> <p>24 you a book about Risk Factors --</p> <p>25 A For cancer.</p>
<p style="text-align: right;">Page 19</p> <p>1 that you might ask. So it was -- I was just</p> <p>2 speculating on the types of questions you might</p> <p>3 ask and brought documents that might help to</p> <p>4 answer or to support arguments or statements that</p> <p>5 I would make. I brought five --</p> <p>6 MS. PARFITT: You can get --</p> <p>7 THE WITNESS: -- which --</p> <p>8 MS. PARFITT: -- the texts --</p> <p>9 THE WITNESS: The textbooks. I brought</p> <p>10 five books with me, again in the same spirit that</p> <p>11 things might come up that it would be helpful to</p> <p>12 refer to material in these books. One -- should I</p> <p>13 tell you what they are?</p> <p>14 BY MS. BRANSCOME:</p> <p>15 Q If you would, please, identify each of</p> <p>16 the books --</p> <p>17 A Okay.</p> <p>18 Q -- for the record, and we will return to</p> <p>19 the eight binders that you just mentioned.</p> <p>20 A One is a book called Risk Factors for</p> <p>21 Cancer in the Workplace. And it's a book that I</p> <p>22 wrote 30 years ago about occupational causes of</p> <p>23 cancer.</p> <p>24 The other one -- the next one is the</p> <p>25 monograph of IARC, which is the International</p>	<p style="text-align: right;">Page 21</p> <p>1 Q -- for Cancer in the Workplace?</p> <p>2 A Because it has -- in that book I -- I</p> <p>3 described my research. I described the research</p> <p>4 findings from my projects in this area. I also</p> <p>5 described the process of conducting epidemiologic</p> <p>6 research and drawing inferences from epidemiologic</p> <p>7 data, and how -- what are the considerations that</p> <p>8 would be used in drawing inferences from</p> <p>9 epidemiologic data for cancer causation. And I</p> <p>10 thought this might come up during the day.</p> <p>11 Q Do the methodological principles that</p> <p>12 you outline in your book, Risk Factors for Cancer</p> <p>13 in the Workplace, are those still current in your</p> <p>14 view today?</p> <p>15 A Yes.</p> <p>16 Q And why specifically did you want to</p> <p>17 have this book available to you during your</p> <p>18 deposition?</p> <p>19 A In case any of the statements that I've</p> <p>20 made in my report about evaluating causation and</p> <p>21 how epidemiology is used for evaluating causation</p> <p>22 are challenged. And specifically, I was</p> <p>23 anticipating that there may be challenges to the</p> <p>24 fact that my approach to this question might be</p> <p>25 new and just sort of concocted in the context of</p>

Jack Siemiatycki, Ph.D.

Page 22	Page 24
<p>1 the litigation, and I wanted to show that in my 2 own sort of intellectual history, these ideas have 3 been there forever but certainly for the last 30 4 years, and that these are commonly held views. 5 Q Are there specific chapters within the 6 book that you brought with you that you would 7 direct someone to to gain information about the 8 methodology that you applied in the MDL? 9 MS. PARFITT: Objection. Form. 10 THE WITNESS: I'm sorry. Could you 11 repeat the question? 12 BY MS. BRANSCOME: 13 Q Understanding that what you brought with 14 you -- 15 A Yes. 16 Q -- is a complete book -- 17 A Yes. 18 Q -- are there specific chapters that you 19 contend contain an explanation of the methodology 20 that is similar to what you have applied in your 21 analysis in the MDL? 22 MS. PARFITT: Objection. Form, broad. 23 THE WITNESS: So I would say there are 24 two chapters that have relevance to the issue at 25 hand. The last chapter contains a discussion of</p>	<p>1 A Yeah. 2 Q -- in the MDL? 3 A I -- yes, I -- I collected as much 4 information, data from different research studies 5 as possible. I evaluated those studies. I 6 ordered them according to the types of evidence 7 that they provide. I tried to synthesize the 8 evidence in particular in the basket of 9 epidemiologic research on the topic. And I 10 juxtaposed the information from epidemiologic 11 evidence with evidence derived from other domains 12 which are provided by other experts. And I made a 13 professional judgment about how all of that fits 14 with different ways of understanding the 15 relationship between perennial use of talc and the 16 risk of ovarian cancer. 17 Q Is the methodology that you just 18 described that you used in forming your opinions 19 in the MDL described in the textbook that you 20 brought with you about risk factors in the 21 workplace? 22 A It is implicit. It is implicit in the 23 work of epidemiologists, and it's implicit in the 24 way we synthesize information. So, in 25 epidemiologic practice, the role of -- there's no</p>
Page 23	Page 25
<p>1 causality and how to use epidemiology in the 2 process of determining causality. 3 The first -- the second chapter contains 4 information -- excuse me, I think it's the second 5 chapter -- contains information about different 6 epidemiologic research designs, and it's a 7 discussion of case-controlled studies, cohort 8 studies, and other types of epidemiologic designs 9 and their relative advantages and disadvantages. 10 BY MS. BRANSCOME: 11 Q Is there a description of the 12 methodology that you have applied in your analysis 13 in the MDL that is directly described in the book 14 that you just referenced? 15 MS. PARFITT: Objection. Form. 16 THE WITNESS: I'm not sure what you mean 17 by "directly," and I'm not sure what you mean by 18 "methodology." 19 BY MS. BRANSCOME: 20 Q Did you apply a specific methodology in 21 reaching your opinions here in the MDL? 22 A What do you mean by "a specific 23 methodology"? 24 Q Did you -- did you use a methodology in 25 forming your opinions --</p>	<p>1 cookbook recipe in how you start the day and 2 finish the day. You collect data. You use your 3 best judgment about how to synthesize and 4 integrate it. And I guess it comes under the 5 rubric of weight of evidence. You look at all of 6 the evidence, and you (weigh it according to your 7 professional judgment. 8 And most of the agencies that have any 9 policies or statements about synthesizing 10 information will talk about collecting 11 information, evaluating it, weighing it, and 12 making a judgment about it. 13 Q If someone were reviewing just your 14 report in the MDL, would they be able to replicate 15 the weight that you gave different pieces of 16 evidence that you considered? 17 A The synthesis of scientific information 18 is not an automated process. It can't be done by 19 a robot. And in every description of how such 20 evidence is synthesized and integrated, the final 21 step always involves professional judgment, and as 22 it should, because there are too many moving parts 23 in all of this to be able to, a priori, set up an 24 algorithm that allows you to automate and arrive 25 at some score that tells you, yes or no, this</p>

Jack Siemiatycki, Ph.D.

Page 26	Page 28
<p>1 agent is dangerous or not dangerous or something 2 like that. 3 So in line with everything I've done in 4 my career, everything that I've been involved with 5 in international and national agencies, whether 6 it's USNCI or the World Health Organization or 7 other agencies, the process depends critically on 8 judgment of the people who are making the 9 decisions or who are making the evaluations. 10 Q Respectfully, Dr. Siemiatycki, that was 11 not my question. 12 My question was, could someone by 13 reviewing the report that you have provided in the 14 MDL replicate your analysis in the sense that they 15 would understand the weight that you gave to each 16 piece of evidence you considered? 17 A I think to a considerable extent I've 18 given fairly explicit information in the report on 19 all of the components of information that I used 20 and the relative weight, but -- not in a 21 quantitative way, but the relative importance that 22 I attribute to different parts of the evidence 23 package. 24 Q You did not do any type of scoring 25 system, for example, in considering the various</p>	<p>1 selected, when they were selected, when they were 2 followed up, how -- all of these things may have a 3 different score, and you may have a hundred 4 dimensions to evaluate on each study. And nobody 5 has come up with a -- a usable, useful, 6 replicatable method for integrating all of this. 7 There have been some attempts and there are some 8 scoring systems out there. The fact that there 9 are scoring -- that someone has published a 10 scoring system, and that even a committee has, 11 does not mean that it's valid. 12 But I -- my professional opinion, and 13 that of I think many other people -- because 14 typically studies are not scored in this way. 15 That's -- when people review evidence. Or if 16 they -- anyway, typically they are not, and my 17 feeling is that there is no valid way really of 18 doing it. 19 But the -- in order to sort of complete 20 the answer to I think what's behind your question 21 of why I didn't do such a thing in my report with 22 all of the studies is that I adopted early on -- I 23 made a decision early on to avoid excluding 24 studies from my analysis based on my opinion about 25 the quality of the study. This is a decision that</p>
Page 27	Page 29
<p>1 underlying studies that you evaluated. Is that 2 fair? 3 A No -- no, I did not, because I don't 4 consider that a valid procedure. 5 Q Why is that not a valid procedure? 6 A Because I don't think epidemiologic 7 studies can be summarized in single-digit scores. 8 There are too many different aspects of a study, 9 and any attempt to do so, I think is flawed and -- 10 Q Why is the attempt to assigning a score, 11 single digit or otherwise, a flawed methodology? 12 A Because there are so many -- a study can 13 be good in one dimension, mediocre in a third, 14 excellent in a fourth, bad in a fifth, so-so in a 15 sixth, and so on. 16 There are so many dimensions of a study, 17 and each one of them can be rated. And that's -- 18 that is something that I do do. I evaluate 19 everything from participation rate to the 20 population in which the study was carried out, to 21 the way the questions were asked in the 22 questionnaire, to the way the information from the 23 questionnaire was -- was coded and categorized, to 24 the way the design of the -- whether its case 25 controlled or otherwise, how the subjects were</p>	<p>1 other meta-analyses have also made implicitly. I 2 don't know if they've made it explicitly, but 3 there are no studies that have -- as far as I 4 know, there are no meta-analyses that have 5 literally excluded studies on the basis of quality 6 or -- or done a systematic attempt to do this. 7 And I made a decision early on that if I 8 tried to -- if I went down the road of eliminating 9 some studies from my analysis, this would be 10 criticized as some form of cherry-picking, and in 11 an attempt to avoid that criticism, I decided I 12 would include all pieces of evidence, 13 notwithstanding my opinion of the overall quality 14 of the study. 15 Q Okay. Dr. Siemiatycki, that was a very 16 long answer, but I will try to unpack a few -- 17 A Yes. 18 Q -- portions of that. 19 So you would agree that in order for a 20 methodology to be valid, it has to be a process 21 that can be replicated? 22 MS. PARFITT: Objection. Form. 23 THE WITNESS: What do you mean by 24 "replicated"? You mean that someone else 25 following exactly the same steps and the -- making</p>

8 (Pages 26 to 29)

Jack Siemiatycki, Ph.D.

Page 30	Page 32
<p>1 the same assumptions as the -- the person who did 2 the analysis would be able to end up with the same 3 statistical estimates at the end? Is that what 4 you mean? Or do you mean that they would make the 5 same judgments? 6 BY MS. BRANSCOME: 7 Q Well, Dr. Siemiatycki, you indicated one 8 of the reasons why you don't agree with using a 9 quantitative point system was that a methodology 10 had not been developed that was, I believe you 11 said, useful, usable and replicable. 12 What did you mean by the word 13 "replicable" when you used it in your own answer? 14 A Did I use the word "replicable" in that 15 sentence? Can I -- can I read that? (Peruses 16 monitor.) 17 I'm not sure what I had in mind with the 18 use -- the word -- yes, you can produce a 19 replicable system, but it doesn't mean that it's 20 valid. So useful and usable, yes. I don't think 21 that there is one that would capture, for 22 observational epidemiology, the -- all of the 23 components that are necessary really to tease out 24 good and/or bad studies. 25 BY MS. BRANSCOME:</p>	<p>1 giving to the pieces of evidence that he or she is 2 considering in reaching their ultimate conclusion. 3 Is that fair? 4 MS. PARFITT: Objection. Form. 5 THE WITNESS: It depends what you mean 6 by "weight." If you mean by "weight" a 7 quantitative number, then, no, that's not 8 necessary. 9 If you mean sort of a heuristic, 10 qualitative understanding of the relative 11 importance of different components of evidence, 12 then I would say yes. It's important to know what 13 played into a -- a reviewer's opinion. 14 BY MS. BRANSCOME: 15 Q You also indicated that you do in fact 16 rate studies. What did you mean by that? 17 A Sorry. Can we read back where I said 18 that? I -- (peruses monitor.) 19 I haven't found it, but I -- I think I 20 meant it as a synonym for evaluate. I think I 21 meant I evaluate different studies. 22 Q Okay. If I could direct your 23 attention -- 24 A Yes. 25 Q -- to pages -- page 19, lines 6</p>
Page 31	Page 33
<p>1 Q My question to you, though, 2 Dr. Siemiatycki, is that, is it important for a 3 methodology to be replicable? 4 A It is important -- the most important is 5 for it to be valid. The replicability is an issue 6 that involves judgment. Different scientists may 7 have different judgments about the value of 8 different components of evidence. That diversity 9 of judgment is not a bad thing, and there's no 10 benefit to science in forcing everyone to have the 11 same judgment within some scoring system. 12 So science progresses from collection of 13 data and from different scientists evaluating the 14 data, and from the same information base different 15 scientists can make different judgments about it, 16 and in that sense, the final evaluations are not 17 necessarily replicable because different 18 scientists can make different judgments. 19 But they are understandable. You need 20 the different processes to be sufficiently 21 understandable that different readers and so on of 22 reports can understand how you came to the 23 conclusions. 24 Q And so it is important to be able to 25 understand what weight a particular scientist is</p>	<p>1 through 8. 2 A Of -- 19 of -- of what? 3 Q Of the transcript that's -- 4 A Okay. 5 Q -- in front of you, which understanding 6 is just a rough, but if you want to review your 7 answer. 8 A Sure. (Peruses document.) 9 Yes, here by "rated," I meant evaluated. 10 Q Did you rank the different pieces of 11 evidence that you considered in forming your 12 opinion with respect to talc and the risk of 13 ovarian cancer? 14 A I -- I've never done that in the 15 hundreds and hundreds of evaluations I've carried 16 out, nor in this one do I actually put a score on 17 different components of -- of a study. Yeah. 18 Q My question is slightly different, 19 Dr. Siemiatycki. 20 It's ranking them relative to each 21 other. So whether or not you're assigning a 22 specific quantitative number to the study, do you 23 evaluate this is, for instance, the most important 24 study and this is the least important study on a 25 particular topic?</p>

9 (Pages 30 to 33)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 34</p> <p>1 MS. PARFITT: Objection. Form.</p> <p>2 THE WITNESS: You mean overall or in --</p> <p>3 in each dimension that the -- that a study is</p> <p>4 comprised of?</p> <p>5 BY MS. BRANSCOME:</p> <p>6 Q Did you do any type of ranking of that</p> <p>7 nature, be it in a subtopic or overall?</p> <p>8 A Not -- not explicitly, no.</p> <p>9 Q You mentioned at the -- at the end of</p> <p>10 your answer that you made a decision not to</p> <p>11 exclude studies because you would not want to face</p> <p>12 the criticism of cherry-picking; is that correct?</p> <p>13 A Yes, I said that.</p> <p>14 Q What is your understanding of the</p> <p>15 criticism of cherry-picking?</p> <p>16 A My understanding is that one would --</p> <p>17 one might look at a body of evidence, have a</p> <p>18 preconceived notion about the topic, the</p> <p>19 hypothesis under consideration, and use those</p> <p>20 studies that support that hypothesis and discard</p> <p>21 the other ones in some way.</p> <p>22 Q Is that good science, in your opinion?</p> <p>23 A No, that's not good science.</p> <p>24 Q Why not?</p> <p>25 A Because it doesn't produce an objective</p>	<p style="text-align: right;">Page 36</p> <p>1 conclusion.</p> <p>2 BY MS. BRANSCOME:</p> <p>3 Q When I asked you the question of whether</p> <p>4 or not the methodology you applied here in forming</p> <p>5 your opinion in the MDL is contained in the book</p> <p>6 that you wrote about Risk Factors for Cancer in</p> <p>7 the Workplace, you said it was implicit.</p> <p>8 Is that methodology explicitly described</p> <p>9 in that textbook or any of the other textbooks you</p> <p>10 brought with you today?</p> <p>11 A I'm not sure that the methodology -- you</p> <p>12 know, I think it -- the collection of data, the</p> <p>13 evaluation of data, the judgment about the</p> <p>14 collection of data is a part of the scientific</p> <p>15 method, and it is so engrained and implicit in</p> <p>16 epidemiology and in other sciences that you don't</p> <p>17 really need to -- and scientists don't write in</p> <p>18 their books or in their -- unless they're talking</p> <p>19 to first-year students -- talk about this. It's</p> <p>20 so elementary that those aspects are not really</p> <p>21 described. One goes further in describing</p> <p>22 specific methodologies that would pertain to the</p> <p>23 topic under consideration.</p> <p>24 Q Are there different ways to perform a</p> <p>25 meta-analysis?</p>
<p style="text-align: right;">Page 35</p> <p>1 portrait of reality.</p> <p>2 Q If a scientist were to selectively</p> <p>3 identify studies that were supportive of his or</p> <p>4 her preconceived notion, would you consider that</p> <p>5 analysis to be a valid one?</p> <p>6 MS. PARFITT: Objection. Form.</p> <p>7 THE WITNESS: Do you mean -- just -- I'm</p> <p>8 just trying to parse your question. You said if a</p> <p>9 scientist were to identify studies that were</p> <p>10 supportive, et cetera, but also that were in</p> <p>11 opposition or to exclude ones that are in</p> <p>12 opposition?</p> <p>13 BY MS. BRANSCOME:</p> <p>14 Q Fair enough.</p> <p>15 So referring back to the scenario that</p> <p>16 you have described as cherry- picking --</p> <p>17 A Yes.</p> <p>18 Q -- if a scientist were to engage in</p> <p>19 cherry-picking, would you consider the ultimate</p> <p>20 conclusion that that scientist reached with</p> <p>21 respect to causation or increased risk of an agent</p> <p>22 to be a valid one?</p> <p>23 A It should be suspect --</p> <p>24 MS. PARFITT: Objection. Form.</p> <p>25 THE WITNESS: It would be a suspect</p>	<p style="text-align: right;">Page 37</p> <p>1 A Yes.</p> <p>2 Q Okay. Did the method that you chose in</p> <p>3 developing your meta-analysis, is that explicitly</p> <p>4 described in any of the materials you either</p> <p>5 brought here with you today or of which you are</p> <p>6 aware in the scientific community?</p> <p>7 A So it partly depends what you mean by "a</p> <p>8 meta-analysis." And in my lexicon, meta-analysis</p> <p>9 is a statistical procedure for summarizing a body</p> <p>10 of -- a set of results from individual studies.</p> <p>11 And that procedure is pretty standard -- has been</p> <p>12 pretty standard since the 1980s and 1990s, and</p> <p>13 there are some refinements since then.</p> <p>14 Sorry, I may have lost the thread of</p> <p>15 your question.</p> <p>16 Q If I were to try to look at a piece of</p> <p>17 scientific literature, be it in a book or an</p> <p>18 article, to find a published description of the</p> <p>19 method that you used to perform your meta-analysis</p> <p>20 in the MDL, where would I look?</p> <p>21 A The meta-analysis was conducted using a</p> <p>22 software that is well known, that is commercially</p> <p>23 available, and I think everyone would recognize</p> <p>24 the validity of the statistical procedures under</p> <p>25 those -- under that.</p>

10 (Pages 34 to 37)

Jack Siemiatycki, Ph.D.

Page 38	Page 40
<p>1 If you're asking about which -- you</p> <p>2 know, there are decisions to be made about which</p> <p>3 studies to include, about which results from</p> <p>4 studies to include, and all of that sort of thing,</p> <p>5 which is not strictly part of the statistics of</p> <p>6 meta-analysis, it's sort of the step before</p> <p>7 meta-analysis, and that part is utterly unique to</p> <p>8 each situation.</p> <p>9 So if you're doing a meta-analysis of</p> <p>10 clinical trials that have all been designed</p> <p>11 basically in an identical way for an</p> <p>12 antihypertensive medication, and whether the study</p> <p>13 is done in Australia or California or Canada, the</p> <p>14 design is pretty standard, and a lot of it can</p> <p>15 be -- you can -- and you end up basically with a</p> <p>16 single result from the study, what is the impact</p> <p>17 on blood pressure -- the average impact on blood</p> <p>18 pressure among people who use it who were given</p> <p>19 the drug, the experimental group versus a</p> <p>20 comparison group, et cetera, that is one type of</p> <p>21 preparation for a meta-analysis.</p> <p>22 If you're dealing with observational</p> <p>23 epidemiology, as we are in the case of ovarian</p> <p>24 cancer, and some of the particularities of the</p> <p>25 literature in this domain, there are a lot of</p>	<p>1 clarify.</p> <p>2 So the three -- the three binders that</p> <p>3 you referred to as sort of this first set of</p> <p>4 materials, are those all references that are</p> <p>5 identified specifically in your report from the</p> <p>6 MDL?</p> <p>7 A Yes, I believe so. And just to be</p> <p>8 clear, when I was sent this material from the</p> <p>9 lawyers' office, it arrived in four binders. I'm</p> <p>10 not sure if you received the same four binders. I</p> <p>11 have re- -- I've taken some things out of there,</p> <p>12 so I have three binders of those things. Just --</p> <p>13 I don't know if there's confusion just between the</p> <p>14 three and four, but...</p> <p>15 Q What did you remove from the set of</p> <p>16 materials that you were provided by plaintiffs'</p> <p>17 counsel?</p> <p>18 A I removed the IARC reports, which I have</p> <p>19 in books, so I didn't need to carry around</p> <p>20 hundreds and hundreds of pages extra.</p> <p>21 I removed some other -- there was</p> <p>22 another report with, you know, thousands of --</p> <p>23 hundreds or -- at least of pages where I thought</p> <p>24 the relevant material was in -- contained in about</p> <p>25 20 pages. So I kept -- in material that I carry</p>
Page 39	Page 41
<p>1 decisions that need to be made in the run-up to</p> <p>2 the meta-analysis.</p> <p>3 Q So in the situation where you are</p> <p>4 dealing with observational epidemiology, would it</p> <p>5 be fair to say that you are applying unique</p> <p>6 judgment in the selection of the studies that you</p> <p>7 include in your meta-analysis and, more</p> <p>8 specifically, what data from those studies you</p> <p>9 include.</p> <p>10 MS. PARFITT: Objection. Form.</p> <p>11 THE WITNESS: Any meta-analysis in this</p> <p>12 area would absolutely need to apply professional</p> <p>13 judgments to those things.</p> <p>14 BY MS. BRANSCOME:</p> <p>15 Q Okay.</p> <p>16 A Mine included and every -- everyone</p> <p>17 else's included.</p> <p>18 Q All right. So, Dr. Siemiatycki, getting</p> <p>19 back to the materials that you brought with you</p> <p>20 today, you mentioned that you brought three</p> <p>21 binders of scientific literature. Was that</p> <p>22 correct?</p> <p>23 A Three binders of the references to my</p> <p>24 report.</p> <p>25 Q Okay. So that's what I wanted to</p>	<p>1 around, I kept the 20 pages and put the rest away</p> <p>2 in a box.</p> <p>3 Q Do you remember which document that was?</p> <p>4 A If you give me a minute, I'll try to</p> <p>5 recreate that.</p> <p>6 Q We can check that at the break if you</p> <p>7 want --</p> <p>8 A Yeah. Sure, sure.</p> <p>9 Q -- to identify that document.</p> <p>10 So then you -- you spoke about an</p> <p>11 additional five binders --</p> <p>12 A Yeah.</p> <p>13 Q -- that you brought with you that</p> <p>14 contain documents that might help you answer</p> <p>15 questions during the deposition.</p> <p>16 Can you describe the contents of those</p> <p>17 five binders. I'm trying to avoid marking all of</p> <p>18 these as exhibits.</p> <p>19 A Yeah. Please.</p> <p>20 Okay. Let me just reach down and look</p> <p>21 at their covers.</p> <p>22 Yeah, so one contains the recent</p> <p>23 manuscript of a study by Taher, et al., a Canadian</p> <p>24 meta-analysis of the issue, plus -- let me see if</p> <p>25 there's anything else in there. I -- I think</p>

11 (Pages 38 to 41)

Jack Siemiatycki, Ph.D.

Page 42	Page 44
<p>1 that's it. It's such a -- such a big report with 2 all the appendices and so on, that it takes up a 3 whole binder. 4 Another one, a smaller one, contains the 5 meta -- the main meta-analyses that have been done 6 in this area, apart from the Taher one. So the 7 Berge, Penninkilampi, a few other older ones, 8 Langseth and some of the older ones. 9 Q Are those materials that are in the set 10 of meta-analysis, the second binder, if you will, 11 are they replicated also in the other set of three 12 binders that you brought with you? 13 A Yes, they are. 14 Q Okay. 15 A Yes, they are. 16 Sorry. There's -- there's another one 17 in -- like that which contains all of the original 18 epidemiology studies that I used or that were 19 available to be used in the meta-analysis. And I 20 had this binder in my previous -- in the previous 21 case that I testified on, and I thought I -- I'd 22 like to have one binder here just of the 23 epidemiology studies because the thick binders, 24 it's harder for me to find articles, so it would 25 be easier for me to find them in this binder. So</p>	<p>1 identification.) 2 BY MS. BRANSCOME: 3 Q Now, Dr. Siemiatycki, with the exception 4 of a copy of your report, which you previously 5 testified has some handwritten annotations on it, 6 do any of the other materials that you brought 7 with you today have any notes, handwritten or 8 typed, or highlighting or any other form of 9 annotation? 10 A Yes. The -- the epidemiology studies 11 and probably the meta-analyses, the previous 12 meta-analyses. I -- I tend to scribble notes when 13 I'm reading an article on the side, so some of 14 those may very well have scribbled notes on -- in 15 the margins or things underlined. 16 Q Dealing first with the binder of the 17 original epidemiological studies that you said you 18 had at a prior deposition, have you annotated that 19 in any way since you brought that to another 20 deposition? 21 A Since today? Sorry. 22 MS. BRANSCOME: Michelle, perhaps you 23 could help me. 24 MS. PARFITT: Sure. Yeah, absolutely. 25 MS. BRANSCOME: Has that specific binder</p>
Page 43	Page 45
<p>1 all of these are in the big binders. 2 And there's another one with Health 3 Canada weight of evidence guidelines. Also 4 guidelines from a European agency on weight of 5 evidence and evaluation. I think there might be 6 something from FDA about that, and also some of 7 the information regarding agency -- what agencies 8 have put on their websites, if anything, about 9 talc, which would include the National Cancer 10 Institute and some other agencies. 11 So these are mainly -- well, partly 12 printouts from websites. Partly the Canadian Risk 13 Management scope for talc published very recently 14 from the Canadian Department of Health. And this 15 sort of information. Not -- not all of those are 16 in the thick binders. 17 Q Are all of the documents in the binder 18 that you are holding there, which I think is your 19 fifth binder, are all of those documents 20 identified within your report or in your reference 21 materials? 22 A No. 23 Q I would like to mark that binder as 24 Exhibit 4. 25 (Exhibit No. 4 was marked for</p>	<p>1 been marked as an exhibit at a prior deposition? 2 MS. PARFITT: Let me see which one. 3 Ms. Branscome, I don't want to 4 represent -- and I would tell you that these were 5 all the studies that he's had over the course of 6 the last few years. I can't imagine it wasn't 7 asked for in prior depositions, but I can't -- I 8 can't represent -- 9 MS. BRANSCOME: Okay. 10 MS. PARFITT: -- one way or another. I 11 really can't. 12 MS. BRANSCOME: Let's go ahead. I would 13 like to mark the binder -- 14 MS. PARFITT: I will tell you this -- 15 maybe I can. There are pink numbers, number 10, 16 number 14, which suggest to me that they might 17 have been referenced in a deposition at one point 18 in time as an exhibit. 19 THE WITNESS: Not -- some of them, but 20 not all of them, have those numbers. 21 MS. PARFITT: Okay. 22 THE WITNESS: They also have numbers in 23 the corner of my -- my team's personal filing 24 system of articles, so things like that. 25 MS. BRANSCOME: Out of an abundance of</p>

12 (Pages 42 to 45)

Jack Siemiatycki, Ph.D.

Page 46	Page 48
<p>1 caution, we will mark the binder that has been 2 described as containing the original 3 epidemiological studies as Exhibit 5, and the 4 binder that contains the meta-analyses as 5 Exhibit 6. 6 (Exhibit Nos. 5 and 6 were marked 7 for identification.) 8 BY MS. BRANSCOME: 9 Q Did you bring anything else with you to 10 the deposition today? 11 A Cell phone, glasses, et cetera, but no. 12 Q I was provided before the deposition 13 began with a single piece of paper that I 14 understand to be a bill for professional services. 15 If we could mark a copy of that as 16 Exhibit 7. 17 MS. BRANSCOME: Michelle, I don't know 18 if you have an extra copy. 19 MS. PARFITT: I do. 20 (Exhibit No. 7 was marked for 21 identification.) 22 MS. PARFITT: I have additional copies 23 for counsel, if you would like. 24 MS. BRANSCOME: I think we passed one 25 around.</p>	<p>1 A Okay. 2 Q So why don't we mark as Exhibit 8 the 3 bill for professional services that covers the 4 month of July. 5 (Exhibit No. 8 was marked for 6 identification.) 7 MS. PARFITT: Sure. I don't have extras 8 of those. Does anyone have a clamp? If I could 9 have one of those? Thank you. 10 MR. TISI: Number 7, for the record, is 11 the one that goes to November. 12 MS. BRANSCOME: We'll -- we'll clear it 13 up. 14 MR. TISI: Thank you. 15 THE WITNESS: Got it. 16 BY MS. BRANSCOME: 17 Q So, Dr. Siemiatycki, you have two 18 exhibits in front of you there, an Exhibit 7 and 19 an Exhibit 8. 20 Do they both contain bills for 21 professional services for the work that you have 22 done in connection with this litigation? 23 A Yes, they do. 24 Q And what has been marked as Exhibit 7 25 covers a work period of August 9th through</p>
Page 47	Page 49
<p>1 BY MS. BRANSCOME: 2 Q Dr. Siemiatycki, do you recognize the 3 document that's been placed in front of you that's 4 been marked as Exhibit 7? 5 A Yes, I do. 6 Q And could you describe for the record 7 what this document is. 8 A It's a bill for services that I sent to 9 Ms. Parfitt dated November 18, 2018, in which I 10 billed for work done between August and November 11 2018 on the MDL case. 12 Q Is it correct that this is a bill that 13 covers 56 hours that you billed in connection with 14 your work on this case in the month of July 15 through August 2nd, 2018? 16 A Sorry, do -- July? Is this the same -- 17 MS. PARFITT: August. I have August to 18 November. 19 THE WITNESS: Do you have a bill labeled 20 July? 21 MS. PARFITT: We have July to August, 22 and here's the August -- 23 BY MS. BRANSCOME: 24 Q Sorry, we had different pieces of paper, 25 Dr. Siemiatycki.</p>	<p>1 November 16th, 2018, during which you billed 136 2 hours; is that correct? 3 A That's correct. 4 Q And then Exhibit 8 covers the period of 5 time July 1st through August 2nd, 2018, over which 6 you billed 56 hours; is that correct? 7 A That's correct. 8 Q And you bill for your time at \$450 an 9 hour, correct? 10 A That's correct. 11 Q Do the two bills for professional 12 services that have been marked as Exhibits 7 and 8 13 contain any time for work done by others at your 14 direction? 15 A They contain work that has been done by 16 a couple of -- by one research assistant, and I 17 make an arrangement with her to reimburse her for 18 her time. So it's -- it's covered in these, yes. 19 Q Okay. And so how is your research 20 assistant's time billed to plaintiffs' counsel? 21 A It's not billed. I -- I adjust the 22 billable hours to reflect the time that she works 23 for me. 24 Q So if I was looking at Exhibit 7 and 25 Exhibit 8, how much in terms of hours of this</p>

13 (Pages 46 to 49)

Jack Siemiatycki, Ph.D.

Page 50	Page 52
<p>1 reflects your personal time?</p> <p>2 A Between 95 percent and 98 percent,</p> <p>3 almost all of it.</p> <p>4 Q And do the two exhibits that you have in</p> <p>5 front of you there, Exhibit 7 and Exhibit 8, does</p> <p>6 that cover all of the work that you have done in</p> <p>7 connection with forming your opinions in this</p> <p>8 case, meaning the MDL?</p> <p>9 A In forming the opinions for the report,</p> <p>10 yes.</p> <p>11 Q These bills do not include time that you</p> <p>12 spent preparing for today's deposition, correct?</p> <p>13 A That's correct.</p> <p>14 Q About how much time have you spent</p> <p>15 preparing for today's deposition?</p> <p>16 A I would say the time since November 18,</p> <p>17 which is referenced here, to today, there were</p> <p>18 actually two components. One was preparing for</p> <p>19 the deposition. Another was a bit of a flurry of</p> <p>20 activity in December, I think it was, when a</p> <p>21 couple of reports from Health Canada and from</p> <p>22 the Taher group were published, and I reviewed and</p> <p>23 tried to think about that information as well.</p> <p>24 So just to be as precise as possible, I</p> <p>25 just want to make that clear. It's not -- it</p>	<p>1 paper and the Health Canada statement?</p> <p>2 A No, I didn't.</p> <p>3 Q Did you annotate any of the materials</p> <p>4 that you reviewed?</p> <p>5 A I'm -- I'm not sure. I typically have a</p> <p>6 pen in my hand when I'm reading, so I couldn't say</p> <p>7 that I never underlined anything or -- I just</p> <p>8 don't recall making any -- and I don't know that I</p> <p>9 could find -- if I did look at it in December, I'm</p> <p>10 not sure I could find that copy because I -- I</p> <p>11 tend to print things over when -- and I -- there</p> <p>12 was nothing written that I wanted to retain. I</p> <p>13 didn't write anything that I have used or -- yeah.</p> <p>14 MS. BRANSCOME: We've been going for a</p> <p>15 little over an hour. Is now a good time to take a</p> <p>16 break?</p> <p>17 THE WITNESS: It's a great time.</p> <p>18 THE VIDEOGRAPHER: We are going off the</p> <p>19 record at 10:55 a.m.</p> <p>20 (Recess.)</p> <p>21 THE VIDEOGRAPHER: This begins disc</p> <p>22 number 2 in the deposition of Jack Siemiatycki.</p> <p>23 We're going back on the record at 11:15 a.m.</p> <p>24 BY MS. BRANSCOME:</p> <p>25 Q Before we took the break,</p>
Page 51	Page 53
<p>1 wasn't only preparation. But I -- I guess we're</p> <p>2 talking about a couple of weeks' work in -- since</p> <p>3 November, but between six and ten days maybe,</p> <p>4 something in that ballpark.</p> <p>5 Q And how would -- what would that be in</p> <p>6 terms of hours?</p> <p>7 A Between 40 and 60 hours or -- subject to</p> <p>8 revision, I could -- I could look that up.</p> <p>9 Q Have you billed plaintiffs' counsel for</p> <p>10 that time yet?</p> <p>11 A No, I haven't.</p> <p>12 Q Presumably you will be billing them for</p> <p>13 the time you spend here today during your</p> <p>14 deposition as well, correct?</p> <p>15 A I -- I presume so as well.</p> <p>16 Q You referenced a flurry of activity in</p> <p>17 December related to the Health Canada information</p> <p>18 becoming public.</p> <p>19 Did you produce or generate any type of</p> <p>20 written work product in connection with your</p> <p>21 review of those materials?</p> <p>22 A No, I didn't.</p> <p>23 Q Did you take any notes while reviewing</p> <p>24 the materials that came out in December -- around</p> <p>25 December 2018 related to the Taher manuscript and</p>	<p>1 Dr. Siemiatycki, we were looking at the two bills</p> <p>2 for professional services that have been marked as</p> <p>3 Exhibit 7 and Exhibit 8.</p> <p>4 And so in addition to the 56 hours that</p> <p>5 are on Exhibit 8, the 136 hours on Exhibit 7, and</p> <p>6 the approximately 40 to 60 hours you have spent</p> <p>7 since mid-November of 2018, how much time have you</p> <p>8 spent in connection with your opinions across all</p> <p>9 talc litigation?</p> <p>10 MS. PARFITT: Objection to form.</p> <p>11 THE WITNESS: Including the previous</p> <p>12 case that I was involved in, you're saying?</p> <p>13 BY MS. BRANSCOME:</p> <p>14 Q Yes.</p> <p>15 A Whew. I -- four to six weeks maybe</p> <p>16 or -- I spent, I think, nearly two weeks in LA</p> <p>17 while that case was going on, so that's one big</p> <p>18 block of time. And then I -- at least a month</p> <p>19 full time, the equivalent of, before that. But,</p> <p>20 I'm sorry, I can't be more precise.</p> <p>21 Q What would that be in terms of hours?</p> <p>22 A Hours. Let's say eight hours a day --</p> <p>23 30, 40 -- 400 hours plus or minus 200.</p> <p>24 Q So a range of between 200 to 600 hours,</p> <p>25 do you think?</p>

14 (Pages 50 to 53)

Jack Siemiatycki, Ph.D.

Page 54	Page 56
<p>1 MS. PARFITT: Object.</p> <p>2 THE WITNESS: It would be more than 200</p> <p>3 for sure. So -- to the best of my recollection,</p> <p>4 it might be between 400 and 600. But...</p> <p>5 BY MS. BRANSCOME:</p> <p>6 Q How much have you billed to date for all</p> <p>7 of the work you've done in connection with talc</p> <p>8 litigation?</p> <p>9 A Well, I -- I don't remember.</p> <p>10 MS. PARFITT: Don't guess.</p> <p>11 THE WITNESS: I don't remember a total.</p> <p>12 BY MS. BRANSCOME:</p> <p>13 Q Do you charge \$450 per hour for all</p> <p>14 types of work that you have done in connection</p> <p>15 with the talc litigation?</p> <p>16 A Yes, I do.</p> <p>17 Q Do the fees that you charge in</p> <p>18 connection with your work as an expert witness in</p> <p>19 the talc litigation go directly to you personally?</p> <p>20 A Yes, they do. Well, they go to a</p> <p>21 corporation that -- that I control, as you see in</p> <p>22 the bills.</p> <p>23 Q Do you pay anyone else for the -- using</p> <p>24 the funds that the corporation has received for</p> <p>25 the expert work you've done in connection with the</p>	<p>1 do you currently spend performing work in</p> <p>2 connection with litigation?</p> <p>3 A By presently, can you give me a time</p> <p>4 frame? You don't mean today, I presume. When you</p> <p>5 say -- do you mean in the last year? In the last</p> <p>6 10 years?</p> <p>7 Q Let's say over -- over the past 12</p> <p>8 months, what percent of your professional time was</p> <p>9 spent performing work in connection with</p> <p>10 litigation?</p> <p>11 A Ten to 20 percent ballpark.</p> <p>12 Q And has that percentage of time spent on</p> <p>13 work in connection with litigation changed over</p> <p>14 the past five years, for example?</p> <p>15 A Yes, it's very variable depending on</p> <p>16 requests for participation in litigation. So in</p> <p>17 the past five years, my main contact with</p> <p>18 litigation has been in the ovarian cancer cases,</p> <p>19 but at -- around five years ago, I was also</p> <p>20 working on two other cases in Canada.</p> <p>21 Sorry, what was the question?</p> <p>22 Q Sure. How -- I'll ask a new one.</p> <p>23 How has the percentage of time that --</p> <p>24 A Oh, oh.</p> <p>25 Q -- you spend in connection with work</p>
Page 55	Page 57
<p>1 talc litigation?</p> <p>2 MS. PARFITT: Objection. Form.</p> <p>3 THE WITNESS: Yes, when I ask someone to</p> <p>4 do some specific tasks, I pay them for that.</p> <p>5 BY MS. BRANSCOME:</p> <p>6 Q And are the fees that you pay to other</p> <p>7 individuals for tasks that they do in support of</p> <p>8 your work, do those fees get billed to plaintiffs'</p> <p>9 counsel?</p> <p>10 A No, they don't.</p> <p>11 Q Can you give me an approximation of how</p> <p>12 much you have paid to others from the fees you</p> <p>13 have billed to plaintiffs' counsel?</p> <p>14 A In MDL or in total?</p> <p>15 Q In all of the talc litigation.</p> <p>16 A My guesstimate would be that it's in the</p> <p>17 order of 2 or 3 or 4 percent -- maybe 2 percent of</p> <p>18 the total that I've billed.</p> <p>19 Q So it's fair to say that approximately</p> <p>20 96 to 98 percent of all the fees that have been</p> <p>21 billed to plaintiffs' counsel for your work as an</p> <p>22 expert in the talc litigation will come to you</p> <p>23 personally?</p> <p>24 A Yes.</p> <p>25 Q What percent of your professional time</p>	<p>1 done related to litigation changed?</p> <p>2 A Any litigation, right?</p> <p>3 Q Yes.</p> <p>4 A Or -- or talc litigation?</p> <p>5 Q I'll start with all litigation.</p> <p>6 A So it's -- as I said, it's very variable</p> <p>7 from month to month. And -- and -- I mean, I</p> <p>8 guess over the past five years, it has kind of</p> <p>9 averaged out at about 10 percent of my time, 10 to</p> <p>10 20 percent of my time.</p> <p>11 Q And over the past two years, has all of</p> <p>12 the litigation work you've been doing, has that</p> <p>13 been exclusively focused on talc?</p> <p>14 A Yes.</p> <p>15 Q The report that -- sorry, the report you</p> <p>16 prepared in connection with the MDL is not the</p> <p>17 first expert report you have generated with</p> <p>18 respect to a potential link between talc and</p> <p>19 ovarian cancer, correct?</p> <p>20 A That's correct.</p> <p>21 Q You produced a report in connection with</p> <p>22 the talcum powder litigation dated October 4th,</p> <p>23 2016, correct?</p> <p>24 A That's correct.</p> <p>25 Q If you could turn in your binder there</p>

15 (Pages 54 to 57)

Jack Siemiatycki, Ph.D.

Page 58	Page 60
<p>1 to tab 2.</p> <p>2 A In this big binder?</p> <p>3 Q Yes, please.</p> <p>4 Is the document behind tab 2 your expert</p> <p>5 report dated October 4th, 2016, that related to</p> <p>6 the talcum powder litigation?</p> <p>7 A Yes, it is.</p> <p>8 MS. BRANSCOME: I would like to mark</p> <p>9 that as Exhibit 9.</p> <p>10 (Exhibit No. 9 was marked for</p> <p>11 identification.)</p> <p>12 BY MS. BRANSCOME:</p> <p>13 Q The report marked as Exhibit 9 was not</p> <p>14 drafted for a particular case; is that correct?</p> <p>15 A I -- I -- I'd have to defer -- I'm not</p> <p>16 exactly sure sometimes whether these reports refer</p> <p>17 to a specific case or not.</p> <p>18 Q Okay. Let me do it this way: What was</p> <p>19 the question that you were attempting to answer in</p> <p>20 the report that has been marked as Exhibit 9?</p> <p>21 A So the question was the generic question</p> <p>22 of whether there is a causal relationship between</p> <p>23 use of talcum powder products and ovarian cancer.</p> <p>24 Q And specifically, the report marked as</p> <p>25 Exhibit 9, were you looking specifically at</p>	<p>1 specific to the Echeverria case, correct?</p> <p>2 A Correct.</p> <p>3 Q So the expert report that described the</p> <p>4 opinions that you were offering in that case is</p> <p>5 the one that we have just marked as Exhibit 9. Is</p> <p>6 that fair?</p> <p>7 MS. PARFITT: Objection. Form.</p> <p>8 THE WITNESS: I -- I'm -- I'm hesitating</p> <p>9 because I'm not sure what the significance of the</p> <p>10 phrase "the expert report that you offered" is. I</p> <p>11 didn't -- I didn't in a sense offer this report</p> <p>12 for -- at that trial. I testified at that trial,</p> <p>13 and they had this expert report available to them.</p> <p>14 BY MS. BRANSCOME:</p> <p>15 Q Okay. Let me ask it this way: You</p> <p>16 generated an expert report specific to the MDL,</p> <p>17 correct?</p> <p>18 A Yes.</p> <p>19 Q And we are going to look at that --</p> <p>20 A Yes.</p> <p>21 Q -- but that is a report that is dated at</p> <p>22 some point in 2018, correct?</p> <p>23 A Correct.</p> <p>24 Q Did you generate an expert report at any</p> <p>25 time in between the expert report that you</p>
Page 59	Page 61
<p>1 perineal or genital use of talc?</p> <p>2 A That was the focus, yes.</p> <p>3 Q Did your 2016 report address any cancer</p> <p>4 risk associated with the inhalation of talc?</p> <p>5 A Not that I recall. It certainly wasn't</p> <p>6 a focus. There may have been some reason to</p> <p>7 allude to that issue, but I can't recall that</p> <p>8 it -- that there was.</p> <p>9 Q Okay. You had your deposition taken on</p> <p>10 December 15th and 16th, 2016, correct?</p> <p>11 A I believe so.</p> <p>12 Q And that deposition was for two specific</p> <p>13 cases, the Oules and the Daniels case, correct?</p> <p>14 A I guess so. But again, I -- that --</p> <p>15 I'm -- I don't recall exactly which cases.</p> <p>16 Q You also have testified at trial in a</p> <p>17 case involving allegations about Johnson's Baby</p> <p>18 Powder, correct?</p> <p>19 A That's correct.</p> <p>20 Q And that was the Echeverria case?</p> <p>21 A Yes, it was.</p> <p>22 Q And you testified in trial in August of</p> <p>23 2017, correct?</p> <p>24 A Correct.</p> <p>25 Q You did not issue an expert report</p>	<p>1 generated there in October 2016 and the expert</p> <p>2 report you have supplied that's dated November</p> <p>3 2018?</p> <p>4 A No, I did not.</p> <p>5 Q All right. So if I may, I would like to</p> <p>6 actually mark your copy of your 2018 report. And</p> <p>7 that will be marked as Exhibit 10, if you have</p> <p>8 that in front of you.</p> <p>9 (Exhibit No. 10 was marked for</p> <p>10 identification.)</p> <p>11 (Counsel conferring.)</p> <p>12 BY MS. BRANSCOME:</p> <p>13 Q To be clear, for the record, I'm marking</p> <p>14 as Exhibit 10 your MDL expert report, but it is</p> <p>15 your copy.</p> <p>16 A Yes.</p> <p>17 Q Okay. And as I understand it, the copy</p> <p>18 that you brought with you here today that's now</p> <p>19 been marked as Exhibit 10 contains some</p> <p>20 corrections. Is that -- is that fair?</p> <p>21 A Yes.</p> <p>22 Q Could you please walk me through the</p> <p>23 corrections that you have made to your 2018 MDL</p> <p>24 report that has been marked as deposition</p> <p>25 Exhibit 10.</p>

16 (Pages 58 to 61)

Jack Siemiatycki, Ph.D.

Page 62	Page 64
<p>1 A Yes. So the first is on page 47. And</p> <p>2 in the first full paragraph that begins with</p> <p>3 "Table 9," on the fourth line --</p> <p>4 Q Let me pause you there for a moment,</p> <p>5 Dr. Siemiatycki. Are we both looking at page 47?</p> <p>6 A Now, I -- I'm not sure whether I printed</p> <p>7 this in a way that is not -- does not correspond</p> <p>8 to the version that you have. I'm sorry. I</p> <p>9 printed this just for my own use, so I didn't --</p> <p>10 Q No, looking at it, it looks similar.</p> <p>11 A Oh, okay.</p> <p>12 Q So why don't you direct me to the</p> <p>13 specific correction. I thought you were referring</p> <p>14 to the image of Table 9.</p> <p>15 MS. PARFITT: No, no. I think we're</p> <p>16 all on the same -- it's the same one you have --</p> <p>17 THE WITNESS: Okay.</p> <p>18 MS. PARFITT: -- on your thumb drives.</p> <p>19 THE WITNESS: Okay.</p> <p>20 BY MS. BRANSCOME:</p> <p>21 Q All right, we'll start again. So,</p> <p>22 Dr. Siemiatycki, if you could identify for me the</p> <p>23 corrections that you are making to your MDL report</p> <p>24 from November 2018.</p> <p>25 A Right. So on page 47, the first full</p>	<p>1 your copy of your report that there were other</p> <p>2 handwritten annotations.</p> <p>3 A Yeah.</p> <p>4 Q Can you please walk me through -- unless</p> <p>5 it's voluminous, in which case we can do it after</p> <p>6 a break -- any notations that you have made in</p> <p>7 your copy of your MDL report.</p> <p>8 A It's not voluminous. I didn't make</p> <p>9 many. One is on page 49. And in the middle of</p> <p>10 the page in italics, there is a misconception</p> <p>11 counting, et cetera, and just before that, I was</p> <p>12 talking about hospital-based studies and</p> <p>13 population-based studies. So the section that</p> <p>14 begins on page 48 is about hospital-based versus</p> <p>15 general population-based studies. And I made a</p> <p>16 note to myself after that -- at the end of that</p> <p>17 section, also --</p> <p>18 I mean, do you want me to quote what I</p> <p>19 wrote?</p> <p>20 Q Yes, please.</p> <p>21 A Sure. I said: "Also the basin for</p> <p>22 hospital controls may differ from the basin for</p> <p>23 cases."</p> <p>24 Q And what did you mean by that?</p> <p>25 A So, you're familiar with the idea, a</p>
Page 63	Page 65
<p>1 paragraph, the fourth line, there are some</p> <p>2 numbers. It says "1.25," and then in parentheses,</p> <p>3 there is a 1.0 that was really a literal typo.</p> <p>4 Someone's -- my fingers were too heavy, and the</p> <p>5 one -- the first 1.0 should be dropped, and so the</p> <p>6 correct number is 1.15 to 1.36. Okay?</p> <p>7 The next one -- I'm sorry. Oh, the next</p> <p>8 one is on page 45, so a couple of pages earlier,</p> <p>9 in the second line -- are you with me? -- the</p> <p>10 sentence that begins "While the Terry 2013." It</p> <p>11 should be the Berge -- "While the Berge" -- the</p> <p>12 first Terry -- I'm just thinking out loud again.</p> <p>13 Whether in fact the Terry was the correct --</p> <p>14 anyway, yesterday when I was correcting this</p> <p>15 quickly, I thought that it -- that I had</p> <p>16 miswritten "Terry 2013" in that sentence and that</p> <p>17 it should have been Berge 2018.</p> <p>18 Do you mind if I look at this again at</p> <p>19 lunchtime and just verify which I was referring</p> <p>20 to? I'm now confusing myself about that.</p> <p>21 Q Not a problem. We can come back to that</p> <p>22 after -- either the next break or the lunch break.</p> <p>23 A And that -- those are the only</p> <p>24 corrections I picked up as I was going through it.</p> <p>25 Q I noticed as you were flipping through</p>	<p>1 hospital-based study? There are actually</p> <p>2 different types of hospital-based studies, which</p> <p>3 is something that has not come out in, really, in</p> <p>4 any of the discussion of this literature.</p> <p>5 But one of the problems with hospital-</p> <p>6 based studies is that when you choose a control</p> <p>7 group, let's say for a series of ovarian cancer</p> <p>8 cases from a given hospital, and you go to a</p> <p>9 different ward in that hospital to look for</p> <p>10 controls who are not -- don't have ovarian</p> <p>11 cancer -- the reasons for referral and the -- the</p> <p>12 pattern of patients coming to hospitals differs</p> <p>13 for different diseases. So serious -- it</p> <p>14 generally is the case that serious diseases in</p> <p>15 specialized hospitals tend to come from a wider</p> <p>16 geographic and social area than cases of traffic</p> <p>17 accident injuries or things that are treated in</p> <p>18 general hospitals more easily.</p> <p>19 And if you just take a series of cases</p> <p>20 of ovarian cancer and go to the emergency</p> <p>21 department to choose controls or you go to the GI</p> <p>22 surgery department where they do appendectomies</p> <p>23 routinely or something like that, you're picking</p> <p>24 up populations who are quite different.</p> <p>25 And this is one of the disadvantages of</p>

17 (Pages 62 to 65)

Jack Siemiatycki, Ph.D.

Page 66	Page 68
<p>1 a hospital-based control strategy, and it's one of</p> <p>2 the reasons why, in general, epidemiologists favor</p> <p>3 population-based studies rather than hospital --</p> <p>4 case control studies, population-based case</p> <p>5 control studies, rather than hospital-based case</p> <p>6 control studies, because the cases and the</p> <p>7 controls -- one of the requisites in a case</p> <p>8 control design is that the patients -- the cases</p> <p>9 and the controls should represent the same study</p> <p>10 base, the same basin of people who if they were</p> <p>11 cases with the disease in question, ovarian</p> <p>12 cancer, this is where they would end up, and all</p> <p>13 of them would end up there.</p> <p>14 Q Are there any studies that were relevant</p> <p>15 to your analysis for your MDL report that you</p> <p>16 think this particular criticism that you have just</p> <p>17 explained applies to?</p> <p>18 A I'm not sure. I didn't examine them</p> <p>19 from that point of view.</p> <p>20 In this section of my report, it was</p> <p>21 kind of a generic discussion of the issue of -- of</p> <p>22 the merits of hospital-based versus population-</p> <p>23 based studies.</p> <p>24 Q Okay. Do you have any other annotations</p> <p>25 that you made in your copy of your MDL report?</p>	<p>1 THE VIDEOGRAPHER: We're going back on</p> <p>2 the record at 11:41 a.m.</p> <p>3 BY MS. BRANSCOME:</p> <p>4 Q Do you have any other annotations there</p> <p>5 with you on your copy of your report?</p> <p>6 A No. I have one other green sticky on</p> <p>7 page 67, but there's nothing written on that page,</p> <p>8 and I don't remember why I put that sticky there.</p> <p>9 Q Okay. The report that we just marked as</p> <p>10 Exhibit 10, does that define the scope of your</p> <p>11 opinions in the MDL?</p> <p>12 A The scope of my opinions. It defines my</p> <p>13 opinions, yes.</p> <p>14 Q Does it contain all of the opinions that</p> <p>15 you intend to offer at any trial or hearing in the</p> <p>16 MDL?</p> <p>17 A I mean, I guess if I'm asked a question</p> <p>18 that veers off from something I said in my report,</p> <p>19 and I address the question, would that be</p> <p>20 considered going off -- you know, offering an</p> <p>21 opinion that is not in my report?</p> <p>22 It's just that -- I'm just not sure</p> <p>23 about the technicality of your question. I mean,</p> <p>24 I will offer -- I will answer questions even if</p> <p>25 they lead off the content of my report.</p>
Page 67	Page 69
<p>1 A At the bottom of that same page, 49, I</p> <p>2 wrote, quote, "Borenstein." And right now I'm --</p> <p>3 oh, yes. So this misconception about counting the</p> <p>4 number of statistically significant results as a</p> <p>5 valid way of assessing consistency of results</p> <p>6 among different studies is a basic flaw in the</p> <p>7 conduct and interpretation of how to review a</p> <p>8 series of studies.</p> <p>9 It's well known. I've known and I -- I</p> <p>10 said it in my report that this is absolutely not</p> <p>11 the way to synthesize evidence from multiple</p> <p>12 studies, to count the number of significant ones.</p> <p>13 And in addition to me saying it and many others, I</p> <p>14 thought that I could -- if you asked me questions</p> <p>15 about it or challenged my opinion on that score, I</p> <p>16 could quote the textbook on meta-analysis, which</p> <p>17 gives some good examples of why that's wrong.</p> <p>18 MS. PARFITT: Let's stop here for a</p> <p>19 minute --</p> <p>20 MS. BRANSCOME: If we could go off the</p> <p>21 record.</p> <p>22 MS. PARFITT: -- and go off the record.</p> <p>23 THE VIDEOGRAPHER: We're going off the</p> <p>24 record at 11:39 a.m.</p> <p>25 (Pause.)</p>	<p>1 Q As you sit here today --</p> <p>2 A Yes.</p> <p>3 Q -- does the report that has been marked</p> <p>4 as Exhibit 10 contain all of the opinions that you</p> <p>5 have formed as of today about which you would</p> <p>6 intend to testify at trial or a hearing on this</p> <p>7 matter?</p> <p>8 A I -- I believe so.</p> <p>9 Q What was the question that you were</p> <p>10 asked to answer in connection with the report you</p> <p>11 generated in 2018?</p> <p>12 A I guess I -- I'll just refer back to</p> <p>13 what it says in the report: "Can application of</p> <p>14 talcum powder products in the perineal region</p> <p>15 cause ovarian cancer?"</p> <p>16 Q Is that question different from the</p> <p>17 question you were answering in your 2016 report?</p> <p>18 A I -- I don't see them as different.</p> <p>19 Q You would agree with me, though, that</p> <p>20 there are differences between the report that you</p> <p>21 produced in November 2018 and the report that you</p> <p>22 produced in October 2016?</p> <p>23 MS. PARFITT: Objection. Form. Vague.</p> <p>24 THE WITNESS: Yes, there are some</p> <p>25 differences.</p>

18 (Pages 66 to 69)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 70</p> <p>1 BY MS. BRANSCOME: 2 Q When you began drafting the report 3 that's been marked there as Exhibit 10, your MDL 4 report, did you begin by using your 2016 report as 5 an initial draft? 6 A Yes. But I also had some ideas about 7 new things that I would want to do. Sort of 8 coming out of the Echeverria experience, I 9 realized that there were -- there were a couple of 10 errors in that -- my original report that I wanted 11 to correct. There were ways of doing the analyses 12 that, on reflection, I thought were not optimal 13 and that I could improve on, even if I anticipated 14 that the bottom line results would not change 15 much. But when I came to actually drafting the 16 text, I certainly used the previous report as a 17 primary source for revising -- for -- for drafting 18 the new one. 19 Q You mentioned that you wanted to make 20 some modifications because there were things in 21 the 2016 report that were either not optimal or 22 were errors. 23 Were any of the modifications that you 24 made done at the suggestion of plaintiffs' 25 counsel?</p>	<p style="text-align: right;">Page 72</p> <p>1 sequence, and I use both of them now but in 2 different places. 3 But -- so is your question, is it 4 exactly the same computer that all the files were 5 kept on or -- is that the sense of your question? 6 BY MS. BRANSCOME: 7 Q How about I ask it this way: Can you 8 describe for me the process by which you drafted 9 your 2018 report that's been marked as Exhibit 10? 10 A So I guess there were two parallel 11 things going on, or maybe more. One was to do 12 some reanalyses of the statistical meta-analysis. 13 And so that I initiated at a certain point 14 between -- probably in 2018. 15 At the same time, and I'm not sure if 16 this was after or before the statistical analyses 17 were started, I looked at the old draft. I 18 reviewed what was there, what I thought were 19 weaknesses in the way of expressing things or 20 things that could be brought to the report that 21 would enhance the clarity or the force of the -- 22 the exposition, and I started redrafting. So I'm 23 not sure if that answers your question. 24 Q Did you personally type the words that 25 are contained in Exhibit 10?</p>
<p style="text-align: right;">Page 71</p> <p>1 MS. PARFITT: Objection. 2 THE WITNESS: No. 3 BY MS. BRANSCOME: 4 Q So any of the changes that you made 5 between your 2016 report and the MDL report in 6 2018, were those all at your own prompting? 7 A Yes. 8 MS. PARFITT: Objection. Form. 9 THE WITNESS: Yes. 10 BY MS. BRANSCOME: 11 Q Did you work in the same computer file 12 to draft the 2018 report from start to finish? 13 MS. PARFITT: Objection. Form. 14 THE WITNESS: You're -- you're referring 15 to the text, not the statistical analyses, which 16 were done in a separate -- I mean, they -- they -- 17 the statistical analyses were based on the 18 addendum that I presented to you, and those are 19 kept on a FileMaker software, which is not on my 20 personal computer, but that my assistant has 21 access to. 22 But as far as the text is concerned -- 23 yeah, I think it was the same computer, but I've 24 changed computers since then, so I'm just 25 hesitating because I'm trying to think of the time</p>	<p style="text-align: right;">Page 73</p> <p>1 A All -- maybe all of them, and maybe 2 there were some paragraphs that I handwrote 3 because I was on a plane or a train, and when I 4 got back to the office, I asked someone to type up 5 that paragraph or two. But basically it was done 6 by me. 7 Q And did you save draft versions along 8 the way? 9 MS. PARFITT: Objection. Form. 10 THE WITNESS: Not really. Not -- 11 certainly not systematically. I didn't see any 12 reason to save discarded versions of things. 13 Yeah. 14 BY MS. BRANSCOME: 15 Q Did you conduct a new literature review 16 in connection with the 2018 report? 17 A I knew that I had all of the literature 18 that was pertinent and published as of 2016. 19 Updating what was available was partly done by 20 asking my research assistant to do a PubMed search 21 of anything new on the topic; asking the lawyers 22 if they had come across anything new in the past 23 year; my own antenna of knowing a lot of 24 epidemiologists and people who work in this area, 25 whether they are aware of anything. So sort of an</p>

19 (Pages 70 to 73)

Jack Siemiatycki, Ph.D.

Page 74	Page 76
<p>1 informal updating process from many branches. 2 Q Did plaintiffs' counsel provide you with 3 studies that had come out since you had generated 4 your 2016 report? 5 A I think they sort of pointed me to a 6 couple of things that I didn't have at the time. 7 I think one was the Penninkilampi review. 8 We're talking about the epidemiology 9 literature or everything? Because the 10 epidemiology literature I was pretty much in 11 control of through my networks and my people and 12 so on. 13 The stuff that I asked counsel to help 14 with was identifying literature in the areas of 15 toxicology, composition of talcum powder products, 16 mechanistic research that would bear on the issue. 17 So I asked them if they would provide me any new 18 data that they had available on those topics. 19 Q Do you consider yourself an expert in 20 toxicology? 21 A No. I'm sufficiently familiar to be 22 able to integrate the expertise of -- of real 23 experts. 24 Q Do you consider yourself an expert on 25 the composition of talc?</p>	<p>1 statistical analysis for your meta-analysis? 2 A It's -- I think it's called 3 Meta-Analysis, but -- it's called Comprehensive 4 Meta-Analysis, Version 3. It's listed in my 5 report on page 34. 6 Q And is that the only software that you 7 used to perform the statistical analyses in your 8 report? 9 A It's the only software that I used to 10 perform the meta-analyses. Are there any other -- 11 I'm just trying to think if there are any other 12 analyses in the report besides meta-analyses or 13 statistical. 14 There were a couple of studies, and I -- 15 I couldn't point them out just this minute, that 16 did not provide full information allowing -- that 17 didn't provide full information on odds ratios or 18 relative risks in a format that was useful for the 19 meta-analysis. And -- but they did provide the 20 numbers of cases and controls who were exposed and 21 unexposed. And that would typically -- I think in 22 at least one instance, maybe two, but at least one 23 instance, there was a situation where they 24 provided odds ratio estimates in different 25 categories of usage of talc or either different</p>
Page 75	Page 77
<p>1 A No. 2 Q And do you consider yourself an expert 3 on potential biological mechanisms of the 4 development of ovarian cancer? 5 A No. 6 Q Other than being aware of the opinions 7 of others in those particular fields, are you 8 offering any expert opinions in toxicology, the 9 composition of talc, or the biological mechanism 10 by which ovarian cancer may develop? 11 A I'm -- 12 MS. PARFITT: Objection. Form. 13 Go ahead. 14 THE WITNESS: I'm -- I reviewed the 15 information that I was provided, and I took note 16 of the types of evidence that are available in 17 those domains, and I used it mainly in thinking 18 about biological plausibility of the association. 19 It -- those areas of evidence did not in any way 20 influence my opinions about the strength and 21 consistency and so on of the epidemiological 22 evidence. 23 BY MS. BRANSCOME: 24 Q Did you -- oh, before I forget, what is 25 the name of the software that you used to do the</p>	<p>1 durations or different amounts used per day or 2 something like that, but didn't summarize that in 3 an overall ever-used-it-at-all versus 4 never-used-it, which was what I was looking to use 5 in the meta-analysis. 6 And I think in those -- in that 7 instance, I did almost a hand calculation. 8 Because it's pretty straightforward how you do 9 this, just re- -- picking the numbers in their 10 tables and recalculating the overall odds ratio. 11 But this is a few years ago, and I -- 12 I -- I would have to go back and review that, but 13 it was -- I think in the other meta-analyses, 14 Berge and Penninkilampi, which were carried out 15 completely independently of mine, and I didn't 16 know about theirs, I think they had to do 17 something similar and arrived at the same answers. 18 So -- but, no, I mean there was no -- no 19 other statistical package used. That kind of 20 calculation can be done by hand. 21 Q How would -- how would I, if I'm looking 22 at your report, identify which studies you 23 actually calculated the odds ratio or relative 24 risk that you input into your meta-analyses? 25 A I -- I -- I'd have to look at it at</p>

20 (Pages 74 to 77)

Jack Siemiatycki, Ph.D.

Page 78	Page 80
<p>1 lunchtime, if you don't mind, and see if there was 2 one. 3 There was one. I don't know if that was 4 retained in the end or if -- I'm sorry. It's -- 5 Q When you say you don't know if a study 6 was retained in the end, are there studies that 7 you considered including in your meta-analysis and 8 ultimately did not? 9 A Only if they didn't provide evidence on 10 the relationship between talcum powder used in the 11 perineal area and ovarian cancer. 12 Q All right. If you wouldn't mind looking 13 at that at lunch, we will come back -- 14 A Yes. Thank you. 15 Q -- to that after the lunch break. 16 THE WITNESS: Someone make a note for 17 me. 18 BY MS. BRANSCOME: 19 Q Did you -- 20 MS. PARFITT: Yes, a note. 21 BY MS. BRANSCOME: 22 Q Did you personally conduct the 23 meta-analysis that was performed as part of your 24 2018 report? 25 A No, I did not do the --</p>	<p>1 from one to another was perfectly in line with 2 what I would expect. 3 Furthermore, the results that we 4 obtained are almost identical to the results that 5 others have independently obtained doing 6 meta-analyses on these topics using basically the 7 same studies. Sometimes the difference of -- 8 minor differences of which result from each study 9 they selected, but basically the results are so 10 similar that I'm confident that there was no 11 glitch. 12 Q Did you save the results of these 13 sensitivity analyses? 14 A Do you mean the output from the computer 15 software for each one? Is that what you're -- 16 Q Is there any way from the materials that 17 you have produced in connection with your report 18 for someone to replicate the sensitivity analyses 19 that you performed? 20 MS. PARFITT: Objection. Form. 21 THE WITNESS: Well -- I reproduced in 22 the report a few plots of -- that come straight 23 out of the program. So for those, it's absolutely 24 replicatable. Anybody can then go to the package 25 and put -- punch in the same input, and they'll --</p>
Page 79	Page 81
<p>1 Q Who did that? 2 A My student. 3 Q And what is your student's name? 4 A Mengting, M-E-N-G-T-I-N-G, Xu, X-U. 5 Q And -- and what are -- is it Mr. or 6 Dr. Xu? 7 A It's -- she's a Ph.D. student at the 8 moment. She will be a doctor. 9 Q What are her qualifications for 10 conducting a meta-analysis? 11 A She is very skilled at statistical 12 analyses and at -- at computer packages. I'm not 13 sure if she's taken a course in meta-analysis 14 specifically, but it's not rocket science to do 15 that with a package like the one we have. 16 Q Did you verify that the meta-analysis 17 was performed correctly using the software? 18 A I looked at the results in various ways 19 to assure myself that everything looked good. By 20 looking good, I mean that there was internal 21 coherence, like she carried out many different 22 meta-analyses under different conditions and -- 23 not different conditions, but including some 24 studies and excluding studies -- these are called 25 sensitivity analyses -- and the pattern of results</p>	<p>1 they'll get the same output. For the -- I didn't 2 do that for every single sensitivity analysis, 3 just for economy -- to save the reader the burden 4 of that. But I'm pretty sure -- I'm pretty sure 5 that Mengting kept files of each of those 6 analyses. 7 BY MS. BRANSCOME: 8 Q Did anyone else -- you mentioned a 9 research assistant helped you with PubMed 10 searches. Who was the research assistant? 11 A She's a woman, who was with me for 30 12 years or so, who was basically the bibliographic 13 expert in our team and helped people find articles 14 and do things necessary, like PubMed searches and 15 so on. So she -- while she was here -- she 16 retired a year or so ago. While she was here, I 17 asked her to look at the ovarian cancer/talc 18 thing, and she dug out some -- she found some 19 articles for me. 20 Q Is that Sally Campbell? 21 A Yes, it is. 22 Q Okay. After Ms. Campbell retired, did 23 anyone else help you perform literature searches? 24 A Not in a routine way for sure. If I 25 wanted to find a specific article that I knew</p>

21 (Pages 78 to 81)

Jack Siemiatycki, Ph.D.

Page 82	Page 84
<p>1 about, I would typically ask my student Mengting 2 to dig it out and print it for me. 3 Q So in addition to Ms. Campbell and 4 Ms. Xu -- 5 A Xu, yes. 6 Q -- did anyone else help prepare the 7 materials that are in your 2018 report? 8 A Yes. So I have another research 9 assistant who's been with me even longer than 10 Sally Campbell, who retired a month ago, and her 11 name is Lesley Richardson. And she set up and 12 maintained the database system in which we 13 integrated all of the results that are in that 14 addendum that I provided you, and that involved 15 reviewing each article and taking every single 16 result and plugging it into this software. 17 Q Did Ms. Richardson exercise any of her 18 own judgment in selecting which data to include in 19 the meta-analyses? 20 A The instruction was to extract 21 everything. Simple instructions can become 22 difficult in operation. And some of the 23 frustration in this area and some of the reason 24 why there is some variability in which studies and 25 which results are included in different</p>	<p>1 Q Okay. And you mentioned reviewing the 2 materials that came out in connection with Health 3 Canada and the Taher manuscript, and we'll talk 4 about that in more detail, but did anything you 5 reviewed since the production of your 2018 report, 6 has any of that changed your opinions or any of 7 the information that is contained in your MDL 8 report? 9 A It doesn't really change anything. I 10 would say that the Health Canada report reinforces 11 the notion that this issue is becoming a front 12 burner issue for public health agencies. But 13 it -- since I didn't explicitly address that 14 question in my report, I would say it doesn't 15 change anything that's in my report. 16 Q Do you intend to offer expert opinions 17 about the different positions of the different 18 public agencies and the relative importance of a 19 potential connection between talc and ovarian 20 cancer? 21 MS. PARFITT: Objection. Form. 22 THE WITNESS: Did I intend -- while 23 writing my report, do you mean, to make -- no. I 24 don't think that those agencies and those 25 positions necessarily reflect the most up-to-date</p>
Page 83	Page 85
<p>1 meta-analyses occur because authors are sometimes 2 cryptic about what they say about their data and 3 their results. And specifically things like what 4 kind of talc use a certain table describes is not 5 always perfectly clear. 6 And so she would need to make a judgment 7 sometimes as to whether this result pertained to 8 all use of talc in the perineal area or only 9 powdering, excluding sanitary napkins or other -- 10 sometimes it -- there's ambiguity in the write-up 11 of these things that therefore requires -- 12 required some judgment on her part. And several 13 of these things she would ask my opinion about, 14 and we would discuss it and say, Well, it looks 15 like this or it looks like that, and let's go with 16 this interpretation. 17 Q Okay. And at the end of the day, 18 despite receiving help from others in developing 19 your 2018 report, do you personally stand behind 20 everything that is in the report? 21 A Yes. Barring more typos. I know that 22 every time I look at anything I've ever written 23 or, you know, things that are expressed not in the 24 most clear way. But, yes, I stand behind 25 everything.</p>	<p>1 science, and I think the most up-to-date science 2 is in the science community through publications 3 and so on, and public health policies tend to lag 4 behind scientific knowledge. 5 BY MS. BRANSCOME: 6 Q Are there instances where public health 7 policies are more conservative than the scientific 8 literature out of sort of a principle of 9 precaution? 10 MS. PARFITT: Objection. Form. 11 THE WITNESS: Sorry, I'm not sure I 12 understand the question. 13 BY MS. BRANSCOME: 14 Q Sure. 15 Are there examples where the public 16 health policy is actually, for instance, more 17 protective than the science might support because 18 the public health agency is exercising an 19 abundance of caution? 20 MS. PARFITT: Objection. Form. 21 THE WITNESS: I -- I believe so. I 22 mean, I've not done any kind of survey of how 23 public health policy in, you know, Sweden over 24 Argentina or everywhere -- you're talking about 25 generally in the world public health or are you</p>

22 (Pages 82 to 85)

Jack Siemiatycki, Ph.D.

Page 86	Page 88
<p>1 talking about United States or -- but I -- I 2 imagine there are instances like that, and I think 3 there is a strand in public health to be 4 precautionary in developing policies. But I'm not 5 sure it's universal. I just don't know. 6 BY MS. BRANSCOME: 7 Q You have a References section in your 8 report. It begins at page 109, if you need to 9 refer to it. 10 How did you maintain all of the 11 documents that are identified under that list? 12 It's quite voluminous. 13 A So let me -- 14 Q And by that, I mean did you keep hard 15 copies? Do you keep electronic copies? 16 A Okay. So the first thing I'll point out 17 is that I deliberately didn't call it a reference 18 section. You'll see that it's called a 19 Bibliography. 20 Q Could you turn to page 109 in your 21 report. 22 A That -- that's where I am. 23 Q Could you turn to the page right before 24 that. 25 A Oh. Ah, yes, I see that.</p>	<p>1 A So, yeah, yeah. 2 Q -- Dr. Siemiatycki, is how -- how do you 3 maintain all of the documents that are listed in 4 your reference section? Do you main hard copies? 5 Do you keep electronic copies? 6 A It's a bit of a mix and match of 7 electronic and hard copies. And these are all the 8 materials that were collected over the years, you 9 know, I would say from the beginning of my 10 involvement in the previous trial and so on, that 11 concern talc and ovarian cancer, including 12 materials that were provided by the lawyers and 13 materials that we found. 14 I prefer to work with paper -- I prefer 15 to read paper, but at a certain point, that gets 16 overwhelming, and the material -- I can't tell you 17 right now for sure that everything here is -- that 18 I have it electronically in a file or that I have 19 it in paper. 20 Q There are different sections of your 21 References section. You have Bibliography Part A, 22 B, so on and so forth. Who made the decision of 23 which articles or documents fell into which of 24 the -- of each category? 25 A I -- I guess I made it, but it was</p>
Page 87	Page 89
<p>1 Q What is the page -- you have that as 2 page 108? 3 A Yes, I have that page with the word 4 "References" on page 108. Section 16. 5 Q Perhaps we could check at the break. My 6 page numbering got off of yours at some point. 7 A Okay. 8 Q But in any event, you do have a 9 Section 16 that's titled "References," correct? 10 A Yes. Yes, I do. I do. 11 Okay. My -- my conscious volition was 12 to call this a bibliography, and the word 13 "references" got in -- into the heading of this 14 section. 15 And the reason for that distinction is 16 that I have not -- not everything that is listed 17 is referred to in the text of my report. So 18 technically speaking, a reference section should 19 be those materials that you refer to in your 20 report. And this is not what I have here. And 21 that's why I -- consciously I wanted to call this 22 a bibliography, and somehow the word "references" 23 got -- when they -- when we were compiling it -- 24 anyways. 25 Q Okay. So my question again --</p>	<p>1 pretty self-evident. The material in Part A is 2 material that is generally publicly available. 3 It's easy to identify that. And the materials in 4 Part B is material that is not publicly available. 5 And all of that came from the lawyers, I think. 6 Q So that was going to be one of my 7 questions. Did all of the materials identified in 8 Bibliography Part B come to you from plaintiffs' 9 counsel? 10 A Okay. So let me look through this 11 quickly. 12 MS. PARFITT: Mm-hmm. Go ahead. 13 THE WITNESS: (Peruses document.) 14 I think so. I -- I think all of it came 15 from plaintiffs' counsel. 16 BY MS. BRANSCOME: 17 Q I'm not going to ask you about all of 18 these, but I noticed on page, at least in my copy, 19 135, maybe 134 on yours, there's reference to the 20 Berg v. Johnson & Johnson case. 21 Do you see that? 22 A Yes, I see that. 23 Q What relevance is it to you as an 24 epidemiologist evaluating the potential risk of 25 ovarian cancer from perineal use of talc to look</p>

23 (Pages 86 to 89)

Jack Siemiatycki, Ph.D.

Page 90	Page 92
<p>1 at the final jury instructions, judgment, and</p> <p>2 verdict form from the Berg case?</p> <p>3 A I'm not sure. I relied on plaintiffs'</p> <p>4 counsel to decide what they thought it would be</p> <p>5 pertinent for me to be aware of. So these were</p> <p>6 documents that they thought would be pertinent for</p> <p>7 me to -- to be aware of, and I can't say why, and</p> <p>8 I don't remember -- frankly, I don't remember</p> <p>9 these documents.</p> <p>10 Q As a scientist, do you typically</p> <p>11 consider jury instructions in forming an opinion</p> <p>12 with respect to risk of the use of a product in</p> <p>13 epidemiology?</p> <p>14 MS. PARFITT: Objection.</p> <p>15 THE WITNESS: Outside of a legal -- no,</p> <p>16 we wouldn't have access to it or -- no, it never</p> <p>17 comes up.</p> <p>18 BY MS. BRANSCOME:</p> <p>19 Q As you sit here today, can you come up</p> <p>20 with any reason why the jury instructions in a</p> <p>21 case would be relevant to you in evaluating the</p> <p>22 question you were asked to answer, which is</p> <p>23 whether or not there is a risk of ovarian cancer</p> <p>24 from the perineal use of talc?</p> <p>25 MS. PARFITT: Objection. Form.</p>	<p>1 informative of your opinions?</p> <p>2 A No. There's no way for anyone else to</p> <p>3 know that.</p> <p>4 Q Okay. Did you ask plaintiffs' counsel</p> <p>5 for specific company documents, using that term</p> <p>6 loosely, to refer to documents that are kept</p> <p>7 internally within the various companies at issue</p> <p>8 in this litigation?</p> <p>9 A I asked to be sent any information they</p> <p>10 had about the composition of talcum powder</p> <p>11 products, historically as well as currently, but</p> <p>12 actually mainly historic -- I was mainly</p> <p>13 interested to know what was the history of the</p> <p>14 composition of talcum powder products.</p> <p>15 And so many of these materials that they</p> <p>16 sent me -- and I can't tell you which ones because</p> <p>17 I don't identify them with these obscure numbers,</p> <p>18 they don't mean anything to me -- but some of them</p> <p>19 dealt with internal company documents or internal</p> <p>20 reports that discussed different types of talc --</p> <p>21 of powdering products, whether talc products or</p> <p>22 cornstarch products in different eras, when they</p> <p>23 started and when, what the market share was in</p> <p>24 different eras. So I was interested in that to</p> <p>25 get a sense of what were the women exposed to who</p>
Page 91	Page 93
<p>1 THE WITNESS: You're asking me to</p> <p>2 speculate as to why plaintiffs' counsel would have</p> <p>3 sent this to me?</p> <p>4 BY MS. BRANSCOME:</p> <p>5 Q I'm asking --</p> <p>6 A Is that what you're asking?</p> <p>7 Q I'm asking if you, as the scientist</p> <p>8 whose name is on this expert report, can you think</p> <p>9 of any reason why that would be informative to you</p> <p>10 as a scientist?</p> <p>11 A If I had it in front of me, I might</p> <p>12 recognize something in there that would make it</p> <p>13 relevant. But I -- I don't know what is typically</p> <p>14 in such jury instructions. I don't know how --</p> <p>15 what the sweep is of those things. I'm just not</p> <p>16 sure. So I -- I can't answer the question.</p> <p>17 Q As you sit here today, do you recall</p> <p>18 reading the final jury instructions from Berg --</p> <p>19 A I don't --</p> <p>20 Q -- v. Johnson & Johnson?</p> <p>21 A I don't actually recall reading it.</p> <p>22 Q Okay. So is there any way for someone</p> <p>23 reviewing your report to identify within the</p> <p>24 reference section, Part B, which of these</p> <p>25 documents you, Dr. Siemiatycki, found relevant and</p>	<p>1 were part of these epidemiologic studies.</p> <p>2 Q Do you rely on any of the information</p> <p>3 that you obtained from documents in Part B of your</p> <p>4 reference list as a basis for forming your expert</p> <p>5 opinion in the MDL?</p> <p>6 A No. No.</p> <p>7 Q Have you viewed any of the deposition</p> <p>8 transcripts of the depositions that have been</p> <p>9 taken in the MDL?</p> <p>10 A I have looked at a few of them.</p> <p>11 Q And which deposition transcripts have</p> <p>12 you reviewed?</p> <p>13 A Plunkett, McTiernan, is it? And Singh.</p> <p>14 Not fully -- not the entire transcripts, but</p> <p>15 portions thereof. Blount. I've seen excerpts</p> <p>16 from, is it, Hopkins? And a table from Pier, but</p> <p>17 not the full text. I didn't review the full text</p> <p>18 -- transcript. There may be one or two more, and</p> <p>19 I can't recall right now.</p> <p>20 Q Okay. Focussing specifically on the</p> <p>21 expert deposition transcripts from the MDL, did</p> <p>22 you ask specifically for Drs. Plunkett, McTiernan</p> <p>23 and Singh's deposition transcripts?</p> <p>24 A I didn't know who the other experts</p> <p>25 were, so I didn't ask for them by name. And I</p>

24 (Pages 90 to 93)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 94</p> <p>1 think that I asked if they could share with me 2 transcripts of depositions and reports. So I also 3 had some of the reports from those experts. I'm 4 not sure I had all of them but at least some of 5 them. 6 Q Well, what materials had you reviewed 7 with respect to other experts in the MDL before 8 you completed your report that we've marked as 9 Exhibit 10? 10 A None. All of what I've just described 11 was after I completed my report. 12 Q Did you rely on the work or opinions of 13 any other expert witnesses in forming your own 14 opinions in the MDL? 15 A No, I don't think I did. 16 Q So understanding that more depositions 17 have been taken than just Drs. Plunkett, McTiernan 18 and Singh, what specifically was your request to 19 plaintiffs' counsel for which deposition 20 transcripts you would like to see? 21 MS. PARFITT: Objection. Asked and 22 answered, form. 23 THE WITNESS: I'm not sure if my request 24 was to see the ones that they thought were most 25 relevant to -- to me or whether I specifically</p>	<p style="text-align: right;">Page 96</p> <p>1 I specifically asked at some point to be provided 2 with information that would inform on the presence 3 of asbestos fibers in talcum powder products. 4 BY MS. BRANSCOME: 5 Q Did you review that material before 6 completing your MDL report? 7 MS. PARFITT: Do you understand the 8 question? 9 THE WITNESS: Yeah. 10 Yes, I think I did look at that before 11 completing my report. 12 BY MS. BRANSCOME: 13 Q When you say the asbestos is an issue 14 that has come up in the last few months, what do 15 you mean by that? 16 A Well, my understanding back in 2016, 17 '17, was that while asbestos had been detected in 18 talcum powder products as far back as the '70s -- 19 1970s, there was an industry directive or promise 20 or instruction that they would somehow get rid of 21 the problem of asbestos contamination. 22 Q And what was your basis for that 23 understanding? 24 A I guess things I've read, and possibly 25 in some of the company documents, possibly in</p>
<p style="text-align: right;">Page 95</p> <p>1 said the epidemiology ones, but I think probably 2 the former, because they sent me, for example, 3 Dr. Plunkett, who is not an epidemiologist. Yeah. 4 BY MS. BRANSCOME: 5 Q Which expert reports have you reviewed 6 that are from the MDL? 7 A I looked at the Plunkett report. I 8 think I looked at the Singh and the McTiernan 9 report. But just dipping into it, not -- not 10 reading it fully. Yeah. 11 Q Any other reports? 12 A Not that I recall offhand. 13 Q Okay. The Blount transcript, the 14 Hopkins transcript, and the table from Julie 15 Pier's deposition, were those items that were 16 provided to you by plaintiffs' counsel? 17 A Yes. 18 Q Did you request them specifically or 19 were they simply given to you? 20 MS. PARFITT: Objection. Form. 21 THE WITNESS: I requested them to 22 provide me with information that would help me to 23 understand the issue. And one of the issues that 24 has come up in the past few months was the issue 25 of asbestos in talcum powder products, and I think</p>	<p style="text-align: right;">Page 97</p> <p>1 publications. I think there have been various 2 publications that have said so that have -- and I 3 can't right now point to those, but that for the 4 last 10 or 20 years have said that asbestos 5 contamination may have been a problem up to the 6 1970s, but that the industry has basically managed 7 to eliminate that contamination. So I've read 8 that, and it seemed to be repeated often enough 9 that I came to take it as a fact. 10 And then I received some -- I guess I 11 received some reports from plaintiffs' counsel of 12 some new studies carried out more recently in 13 the -- by Longo and his team, and some others, put 14 in question whether asbestos fibers were present 15 in talcum powder products. And so this caused me 16 to revisit that whole thing. 17 My opinions offered in 2016, '17, about 18 talc and ovarian cancer were premised on the 19 assumption that whereas there may have been some 20 contamination up to the 1970s, it was basically a 21 nonissue after the 1970s. So the opinions I 22 expressed in -- in 2016, '17, were independent of 23 any hypotheses about asbestos in talc. 24 When I saw the reports from Longo and 25 maybe others in the fall -- I think it was in the</p>

25 (Pages 94 to 97)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 98</p> <p>1 fall of 2018, I specifically asked counsel to 2 provide me with other information that they had, 3 and I made a point of saying, you know, Are there 4 studies that contradict these -- is there evidence 5 that contradicts these evidence -- these claims of 6 asbestos contamination? And they sent me some 7 material at that point. 8 Q Okay. The work that Dr. Longo had 9 conducted with respect to analyzing talcum powder 10 products, to your knowledge, has that ever been 11 published? 12 A I'm not sure. I -- to my knowledge, no, 13 but maybe it has been. I don't know. 14 Q Okay. What were you -- when you 15 referred to the study that Dr. Longo conducted, 16 what -- are you referring to the work that he has 17 done in connection with litigation on behalf of 18 plaintiffs' counsel? 19 A I'm referring to a few reports that I 20 think are dated or -- not -- 2017, 2018. I guess 21 they're connected to litigation, but I'm -- I'm 22 not absolutely certain of that. But those are -- 23 that's what I'm referring to. 24 Q Separate and apart from your role as an 25 expert witness, when you're evaluating a</p>	<p style="text-align: right;">Page 100</p> <p>1 of the investigators. I know many of the people 2 in the area that I work in, and I can -- often 3 have a gut feeling about the quality of their 4 work. 5 Q Do you know anything about Dr. Longo's 6 qualifications such that you could render an 7 opinion about the quality of his work? 8 A It's in a different area than mine, so 9 the answer is I -- I couldn't render an opinion 10 about it. 11 Q When you asked for evidence that might 12 contradict the work that Dr. Longo had done in 13 connection with litigation, what specifically were 14 you provided by plaintiffs' counsel? 15 A I'm sorry, without digging around and 16 looking at e-mail exchanges, offhand I can't tell 17 you. I was provided with a batch of -- of 18 documents. I can't remember how many were on one 19 side or the other side. I remember there -- well, 20 in my report I refer to a few pieces of evidence 21 that -- yes. So -- can I -- well, on page 30 in 22 my copy -- 23 Q Okay. 24 MS. PARFITT: Why don't you give the 25 category, the title.</p>
<p style="text-align: right;">Page 99</p> <p>1 scientific question, do you typically consult 2 expert reports that are generated for purposes of 3 litigation? 4 MS. PARFITT: Objection. Form. 5 THE WITNESS: I would -- if I had 6 access -- I mean, usually we don't know about such 7 reports if we're not in the litigation process. 8 So it's a hypothetical question, I guess. It -- 9 it just doesn't come up in reality that I would be 10 looking at carcinogenicity of diesel engine 11 emissions, and I would have access to reports 12 produced in litigation that are not published. 13 I -- I don't know that I -- I wouldn't have access 14 to such information unless I was part of the 15 litigation. But... 16 BY MS. BRANSCOME: 17 Q Okay. When you're evaluating scientific 18 literature, do you place a different amount of 19 weight on a study that has been peer reviewed as 20 compared to one that has not? 21 A Yes, it's one of the considerations. 22 Q Okay. And -- 23 A There -- there are many considerations 24 that I weigh, including my knowledge of and 25 evaluation of the skill and reputation and quality</p>	<p style="text-align: right;">Page 101</p> <p>1 THE WITNESS: Oh, the -- so it's in 2 Section 5.3.2, "What were women exposed to in body 3 powders?" 4 BY MS. BRANSCOME: 5 Q Were you provided, for example, with the 6 expert reports generated by the expert retained by 7 Johnson & Johnson and Imerys to rebut Dr. Longo's 8 report? 9 A Can you give me the author's name or -- 10 Q Sure. Were you provided any reports by 11 Dr. Matthew Sanchez? 12 A I don't recall. I don't recall that. 13 Q Are you offering an expert opinion about 14 the contents of any of the talcum powder products 15 sold or manufactured by Johnson & Johnson? 16 A I only take note of what has been 17 provided in the various documents I have access 18 to. 19 Q What does that mean? 20 A It means -- can I read the sentence? 21 Basically, I think it summarizes what I mean. And 22 I'll start -- so I'll start on the sentence that 23 on my copy is on the bottom of page 29, still in 24 that Section 5.3.2. 25 "So representatives of the industry have</p>

26 (Pages 98 to 101)

Jack Siemiatycki, Ph.D.

Page 102	Page 104
<p>1 claimed that talcum powders were free of asbestos</p> <p>2 fibers since the 1980s" -- and there are a couple</p> <p>3 of references there --</p> <p>4 MS. PARFITT: Read them.</p> <p>5 THE WITNESS: "Hopkins 2018, Pier 2018.</p> <p>6 -- "but this assertion has increasingly</p> <p>7 come under doubt as a number of labs have reported</p> <p>8 finding asbestos fibers in talcum powder</p> <p>9 products." And it references Blount, '91;</p> <p>10 Paoletti, '84; Gordon, 2014; Longo, et al., 2017</p> <p>11 and 2018; Blount deposition, 2018; Pier</p> <p>12 deposition, 2018.</p> <p>13 "These various studies that have</p> <p>14 reported finding asbestos in historic talcum</p> <p>15 powder samples have been challenged by other</p> <p>16 reports that failed to find meaningful amounts of</p> <p>17 asbestos in historic talcum powder samples." And</p> <p>18 the two citations are CIR 2013 and Anderson 2017.</p> <p>19 BY MS. BRANSCOME:</p> <p>20 Q So what I'm trying to understand,</p> <p>21 Dr. Siemiatycki, is what role this information</p> <p>22 plays in your opinions, if any.</p> <p>23 A Not much. You know, I would say that</p> <p>24 the -- my opinions about the association are</p> <p>25 driven by the strength and consistency of the</p>	<p>1 and answered.</p> <p>2 THE WITNESS: You know, I would say the</p> <p>3 sentences that I read summarize my opinion on that</p> <p>4 question.</p> <p>5 BY MS. BRANSCOME:</p> <p>6 Q So in your opinion, is it -- is it a</p> <p>7 question for debate in the scientific community at</p> <p>8 the moment?</p> <p>9 MS. PARFITT: Objection. Form.</p> <p>10 Misstates his testimony.</p> <p>11 THE WITNESS: It's not an area in which</p> <p>12 I feel confident to pronounce that the issue has</p> <p>13 been resolved or not.</p> <p>14 MS. BRANSCOME: Is now a good time for a</p> <p>15 break? I don't now how long --</p> <p>16 MR. TISI: We've been going about an</p> <p>17 hour and 25 minutes.</p> <p>18 MS. PARFITT: We have lunch at 1:00, and</p> <p>19 I don't think it's here.</p> <p>20 (A discussion was held off the record.)</p> <p>21 MS. BRANSCOME: We can go off the</p> <p>22 record.</p> <p>23 THE VIDEOGRAPHER: This ends disc number</p> <p>24 in the deposition of Jack Siemiatycki. We're</p> <p>25 going off the record at 12:42 p.m.</p>
Page 103	Page 105
<p>1 epidemiologic evidence. And this information</p> <p>2 about asbestos contamination of talcum powder</p> <p>3 products would be capable of moving the dial in</p> <p>4 the direction of increasing my belief that there</p> <p>5 is a causal assoc- -- a causal relationship, if it</p> <p>6 is demonstrated that there were in fact asbestos</p> <p>7 fibers contaminating.</p> <p>8 So if it is shown that they are present,</p> <p>9 that would increase my level of belief. If it is</p> <p>10 not shown, if it is not demonstrated, it would not</p> <p>11 detract from my finding based on the epidemiologic</p> <p>12 evidence. It could move the dial in one</p> <p>13 direction. It wouldn't move the dial in another,</p> <p>14 because there -- there are different conceivable</p> <p>15 ways that talcum powder products could increase</p> <p>16 the risk of ovarian cancer. This is one. I'm not</p> <p>17 capable of adjudicating whether this one is</p> <p>18 correct or not.</p> <p>19 Q So as you sit here today,</p> <p>20 Dr. Siemiatycki, do you have an opinion to a</p> <p>21 reasonable degree of scientific certainty that</p> <p>22 there are in fact contaminants like asbestos or</p> <p>23 heavy metals in Johnson & Johnson's talcum powder</p> <p>24 products?</p> <p>25 MS. PARFITT: Objection. Form. Asked</p>	<p>1 (Lunch recess.)</p> <p>2 THE VIDEOGRAPHER: This begins disc</p> <p>3 number 3 in the deposition of Jack Siemiatycki.</p> <p>4 We're going back on the record at 1:46 p.m.</p> <p>5 BY MS. BRANSCOME:</p> <p>6 Q Good afternoon, Dr. Siemiatycki.</p> <p>7 Did you have a chance to look at the</p> <p>8 various subjects we were going to return to after</p> <p>9 the lunch break?</p> <p>10 A I did.</p> <p>11 Q Okay. So we'll take them one at a time.</p> <p>12 A Yes, please.</p> <p>13 Q Let's start first with, did you identify</p> <p>14 the document that you had been provided by</p> <p>15 plaintiffs' counsel that you said you took out all</p> <p>16 but about 20 pages that you found relevant?</p> <p>17 A Right. So I -- I think I mentioned the</p> <p>18 IARC monographs as being two of them, and I think</p> <p>19 the third one was the Reference Manual on</p> <p>20 Scientific Evidence. There was a huge pack of</p> <p>21 pages that were sent to me, and I took out most of</p> <p>22 them, but I retained some that I thought were</p> <p>23 relevant.</p> <p>24 Q What portions of the Reference Manual on</p> <p>25 Scientific Evidence did you retain?</p>

27 (Pages 102 to 105)

Jack Siemiatycki, Ph.D.

Page 106	Page 108
<p>1 A I think it was the Epidemiology section 2 and maybe the Statistics section. 3 Q All right. During the break, you were 4 also going to check which of the epidemiological 5 studies that you included in your meta-analysis. 6 Did you or someone at your direction 7 independently calculate an odds ratio or relative 8 risk figure that was not published in the report 9 itself? 10 A Sorry, what? That was not published in 11 the original report. So I'm not sure. The answer 12 is in the time I had available, I couldn't really 13 identify anything like that, and I'm not sure if 14 that occurred at all, and it -- the impact of 15 that, if -- if it had occurred, would have been 16 negligible. 17 Q If -- 18 A It would have meant -- I'm sorry. It 19 would have meant that most likely I added -- I put 20 together a two-by-two table by aggregating across 21 two or three or four levels of exposure. If -- if 22 it had happened, I think that's what would have 23 happened. And the impact of that would be to 24 produce an odds ratio estimate that is not 25 adjusted for the covariates that they adjusted for</p>	<p>1 think what it is, we've got the signature page on 2 the one report, and then the one he has in his 3 binder appears to not have a signature page on it, 4 and the font seems to be -- when the signature 5 page was put in, the font was slightly larger, 6 which sort of throws off the page numbers. Same 7 report. 8 MS. BRANSCOME: So what I would -- 9 MS. PARFITT: Single -- 10 MS. BRANSCOME: -- request so that we 11 keep the record clean going forward and not every 12 question has to say page 108 in mine and page 107 13 in your copy is that we actually mark the version 14 of the report that has been produced to us as 15 Exhibit 11 -- well, let me just, Ms. Parfitt, 16 would you be comfortable marking his copy as 17 Exhibit 11 and switching them and putting the new 18 clean copy as Exhibit 10? I'm only thinking that 19 there are many prior questions -- 20 MS. PARFITT: Sure, I'm fine with that. 21 MS. BRANSCOME: -- that refer to his 22 report -- 23 MS. PARFITT: As long as his -- 24 MS. BRANSCOME: -- as Exhibit 10. 25 MS. PARFITT: Yeah, and just so the</p>
Page 107	Page 109
<p>1 in their analysis by the categories of dose or 2 whatever they adjusted for. 3 Q Is there any way by examining your 2018 4 report and the addendum that an outside reader 5 could determine which studies, if any, were 6 subject to this independent calculation? 7 A So the one thing I didn't check during 8 the break was whether there's a note in the 9 addendum, and it would take me a while, I'd have 10 to go through each study and see if there's any 11 notation in the margin that would indicate that 12 this was done. So I -- I -- I'm not sure of the 13 answer to your question. 14 Q If an adjustment like that or an 15 independent calculation had been done, would it be 16 your expectation that a notation would have been 17 made in the addendum? 18 A Yes. Yes. 19 Q All right. Did you look at anything 20 else over the lunch break? 21 A Well, we looked to see -- the page -- 22 pagination discrepancy between the different 23 versions, and I think Ms. Parfitt could fill you 24 in on -- or maybe she has. I don't know. 25 MS. PARFITT: No. No, I haven't. I</p>	<p>1 record is clear, and what appears to have happened 2 is there was a signature page that was put on the 3 report to represent the matter was filed in the 4 United States District Court, the District of New 5 Jersey, in light of the prior report that was in a 6 state court, and that has thrown off not only the 7 page numbers but I think even it might have been a 8 different font. 9 Sure, so we will put on -- 10 THE WITNESS: So do you want to modify 11 the -- this? 12 MS. PARFITT: Sure. I think what we're 13 going to do is the one that Dr. Siemiatycki has 14 brought will be now Exhibit 11, and the one that's 15 in -- on the thumb drive and -- 16 MS. BRANSCOME: It is tab 3 in the 17 binder in front of you will be the correct 18 Exhibit 10. 19 MS. PARFITT: And this will be 20 Exhibit 11. 21 MR. TISI: And Exhibit 11 will be his 22 copy, the one that he brought. 23 MS. PARFITT: And this will be 3 -- 3, 24 correct? 25 MS. BRANSCOME: 11 -- I mean 10. It's</p>

28 (Pages 106 to 109)

Jack Siemiatycki, Ph.D.

Page 110	Page 112
<p>1 tab 3.</p> <p>2 MS. PARFITT: 11 -- 10. Tab 3, correct.</p> <p>3 (Exhibit No. 11 was marked for</p> <p>4 identification.)</p> <p>5 BY MS. BRANSCOME:</p> <p>6 Q So, Dr. Siemiatycki, can you confirm</p> <p>7 that Exhibit 10 is a complete copy of your report</p> <p>8 that was submitted in the MDL? It is a clean copy</p> <p>9 and does not contain any annotations.</p> <p>10 A Yes.</p> <p>11 Q Can you also confirm that what we have</p> <p>12 now marked as Exhibit 11 is the copy of your MDL</p> <p>13 report that you brought with you here today? It</p> <p>14 does contain handwritten annotations and the page</p> <p>15 numbers are just slightly misaligned.</p> <p>16 A Yes.</p> <p>17 Q Okay. So if you could, in Exhibit --</p> <p>18 oh, there was one other --</p> <p>19 A There was one other, and -- and there's</p> <p>20 another -- yet another one that I -- a correction</p> <p>21 to be made, a small one.</p> <p>22 So do you want to point out what that --</p> <p>23 Q Yes. So, Dr. Siemiatycki, do you have</p> <p>24 any corrections that you would like to make to</p> <p>25 your report at this time?</p>	<p>1 would like to make at this time?</p> <p>2 A Yes. I'd like to make one -- oh, yes.</p> <p>3 Well, page 72 in this version.</p> <p>4 MS. PARFITT: Just refer to the exhibit</p> <p>5 number, so 11.</p> <p>6 THE WITNESS: Exhibit 11, page 72,</p> <p>7 Table 2. Table 2 of the report.</p> <p>8 BY MS. BRANSCOME:</p> <p>9 Q What is the correction you would like to</p> <p>10 make?</p> <p>11 A The correction is -- there's a column</p> <p>12 called "Included in main meta-analysis," and I</p> <p>13 think in your copy, as in mine in this version,</p> <p>14 there are a bunch of question marks. In the</p> <p>15 original Word document that I submitted, these</p> <p>16 were not question marks. They were tick marks,</p> <p>17 checkmarks. And somehow in the translation of</p> <p>18 Word to PDF, this -- the tick mark -- the tick</p> <p>19 marks got changed to these funny little question</p> <p>20 marks. So they should all be tick marks.</p> <p>21 Q Are there any other corrections you</p> <p>22 would like to make to your report?</p> <p>23 A Not that I'm aware of at this time.</p> <p>24 Q Okay. So if you could turn to</p> <p>25 Exhibit 10 -- which is in front of you there -- if</p>
Page 111	Page 113
<p>1 A So the one outstanding one that we had</p> <p>2 highlighted -- or we've gone through the three of</p> <p>3 them.</p> <p>4 MS. PARFITT: 45.</p> <p>5 THE WITNESS: Have we --</p> <p>6 MS. PARFITT: No, 45. Page --</p> <p>7 MR. TISI: No, 47. 45.</p> <p>8 MS. PARFITT: Page 45. Excuse me, it's</p> <p>9 47.</p> <p>10 THE WITNESS: Oh, yes, that -- the</p> <p>11 question of whether that sentence should refer to</p> <p>12 Berge or Terry on that page. It's Berge 2018, not</p> <p>13 Terry. I was right the first time.</p> <p>14 MS. PARFITT: Oh, and it is page 45,</p> <p>15 just for the record. It is not 47. That was the</p> <p>16 first correction is on page 45.</p> <p>17 THE WITNESS: In this version.</p> <p>18 BY MS. BRANSCOME:</p> <p>19 Q So just to be clear, Dr. Siemiatycki, on</p> <p>20 the third line of page 45 of Exhibit 10, the</p> <p>21 reference to Terry 2013 in the sentence beginning</p> <p>22 with the word "while" should in fact be Berge</p> <p>23 2018?</p> <p>24 A Yes.</p> <p>25 Q Do you have any other corrections you</p>	<p>1 you could turn to your Conclusion section. It</p> <p>2 should be on page 69.</p> <p>3 A Yes.</p> <p>4 Q You state in the second paragraph below</p> <p>5 the Conclusion section that: "Based on the</p> <p>6 totality of the evidence, it is my opinion to a</p> <p>7 reasonable degree of scientific certainty that the</p> <p>8 perineal use of talcum powder products can cause</p> <p>9 ovarian cancer."</p> <p>10 First, did I read that correctly?</p> <p>11 A Yes, you did.</p> <p>12 Q Does that conclusion accurately</p> <p>13 summarize your opinion in this case as to whether</p> <p>14 or not perineal use of talcum powder can cause</p> <p>15 ovarian cancer?</p> <p>16 A Yes, it does.</p> <p>17 Q You state that your opinion is to a</p> <p>18 reasonable degree of scientific certainty,</p> <p>19 correct?</p> <p>20 A Correct.</p> <p>21 Q Is that a phrase that you have ever used</p> <p>22 in a scientific publication?</p> <p>23 A I don't think so.</p> <p>24 Q Why did you use it here?</p> <p>25 A I've seen this phrase used in all of the</p>

29 (Pages 110 to 113)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 114</p> <p>1 expert opinions in the legal cases that I've seen, 2 and I inferred that it's a -- a formula that is 3 de rigueur in legal communications for this sort 4 of thing. 5 Q When you say "to a reasonable degree of 6 scientific certainty," what do you mean by that 7 phrase? 8 A So my -- you know, I think somewhere 9 else in the document, I -- I phrase it in a way 10 that I'm comfortable with, which is a way that 11 also is sort of derivative from my understanding 12 of legal jargon and precedence. I think that it's 13 more likely than not that there is a causal 14 relationship. 15 Q You anticipated where I was going with 16 my question. Do those two sentences mean anything 17 different to you? 18 A No. 19 Q What is your understanding of "more 20 likely than not"? 21 A From a strictly mathematical point of 22 view, it implies that I feel that there's greater 23 than 50 percent probability that this thesis is 24 true. And I wouldn't put a more quantitative 25 meaning onto it.</p>	<p style="text-align: right;">Page 116</p> <p>1 that exists today enable a scientist to parse that 2 out? 3 MS. PARFITT: Objection. Form. 4 THE WITNESS: I'm not sure I understand 5 the premise of the question, the "if" part. 6 BY MS. BRANSCOME: 7 Q Okay. So if the biological mechanism by 8 which a talcum powder product can cause ovarian 9 cancer is because of a particular contaminant in 10 that talcum powder product, but that contaminant 11 does not exist in all talcum powder products, 12 would the epidemiological evidence that exists 13 today allow you to see that distinction? 14 MS. PARFITT: Objection. Form. 15 THE WITNESS: The epidemiologic evidence 16 as -- as it exists today would not allow one to 17 parse out anything about the particular 18 manufacturer, the particular product, if I 19 understand your question correctly. 20 BY MS. BRANSCOME: 21 Q And so therefore, the epidemiological 22 evidence as it exists today does not have a level 23 of detail by which someone reviewing that data 24 could determine if there were different 25 contaminants present in different talcum powder</p>
<p style="text-align: right;">Page 115</p> <p>1 Q Is your opinion that perineal use of 2 talcum powder products can cause ovarian cancer, 3 is it specific to a single brand or manufacturer 4 of talcum powder? 5 A No, it isn't. 6 Q Why not? 7 A Because as I understand it, the 8 epidemiologic evidence that supports the thesis of 9 a causal relationship is derived from evidence 10 among women who used all types of talcum powder 11 products that were available in their consumer 12 area of purchase of these products. And whatever 13 was the frequency distribution of different 14 manufacturers and types of powdering that were 15 available in the consumer -- various consumer 16 markets were the types that lead to the overall 17 inference about causality, and there's no way for 18 me to parse out which particular manufacturer 19 would have been more or less responsible for any 20 of this. 21 Q If in fact, and we're just talking 22 hypothetically, the biological mechanism by which 23 some talcum powder products can cause ovarian 24 cancer is related to a contaminant in that talcum 25 powder product, does the epidemiological evidence</p>	<p style="text-align: right;">Page 117</p> <p>1 products that were used by individuals who 2 developed ovarian cancer -- 3 MS. PARFITT: Objection. Form. 4 BY MS. BRANSCOME: 5 Q -- correct? 6 MS. PARFITT: Objection. Form. 7 THE WITNESS: May I read the -- 8 MS. PARFITT: Yes, you can. 9 BY MS. BRANSCOME: 10 Q Of course. 11 A Just to make sure I understand. 12 (Peruses document.) 13 So I -- I don't think that the 14 epidemiological evidence would allow you to 15 attribute causality to a specific type or -- or 16 not. If one knew -- if part of your hypothetical 17 is the knowledge of what the constituents were of 18 different products used in different markets, and 19 the biological mechanism has been established to a 20 high degree of certainty, there might be some room 21 for making inferences about this. But that seems 22 like a tenuous possibility. 23 Q But you agree that the current 24 epidemiological evidence as it exists does not 25 enable someone to distinguish between brands of</p>

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 118</p> <p>1 cosmetic talc products, for example? 2 MS. PARFITT: Objection. Form. 3 THE WITNESS: I don't think it does. 4 BY MS. BRANSCOME: 5 Q Does -- is your opinion that perineal 6 use of talcum powder products can cause ovarian 7 cancer, is that limited to talcum powder products 8 manufactured during a certain time period? 9 A The evidence as it exists today pertains 10 to products manufactured over half a century, 11 roughly speaking, so I don't think that there's 12 any way to link it to products manufactured in a 13 particular time period. 14 In -- in answer to that question, 15 actually, and to the previous one, hypothetically, 16 one might imagine looking at the different 17 study -- the 30-odd studies that have been carried 18 out in different communities and different cities 19 and different countries, and if one could obtain 20 reliable, reasonably precise and time relevant 21 information on market shares of products in 22 different markets at different times, that could 23 give a first approximation of whether certain 24 company products are more closely linked to the 25 excesses that are seen in the epidemiological</p>	<p style="text-align: right;">Page 120</p> <p>1 ovarian cancer in that area, it would be 2 improbable that the product of that company were 3 not part of the responsibility, but one of the 4 companies that produced 5 or 10 percent of the 5 market share. 6 BY MS. BRANSCOME: 7 Q Okay. But as you sit here today, based 8 on the analysis that you have done, you are not 9 able to draw an opinion specifically about an 10 increased risk of ovarian cancer that is tied to a 11 particular brand or a particular time period, 12 correct? 13 MS. PARFITT: Objection. Form. 14 THE WITNESS: That's correct, in part 15 because I don't have data on market share at 16 different times and in different places. 17 BY MS. BRANSCOME: 18 Q Okay. In forming your opinion that 19 perineal talc use can cause ovarian cancer, did 20 you reach an opinion about how much talcum powder 21 is needed to cause ovarian cancer? 22 A No. 23 Q Is there an amount of talcum powder that 24 can be used perineally without increasing a risk 25 for ovarian cancer?</p>
<p style="text-align: right;">Page 119</p> <p>1 studies. 2 Q The application, though, of a market 3 share analysis to the users of talcum powder 4 products, if you're looking at causality, would 5 require that the individuals who developed ovarian 6 cancer had purchased their talcum powder according 7 to the market share, correct? 8 MS. PARFITT: Objection. Form. 9 THE WITNESS: Approximately, yes. 10 BY MS. BRANSCOME: 11 Q So, for example, if one type of talcum 12 powder product or one time period of talcum powder 13 product is the only type that actually causes 14 ovarian cancer, so all of the positives were 15 derived from those users, you -- you could not 16 determine that simply by applying market share, 17 for example? 18 MS. PARFITT: Objection. Form. 19 THE WITNESS: That -- that's true, 20 except in the circumstance that market share were 21 very, very high in most of the communities that 22 have been investigated. So if one company 23 produced 90 percent or 85 percent or something of 24 the product in a certain area -- that was consumed 25 in a certain area, and there's an excess risk of</p>	<p style="text-align: right;">Page 121</p> <p>1 A So let me go back to the previous 2 question, and clarify what do you mean by amount? 3 Do you mean like the amount in grams? The amount 4 in number of applications? The amount in number 5 of day -- days on which the powder is applied? 6 These are all different metrics of exposure, and 7 the answer might depend on what kind of -- you 8 know, we're starting with these studies. There 9 are now some hints about the dose-response 10 relationship and what kind of levels of exposure 11 in terms of number of applications in use, 12 observable excess risks. 13 Q So let me ask it this way: Did you 14 calculate how much talcum powder is needed to 15 cause ovarian cancer in any of the forms, be it 16 frequency of application, the amount in grams that 17 was used? 18 A I -- 19 MS. PARFITT: Objection. Form. 20 THE WITNESS: I did not carry out such a 21 calculation. I'm -- my emphasis was on 22 determining whether there's a dose-response 23 relationship. Going beyond that might involve 24 trying to quantify the dose-response relationship 25 to the extent of determining what the shape of</p>

31 (Pages 118 to 121)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 122</p> <p>1 such a relationship is and how the curve looks, 2 whether there's a threshold effect, and so on. 3 But I don't think there's enough data now to be 4 able to make such estimates. 5 BY MS. BRANSCOME: 6 Q Can you rule out the possibility that 7 there is a threshold below which perineal use of 8 talc presents no risk of ovary -- of ovarian 9 cancer? 10 MS. PARFITT: Objection. Form. 11 THE WITNESS: No, I -- I don't think -- 12 I can't, and I don't think it's possible to do 13 that with most carcinogens. It's -- it's an 14 extremely difficult and controversial issue of how 15 to detect sort of a minimum level of exposure 16 produces a carcinogenic effect. 17 BY MS. BRANSCOME: 18 Q In your view, has a dose-response 19 relationship for the perineal application of talc 20 and the development of ovarian cancer been 21 established in the scientific literature? 22 A My view is that the data are certainly 23 compatible with the notion of a dose-response 24 relationship. It -- it trends in that direction 25 of that conclusion. It's not definitive yet.</p>	<p style="text-align: right;">Page 124</p> <p>1 ovarian cancer, is that the question? Almost. 2 But the one qualification I would make in 3 answering that question is that I have a colleague 4 who started working with -- in my academic 5 department about 12 years ago, and she was 6 interested in ovarian cancer as a topic of 7 research, and she wanted to organize a case- 8 control study of ovarian cancer in relation to 9 various factors, and she asked me to kind of 10 mentor her -- she was just starting out -- mentor 11 her in getting grants, in setting up the study, 12 and this sort of thing, and this is what I did 13 with her. 14 So I worked on grant applications with 15 her on some aspects of setting up her study, and 16 that has been going on now for -- I don't know -- 17 I think since 2010 maybe that she started. So -- 18 but that has not -- I've been what we call a 19 coinvestigator on that project, not a principal 20 investigator. 21 But apart from that, the next stage in 22 my involvement with talc and ovarian cancer was in 23 the litigation. 24 Q What is your colleague's name? 25 A Anita Koushik.</p>
<p style="text-align: right;">Page 123</p> <p>1 It's not definitive. But I believe the bulk of 2 the evidence, especially from the Terry study and 3 partly from, I think it's the, Schildkraut study, 4 which are the most powerful ones for that 5 question, but certainly the Terry study is by far 6 the most important one, does tend to indicate 7 dose-response relationship. 8 Q Is the data that exists today also 9 compatible with no dose-response relationship? 10 MS. PARFITT: Objection. Form. 11 THE WITNESS: Yes. It could be -- in 12 other words, it could be a chance finding. Is -- 13 that's what you're saying. I think it's unlikely, 14 but it's -- it can't be ruled out. 15 BY MS. BRANSCOME: 16 Q Are you offering an expert opinion that 17 the inhalation of talc increases or presents any 18 risk of ovarian cancer? 19 A I -- I don't have an opinion on -- on 20 that. No. 21 Q Aside from your participation in the 22 IARC panel in 2006 and the Langseth article on 23 2008, has all of your work on talc and ovarian 24 cancer been in connection with litigation? 25 A On talc and -- sorry, work on talc and</p>	<p style="text-align: right;">Page 125</p> <p>1 Q If you had to give me your best 2 estimate, how many hours total have you spent 3 assisting her with the case-control study? 4 MS. PARFITT: Objection. Form, 5 misstates his testimony. 6 THE WITNESS: It's very hard to answer 7 that. I mean, ten years ago discussions over 8 coffee about studies and how to write grant 9 applications and reviewing and revising and so on. 10 I -- I don't -- not a trivial amount and not an 11 overwhelming amount. 12 BY MS. BRANSCOME: 13 Q When was the last time that you spent 14 hours in connection with that case-control study? 15 MS. PARFITT: Objection. Form. 16 THE WITNESS: There was a manuscript 17 that came -- a publication that came from that 18 study. It was -- the study was only completed in 19 the field, the data collection, around two years 20 ago, and spending a year cleaning data and so on, 21 and then starting to analyze it. 22 And there was an analysis of 23 reproductive and hormonal factors in relation to 24 ovarian cancer, and I helped her review and revise 25 that manuscript. That would have been a year and</p>

Jack Siemiatycki, Ph.D.

Page 126	Page 128
<p>1 a half ago or so, and I don't know, maybe I spent 2 three or four days on it at the time. 3 BY MS. BRANSCOME: 4 Q Did that study reach any conclusions 5 with respect to a potential link between perineal 6 use of talc and ovarian cancer? 7 A The talc information was collected in 8 the questionnaire and has not yet been analyzed. 9 Q Other than what we just discussed with 10 respect to the case-control study and then your 11 work in connection with the IARC panel and the 12 Langseth paper, have you ever done any original 13 research on the association between perineal 14 talcum powder use and ovarian cancer? 15 A No. No, I haven't. 16 It's common -- it's common for me to be 17 asked to review information on which I have not 18 directly worked. You know, topics. You know, I 19 recently was asked by the government of France to 20 evaluate a problem of possible cancer risks 21 related to a pesticide that's used in the banana 22 industry in Guadeloupe and Martinique. I've never 23 studied that pesticide and I've never been to 24 Martinique. But the kind of expertise that I have 25 can be applied to studying different sorts of</p>	<p>1 A That's correct. 2 Q Have you done anything since 2016 to 3 publicly announce your view that the perineal use 4 of talc can cause ovarian cancer? 5 A No, I've not had really an opportunity. 6 And in a way the -- the publication by Berge, 7 which appeared as a -- after I completed my 8 meta-analyses, and they -- they kind of beat me to 9 the punch with one type of publication output that 10 I might have produced. So I'm thinking about 11 different ways of communicating my results and my 12 opinions, but mainly my results. 13 I mean, the other part of the answer 14 to -- another part of the answer to your question 15 is that I'm not particularly a fan of individual 16 scientists going into press with opinions before 17 some sort of consensus starts to appear. I mean, 18 you can -- you can publish hypotheses and ideas, 19 but proclaiming conclusions is something that 20 should come later in the scientific process. I 21 mean, I -- I think it's best if IARC or an agency 22 like IARC would take on that role, and that would 23 be my hope actually. 24 Q In your opinion, has consensus formed 25 that peri- -- perineal use of talc can cause</p>
Page 127	Page 129
<p>1 problems. 2 Q You have not published the meta-analyses 3 that you -- meta-analysis you performed in 4 connection with the MDL, have you? 5 A No, I haven't. 6 Q Have you ever published in any peer- 7 reviewed article the opinion that the perineal use 8 of talcum powder can cause ovarian cancer? 9 A I -- I've never had occasion to opine 10 about this in any publication, and one doesn't 11 just announce to the New England Journal of 12 Medicine that you want to, you know, write an 13 article about opining about something like this. 14 There has to be some sort of platform basis of 15 research evaluation and so on. 16 And my involvement in this case might 17 lead to such a publication, but in the past I 18 would have not -- I had no reason to publish or to 19 try to publish such an opinion. 20 Q But you had formed an opinion with 21 respect to the perineal use of talcum powder and 22 an increased risk of ovarian cancer at the time 23 that you published your report in October of 2016. 24 And by "published," I mean within the 25 litigation context, correct?</p>	<p>1 ovarian cancer? 2 A I think among people who have reviewed 3 the evidence who -- sort of competent scientists 4 who have reviewed the evidence, I think there's 5 starting to be a ground swell of consensus about 6 it. You know, I've never done a survey, so I 7 can't say if it's majority or minority. 8 If your denominator is all medical 9 researchers, then the answer is, well, most of 10 them have never heard of this issue, so it's 11 not -- they wouldn't be susceptible to holding 12 such an opinion. But among the people who have 13 reviewed, are familiar with the issues, I think 14 there's certainly a much higher level of 15 receptivity to this thesis than there was ten 16 years ago. 17 Q Has a consensus been reached that 18 perineal use of talc probably causes ovarian 19 cancer? 20 MS. PARFITT: Objection. Asked and 21 answered. Form. 22 THE WITNESS: I can't answer that 23 question. I -- it's too -- are you trying to make 24 the distinction between probably and -- I -- so -- 25 BY MS. BRANSCOME:</p>

33 (Pages 126 to 129)

Jack Siemiatycki, Ph.D.

Page 130	Page 132
<p>1 Q Well, what do you understand the phrase</p> <p>2 "can cause ovarian cancer" to mean?</p> <p>3 A Well, it's a synonym with "is a risk</p> <p>4 factor for" or -- that's how I understand it.</p> <p>5 Q All right. And is that in your mind the</p> <p>6 same as "it probably causes cancer"?</p> <p>7 MS. PARFITT: Objection. Form.</p> <p>8 THE WITNESS: "It probably can cause,"</p> <p>9 is that what you said, or "probably does cause"?</p> <p>10 BY MS. BRANSCOME:</p> <p>11 Q Probably does cause.</p> <p>12 A So I don't think any risk factor can be</p> <p>13 described as -- in a way with the wording "does</p> <p>14 cause." You know, smoking does not cause lung</p> <p>15 cancer. It can cause lung cancer when there's a</p> <p>16 constellation of other favorable circumstances.</p> <p>17 You know, this is part of multifactorial causation</p> <p>18 of disease. So, you know, each factor in itself</p> <p>19 is not the cause, but it's part of a constellation</p> <p>20 of factors that together can cause the disease.</p> <p>21 So each of them can cause the disease.</p> <p>22 Q So -- you -- you state in your report</p> <p>23 that -- let me see if I can get the exact</p> <p>24 language.</p> <p>25 And perhaps you can get me there more</p>	<p>1 THE WITNESS: I don't know -- I haven't</p> <p>2 carried out a survey among people. I don't know</p> <p>3 whether a consensus has been reached. I don't</p> <p>4 know what proportion of that community would</p> <p>5 subscribe to this point of view or not.</p> <p>6 BY MS. BRANSCOME:</p> <p>7 Q Okay. Setting aside conducting a survey</p> <p>8 of individuals in the scientific community, would</p> <p>9 you say that the scientific literature reflects a</p> <p>10 consensus that the causal relationship between</p> <p>11 perineal talc powder exposure and ovarian cancer</p> <p>12 is probable?</p> <p>13 MS. PARFITT: Objection. Form.</p> <p>14 THE WITNESS: I think the scientific</p> <p>15 literature supports that conclusion. I'm not sure</p> <p>16 that it reflects it.</p> <p>17 So there's kind of a lag period between</p> <p>18 the production of research findings and the</p> <p>19 consensus -- a consensus building around it and</p> <p>20 being expressed in print. You know, if we take</p> <p>21 sort of the classic smoking and lung cancer</p> <p>22 historical example, evidence was accumulating</p> <p>23 rapidly in the 1950s. There were several studies</p> <p>24 through the 1950s and early 1960s, and it was only</p> <p>25 in 1964, so many years after some of this evidence</p>
Page 131	Page 133
<p>1 quickly. You talk about that now you would give a</p> <p>2 different rating under the IARC standard.</p> <p>3 Ah, here we go. Page 67 in your 2018</p> <p>4 report. You state: "It is now my professional</p> <p>5 opinion based on the totality of the evidence,</p> <p>6 that to a reasonable degree of scientific</p> <p>7 certainty, the causal relationship between</p> <p>8 perineal talc powder exposure and ovarian cancer</p> <p>9 is," quote, "probable."</p> <p>10 Did I read that correctly?</p> <p>11 A You did.</p> <p>12 Q Do you hold that opinion?</p> <p>13 A Yes, I do.</p> <p>14 Q What do you mean when you say a "causal</p> <p>15 relationship between perineal talc powder exposure</p> <p>16 and ovarian cancer is," quote, "probable"?</p> <p>17 A I mean it's more likely than not.</p> <p>18 Q Okay. Has a consensus been reached in</p> <p>19 the scientific community, understanding we're</p> <p>20 looking at those who have an interest in this</p> <p>21 issue, been reached that the causal relationship</p> <p>22 between perineal talc powder and ovarian cancer is</p> <p>23 probable?</p> <p>24 MS. PARFITT: Objection. Form, asked</p> <p>25 and answered.</p>	<p>1 had been published and been accepted by many</p> <p>2 scientists, but rejected by others -- there was</p> <p>3 still controversy around it -- that the Surgeon</p> <p>4 General's report reflected and created a</p> <p>5 consensus.</p> <p>6 BY MS. BRANSCOME:</p> <p>7 Q So in early 2019, are we still in the</p> <p>8 lag period or the period in which the production</p> <p>9 of research findings is still behind consensus</p> <p>10 building in the literature?</p> <p>11 MS. PARFITT: Objection. Form,</p> <p>12 misstates his testimony.</p> <p>13 THE WITNESS: Does that mean I should</p> <p>14 answer or --</p> <p>15 MS. PARFITT: I'm objecting. I said it</p> <p>16 misstates your prior testimony.</p> <p>17 THE WITNESS: Okay. Sorry. Let me read</p> <p>18 the question again. (Peruses monitor.)</p> <p>19 So I can't point to hallmark</p> <p>20 publications analogous to the Surgeon General's</p> <p>21 report for smoking and lung cancer that would</p> <p>22 reflect such a bend in the road kind of general</p> <p>23 perception of the talc ovarian cancer issue. It</p> <p>24 doesn't mean that the evidence isn't there, but</p> <p>25 the process of recognizing and generalizing and so</p>

34 (Pages 130 to 133)

Jack Siemiatycki, Ph.D.

Page 134	Page 136
<p>1 on is not -- has not been achieved yet.</p> <p>2 BY MS. BRANSCOME:</p> <p>3 Q Okay. Have you ever given a lecture,</p> <p>4 either to students or to other scientists, in</p> <p>5 which you have presented your view that the</p> <p>6 perineal use of talcum powder can cause ovarian</p> <p>7 cancer?</p> <p>8 A I have to my students -- I mean to the</p> <p>9 students in my department. I teach epidemiologic</p> <p>10 methods. I don't teach about ovarian cancer. I</p> <p>11 don't teach about talc. That's not what I'm paid</p> <p>12 to do. I'm paid to teach about the methodology</p> <p>13 and the conduct of -- and the interpretation of</p> <p>14 epidemiologic -- and I've used the talc/ovarian</p> <p>15 cancer as an example and walked my students</p> <p>16 through the evidence. So, yes, I have.</p> <p>17 Q When did you start teaching that as part</p> <p>18 of your epidemiological methods course?</p> <p>19 A Probably two years ago. As soon as I</p> <p>20 started gathering the information and synthesizing</p> <p>21 it, so two -- two or three years ago.</p> <p>22 Q Other than presenting to your students</p> <p>23 your analysis of talc and ovarian cancer as an</p> <p>24 illustration of an epidemiological method, have</p> <p>25 you presented your opinion that perineal use of</p>	<p>1 think. (Peruses document.)</p> <p>2 Q Okay.</p> <p>3 A No, I've never spoken to any of them</p> <p>4 about -- I -- I crossed paths with Dr. Cramer in</p> <p>5 Los Angeles for a -- you know, we were in the same</p> <p>6 hotel. He was leaving, I was coming, that sort of</p> <p>7 thing, but I don't think we had any substantive</p> <p>8 discussion, and I can't -- I know some of the</p> <p>9 others, but I've never spoken to them about this</p> <p>10 issue.</p> <p>11 Q Do you know personally or professionally</p> <p>12 any of the other plaintiffs' experts in the MDL?</p> <p>13 A No, I don't.</p> <p>14 Q You were chair of the working group --</p> <p>15 the IARC Working Group that published the</p> <p>16 monograph on talc in 2006 -- or, well, that met in</p> <p>17 2006, and then was subsequently published in 2010,</p> <p>18 correct?</p> <p>19 A That's correct.</p> <p>20 Q And there were roughly 20 members of</p> <p>21 that working group?</p> <p>22 A I think so.</p> <p>23 Q In 2006, you agreed with the IARC</p> <p>24 classification of, quote, "possible" describing</p> <p>25 the relationship between perineal talc use and</p>
Page 135	Page 137
<p>1 talcum powder can cause ovarian cancer in any</p> <p>2 other context outside of litigation?</p> <p>3 A No, I haven't.</p> <p>4 Q Have you spoken with other scientists</p> <p>5 about the issue of whether perineal use of talcum</p> <p>6 powder can cause ovarian cancer? Setting aside</p> <p>7 your students.</p> <p>8 A Yeah. Yes, I've spoken to -- to</p> <p>9 colleagues, friends over -- over coffee, over</p> <p>10 drinks at conferences, you know, what are you up</p> <p>11 to, what are you doing, and then describe my</p> <p>12 involvement in this case. And then we dig a</p> <p>13 little further into, Well, what -- what do you</p> <p>14 think, and so on. So I -- I have discussed it in</p> <p>15 that kind of format.</p> <p>16 Q Have you ever spoken with any of the</p> <p>17 authors on any of the papers that you cite in your</p> <p>18 report about the potential link between perineal</p> <p>19 use of talc and ovarian cancer?</p> <p>20 A I don't think so. I can quickly scroll</p> <p>21 through the list to see if anything jogs my --</p> <p>22 yeah -- no, let me --</p> <p>23 Q If you can do that quickly, we could do</p> <p>24 it now, or we can save that for the next break.</p> <p>25 A It will take just three minutes, I</p>	<p>1 ovarian cancer, correct?</p> <p>2 MS. PARFITT: Objection. Form.</p> <p>3 THE WITNESS: That's correct. I could</p> <p>4 read the exact wording of what "to be" means, but</p> <p>5 that's the gist of it.</p> <p>6 BY MS. BRANSCOME:</p> <p>7 Q Okay. IARC has not changed its</p> <p>8 clarification of talc, and specifically with</p> <p>9 respect to the peri- -- perineal use of talc since</p> <p>10 it published the 2010 monograph, correct?</p> <p>11 A Technically correct, but actually,</p> <p>12 what -- the correct statement is IARC has not</p> <p>13 evaluated talc since 2006 -- has not reevaluated.</p> <p>14 So there are no changes made to IARC evaluations</p> <p>15 except through a formal complete reevaluation, and</p> <p>16 there has not been a formal complete reevaluation</p> <p>17 of talc since the 2006 meeting. So there's no</p> <p>18 opportunity for IARC to change anything in one</p> <p>19 direction or another failing another complete</p> <p>20 evaluation.</p> <p>21 Q What, if you know, can initiate a formal</p> <p>22 complete evaluation of a constituent like talc?</p> <p>23 A Well, it comes I think from different</p> <p>24 sources. I'm not entirely certain. I know that</p> <p>25 there is now a public process whereby public</p>

35 (Pages 134 to 137)

Jack Siemiatycki, Ph.D.

Page 138	Page 140
<p>1 parties can write to the monograph program and</p> <p>2 make suggestions for chemicals to be evaluated.</p> <p>3 There are -- they get requests from governments.</p> <p>4 They get requests from groups of scientists. They</p> <p>5 have their own internal scientific staff that has</p> <p>6 its antenna out for different problems that arise,</p> <p>7 and they generally have sort of a five-year</p> <p>8 program of agents that they are going to evaluate</p> <p>9 in every -- in the next five-year period.</p> <p>10 These things are not quick and easy to</p> <p>11 organize, and so there's a lot of lead time.</p> <p>12 There's a lot of, in a way, competition for agents</p> <p>13 to get onto the list to be evaluated. There are a</p> <p>14 lot of interested parties that would like the</p> <p>15 agent that they are exposed to or the "et cetera"</p> <p>16 to be evaluated. So the exact mechanics of how</p> <p>17 they make decisions, I haven't been involved in</p> <p>18 that process, but that's, roughly speaking, how</p> <p>19 it's done.</p> <p>20 Q Have you ever submitted a request to</p> <p>21 IARC for them to conduct a complete evaluation of</p> <p>22 talc?</p> <p>23 A Have I ever?</p> <p>24 Q Have you since the publication of the</p> <p>25 monograph in 2010 submitted a request to IARC for</p>	<p>1 sentence -- you know, in the context of a</p> <p>2 conversation about many things, as we do when we</p> <p>3 catch up when we meet. What -- you know, what's</p> <p>4 on the agenda for the monograph program? By the</p> <p>5 way, I think talc might be an interesting thing to</p> <p>6 put on a list for you to consider. And probably</p> <p>7 the conversation ended -- that part of the</p> <p>8 conversation ended and moved on to other things.</p> <p>9 But...</p> <p>10 MR. KLATT: Should we take a break?</p> <p>11 MS. BRANSCOME: I understand the noise,</p> <p>12 but I -- I don't know that Dr. Siemiatycki was</p> <p>13 finished with his answer.</p> <p>14 MS. PARFITT: We'll keep going. I</p> <p>15 didn't -- I was trying to keep a clean record for</p> <p>16 you. That's fine. Keep going.</p> <p>17 MS. BRANSCOME: Well, we -- we can</p> <p>18 pause. I just was trying to let him finish his</p> <p>19 answer.</p> <p>20 MS. PARFITT: We'll keep it paused here</p> <p>21 on the screen. Just a little bit more activity.</p> <p>22 THE VIDEOGRAPHER: We will pause for a</p> <p>23 second. We're going off the record, 2:41 a.m. --</p> <p>24 p.m.</p> <p>25 (Pause.)</p>
Page 139	Page 141
<p>1 them to conduct another complete evaluation of</p> <p>2 talc?</p> <p>3 A I had a quick word with the director of</p> <p>4 the monograph program a few months ago, and I</p> <p>5 suggested it might be time for that. But I'm</p> <p>6 intending to submit a more formal request along</p> <p>7 those lines. So...</p> <p>8 Q Okay. Who -- who specifically did you</p> <p>9 speak with a few months ago?</p> <p>10 A The director of the monograph program is</p> <p>11 Kurt Straif, S-T-R-A-I-F.</p> <p>12 Q And how did you have occasion to be</p> <p>13 speaking with the director?</p> <p>14 A We're acquaintances, and I met him at a</p> <p>15 conference in August, I saw him when I was in Lyon</p> <p>16 in November at a meeting that he organized. So</p> <p>17 I've seen him a few times in the last six months.</p> <p>18 Q When did you have this conversation with</p> <p>19 the director?</p> <p>20 A I think it was in the summer.</p> <p>21 Q So the summer of 2018?</p> <p>22 A Yeah.</p> <p>23 Q And what specifically did you discuss</p> <p>24 with him?</p> <p>25 A I -- I think it might have been a one</p>	<p>1 THE VIDEOGRAPHER: We're going back on</p> <p>2 the record at 2:43 p.m.</p> <p>3 BY MS. BRANSCOME:</p> <p>4 Q When you spoke with the director of the</p> <p>5 monograph program for IARC last summer, did you</p> <p>6 inform him that you have been serving as an expert</p> <p>7 witness on behalf of plaintiffs in litigation</p> <p>8 involving talcum powder products and the claim</p> <p>9 that they cause ovarian cancer?</p> <p>10 A I'm not sure if I told him at that time,</p> <p>11 but I certainly have told him since then.</p> <p>12 Q When you were talking to him about the</p> <p>13 possibility of including talc in a formal,</p> <p>14 complete evaluation subsequent to the one that was</p> <p>15 done in 2006 and published in 2010, did you tell</p> <p>16 him anything about your opinions with respect to</p> <p>17 the likelihood that perineal use of talc can cause</p> <p>18 ovarian cancer?</p> <p>19 A I don't think I did.</p> <p>20 Q What did he say about -- if anything,</p> <p>21 about conducting a formal evaluation of talc?</p> <p>22 A I -- I can't remember if he said</p> <p>23 anything about it.</p> <p>24 Q Have you had any conversations with him</p> <p>25 other than the conversation you had last summer</p>

36 (Pages 138 to 141)

Jack Siemiatycki, Ph.D.

Page 142	Page 144
<p>1 about IARC conducting another examination of talc</p> <p>2 and its potential carcino- -- carcinogenicity --</p> <p>3 whoops, butchered that one -- about it's ability</p> <p>4 to cause cancer?</p> <p>5 A No. I don't think I did.</p> <p>6 Q Now, you said you have an -- you have</p> <p>7 the intention to submit something formal to IARC;</p> <p>8 is that correct?</p> <p>9 A Yes. I've been thinking about it, and</p> <p>10 I -- when I have time, I'll look into the process.</p> <p>11 Q What specifically would you request that</p> <p>12 IARC do at this time with respect to talc?</p> <p>13 A Carry out an evaluation like they did in</p> <p>14 2006 but with up-to-date data.</p> <p>15 Q What data specifically do you think an</p> <p>16 IARC Working Group would need to consider that was</p> <p>17 not available in 2006? What are the key pieces of</p> <p>18 data that you think should be considered by a</p> <p>19 working group?</p> <p>20 A So from an epidemiological database</p> <p>21 point of view, there have been a number of</p> <p>22 publications, as you know, since 2006, including</p> <p>23 some cohort studies, various case-control studies,</p> <p>24 various meta-analyses, a pooled analysis from the</p> <p>25 Terry group. All of that information bears on the</p>	<p>1 sufficient growth in the information base that</p> <p>2 would justify it. And the question is whether</p> <p>3 there are other priorities -- that they have</p> <p>4 things with even higher priorities for them to</p> <p>5 look at.</p> <p>6 Q We agree the perineal use of talc</p> <p>7 currently is classified by IARC as a Group 2B</p> <p>8 chemical, correct?</p> <p>9 A Correct.</p> <p>10 Q So the classification or the definition</p> <p>11 of a Group 2A chemical still applies when there is</p> <p>12 limited evidence of carcinogenicity in humans and</p> <p>13 then sufficient evidence of carcinogenicity in</p> <p>14 experimental animals, correct?</p> <p>15 A Yes.</p> <p>16 Q Has there been developments in the</p> <p>17 experimental animal data since the IARC Working</p> <p>18 Group evaluated the risks associated with the</p> <p>19 perineal use of talc in 2006?</p> <p>20 A I'm not aware whether there has been.</p> <p>21 I -- it does not spring to mind. I can't think of</p> <p>22 any examples.</p> <p>23 Q Now, I noticed in your report you have a</p> <p>24 description, it's on page 24, of the different</p> <p>25 categories that IARC might rate a chemical.</p>
Page 143	Page 145
<p>1 evaluation of cancer risk. It -- it may or may</p> <p>2 not change the view of a working group vis-à-vis</p> <p>3 the view held by the 2006 working group, but</p> <p>4 there's enough new information there that it could</p> <p>5 potentially change points of view.</p> <p>6 And in the mechanism area, I understand</p> <p>7 that there has been additional work on various</p> <p>8 possible areas of -- concerning the migration of</p> <p>9 particles around the body and how this might</p> <p>10 influence the -- the biological plausibility of</p> <p>11 such a -- a process. The possible role, roles of</p> <p>12 inflammation or oxidative stress. There have been</p> <p>13 developments -- there are new publications in</p> <p>14 those areas that might influence a new working</p> <p>15 group or a working group looking at it with new</p> <p>16 eyes.</p> <p>17 For all of those reasons, I think it</p> <p>18 would be timely, and in any case, if a decision</p> <p>19 were made today to do this, such a meeting would</p> <p>20 probably not be held before 2022 or 2023 at the</p> <p>21 earliest. They have a horizon of priorities that</p> <p>22 they're working on. So -- and by then, there</p> <p>23 would likely be additional work that would be</p> <p>24 available.</p> <p>25 So it's an area where I think there is</p>	<p>1 Do you see where I am?</p> <p>2 A Yes, I see where you are.</p> <p>3 Q Okay. And there's a rating system that</p> <p>4 IARC uses that ranges from 1 to 4, correct?</p> <p>5 A Yes.</p> <p>6 Q That -- you have indicated here on</p> <p>7 page 24 on your report that number 4 is not a</p> <p>8 carcinogen. Is that accurate? Is that an</p> <p>9 accurate description of category 4?</p> <p>10 A The wording is longer than that, but</p> <p>11 this is my potted version of what that longer</p> <p>12 version means.</p> <p>13 Q The actual definition is that it is</p> <p>14 probably not carcinogenic, correct?</p> <p>15 A Correct.</p> <p>16 MS. BRANSCOME: Would now be a good time</p> <p>17 for a break?</p> <p>18 MS. PARFITT: I think so. We can take a</p> <p>19 break. Thank you.</p> <p>20 THE VIDEOGRAPHER: We are going off the</p> <p>21 record at 2:51 p.m.</p> <p>22 (Recess.)</p> <p>23 THE VIDEOGRAPHER: This is the beginning</p> <p>24 disc number 4 in the deposition of Jack</p> <p>25 Siemiatycki. We're going back on the record at</p>

37 (Pages 142 to 145)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 146</p> <p>1 3:27 p.m. 2 BY MS. BRANSCOME: 3 Q Good afternoon, again, Dr. Siemiatycki. 4 A Hi. 5 Q Do you still agree with the IARC 6 characterization that the case-control studies 7 evaluating a potential connection between perineal 8 talc powder exposure and ovarian cancer are 9 unusually consistent? 10 A Unusually -- they're very consistent. 11 I'm not sure I would choose the word "unusually." 12 Sometimes when 20 people write a document, 13 everyone doesn't agree with every word, but they 14 are very consistent. 15 Q Do you agree with the IARC determination 16 that the excess in risk in those case-control 17 studies is, quote, modest? 18 A That the what, the increase in risk? 19 Q Or the excess of risk. 20 A Yeah, the -- I mean, the terminology 21 around strength of association -- weak, modest, 22 strong, very strong, medium, et cetera -- it 23 doesn't have -- there are no regulations. There's 24 no epidemiologic handbook that says if a relative 25 risk is in this range, you call it weak or</p>	<p style="text-align: right;">Page 148</p> <p>1 this -- there are not many that have such high 2 relative risks. 3 I'm just giving you a bit of background 4 because the terminology is controversial, and I 5 know it plays into the case of how we -- how we 6 characterize the associations around talc and 7 ovarian cancer. 8 There are a lot of associations that are 9 much less than -- with relative risks much lower 10 than ten that are very well accepted as being 11 causal associations. And so the idea that 12 associations have to be, quote/un- -- quote, 13 strong in the sense that the smoking-lung cancer 14 association was strong is not really tenable any 15 more. There are so many -- most known carcinogens 16 don't have such strong -- don't have such high 17 relative risks. So where you draw the line 18 between strong, moderate, weak, and so on, is a 19 kind of -- is a vague notion. 20 If you're asking me how I would 21 characterize it or how it's characterized -- I'm 22 not sure whether you want to go -- to ask how I 23 would characterize it or how it's characterized by 24 other people or -- 25 Q So, respectfully, Dr. Siemiatycki, my</p>
<p style="text-align: right;">Page 147</p> <p>1 moderate and so on and so forth. 2 So the term "moderate" -- actually, the 3 terminology around strength of associations was 4 probably most influenced by the smoking and lung 5 cancer situation in the '50s and '60s where there 6 were relative risks of ten approximately, ten 7 times as high of risk for smokers as for 8 nonsmokers of getting lung cancer, and that was 9 considered a benchmark for strong associations. 10 And it was not known then whether most carcinogens 11 would fall -- most carcinogens that would be 12 discovered later than that era would fall into the 13 category, you know, of relative risks, around ten 14 or around five or around two or whatever. 15 So the -- the use of the terms "strong," 16 "medium," "weak" has kind of been -- what's the 17 word? -- benchmarked, I guess, by the smoking-lung 18 cancer association. And things that -- 19 subsequently relative risks that were less than in 20 that order of magnitude of ten or so where people 21 didn't refer to them as strong because they were 22 not as strong as smoking and lung cancer. 23 It has subsequently turned out that the 24 level of relative risk for smoking and lung cancer 25 is exceptional among known carcinogens, and that</p>	<p style="text-align: right;">Page 149</p> <p>1 question was, do you agree with the IARC 2 classification of the increase in risk as, quote, 3 modest? 4 A So there was no such classification. It 5 was a word used in a sentence, I guess. There 6 is -- they never classified the association as 7 being strong, weak, moderate or whatever. It was 8 part of a narrative about the -- the body of 9 evidence. 10 Do I agree that -- yeah, I would use 11 that term today. 12 I'm sorry if I digressed from your 13 question. 14 Q You would agree that the point estimate 15 of the meta-analysis that you conducted in 2018 16 that's contained in your report marked Exhibit 10 17 is actually lower than the point estimate that was 18 reported in the Langseth 2008 study, correct? 19 A That's correct. 20 Q And the Langseth 2008 paper, the 21 meta-analysis that you and your coauthors 22 conducted resulted in a 1.35 relative risk, 23 correct? 24 A That's correct. 25 Q And in Exhibit 10, your report in the</p>

38 (Pages 146 to 149)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 150</p> <p>1 MDL, the relative risk point for your 2018 2 meta-analysis is 1.28, correct? 3 A In the 2018 -- yes, that's correct. 4 Q Is it your opinion -- well, let me just 5 ask you, what classification should perineal use 6 of talc get with respect to ovarian cancer under 7 the IARC scale? 8 MS. PARFITT: Objection. Form. 9 THE WITNESS: I -- I'm very reluctant to 10 answer that question because it takes a lot of 11 input from different disciplines to produce an 12 IARC evaluation and then IARC classification. And 13 I feel it's presumptuous for any one person from 14 one discipline to take on that function. 15 What I can say is that in this 16 situation, the epidemiologic evidence alone is 17 sufficient to make the -- make me think that it's 18 more likely than not that there is a causal 19 association. How that proposition would feed into 20 an IARC evaluation is something that would -- that 21 a multidisciplinary group would need to work out, 22 but I think there's at least enough evidence to 23 say it's more likely than not. 24 BY MS. BRANSCOME: 25 Q Because you would agree that a work --</p>	<p style="text-align: right;">Page 152</p> <p>1 causality, but it's not a one-to-one kind of 2 relationship. 3 Now I've lost the thread. I'm sorry. 4 BY MS. BRANSCOME: 5 Q That's okay. I'm going to ask you the 6 question again. 7 Simply the fact that the epidemiological 8 evidence -- 9 A Yeah. 10 Q -- may support a conclusion that more 11 likely than not perineal talc use can cause 12 ovarian cancer, that fact alone is not sufficient 13 to result in a Group 2A classification of a 14 chemical under IARC. 15 MS. PARFITT: Objection. Form. 16 BY MS. BRANSCOME: 17 Q Is that fair? 18 A It's fair -- in principle, it's a fair 19 statement. My feeling is that if that occurred in 20 a meeting, and if -- you know, in an IARC Working 21 Group, the group is subdivided into four 22 subgroups: Initially, an epidemiology group, 23 animal experimentation group, other biological 24 mechanisms, and then expose -- an exposure group. 25 If the epidemiology group came back, had</p>
<p style="text-align: right;">Page 151</p> <p>1 an IARC Working Group, for example, if a former -- 2 formal evaluation was done on talc, in order to 3 classify talc as say a Group 2A, that working 4 group would need to consider multiple lines of 5 evidence, correct? 6 MS. PARFITT: Objection. Form. 7 THE WITNESS: That's correct. 8 BY MS. BRANSCOME: 9 Q And simply the determination, if it were 10 the case that the epidemiological evidence might 11 support the conclusion that perineal use of talc 12 more likely than not can cause ovarian cancer, 13 would not by itself be sufficient for a Group 2A 14 rating. Is that fair? 15 MS. PARFITT: Objection. Form. 16 THE WITNESS: The IARC classification 17 was developed in the 1970s. It was not developed 18 in order to fit into a template that can be used 19 in the courtroom. So terms like "more likely than 20 not" or, you know, whatever terminology would be 21 used in a courtroom around this sort of thing does 22 not fit perfectly on the IARC classification 23 scale. 24 I understand why courts use IARC 25 evaluations as an input to understanding</p>	<p style="text-align: right;">Page 153</p> <p>1 a feeling that there likely -- it was more likely 2 than not that there is a causal association, they 3 have the prerogative to categorize the evidence as 4 being sufficient or limited. And it's not clear 5 how they would categorize the epidemiologic 6 evidence. That would feed into the final 7 evaluation. 8 Q So you would say, as you sit here today, 9 based on what you know about the epidemiological 10 evidence with respect to the perineal use of talc 11 and ovarian cancer, it's not clear whether that 12 would satisfy the criteria for sufficient evidence 13 of carcinogenicity. Is that fair? 14 MS. PARFITT: Objection. Misstates his 15 testimony. 16 THE WITNESS: For -- for a particular 17 working group. Because the other particularity of 18 the IARC process, as with other -- from high level 19 scientific processes, is that it depends a lot on 20 scientific judgment. There's -- there are 21 guidelines for how to combine animal evidence and 22 basic biology evidence in epidemiology, but all of 23 these guidelines are just models of how the final 24 evaluation might be determined. 25 Each working group is sovereign and can</p>

39 (Pages 150 to 153)

Jack Siemiatycki, Ph.D.

Page 154	Page 156
<p>1 take the entire body of evidence and make a</p> <p>2 decision outside the -- the template -- the -- the</p> <p>3 typical template. So a working group could look</p> <p>4 at the evidence and decide is it Group 1, it's</p> <p>5 Group 2B, Group 2A, based on the totality of</p> <p>6 evidence.</p> <p>7 In general, if the epidemiology is</p> <p>8 convincing, it would be Group 1 or Group 2A if</p> <p>9 it's convincing but not -- or let's say if it's --</p> <p>10 if it indicates a risk but it's not definitive.</p> <p>11 BY MS. BRANSCOME:</p> <p>12 Q So you would say if the epidemiology</p> <p>13 indicates a risk but is not definitive, you think</p> <p>14 there's a possibility a chemical would be</p> <p>15 classified as Group 1?</p> <p>16 MS. PARFITT: Objection. Form.</p> <p>17 THE WITNESS: It depends how close to</p> <p>18 definitive it is. So if the feeling of the group</p> <p>19 is that it's almost certain on the basis of</p> <p>20 epidemiologic evidence, then they could classify</p> <p>21 it as Group 1, and they would classify the</p> <p>22 epidemiologic evidence as sufficient in that case.</p> <p>23 BY MS. BRANSCOME:</p> <p>24 Q Okay. On the scale of definitiveness,</p> <p>25 where would you place the evidence of the perineal</p>	<p>1 (A discussion was held off the record.)</p> <p>2 BY MS. BRANSCOME:</p> <p>3 Q Do you remember what you were answering</p> <p>4 or should we --</p> <p>5 A I prefer if -- I'm sorry. If you could</p> <p>6 ask again and --</p> <p>7 Q Let me ask it a different way. Is it</p> <p>8 possible for a confounding variable to essentially</p> <p>9 infect all of the epidemiology on a particular --</p> <p>10 looking at a particular causal relationship?</p> <p>11 MS. PARFITT: Objection. Form.</p> <p>12 THE WITNESS: It is possible.</p> <p>13 BY MS. BRANSCOME:</p> <p>14 Q Okay. If that were to happen and you</p> <p>15 see evidence in the epidemiology that shows a</p> <p>16 consistent increase in risk but there's the</p> <p>17 potential for a confounding variable, would it be</p> <p>18 important to look at the potential biological</p> <p>19 mechanism to see whether or not the agent might be</p> <p>20 causing the outcome?</p> <p>21 A So the confounding factor is -- is a</p> <p>22 factor that could be captured in epidemiologic</p> <p>23 studies but hasn't been. Is that what you are</p> <p>24 alluding to? And the biologic -- but the biologic</p> <p>25 mechanism that you're referring to would involve</p>
Page 155	Page 157
<p>1 use of talc and ovarian cancer as of today?</p> <p>2 A Based on the epidemiologic evidence.</p> <p>3 Q Correct.</p> <p>4 A I -- I go back to more likely than not.</p> <p>5 Not -- not definite, but more likely than not.</p> <p>6 Q Is it possible to have a situation where</p> <p>7 the epidemiological evidence is supportive of a</p> <p>8 causal association, but the group working on</p> <p>9 biological mechanism determines that there isn't a</p> <p>10 sufficient mechanism by which that chemical could</p> <p>11 have caused that outcome?</p> <p>12 A That can happen.</p> <p>13 Q And what would the explanation for an</p> <p>14 inconsistency like that be?</p> <p>15 A It would require quite a high level of</p> <p>16 understanding of the mechanistic evidence.</p> <p>17 So -- I -- I don't know if it has</p> <p>18 happened, so I'm -- I'm trying to think through</p> <p>19 memory whether I can think of any examples. I'm</p> <p>20 not sure that it has happened.</p> <p>21 THE VIDEOGRAPHER: Excuse me, Counsel.</p> <p>22 The microphone just fell.</p> <p>23 THE WITNESS: Oh, I'm sorry.</p> <p>24 MS. BRANSCOME: That's okay. You just</p> <p>25 knocked off your microphone.</p>	<p>1 that confounding factor or is this -- are you --</p> <p>2 are you confounding "confounding" with -- with</p> <p>3 biologic mechanism issues?</p> <p>4 Q Okay. Let me -- let me give you a</p> <p>5 specific hypothetical.</p> <p>6 A Yes.</p> <p>7 Q Okay. So let's say hypothetically, for</p> <p>8 example, recall bias --</p> <p>9 A Okay.</p> <p>10 Q -- affects the epidemiology related to</p> <p>11 looking at the causal relationship, and whether</p> <p>12 you agree with it or not, but we'll just say</p> <p>13 hypothetically that affected the epidemiology of</p> <p>14 talc use and ovarian cancer.</p> <p>15 A Can I just interrupt for a</p> <p>16 terminological thing? So typically we don't refer</p> <p>17 to recall bias as a confounding factor.</p> <p>18 Q Ah.</p> <p>19 A We refer to it as a bias, a type of</p> <p>20 bias, but -- you know, that's just technical, but</p> <p>21 for the record, if we're going to be discussing</p> <p>22 this further.</p> <p>23 Q I appreciate the clarification.</p> <p>24 A Thank you.</p> <p>25 Q Well, first of all, let me just ask you,</p>

40 (Pages 154 to 157)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 158</p> <p>1 is recall bias something that could affect the 2 reliability of conclusions drawn from 3 epidemiological studies that rely on recall to 4 define exposure to the agent? 5 A Yes, it could, hypothetically. 6 Q Okay. Is recall bias something that 7 potentially could affect the epidemiological 8 studies of the perineal use of talc? 9 A Yes, theoretically, it could. 10 Q Okay. In situations where there is a 11 potential bias or a confounding variable that has 12 not been identified, how should epidemiological 13 evidence be evaluated in comparison to the other 14 categories of evidence that are considered, for 15 example, by an IARC Working Group? 16 A Well, these things would typically be 17 evaluated in a -- a nonquantitative way. You 18 can't really quantify what is the potential impact 19 of a confounder that you don't know about or that 20 you haven't measured. It's kind of a theoretical 21 thing. 22 And the same with -- with recall bias 23 where there could be some evidence about it. And 24 certainly when I reviewed the evidence on this 25 topic, the possibility of recall bias was one of</p>	<p style="text-align: right;">Page 160</p> <p>1 exposures, all -- you know, environmental things 2 that they've been exposed to, et cetera, there -- 3 there's no reason why exposure to talc would be 4 the one item in epidemiologic questionnaires that 5 would provoke recall bias where nothing else does. 6 So if it's a part of a general 7 phenomenon, this recall bias, which is certainly a 8 hypothetical possibility, we would see that most 9 of the associations that were tested in case- 10 control studies would be found to be high risks, 11 maybe significantly high risks. 12 That's not what we observed. That's not 13 what I've observed in my research. I have 14 estimated -- and in the book that I showed this 15 morning, there are literally thousands of odds 16 ratio estimates in there. But in all of my 17 research on over nearly four decades, I've 18 published a lot of evidence, and I can show some 19 examples, where there's no difference between 20 cases and controls because there is no effect, 21 there's no causal association between the two 22 things, and the case -- although people were -- 23 cases were asked about, let's say, alcohol 24 consumption, and controls were asked about alcohol 25 consumptions, the cases didn't overreport. They</p>
<p style="text-align: right;">Page 159</p> <p>1 the main stumbling blocks to arriving at an 2 opinion, as it was for the IARC panel in 2006. 3 You know, we are all aware of that hypothetical 4 possibility, and we think about whether something 5 of that magnitude -- something like that could 6 artifactually generate an appearance of a relative 7 risk. 8 My own way of dealing with that was to 9 look at the phenomenon of recall bias from the 10 perspective of both my own research, which has 11 mainly involved case-control studies, some cohort 12 studies but mainly case-control studies, and 13 research that I've read about, experienced, 14 reviewed for journals, et cetera. 15 And if the phenomenon of recall bias 16 were sort of a general across-the-board phenomenon 17 that infects and in a way discredits all 18 case-control studies -- interviewing cases, people 19 who are sick people, interviewing people who are 20 well and comparing the responses -- if this were 21 an inherent systemic problem, what we would 22 observe in general would be a plethora of fake 23 excess risks. Because almost everything you would 24 ask people about, whether it's smoking, alcohol 25 consumption, physical activity, diet, workplace</p>	<p style="text-align: right;">Page 161</p> <p>1 didn't say, Oh, well, they want to know if this 2 caused my cancer, and therefore I'm going to tell 3 them, yes, I consumed a lot of beer and wine and 4 so on, or smoking or whatever. 5 So we don't see this as a general 6 phenomenon that people overreport -- that cases 7 overreport compared to controls. 8 Q Have you looked at the phenomenon of 9 recall bias specifically when the agent being 10 investigated is part of public wide -- wide scale 11 litigation? 12 MS. PARFITT: Object to form. 13 THE WITNESS: So I haven't personally -- 14 let me just think if any of my research has 15 involved situations analogous to that. 16 Yes. Cell phones and brain cancer. So 17 I was involved in a large cell phone and brain 18 cancer study, and we asked cases about their use 19 of cell phones, and we asked controls about their 20 use of cell phones. And while the interpretation 21 of the results of the study were somewhat 22 controversial, there was no generalized phenomenon 23 of cases reporting more cell phone use than 24 controls in that particular study. 25 So that -- I can't think of another</p>

41 (Pages 158 to 161)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 162</p> <p>1 example in my career of sort of one of these 2 generally suspected things. I mean, I've studied 3 a lot of occupational exposures, but those tend to 4 be more obscure, and people don't, you know, have 5 the same visceral reaction maybe to were you 6 exposed to formaldehyde or benzene or this or 7 that. 8 BY MS. BRANSCOME: 9 Q For purposes of your meta-analysis, you 10 looked at the binary question of ever having used 11 talc and never having used talc, correct? 12 A Among other -- not only that, but that 13 in addition to, yeah. 14 Q Yes. For example, you were not -- your 15 data isn't stratified based off of having used it 16 to a certain degree of frequency, correct? 17 A The -- the meta-analysis, no. 18 Q Okay. 19 A I -- I looked at dose-response 20 information within the studies that provided it, 21 but I didn't do any meta-analyses of the -- of the 22 dose-response data. 23 Q Okay. So I -- I asked you sort of the 24 broad question about what has changed in the 25 scientific literature with respect to perineal use</p>	<p style="text-align: right;">Page 164</p> <p>1 A Yeah. 2 Q Are those areas in which you contend 3 there is developments in the scientific literature 4 that is relevant to the question of the connection 5 between perineal use of talc and ovarian cancer? 6 A Yes. 7 Q Okay. So I just wanted to talk to you 8 about which of those categories you are 9 independently offering an expert opinion as 10 opposed to you are deferring to others. Does that 11 make sense? 12 A Yes. 13 Q All right. So you are offering an 14 expert opinion about developments in the 15 epidemiology, correct? 16 A Correct. 17 Q Are you testifying as an expert in 18 developments in the scientific literature with 19 respect to toxicology? 20 A No. 21 Q Are you testifying as an expert with 22 respect to developments in the scientific 23 literature in molecular biology? 24 A No. I -- I'm aware that there have been 25 some publications since 2006 in that domain, but</p>
<p style="text-align: right;">Page 163</p> <p>1 of talc since the 2006 IARC Working Group, but I 2 want to point you now sort of specific to what you 3 say in your report and ask you some more detailed 4 questions about what's changed. 5 So if you could turn to page 67 of 6 Exhibit 10 there. 7 A Yes. 8 Q Sorry, just one moment. My pencil has 9 died on me. Just give me one second. All right. 10 All right. So you have a Section 9 here 11 that says: "Contrast with IARC monograph and 12 other reviews." Do you see that? 13 A I do. 14 Q All right. And you asked the question 15 in your report: "What has changed in the years 16 since the IARC review?" Correct? 17 A Correct. 18 Q All right. And you talk about 19 additional studies and scientific literature 20 addressing a variety of topics, including 21 epidemiology, toxicology, molecular biology and 22 mechanistic studies; is that correct? 23 A Sorry, are -- you're saying that I 24 referred to those domains? 25 Q Yes.</p>	<p style="text-align: right;">Page 165</p> <p>1 I'm not offering an opinion about those. 2 Q Are you offering an opinion with respect 3 to the biological mechanism by which the perineal 4 use of talc may or may not cause ovarian cancer? 5 A Not an opinion. Again, I'm -- I'm 6 acknowledging that there is new evidence, and I 7 mention some of that, yes. 8 Q But as an expert, you're not here to 9 opine on the strengths and weaknesses of that 10 evidence or how it might be weighted against other 11 evidence that's in the field related to biological 12 mechanism; is that fair? 13 MS. PARFITT: Objection. Form. 14 THE WITNESS: That's correct. 15 BY MS. BRANSCOME: 16 Q Okay. Now, you state in your report 17 that: "The various possible biases" -- this is 18 still on page 67 -- "that are on the table remain 19 substantially similar to the ones that were 20 considered by the IARC panel." Correct? 21 A Correct, I said that. 22 Q Okay. What are the various possible 23 biases that you refer to there? 24 A Well, I -- I'd have to go back to the 25 IARC 2006 report to give you a full answer, but I</p>

42 (Pages 162 to 165)

Jack Siemiatycki, Ph.D.

Page 166	Page 168
<p>1 guess the main things that were highlighted at the</p> <p>2 time were measurement error, how to assess</p> <p>3 exposure to talc, and what the impact of</p> <p>4 measurement error might be on the estimates,</p> <p>5 recall bias and the possible impact that that</p> <p>6 might have.</p> <p>7 Q What do you mean by "measurement error"?</p> <p>8 A Measurement error is closely related to</p> <p>9 recall bias, but it's not the same thing.</p> <p>10 Measurement -- recall bias refers to differences</p> <p>11 between cases and controls in the way they</p> <p>12 respond. Measurement error refers to inaccurate</p> <p>13 recall and reporting, irrespective of whether</p> <p>14 there are cases and controls. There can be</p> <p>15 exactly the same degree of error in -- in recall</p> <p>16 between cases and controls.</p> <p>17 So it's not differential. It's not --</p> <p>18 it's not a recall bias between the two groups.</p> <p>19 But if there's error, if some people report high</p> <p>20 use, and in fact they had medium use and all --</p> <p>21 all this sort of thing, that impacts the estimates</p> <p>22 of relative risk -- even though those errors are</p> <p>23 the same in the cases and controls, that impacts</p> <p>24 the estimates of relative risk, and that generally</p> <p>25 impacts it in the direction of attenuating the</p>	<p>1 there is error in diagnose -- I guess you -- what</p> <p>2 you're alluding to -- let me make sure, you're</p> <p>3 alluding to possible misdiagnosis between</p> <p>4 mesothelioma and ovarian cancer. Is that where</p> <p>5 you're going?</p> <p>6 Q That -- that is one possibility, yes.</p> <p>7 A So in the case of a -- in this situation</p> <p>8 of a cohort study, following up a group of women,</p> <p>9 some of them really get mesotheliomas that are not</p> <p>10 linked to talc exposure, but those women are</p> <p>11 classified as ovarian cancers erroneously.</p> <p>12 They -- that error would have the effect of</p> <p>13 reducing the apparent risk compared to the real</p> <p>14 risk of talc and ovarian cancer. In that context,</p> <p>15 it would have that effect.</p> <p>16 In the context of a case-control study,</p> <p>17 where you start with a group of women who have</p> <p>18 been diagnosed with ovarian cancer but in truth</p> <p>19 some of them had peritoneal mesotheliomas, and you</p> <p>20 compare them to controls, the women who -- and</p> <p>21 assuming that talc has no effect on peritoneal</p> <p>22 mesothelioma, which is another assumption to make,</p> <p>23 but -- but assuming that it does on ovarian</p> <p>24 cancer, just for the sake of argument, lumping in</p> <p>25 the mesotheliomas with the ovarian cancer cases</p>
Page 167	Page 169
<p>1 relative risk estimates, lowering them from what</p> <p>2 they really are.</p> <p>3 So that's one error -- one type of error</p> <p>4 that is -- that permeates epidemiology and that is</p> <p>5 present, and that we have to be conscious of and</p> <p>6 try to evaluate.</p> <p>7 Q Could there be measurement error related</p> <p>8 to misdiagnoses?</p> <p>9 A Yes.</p> <p>10 Q And if there was misdiagnoses in the</p> <p>11 sense that someone was diagnosed with ovarian</p> <p>12 cancer but in fact had a different form of cancer,</p> <p>13 that could actually result in an artificially</p> <p>14 inflated relative risk, correct?</p> <p>15 MS. PARFITT: Objection. Form.</p> <p>16 THE WITNESS: So that kind of error in</p> <p>17 diagnosis has subtly different meaning in the</p> <p>18 context of a case-control study and a cohort</p> <p>19 study. And if -- if you want, I'll -- I could try</p> <p>20 to answer your question in -- in each context.</p> <p>21 BY MS. BRANSCOME:</p> <p>22 Q Okay.</p> <p>23 A So it has an effect in both contexts,</p> <p>24 but it's a slightly different effect.</p> <p>25 So in the context of a cohort study, if</p>	<p>1 would again create a reduction in the estimate of</p> <p>2 relative risk.</p> <p>3 So in both situations -- I would have to</p> <p>4 work it out on a pad of paper, but I think in both</p> <p>5 cases -- and I did write something about this in</p> <p>6 my report, so if you don't --</p> <p>7 Q Feel free to take a look. Sure.</p> <p>8 A -- mind. Thinking out loud in the</p> <p>9 middle of a deposition is sometimes harder than</p> <p>10 thinking out loud at home. (Peruses document.)</p> <p>11 So I'm looking at page 57,</p> <p>12 Section 7.2.5, at the bottom of the page and then</p> <p>13 going on to the next page, and see if what I said</p> <p>14 then is -- corresponds roughly to what I just</p> <p>15 said.</p> <p>16 I think basically it -- it agrees with</p> <p>17 what I just said. Basically the effect would be</p> <p>18 to attenuate estimates in this situation.</p> <p>19 Q So we discussed -- of the various</p> <p>20 possible biases that might affect the</p> <p>21 epidemiology, we talked about measurement error,</p> <p>22 recall bias, diagnostic error.</p> <p>23 Are there any other potential biases</p> <p>24 that should be considered when evaluating the</p> <p>25 epidemiology on the use of talc peritoneally?</p>

43 (Pages 166 to 169)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 170</p> <p>1 A Yes. So I -- I did list a bunch of 2 possible biases in my report. And one of them -- 3 if you don't mind, I'll just go through the titles 4 of the different things that -- starting on 5 page 53. 6 Bias due to nonresponse or 7 nonparticipation. If you carry out a case-control 8 study, and you get -- you identify a group of a 9 hundred women who are cases, and you ask them to 10 participate and only 50 agree to participate, and 11 the ones who agree to participate happen to be the 12 only ones who used talcum powder, and the other 50 13 that you don't know about never used it, that 14 would be a problem. And -- but it also depends 15 what happens among the controls. Among the 16 controls, do you get the same nonresponse bias? 17 So there's a -- that is one possible bias in 18 case-control studies. 19 The second one I listed was recall or 20 reporting bias that we've discussed. 21 The third one is what I call 22 nondifferential or random error, which we 23 discussed. It's error in reporting that is equal 24 in cases and controls, but it has an impact on 25 relative risk estimates.</p>	<p style="text-align: right;">Page 172</p> <p>1 other biases. And this is why I corrected you at 2 the beginning when we were talking about 3 confounding and bias. I mean it's not -- I'm not 4 criticizing you in any way for this. It's -- 5 there is terminological gray zones in 6 epidemiology, so it's not always clear. But -- 7 Q Would it be fair to describe a 8 confounding variable in the context of ovarian 9 cancer as something that as of now is unknown that 10 makes a particular individual more likely to 11 develop ovarian cancer that also, for whatever 12 reason, makes them more likely to use talcum 13 powder? 14 A Yes. That would be a correct 15 interpretation of "confounding." 16 Q And that is something that should be 17 taken into account in evaluating the epidemi- -- 18 epidemiological literature, correct? 19 A That's correct. 20 Q And you would agree that the scientific 21 community at large has not yet understood all of 22 the potential factors that might contribute to a 23 susceptibility to develop ovarian cancer, correct? 24 MS. PARFITT: Objection. Form. 25 THE WITNESS: Sorry, I -- I was hearing</p>
<p style="text-align: right;">Page 171</p> <p>1 The fourth one, which we haven't 2 discussed, has to do -- it's mainly a problem for 3 cohort studies. And if you carry out a cohort 4 study of -- focused on cancer, and you collect 5 information about exposure, and then follow them 6 for two years to find out how many of them got 7 cancer, and whether there is a difference between 8 the people who were exposed and the people who are 9 not exposed, well, that would be pretty hopeless 10 because it takes more than two years for cancers 11 to develop and be diagnosed. So short follow-up 12 periods in cohort studies would be a source of 13 bias in cohort studies. 14 Diagnostic errors, we've just discussed. 15 Initiation of powdering as a result of 16 ovarian cancer, is it possible that some women 17 who -- that there is a statistical association 18 between powdering and ovarian cancer, but it's 19 because the women who get ovarian cancer in the 20 early stages, to relieve symptoms or to deal with 21 discomfort start to use powdering. And so that is 22 a potential bias. 23 Confounding is the next category, and 24 that's -- it's a huge category of potential 25 distortion that is a little bit different from the</p>	<p style="text-align: right;">Page 173</p> <p>1 two things with my two ears. 2 MS. PARFITT: Sorry. 3 THE WITNESS: Can you repeat the last 4 part? 5 BY MS. BRANSCOME: 6 Q Yeah. You would agree that all of the 7 factors that might make someone susceptible to 8 developing ovarian cancer are not currently known. 9 A That's correct. 10 So are -- are you -- are you getting at 11 the potential impact of confounding as -- from 12 unknown factors as something that hasn't been 13 properly evaluated or that is part of this 14 picture? 15 Q I am simply asking you -- 16 A Yes. 17 Q -- questions about your opinions. 18 A Yes, yeah. 19 Q But you agree that the possibility of an 20 unknown confounding variable is something that, as 21 an epidemiologist, you would at least consider 22 when looking at the strength of association 23 established by epidemiological studies, correct? 24 A I would consider it, and I've considered 25 it in the context of this literature, and in my</p>

44 (Pages 170 to 173)

Jack Siemiatycki, Ph.D.

Page 174	Page 176
<p>1 opinion, it's unlikely that any confounding factor</p> <p>2 or factors would create the pattern of results</p> <p>3 that we see.</p> <p>4 And if I could give you one piece of</p> <p>5 evidence about why I -- you know, that illustrates</p> <p>6 why I think that. A confounding factor can only</p> <p>7 bias the result by a certain amount; not as strong</p> <p>8 as its own relationship to the risk factor.</p> <p>9 So if there's a risk fact- -- if the</p> <p>10 relative risk that we see around 1.3 -- ballpark,</p> <p>11 let's for the sake of argument say 1.3 -- is due</p> <p>12 to a confounding factor, that confounding factor</p> <p>13 would have to have an association with ovarian</p> <p>14 cancer much strong -- stronger than 1.3, but much</p> <p>15 stronger than 1.3.</p> <p>16 And I can -- just to illustrate that, I</p> <p>17 actually have a publication -- I think I gave you</p> <p>18 a copy of that publication of mine that</p> <p>19 illustrates my own research on occupational causes</p> <p>20 of cancer --</p> <p>21 THE VIDEOGRAPHER: Sorry.</p> <p>22 THE WITNESS: Am I again disconnected?</p> <p>23 Okay. When I get excited...</p> <p>24 Yes, that's the one. If I could --</p> <p>25 MS. PARFITT: Make a copy.</p>	<p>1 illustrate the potential impact of confounding in</p> <p>2 this issue of ovarian cancer and talc, and what --</p> <p>3 to explain why I believe that the excess risks</p> <p>4 that we observe are unlikely to be explained by</p> <p>5 confounding.</p> <p>6 Q Okay. You would agree, though, that if</p> <p>7 there was a confounding variable that had a</p> <p>8 relationship with, in this case, ovarian cancer</p> <p>9 that was stronger than 1.3, it could explain an</p> <p>10 increase of 1.3 associated with the use of talc if</p> <p>11 it was similarly connected to the use of talcum</p> <p>12 powder products --</p> <p>13 MS. PARFITT: Objection. Form.</p> <p>14 BY MS. BRANSCOME:</p> <p>15 Q -- correct?</p> <p>16 MS. PARFITT: Objection. Form.</p> <p>17 THE WITNESS: Well, one of the points</p> <p>18 that I want to illustrate is that not only would</p> <p>19 it have to be stronger than 1.3, it would have to</p> <p>20 be a lot stronger than 1.3.</p> <p>21 BY MS. BRANSCOME:</p> <p>22 Q How strong would it need to be?</p> <p>23 MS. PARFITT: Objection. Form.</p> <p>24 THE WITNESS: I'll answer that by -- by</p> <p>25 showing you what -- what we found when we were</p>
Page 175	Page 177
<p>1 THE WITNESS: Do you have any copies?</p> <p>2 MS. PARFITT: I'm looking to see.</p> <p>3 THE WITNESS: So -- well, if I could</p> <p>4 just read a couple of sentences from the abstract</p> <p>5 of this, I'll tell you what this is about. It's</p> <p>6 a study of --</p> <p>7 BY MS. BRANSCOME:</p> <p>8 Q Could you, please, Dr. Siemiatycki,</p> <p>9 identify for me --</p> <p>10 A Oh.</p> <p>11 Q -- what is the paper from which you are</p> <p>12 reading.</p> <p>13 A Yes. This is a paper called "Degree of</p> <p>14 confounding bias related to smoking, ethnic group,</p> <p>15 and socioeconomic status in estimates of the</p> <p>16 associations between occupation and cancer."</p> <p>17 Q Is this something that you cite to or</p> <p>18 reference anywhere in the report that you</p> <p>19 submitted in the MDL?</p> <p>20 A It's only in my CV, which is I think</p> <p>21 part of the record.</p> <p>22 Q What led you to specially identifying</p> <p>23 this article, which you seem to have handy today</p> <p>24 here at the deposition?</p> <p>25 A Because I was thinking about how to</p>	<p>1 examining the associations between different</p> <p>2 occupations and lung cancer.</p> <p>3 So occupation and lung cancer, there are</p> <p>4 some true associations there, as you probably</p> <p>5 know, but -- and we collected information about</p> <p>6 people's occupations. We also collected</p> <p>7 information about their smoking history, their</p> <p>8 socioeconomic status, their ethnicity and so on.</p> <p>9 A lot of factors.</p> <p>10 But the most important part of this was</p> <p>11 looking at the association between lung cancer and</p> <p>12 smoking and -- lung cancer and occupation. We</p> <p>13 chose I think 15 occupations, estimated the odds</p> <p>14 ratios for 15 different associations between</p> <p>15 occupations and lung cancer, and we controlled for</p> <p>16 smoking or we didn't control for smoking. We</p> <p>17 compared the results when you control for smoking</p> <p>18 and when you don't compare -- control for smoking.</p> <p>19 BY MS. BRANSCOME:</p> <p>20 Q Respectfully, Dr. Siemiatycki, I only</p> <p>21 have seven hours to ask you questions.</p> <p>22 A Okay.</p> <p>23 Q Your -- your -- counsel for the</p> <p>24 plaintiffs can ask you to fully explain other</p> <p>25 research that you've done.</p>

45 (Pages 174 to 177)

Jack Siemiatycki, Ph.D.

Page 178	Page 180
<p>1 A Okay.</p> <p>2 Q It sounds very interesting.</p> <p>3 A Thank you.</p> <p>4 Q But my question to you is, in your</p> <p>5 opinion, how strong would an association have to</p> <p>6 be with a confounding variable in order to play a</p> <p>7 significant role in a 1.3 relative risk?</p> <p>8 A My --</p> <p>9 MS. PARFITT: Objection. Form.</p> <p>10 THE WITNESS: -- guess, it would have to</p> <p>11 be in the order of 3 to 5. Because it also</p> <p>12 depends on the association between a talc</p> <p>13 powdering behavior and this unknown confounder.</p> <p>14 BY MS. BRANSCOME:</p> <p>15 Q Okay. Are there limitations to</p> <p>16 performing a meta-analysis?</p> <p>17 MR. TISI: Do you want to mark that or</p> <p>18 no?</p> <p>19 MS. BRANSCOME: No.</p> <p>20 THE WITNESS: Are there --</p> <p>21 BY MS. BRANSCOME:</p> <p>22 Q -- limitations to performing a</p> <p>23 meta-analysis?</p> <p>24 A I -- I'm not sure what -- like --</p> <p>25 Q I believe you referenced earlier that</p>	<p>1 In -- one of the differences between --</p> <p>2 as I mentioned earlier, between -- some types of</p> <p>3 meta-analyses are carried out on clinical trials,</p> <p>4 in fact, I would say the bulk of meta-analysis is</p> <p>5 conducted in clinical trials research where the</p> <p>6 research protocols are really very standardized</p> <p>7 from one study to another, and that enhances the</p> <p>8 ability to make inferences from the results of a</p> <p>9 meta-analysis.</p> <p>10 In observational epidemiology, this</p> <p>11 isn't true. We have very different kinds of study</p> <p>12 design and problems that arise in different</p> <p>13 studies, and this leads in itself to variability</p> <p>14 and heterogeneity. And it is sometimes imagined</p> <p>15 that heterogeneity is a reflection -- some sort of</p> <p>16 a reflection of different risks in different</p> <p>17 populations or something like that. It's mainly</p> <p>18 -- it's at least in part a reflection of the fact</p> <p>19 that different study designs and different -- just</p> <p>20 not just the overall architecture of the design,</p> <p>21 but the implementation, how people were</p> <p>22 interviewed, what the questions were and so on,</p> <p>23 influences the results of a study. That varies</p> <p>24 from study to study, and that creates</p> <p>25 heterogeneity. So --</p>
Page 179	Page 181
<p>1 you teach a class on epidemiological</p> <p>2 methodologies; is that correct?</p> <p>3 A Yes.</p> <p>4 Q Okay. So presumably, when you teach a</p> <p>5 class you discuss the strengths and the</p> <p>6 limitations of different types of analyses. Fair?</p> <p>7 A It comes into the course, yes.</p> <p>8 Q Okay. So in the context of looking at</p> <p>9 the strengths and the weaknesses of different</p> <p>10 types of analyses, are there any weaknesses or</p> <p>11 limitations to a meta-analysis?</p> <p>12 A Weakness, okay. Because the word</p> <p>13 "limitation" doesn't always mean weaknesses.</p> <p>14 Meta-analysis depends on having reliable</p> <p>15 data. So the basic studies that you use and the</p> <p>16 basic data that you use in a meta-analysis has to</p> <p>17 be sufficiently reliable to support a good</p> <p>18 meta-analysis.</p> <p>19 The data have to be sufficiently</p> <p>20 comparable in nature. So putting apples and</p> <p>21 oranges and grapes into the same meta-analysis</p> <p>22 would be a problem. Different kinds of apples,</p> <p>23 yes, but different -- et cetera. So you have to</p> <p>24 be careful that you're really measuring the same</p> <p>25 thing, have the same outcomes.</p>	<p>1 Q Does heterogeneity -- do you want</p> <p>2 heterogeneity in a meta-analysis? Is it a good</p> <p>3 thing or does it weaken the meta-analysis?</p> <p>4 A It depends on the purpose of the</p> <p>5 meta-analysis. So some meta-analyses have as one</p> <p>6 of their objectives to identify populations in</p> <p>7 which the effect of the drug or the -- whatever</p> <p>8 you're studying is different from one population</p> <p>9 to another. That is a situation where you want to</p> <p>10 identify heterogeneity, and you want to try to</p> <p>11 target heterogeneity and the different</p> <p>12 populations, different studies, the different</p> <p>13 methods of administering medication, or whatever</p> <p>14 the differences are between studies.</p> <p>15 In observational epidemiology, it's</p> <p>16 rarely the case that heterogeneity -- that a</p> <p>17 formal evaluation of heterogeneity is -- is useful</p> <p>18 or actionable. Usually the bottom line result</p> <p>19 doesn't change. For example, there are</p> <p>20 meta-analyses of smoking and lung cancer where the</p> <p>21 meta-analysis demonstrates heterogeneity of the</p> <p>22 results. The results are always between a</p> <p>23 relative risk of 5 or 6 and a relative risk of 10</p> <p>24 or 12.</p> <p>25 Now, for the question of -- for the</p>

46 (Pages 178 to 181)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 182</p> <p>1 qualitative question does smoking cause lung 2 cancer, it really doesn't matter if the relative 3 risk is 5 or 12. So that heterogeneity has 4 absolutely no bearing on the question that is 5 being asked, and the best answer ignore -- would 6 ignore heterogeneity. It doesn't really matter. 7 If you're trying to find out in which 8 populations does smoking have a greater impact, 9 then you might want to say, Okay, let's -- which 10 are the populations where the relative risks were 11 5 and which are populations where the relative 12 risks are 12? Can we identify differences between 13 it? Are they different countries, different 14 ethnic groups, and so on and so forth. 15 So it's a longwinded answer, and I'm not 16 sure if that gets to the question that you were 17 asking. 18 Q Well, you said in your report -- and 19 it's on page 17, if you want to look at it -- you 20 stated -- it's at the top of the page. 21 A Yes. 22 Q "Unless a significant methodological 23 flaw can be identified that has caused the 24 heterogeneity, the best overall estimate remains 25 the meta-estimate."</p>	<p style="text-align: right;">Page 184</p> <p>1 of the weaknesses is that it is sometimes 2 fetishized, and that people put too much -- you 3 know, have sort of a magical belief in the value 4 of meta-analysis result, which is not justified. 5 Often the results of certain critical studies are 6 as valuable or more valuable than those of a 7 meta-analysis, especially when -- especially in 8 observational epidemiology when it's hard to 9 really identify all of the parameters that 10 influence the quality of a study. 11 And so determining what studies to 12 include and which data from each study to include 13 is tricky. It requires judgment. Those judgments 14 can be wrong. They can be contested. Sometimes 15 one very good study is as powerful, but -- it's 16 part of -- a meta-analysis is part of a package of 17 information that I would look at in evaluating the 18 risks. 19 Q Okay. You mentioned the concept that a 20 scientific judgment needs to be used in 21 determining what studies and, more specifically, 22 what data within those studies to include in a 23 meta-analysis, correct? 24 A That's correct. 25 Q And you would agree that -- and I</p>
<p style="text-align: right;">Page 183</p> <p>1 Did I read that correctly? 2 A Yeah. I guess we should read the 3 beginning of the sentence just to -- oh, yes. Oh, 4 yes, I see. Sorry. Yes, I agree with you. 5 Q So what is the basis for that statement? 6 A The basis is that it's correct. Are you 7 offering an alternative to this that I should 8 consider? 9 Q Is there -- I guess my question is, is 10 it -- is it correct because you think it is 11 correct? Or can you point me to something that 12 would support that principle and explain it more 13 fully? 14 A I -- I haven't looked for any 15 documentary evidence that this has been written up 16 in this way anywhere. I've been interpreting 17 meta-analyses in this way, and I believe this to 18 be true. 19 Q Okay. So we talked about a few 20 different things that you articulated as potential 21 weaknesses to a meta-analysis. Are there any 22 other weaknesses to a meta-analysis? 23 A Possibly. Are there any that you can 24 identify? I will be happy to -- you know, I'm 25 just -- to meta-analysis as a concept, I think one</p>	<p style="text-align: right;">Page 185</p> <p>1 believe you just referenced it -- that there can 2 be errors in judgment in determining what studies 3 to include or not include or what data to include 4 or not include, correct? 5 A I -- 6 MS. PARFITT: Objection. Form. 7 THE WITNESS: I would not characterize 8 these things as errors in judgment. There can be 9 differences in judgment that are legitimate 10 that -- where people, equally well motivated and 11 well trained and experienced, can arrive at 12 different judgments on some of these things. 13 BY MS. BRANSCOME: 14 Q Did you have a specific methodology that 15 you used in determining which relative risk or 16 odds ratio to include from each of the studies 17 that you include in your meta-analysis? 18 A Carefully reading the study, carefully 19 reading the tables and the reports of what is in 20 the paper, understanding what is there, and then 21 making a determination on that basis. 22 Q And those were, to use your words, 23 quote, judgment calls; is that fair? 24 A Yes. 25 Q Okay.</p>

47 (Pages 182 to 185)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 186</p> <p>1 A There is no alternative to judgment in 2 science. 3 Q The meta-analysis in your MDL report is 4 different than the meta-analysis in your 2016 5 report; is that correct? 6 A The bottom line result, you're saying? 7 Well, yes, but also in the 2016 report, I 8 presented I think eight different estimates, 9 depending on scenarios of which studies to include 10 and which result from which studies to include, 11 because there were some borderline judgments where 12 I thought the best thing would be just -- just 13 provide all of the different options. 14 In 2018, I adopted a different strategy. 15 I thought, well, the best service I can provide 16 the court is to give my best estimate of which 17 studies and which data to include, and then to 18 provide a set of alternatives that I call 19 sensitivity analyses. So that's one difference 20 between the two reports. 21 Q Okay. 22 A But there were some differences in which 23 studies were included and which result in which 24 studies were included from the one to the other. 25 Q Well, let me start at the very basic</p>	<p style="text-align: right;">Page 188</p> <p>1 is the difference doing it this way or doing it 2 that way. 3 Q Okay. 4 A But it's largely overlapped. I mean, 5 I'll look at it and see if I can quickly recognize 6 which studies might have been -- 7 Q Well, I can point you -- 8 A Okay. If you've done it, that's great. 9 Q Yeah. So you included Green 1997 in 10 your 2016 meta-analysis, correct? 11 A Yes. 12 Q And you did not include Green 1997 in 13 your 2018 meta-analysis, correct? 14 A Correct. 15 Q Why did you -- did including Green 1997 16 in your earlier report, do you consider that to be 17 a flaw? 18 MS. PARFITT: Objection to form. 19 THE WITNESS: I don't consider any of 20 these things flaws. They were judgment calls, and 21 I -- actually, in that case, I learned in between 22 some information that I didn't know in 2016 that 23 made that decision the right one. 24 BY MS. BRANSCOME: 25 Q What information did you learn?</p>
<p style="text-align: right;">Page 187</p> <p>1 level. Are there any studies that are included in 2 your 2018 meta-analysis that were not available at 3 the time that you did your 2016 meta-analysis? 4 A I don't think so. 5 Q Okay. So you mention that you made some 6 changes to which studies you included and even 7 within that, some of your numbers are slightly 8 different. 9 Can you explain to me what changes you 10 made with respect to which studies to include? 11 A So somewhere I did the side-by-side 12 comparison, and I don't think I have -- I don't 13 think I have that with me. So it would take me a 14 bit of time to just compare the two and see how -- 15 how they compare. 16 Q So you generated actually a side-by-side 17 comparison of your 2016 meta-analysis and your 18 2018 meta-analysis? 19 A Well, of -- of the studies that went 20 into them. Well, generated is a kind of a 21 highfalutin word. I listed on a piece of paper, 22 and then I -- beside it I listed the other ones. 23 So I'm pretty sure I did that at some point just 24 to make sure. If I didn't do it on paper, I did 25 it in my mind. I wanted to know, you know, what</p>	<p style="text-align: right;">Page 189</p> <p>1 A Well, a case-control study was carried 2 out in Australia by a team that involved Green and 3 Purdie, and the publication in 1995, I think it 4 was, described their analysis -- sorry, do you 5 want me to stop while you're -- 6 Q Keep going. 7 A The paper in Purdie 1995, I think it is, 8 described the association between talc and ovarian 9 cancer. I had that in my database. 10 And I also had -- a couple of years 11 later, there was a paper by Green that was not 12 focused on talc. It was focused on risks that 13 were related to -- to other -- well, to other 14 gynecological issues in relation to ovarian 15 cancer. But in there she -- in the text, not in 16 any table but in the text, she provided a result 17 on talc and ovarian cancer. 18 Because that paper was published in 19 2000 -- in 1997, the Green, et al., paper, I 20 assumed that that was an extension of the 2000 -- 21 of the data that was used for the 1995 paper, and 22 that it actually included more information and 23 more up-to-date information than the 1995 paper 24 published two years earlier. I had some doubts 25 about that. But that was the decision I made in</p>

48 (Pages 186 to 189)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 190</p> <p>1 2016. In general, when there were different 2 reports from the same study at different 3 intervals, I took the most recent one as being the 4 more definitive one. 5 When I started analyzing for the 2018 6 report, I had lingering -- I remained with the 7 lingering doubts about the Green study -- the 8 Green report and whether it actually was an 9 updated version of the talc results from 2016 -- 10 from my 2016 report. 11 And I wrote to Adele Green, who I know 12 as an acquaintance, not well but enough to write 13 and say, You know, what's going on with these -- 14 what was going on with these two papers? Is it 15 the fact that the result -- which one has the most 16 definitive result on talc and ovarian cancer, the 17 earlier one or the more recent one? And she wrote 18 back and said, The earlier one does. That the 19 later one -- and I can't remember the exact 20 explanation, but it had to do with some cases 21 being dropped because of reasons having nothing to 22 do with talc but having to do with other 23 hypotheses that she was examining. 24 So in any case, the two results are 25 identical. So it makes no difference. But that</p>	<p style="text-align: right;">Page 192</p> <p>1 studies over time, the relative risk for the 2 association between peritoneal use of -- I mean 3 perineal use of talc and the development of 4 ovarian cancer has actually gone down? 5 MS. PARFITT: Objection. Form. 6 THE WITNESS: I -- I haven't evaluated 7 that, and I have no reason to agree or disagree 8 with it. If you want me to spend a bit of time 9 looking to see if I can -- 10 BY MS. BRANSCOME: 11 Q Well, for example -- 12 A -- confirm or -- 13 Q You are familiar with the Berge 2018 14 paper, correct? 15 A Yeah, yeah. 16 Q And the authors in that paper said: "We 17 confirm the trend toward lower overall risk 18 estimates as more evidence accumulated." 19 MS. PARFITT: Can we get that article in 20 front of him? 21 MS. BRANSCOME: Of course. 22 MS. PARFITT: Thank you. 23 MS. BRANSCOME: It is tab 48. 24 (A discussion was held off the record.) 25 MS. PARFITT: It's tab 18?</p>
<p style="text-align: right;">Page 191</p> <p>1 is, in answer to your question, why did it change, 2 it wasn't capricious issues. It wasn't wrong. It 3 was the right thing to do. 4 Q Did you retain copies of the e-mail 5 correspondence that you had with Green? 6 A I imagine that I did, but I -- this 7 would have been eight months ago maybe or 8 something. 9 Q Would it be fair to say that you relied 10 on Green's representation of which dataset was 11 more fulsome in determining what to use in your 12 2018 metadata? 13 A Yes. 14 Q And that was something she communicated 15 to you by e-mail, correct? 16 A That's right. 17 MS. BRANSCOME: We can meet and confer 18 about this offline, but we would request 19 production of those e-mails. 20 MS. PARFITT: We'll take it under 21 advisement. Thank you. 22 MS. BRANSCOME: Okay. 23 BY MS. BRANSCOME: 24 Q Do you agree that in terms of the trend 25 for relative risk, with the addition of newer</p>	<p style="text-align: right;">Page 193</p> <p>1 THE WITNESS: Tab 48? 2 BY MS. BRANSCOME: 3 Q Tab 48. 4 A I don't have a tab 48. 5 Q It may be in your second binder. 6 A Oh. 7 MS. PARFITT: I will take this one out. 8 And I'll take this one for you. 9 THE WITNESS: Thank you. 10 MS. PARFITT: Of course. 11 THE WITNESS: Thank you. 12 BY MS. BRANSCOME: 13 Q Dr. Siemiatycki, are you familiar with 14 the article that is located there behind tab 48? 15 A Yes, I am. 16 Q Berge is the lead author on this 17 publication titled "Genital use of talc and risk 18 of ovarian cancer: A meta-analysis." Correct? 19 A Yes, correct. 20 Q I believe earlier you said that Berge 21 "beat you to the punch" might have been the phrase 22 that you used. 23 What did you mean by that? 24 A If this had never appeared, I might have 25 worked on a manuscript to submit for publication</p>

49 (Pages 190 to 193)

Jack Siemiatycki, Ph.D.

Page 194	Page 196
<p>1 on my meta-analysis before today, sometime in the</p> <p>2 past.</p> <p>3 Q Do you rely on Berge 2018?</p> <p>4 MS. BRANSCOME: Let's go ahead and mark</p> <p>5 that actually as Exhibit 12.</p> <p>6 (Exhibit No. 12 was marked for</p> <p>7 identification.)</p> <p>8 MR. TISI: How long have we been going?</p> <p>9 How long have we been going?</p> <p>10 MS. BRANSCOME: Just under five hours.</p> <p>11 MR. TISI: No, how long have we been</p> <p>12 going on this one?</p> <p>13 MS. BRANSCOME: We can take a break</p> <p>14 if -- do you need a break?</p> <p>15 MR. TISI: I'm just asking.</p> <p>16 MS. PARFITT: Do you want a break?</p> <p>17 THE WITNESS: No, let's finish -- let's</p> <p>18 finish with this.</p> <p>19 MS. PARFITT: Okay.</p> <p>20 (A discussion was held off the record.)</p> <p>21 BY MS. BRANSCOME:</p> <p>22 Q Do you rely in forming your opinions on</p> <p>23 this case on the Berge article that we just marked</p> <p>24 as Exhibit 12?</p> <p>25 A I formed my opinions before knowing</p>	<p>1 here that I'm -- I haven't fully integrated into</p> <p>2 my evaluation of this paper. But I know what's in</p> <p>3 it. I know what's the other one. I know what's</p> <p>4 in this one.</p> <p>5 Q Okay. So back to my question,</p> <p>6 Dr. Siemiatycki.</p> <p>7 A Yeah.</p> <p>8 Q You stated that you believe that the</p> <p>9 Berge 2018 study supports the conclusions that you</p> <p>10 have reached in this litigation, and my question</p> <p>11 to you was, what do you mean by that?</p> <p>12 A Well, it supports it in a few ways.</p> <p>13 One -- and from my point of view, the most</p> <p>14 important one, but probably not for anyone else --</p> <p>15 is that they carried out a search of the</p> <p>16 literature using a much more intensive and -- a</p> <p>17 much more intensive procedure than I had. I had</p> <p>18 full confidence in the procedure that I had used,</p> <p>19 but it was not as long, as lengthy, as costly, et</p> <p>20 cetera, et cetera, as what -- and the bottom line</p> <p>21 was that they didn't find any papers -- relevant</p> <p>22 papers that I hadn't found. So I was very</p> <p>23 reassured by this.</p> <p>24 The second thing is that the bottom line</p> <p>25 meta-analysis result -- well, no, the second thing</p>
Page 195	Page 197
<p>1 about this article.</p> <p>2 Q Do you believe that the Berge 2018 study</p> <p>3 supports the conclusions that you have reached in</p> <p>4 your own meta-analysis?</p> <p>5 A Yes, I think it does.</p> <p>6 Q In what way?</p> <p>7 A Well, let me preface that also by saying</p> <p>8 that there's been a bit of a -- a history to this</p> <p>9 article of -- I thought the publication -- there</p> <p>10 was a version published in 2017, which I thought</p> <p>11 was the definitive version that I've always kept</p> <p>12 in my binders as the Berge article, and it's only</p> <p>13 very recently that I actually came upon this</p> <p>14 particular version, which is not greatly changed</p> <p>15 from the 2017 but slightly changed, and I haven't</p> <p>16 fully digested the small changes that have been</p> <p>17 made.</p> <p>18 Q If you could -- sorry for the multiple</p> <p>19 binders, but if you want to look at your first</p> <p>20 binder, tab 13, we can see if that's the paper</p> <p>21 that you previously had reviewed as the Berge</p> <p>22 paper.</p> <p>23 A I -- I don't mind answering questions in</p> <p>24 relation to this version. Just -- I just wanted</p> <p>25 to point out that there are a couple of things</p>	<p>1 is that the actual results that they chose from</p> <p>2 the different studies were very similar in most</p> <p>3 cases to the ones I had chosen from the different</p> <p>4 study. So there was a degree of corroboration</p> <p>5 there that I was happy about.</p> <p>6 They adopted a different strategy in one</p> <p>7 important respect, and that concerned how to deal</p> <p>8 with the Terry paper and the various components of</p> <p>9 the Terry paper. And with all due respect to this</p> <p>10 team, I don't think that there -- theirs was in</p> <p>11 error. I prefer my approach that maintained the</p> <p>12 integrity of the pooled analysis, which has some</p> <p>13 advantages. But there's -- you know, I wouldn't</p> <p>14 expect any large differences on the bottom line</p> <p>15 estimates from their strategy or my strategy. And</p> <p>16 the bottom line results were very similar.</p> <p>17 They -- also in the previous version,</p> <p>18 their evaluation of dose-response was, in my view,</p> <p>19 deficient in not devoting adequate weight to what</p> <p>20 I think is the most important evidence around</p> <p>21 dose-response in this area, which is the Terry</p> <p>22 pooled analysis. They focused on studies which</p> <p>23 provided results by duration of exposure and by</p> <p>24 frequency of exposure. And I think it's the</p> <p>25 combination of those two which is the most</p>

50 (Pages 194 to 197)

Jack Siemiatycki, Ph.D.

Page 198	Page 200
<p>1 important metric.</p> <p>2 And the fact that the Terry analysis was</p> <p>3 able to combine an enormous dataset for evaluating</p> <p>4 dose-response, much greater than any of the</p> <p>5 studies looking at duration or any of the studies</p> <p>6 looking at frequency, meant that in my view they</p> <p>7 missed an opportunity to properly evaluate</p> <p>8 dose-response by cumulative exposure.</p> <p>9 I note very recently that they have --</p> <p>10 they've now used a different statistical procedure</p> <p>11 for evaluating dose-response by duration and</p> <p>12 frequency, which is embodied in their Table 3,</p> <p>13 which I don't fully understand. It seemed -- this</p> <p>14 was the new part of this study, which I haven't --</p> <p>15 I looked quickly in the method section to see a</p> <p>16 description of exactly what they did, and I</p> <p>17 couldn't find it, but I don't deny that it's</p> <p>18 somewhere in the article. I just haven't had time</p> <p>19 to properly evaluate that part of it.</p> <p>20 Q As you sit here today, do you have any</p> <p>21 criticisms of the statistical analysis that they</p> <p>22 performed?</p> <p>23 A All of it? You're referring to all of</p> <p>24 it? Well, I --</p> <p>25 MS. PARFITT: Objection. Form.</p>	<p>1 That's 2016. Okay.</p> <p>2 Q Dr. Siemiatycki, if you could just</p> <p>3 identify for the record where you're looking so I</p> <p>4 can follow along and the record reflects it.</p> <p>5 A Right. I'm looking in my report of 2018</p> <p>6 in the appendix, page 103, Appendix B.</p> <p>7 Q So looking at Appendix B, which also</p> <p>8 helpfully compares Penninkilampi as well, are</p> <p>9 there studies specifically focused on the Berge</p> <p>10 2018 that in your opinion the authors should have</p> <p>11 included in their meta-analysis?</p> <p>12 MS. PARFITT: Objection. Form.</p> <p>13 THE WITNESS: Okay. Well, just</p> <p>14 following this table, I see that Gates 2008 was in</p> <p>15 my report, but not in theirs. Now, it wasn't in</p> <p>16 my main analysis; it was in one of my sensitivity</p> <p>17 analyses. So I have no -- my main analysis and</p> <p>18 their main analysis concurred about Gates.</p> <p>19 The next one that I see that was in my</p> <p>20 analysis but not in theirs was what I call</p> <p>21 Schildkraut B. And Schildkraut B, for the record,</p> <p>22 is -- there's no such study, but I've named it</p> <p>23 Schildkraut B. It's the result of the analysis of</p> <p>24 the Schildkraut study of cases that were</p> <p>25 interviewed before 2014, I think it was.</p>
Page 199	Page 201
<p>1 THE WITNESS: I note that their bottom</p> <p>2 line meta-relative risk is lower than the one that</p> <p>3 I estimated. And I'm not sure why that is. To me</p> <p>4 the -- the difference in -- the minor differences</p> <p>5 in the studies included or excluded is not</p> <p>6 sufficient to explain that, and I wonder if it's a</p> <p>7 software issue, of them having used a different</p> <p>8 software for meta-analysis than I used. But it's</p> <p>9 not a criticism necessarily. I just note this</p> <p>10 discrepancy.</p> <p>11 BY MS. BRANSCOME:</p> <p>12 Q Are there any studies that you included</p> <p>13 in your meta-analysis in 2018 that the Berge</p> <p>14 authors failed to consider that you think they</p> <p>15 should have included?</p> <p>16 A So I'll go back to my report, because I</p> <p>17 do have a table outlining that in my report.</p> <p>18 MS. PARFITT: You want your report?</p> <p>19 THE WITNESS: Yeah, my report, back to</p> <p>20 my report.</p> <p>21 MS. PARFITT: Let me get you that.</p> <p>22 BY MS. BRANSCOME:</p> <p>23 Q And we'll take a break after we finish</p> <p>24 this paper.</p> <p>25 A Thank you.</p>	<p>1 BY MS. BRANSCOME:</p> <p>2 Q And we will discuss that in more detail,</p> <p>3 but do you consider it an error for the Berge</p> <p>4 authors to just have taken the Schildkraut 2016</p> <p>5 data as a whole?</p> <p>6 A No, I don't consider it an error. In</p> <p>7 fact, I used it -- not in my main analysis but in</p> <p>8 one of my sensitivity analyses.</p> <p>9 The same with Shushan. So Shushan '96</p> <p>10 was in my -- one of my sensitivity analyses, not</p> <p>11 in my main analysis, and they did not include it</p> <p>12 in their main analysis. So we agreed on the main</p> <p>13 analyses there.</p> <p>14 Terry, I included in mine, and they</p> <p>15 didn't include Terry. They included the component</p> <p>16 parts of Terry.</p> <p>17 So there was no -- there was no study</p> <p>18 that was in my main analysis that was not in</p> <p>19 theirs.</p> <p>20 Q Okay. And looking quickly back at the</p> <p>21 Berge article, coming full circle to the question</p> <p>22 that I started with, if you could look on page 253</p> <p>23 of that paper.</p> <p>24 MS. PARFITT: Yes, 253.</p> <p>25 BY MS. BRANSCOME:</p>

51 (Pages 198 to 201)

Jack Siemiatycki, Ph.D.

Page 202	Page 204
<p>1 Q Under the Discussion section, do you see 2 where I am? 3 A Yes, I do. 4 Q All right. The second paragraph under 5 Discussion from the Berge paper states: "This 6 meta-analysis suggests that genital powder use is 7 associated with a small increased risk of 8 developing ovarian cancer. However, this positive 9 association appears to be limited to the serous 10 histological type and to case-control studies." 11 Did I read that correctly? 12 A You read it correctly. 13 Q It continues on: "This estimate is 14 somewhat lower than that of previous 15 meta-analysis," and in parentheses, it refers 16 specifically to Huncharek and Langseth, colon, "In 17 our cumulative meta-analysis, we confirmed the 18 trend toward lower overall risk estimates as more 19 evidence accumulated." 20 First, did I read that correctly? 21 A You read it correctly. 22 Q Do you have any basis to disagree with 23 the statement by the Berge authors in this 24 paragraph in the Discussion section? 25 MS. PARFITT: Objection. Form.</p>	<p>1 BY MS. BRANSCOME: 2 Q Based on the evidence that's available 3 today, do you think there is strong enough 4 epidemiological evidence to reach a conclusion 5 about the association between talc -- genital talc 6 use and other specific subtypes of ovarian cancer? 7 A I think it becomes very fragile to draw 8 inferences about other types. And in the absence 9 of reliable evidence about other types, you know, 10 especially those that have a smaller fraction of 11 all ovarian cancers than serous type, I think the 12 prudent thing to do is to consider that all 13 ovarian cancers are affected the same way. 14 The same way as with -- we do with lung 15 cancer and smoking and histologic types of lung 16 cancer. While there is some variability in the 17 degree of relative risk between smoking and 18 adenocarcinoma or squamous cell carcinoma or other 19 types, small cell, large cell, for lung cancer, 20 there is some variability in the degree of 21 relative risk. Generally speaking, we say smoking 22 causes cancer. Smoking causes all kinds of -- 23 causes lung cancer, all kinds of lung cancer. 24 Q Are you qualified to evaluate the 25 reasonableness of making an extrapolation from one</p>
Page 203	Page 205
<p>1 THE WITNESS: So there are a few 2 statements in this paragraph, not just one. 3 Do you want me to take them one by one? 4 BY MS. BRANSCOME: 5 Q Sure. 6 A So whether "the positive association 7 appears to be limited to the serous histological 8 type," I have some problem with that. I -- I was 9 looking in their publication for which studies -- 10 let me just see if I can -- which studies provided 11 evidence on serous type, and I couldn't find that. 12 In my -- in my analysis, the evidence 13 that I was able to -- to compile that's in this 14 addendum and meta-analyze showed an approximately 15 similar meta-relative risk between serous and all 16 ovarian cancers. 17 So there is no -- I found no evidence 18 that this -- that there was a particular peak of 19 risk for serous types compared to other types. 20 Q As you sit here today -- 21 MS. PARFITT: Are you done -- are you 22 done with your -- is that -- 23 THE WITNESS: Yeah, for -- for that 24 point on serous, yes. 25 MS. PARFITT: Thank you.</p>	<p>1 subtype of ovarian cancer to all types of ovarian 2 cancer in terms of what is biologically plausible? 3 MS. PARFITT: Objection to form. 4 THE WITNESS: My inferences would be 5 based on the statistical and epidemiological 6 evidence, and if there is biological, 7 physiological evidence that would indicate that 8 talcum powder is more likely to influence one type 9 of ovarian cancer than another, I would be 10 absolutely open to that interpretation. 11 BY MS. BRANSCOME: 12 Q All right. So moving along in that 13 paragraph, are there -- 14 A Okay. 15 Q -- any other sentences or portions of 16 sentences with which you disagree? 17 A So, the statement about case-control 18 studies and whether the positive association is 19 limited to case-control studies is -- is a bit 20 contentious. And I understand very well that the 21 evidence does not -- if we only had the cohort 22 studies, if that's all the evidence that existed, 23 it would be fair to say that that evidence does 24 not argue for an association with -- between 25 ovarian cancer and -- so I would -- I'm not -- I</p>

52 (Pages 202 to 205)

Jack Siemiatycki, Ph.D.

Page 206	Page 208
<p>1 guess if I were writing this, I would qualify it 2 somehow, and -- no, I think I'll just leave -- 3 leave that there, and you may have follow-up 4 questions about the case-control/cohort 5 comparison. 6 Q Is there anything else in this paragraph 7 in the Discussion section of Berge 2018 with which 8 you disagree? 9 MS. PARFITT: And can you refer him to 10 the left-hand side of the discussion or the 11 entire -- 12 MS. BRANSCOME: The second full 13 paragraph in the Discussion section. 14 MS. PARFITT: Which starts with "An 15 important." 16 THE WITNESS: So I -- I think what -- 17 BY MS. BRANSCOME: 18 Q No, it begins with "This meta-analysis 19 suggests." 20 A Yeah. Yeah. 21 So your question -- the question is 22 about that sentence that says: "This estimate is 23 somewhat lower. In our cumulative meta-analysis, 24 we confirmed the trend towards lower," da, da, da, 25 and that refers I guess specifically to Figure 4</p>	<p>1 misstates his testimony. 2 THE WITNESS: It requires looking at 3 which studies were included in each of these 4 meta-analyses, and which results were chosen by 5 the meta-analysis people who did these 6 meta-analyses from each paper. The meta-analysis 7 is somewhat sensitive to which studies are 8 selected and -- so the same study might have been 9 selected in the 2004 meta-analysis as in the 2016, 10 but they chose -- they decided to choose an 11 estimate from -- a result from that paper that 12 they thought was the most reasonable one and 13 that's different. 14 So one would have to do side-by-side 15 comparisons of which studies were included and 16 which results before concluding that this is 17 because of a downward trend. You also need to 18 know when the data were collected. 19 You know, I'm not sure if the -- if you 20 are implying or if they are implying that -- you 21 know, I -- a declining trend, if there is one, in 22 meta-analyses -- these are the years of the 23 meta-analysis, not the years that women were 24 exposed. So there's no implication -- direct 25 implication here that the risks to women are</p>
Page 207	Page 209
<p>1 on the following page. 2 Certainly the confidence intervals, if 3 you look at the confidence intervals of the 4 meta-estimates in that Figure 4, from 1988 through 5 2016, everything is embedded in everything. So 6 from the point of view of statistical variability, 7 it would be difficult to argue that there is a 8 real statistical -- statistically meaningful 9 difference between the trendline from -- through 10 that whole period. 11 There is a tendency by eye for a 12 decline. I don't know in their paper, in the text 13 whether they've characterized the decline with any 14 regression coefficients or not. I don't remember. 15 It seems to me like a rather weak trend to make a 16 big point about. So I wouldn't disagree with 17 the -- the point they're making, but I think it's 18 not strongly supported. There isn't a strong 19 trend downwards in this line, in this figure. 20 Q So you would agree with the authors that 21 there is a downward trend in the risk assessment 22 over time as more evidence accumulated, but you 23 might disagree with them about the strength of 24 that trend. Is that fair? 25 MS. PARFITT: Objection. Form,</p>	<p>1 declining over time. So if it's only the fact 2 that meta-analyses carried out at different points 3 in time showed very slightly different results, I 4 don't find that a noteworthy observation. But... 5 BY MS. BRANSCOME: 6 Q And you agree that meta-analyses are 7 sensitive to the judgments applied by the authors 8 of those studies, correct? 9 A Yes, they are, but to -- to a degree. I 10 mean you have to weigh the -- the degree of 11 bias -- or not the bias, but the -- the influence 12 of particular decisions that you might make. 13 I've done an analysis looking at what 14 happens when you include or exclude studies, and 15 you could exclude any study from my meta-analysis 16 and you'd find the same result. So if any of 17 these studies in my meta-analysis are completely 18 wrong, if they were completely invented, if the 19 women were never actually interviewed but the 20 investigator just wrote a paper on a Sunday 21 afternoon, and you're suspicious that this study 22 was -- or badly -- whatever, if you take any one 23 of these studies and take it out of the mix, it 24 wouldn't affect the meta-relative risk. 25 MS. BRANSCOME: Okay. I think this is a</p>

53 (Pages 206 to 209)

Jack Siemiatycki, Ph.D.

Page 210	Page 212
<p>1 good place to take a break.</p> <p>2 MS. PARFITT: Very good. Thank you.</p> <p>3 THE VIDEOGRAPHER: We're going off the</p> <p>4 record at 5:07 p.m.</p> <p>5 (Recess.)</p> <p>6 THE VIDEOGRAPHER: This begins disc</p> <p>7 number 5 in the deposition of Jack Siemiatycki.</p> <p>8 We're going back on the record at 5:36 p.m.</p> <p>9 BY MS. BRANSCOME:</p> <p>10 Q One of the decisions that you had to</p> <p>11 make in conducting your meta-analysis was how to</p> <p>12 treat the Schildkraut 2006 study, correct?</p> <p>13 A 2000 --</p> <p>14 Q -- '16.</p> <p>15 A Thank you. Yes.</p> <p>16 Q Okay. For purposes of your</p> <p>17 meta-analysis, you divided Schildkraut 2016 into</p> <p>18 two sets of results, correct?</p> <p>19 A "Divided" isn't quite the right word.</p> <p>20 Q How would you describe it?</p> <p>21 A Because they're not separate, one</p> <p>22 includes the other.</p> <p>23 Q Okay.</p> <p>24 A So just the word "divided" -- I'm not</p> <p>25 sure what the right word is, but there were two</p>	<p>1 Q But if it's your preference to look at</p> <p>2 the paper now, it is tab 15.</p> <p>3 A It's in this binder, I think.</p> <p>4 MS. PARFITT: Here it is. Thank you.</p> <p>5 THE WITNESS: Thank you.</p> <p>6 Okay. The -- so one includes all --</p> <p>7 Schildkraut A includes all of the cases</p> <p>8 interviewed the whole period, and the</p> <p>9 Schildkraut B includes cases after 2014, but I'm</p> <p>10 not sure if it includes 2014. But...</p> <p>11 BY MS. BRANSCOME:</p> <p>12 Q Let me ask a clarification on that one,</p> <p>13 Dr. Siemiatycki.</p> <p>14 Schildkraut 2016-B shows results for</p> <p>15 individuals interviewed before 2014, correct?</p> <p>16 A I'm sorry, which one, B? Schildkraut B?</p> <p>17 Q Schildkraut 2016-B.</p> <p>18 A B.</p> <p>19 Q I believe you just stated after, so I --</p> <p>20 A I see. Okay.</p> <p>21 Q -- wanted to seek clarification there.</p> <p>22 A Okay. Yeah, I'm --</p> <p>23 Q If it's helpful --</p> <p>24 A It's late in the day. Let me --</p> <p>25 Q Sure. If it's helpful to you to</p>
Page 211	Page 213
<p>1 sets of results reported, and I used both sets of</p> <p>2 results. One is embedded -- one set is embedded</p> <p>3 in the other.</p> <p>4 Q So correct me if I'm wrong, Schildkraut</p> <p>5 2016-A shows results from all subjects who were</p> <p>6 interviewed in the study from 2010 through 2015.</p> <p>7 Schildkraut 2016-B is a subset of that that</p> <p>8 includes the results for subjects who were</p> <p>9 interviewed before 2014, correct?</p> <p>10 MS. PARFITT: And, Counsel, if we could</p> <p>11 get Schildkraut in front of him, would that be all</p> <p>12 right?</p> <p>13 MS. BRANSCOME: Sure.</p> <p>14 BY MS. BRANSCOME:</p> <p>15 Q If you need to reference it --</p> <p>16 MS. PARFITT: Sure.</p> <p>17 BY MS. BRANSCOME:</p> <p>18 Q -- to answer my questions, certainly.</p> <p>19 A If you're going -- yes, I think you're</p> <p>20 right in what you said, but if you want me to look</p> <p>21 at specific results in the paper, maybe I should</p> <p>22 have it in front of me.</p> <p>23 Q I was going to direct you there when we</p> <p>24 got to those questions.</p> <p>25 A Okay.</p>	<p>1 reference in your report, you discuss your</p> <p>2 separation of Schildkraut on page 74, Note 6.</p> <p>3 A That's why I wanted my report in a small</p> <p>4 binder, rather than -- before 2014, yes.</p> <p>5 Q And the reason that you divided --</p> <p>6 separated the study into those two groups, one</p> <p>7 which is inclusive of the other, is to account for</p> <p>8 the possibility that publicity surrounding two</p> <p>9 class action lawsuits on talc and ovarian cancer</p> <p>10 in 2014 may have induced bias in the validity of</p> <p>11 reporting talc exposure; is that correct?</p> <p>12 A That's correct.</p> <p>13 Q Okay. But in your main meta-analysis</p> <p>14 you use Schildkraut A, which includes all subjects</p> <p>15 interviewed from 2010 to 2015, correct?</p> <p>16 A That's correct.</p> <p>17 Q When you substituted Schildkraut B,</p> <p>18 which included only subjects interviewed before</p> <p>19 2014, for Schildkraut A, all subjects interviewed</p> <p>20 from 2010 to 2015, the relative risk estimate for</p> <p>21 the meta-analysis goes down, correct?</p> <p>22 A Yes. From 1.28 to 1.27.</p> <p>23 MS. BRANSCOME: If we could mark</p> <p>24 Schildkraut as Exhibit 13.</p> <p>25 THE WITNESS: There's a label here</p>

54 (Pages 210 to 213)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 214</p> <p>1 already.</p> <p>2 MS. PARFITT: There is. I will go ahead</p> <p>3 and just -- you don't care -- there's a defense</p> <p>4 label of 1436. Can I go ahead and put the exhibit</p> <p>5 over top of it? Does it matter to you? Okay.</p> <p>6 This will be 13.</p> <p>7 (Exhibit No. 13 was marked for</p> <p>8 identification.)</p> <p>9 BY MS. BRANSCOME:</p> <p>10 Q All right. If you could,</p> <p>11 Dr. Siemiatycki, please turn to Table 2, which is</p> <p>12 on page 1414 of Exhibit 13.</p> <p>13 A I see it.</p> <p>14 Q Before doing that, can you just simply</p> <p>15 confirm that Exhibit 13 is in fact the Schildkraut</p> <p>16 study?</p> <p>17 A Yes, it is.</p> <p>18 Q And we see in Table 2 that there is a</p> <p>19 category for interview date less than 2014, and</p> <p>20 then another category for interview date greater</p> <p>21 than 2014. Correct?</p> <p>22 A Yes, I see that.</p> <p>23 Q All right. And we see that there are</p> <p>24 odds ratios for any genital use for both of these</p> <p>25 categories, correct?</p>	<p style="text-align: right;">Page 216</p> <p>1 A Yes, that's correct.</p> <p>2 Q All right. And the -- those are for the</p> <p>3 cases, meaning individuals who had been diagnosed</p> <p>4 or reported as diagnosed with ovarian cancer,</p> <p>5 correct?</p> <p>6 A Correct.</p> <p>7 Q And if you compare that against the</p> <p>8 controls, 34 percent is the reported number for</p> <p>9 women without ovarian cancer who reported any</p> <p>10 genital use of talcum powder that were interviewed</p> <p>11 before 2014, correct?</p> <p>12 A That's correct.</p> <p>13 Q And if we look at those same</p> <p>14 percentages for the individuals who were</p> <p>15 interviewed after 2014, the percentage of cases,</p> <p>16 meaning individuals who have been diagnosed or</p> <p>17 reported as diagnosed with ovarian cancer who</p> <p>18 claim to have used talc genitally at any point in</p> <p>19 time, goes up to 51.5 percent compared to a</p> <p>20 control of 34.4 percent, correct?</p> <p>21 A That's correct.</p> <p>22 Q All right. And so if we compare</p> <p>23 individuals interviewed before 2014 who have been</p> <p>24 diagnosed or reported as diagnosed with ovarian</p> <p>25 cancer to those individuals in the same category</p>
<p style="text-align: right;">Page 215</p> <p>1 A Yes, I see that.</p> <p>2 Q And the odds ratio for any genital use</p> <p>3 for individuals who were interviewed after 2014 is</p> <p>4 higher than the odds ratio for any genital use for</p> <p>5 those individuals who were interviewed before</p> <p>6 2014, correct?</p> <p>7 A That's correct.</p> <p>8 Q And it also shows the number of</p> <p>9 individuals that fell in those respective</p> <p>10 categories, correct?</p> <p>11 A Yes, correct.</p> <p>12 Q And so just simply looking at the</p> <p>13 reported data, the percentage of women with --</p> <p>14 with ovarian cancer who reported any genital use</p> <p>15 of talc who were interviewed before 2014 was</p> <p>16 36.5 percent, correct?</p> <p>17 A Can you run that by me again? Show me</p> <p>18 where the --</p> <p>19 Q Sure.</p> <p>20 A So interview date before 2014, any</p> <p>21 genital use, the percentage 36.5, number 128, is</p> <p>22 that what --</p> <p>23 Q Yes.</p> <p>24 A -- you are looking at? Okay.</p> <p>25 Q Was that correct?</p>	<p style="text-align: right;">Page 217</p> <p>1 who were interviewed after 2014, you see at least</p> <p>2 a 12 percent increase in those figures; is that</p> <p>3 correct?</p> <p>4 A 12 percent representing which -- which</p> <p>5 two numbers?</p> <p>6 Q Representing the difference between the</p> <p>7 cases who reported genital use of talcum powder --</p> <p>8 A The 36.5?</p> <p>9 Q -- as compared to the 51.5 percent.</p> <p>10 A So you -- you said it's 12 percent? I</p> <p>11 think it's like 14 percent.</p> <p>12 Q It is.</p> <p>13 A Okay.</p> <p>14 Q That is correct.</p> <p>15 But if you do the same comparison for</p> <p>16 the control group, you don't see a similar</p> <p>17 increase or a similar difference in the reporting</p> <p>18 percentages for individuals interviewed before</p> <p>19 2014 as after 2014, correct?</p> <p>20 A That's correct.</p> <p>21 Q Okay. Are those results compatible with</p> <p>22 the existence of recall bias for individuals</p> <p>23 interviewed after 2014?</p> <p>24 A I would say they are compatible with</p> <p>25 recall bias.</p>

55 (Pages 214 to 217)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 218</p> <p>1 Q Okay. Was litigation-related recall 2 bias considered by IARC as a possible bias that 3 could explain the association between perineal 4 talc use and ovarian cancer? 5 A In 2006? 6 Q Correct. 7 A I -- I can't remember verbatim the 8 discussions, and I can't remember a discussion of 9 litigation-related impact on response bias. I 10 doubt if there would have been any at that time, 11 but -- and I don't recall any discussion of it. 12 Q And at least the Schildkraut authors are 13 identifying 2014 as a significant year with 14 respect to widespread knowledge of lawsuits 15 involving talcum powder and a claim of ovarian 16 cancer -- 17 MS. PARFITT: Objection. Form. 18 BY MS. BRANSCOME: 19 Q -- correct? 20 MS. PARFITT: Objection. Form. 21 THE WITNESS: I -- if you may, I think 22 what they refer to is localized publicity, not 23 widespread publicity. 24 BY MS. BRANSCOME: 25 Q If you can, can you refer me to the</p>	<p style="text-align: right;">Page 220</p> <p>1 column seems to suggest that data was collected 2 from a number -- 3 A Oh. 4 Q -- of different states across the United 5 States, correct? 6 A Correct. Correct. 7 Q And so at least based on your review as 8 you sit here today, the authors do not seem to 9 have limited the potential effect of publicity of 10 the class action lawsuits to a precise region, 11 correct? 12 A That seems to be the case. 13 Q Okay. 14 A Yes. 15 Q And so your understanding or your 16 testimony earlier that the publicity was only 17 localized, you're not able to point me to anything 18 in the article to support that, correct? 19 A That's correct. 20 Q And in fact, in the two portions of the 21 Schildkraut article that discuss the publicity, 22 there is no specific reference to it being limited 23 to an area, correct? 24 MS. PARFITT: Objection. Form. 25 THE WITNESS: In the two -- sorry.</p>
<p style="text-align: right;">Page 219</p> <p>1 language in the paper that references that. 2 A So I see a mention of it in the -- on 3 page 1412, second column, last paragraph, about 4 seven or eight lines from the bottom, the sentence 5 beginning: "Two class action lawsuits were filed 6 in 2014 concerning possible carcinogenic effects 7 of body powder, which may have influenced recall." 8 Now, there's a reference there, but the 9 reference doesn't indicate where those class 10 actions were. And now I'm going to look in the 11 Discussion section to see if there's any 12 indication. If anyone knows whether there is or 13 if there is not -- I haven't looked for this 14 specifically. I just have a vague memory of them 15 referring to localized publicity, but... (peruses 16 document.) 17 Well, in my very quick scanning, I don't 18 see reference to these being local. You people 19 might know whether these two lawsuits that they 20 refer to in the Reference section, whether they 21 were local in this area. And this is North 22 Carolina, is it? 23 Q Well, so that's -- that's a question I 24 have for you, Dr. Siemiatycki. On page 1412, the 25 paragraph -- the last full paragraph on the second</p>	<p style="text-align: right;">Page 221</p> <p>1 BY MS. BRANSCOME: 2 Q So there's one discussion of the 3 potential public -- the potential effect of 4 publicity, which is on page 1412. 5 A Yeah. 6 Q And then there is a second discussion of 7 it on page 1416 -- 8 A Yes. 9 Q -- in the Discussion section, and 10 neither of those two sections talk about awareness 11 of the class action lawsuits being limited to a 12 specific geographic region, correct? 13 A That's correct. 14 Q In fact, the language that the authors 15 use is a heightened awareness of the exposure as a 16 result of two recent class action lawsuits, and 17 they discuss just publicity, correct? 18 A Yes, I think so. 19 Q Okay. Are you relying -- 20 A In that second paragraph in the 21 discussion, the authors seem to discount the -- 22 the recall bias hypothesis or to minimize it, and 23 I -- I -- I don't support -- or the opposite of 24 what they're saying. I just note that they don't 25 seem to be enthusiastic about that hypothesis that</p>

56 (Pages 218 to 221)

Jack Siemiatycki, Ph.D.

Page 222	Page 224
<p>1 it's strictly due to response bias.</p> <p>2 But go ahead and --</p> <p>3 Q The authors do recognize, though, that</p> <p>4 there is a possibility of recall bias may have</p> <p>5 caused some inflation of the odds ratios, correct?</p> <p>6 A Yes.</p> <p>7 MS. PARFITT: Wait, that's part --</p> <p>8 that's part of the sentence. Objection.</p> <p>9 THE WITNESS: Yeah. Yeah.</p> <p>10 BY MS. BRANSCOME:</p> <p>11 Q Are you relying on Penninkilampi 2018</p> <p>12 for your opinions in this litigation?</p> <p>13 A My opinions were informed before I knew</p> <p>14 about that article.</p> <p>15 Q Do you believe that the Penninkilampi</p> <p>16 2018 study supports your conclusions in this</p> <p>17 litigation?</p> <p>18 A It's consistent with my conclusions. A</p> <p>19 little bit like Berge, the fact that they didn't</p> <p>20 pick up any studies that I hadn't -- that I had</p> <p>21 not picked up reassures me that there was nothing</p> <p>22 amiss in my search of the literature.</p> <p>23 There were some differences in which</p> <p>24 studies they included in their meta-analysis and</p> <p>25 which data. I'm happy with the decisions -- the</p>	<p>1 impact on the bottom line result. Some errors</p> <p>2 might have large effects, so it would depend what</p> <p>3 the errors were.</p> <p>4 But since his studies were mostly the</p> <p>5 same as the ones I had used and the same ones that</p> <p>6 Berge had used, and since the results that he had</p> <p>7 taken out of those studies were mostly the same</p> <p>8 ones I had taken out and that Berge had taken out,</p> <p>9 I fully expected his bottom line meta-analysis to</p> <p>10 produce the same results.</p> <p>11 BY MS. BRANSCOME:</p> <p>12 Q The Penninkilampi study does not</p> <p>13 consider or include the Gates 2010 cohort study,</p> <p>14 correct?</p> <p>15 A Correct.</p> <p>16 Q Do you think Gates 2010 - and if you</p> <p>17 would prefer to refer to Penninkilampi, it is</p> <p>18 tab 20.</p> <p>19 A Yeah.</p> <p>20 Q In your opinion, is --</p> <p>21 MS. PARFITT: I have a clean one right</p> <p>22 here with the -- if we use two books, we can do it</p> <p>23 to save time, but --</p> <p>24 THE WITNESS: Sorry?</p> <p>25 MS. PARFITT: Do you want that?</p>
Page 223	Page 225
<p>1 judgments I had made about it. So there are some</p> <p>2 minor variations there. But essentially they</p> <p>3 found the same thing that I found, because we're</p> <p>4 all working with the same data.</p> <p>5 Q Okay. Did you do an independent</p> <p>6 verification that the data Penninkilampi reports</p> <p>7 in his article is indeed accurate?</p> <p>8 MS. PARFITT: Objection. Form.</p> <p>9 THE WITNESS: By the data, you mean the</p> <p>10 results that he put into his meta-analysis?</p> <p>11 BY MS. BRANSCOME:</p> <p>12 Q For example, did you look at the</p> <p>13 reported data in the tables in the Penninkilampi</p> <p>14 article and compare it to the underlying studies</p> <p>15 to see if they matched?</p> <p>16 A I don't recall doing that comparison.</p> <p>17 I'm not sure why I would want to.</p> <p>18 Q If there were errors in the reporting of</p> <p>19 any of the odds ratios or confidence intervals in</p> <p>20 the Penninkilampi 2018 paper, would that call into</p> <p>21 reliability the meta-analysis, in your opinion?</p> <p>22 MS. PARFITT: Objection. Form.</p> <p>23 THE WITNESS: It depends on the nature</p> <p>24 of the errors. If there was one decimal point</p> <p>25 typo sort of thing, it would have absolutely no</p>	<p>1 THE WITNESS: No. I'm actually looking</p> <p>2 for my copy of the Gates 2010.</p> <p>3 You're going to ask me about his use</p> <p>4 of -- Gates 2010?</p> <p>5 BY MS. BRANSCOME:</p> <p>6 Q I was simply just going to ask you, is</p> <p>7 Gates 2010 a significant study, in your opinion,</p> <p>8 to leave out of a meta-analysis on this topic?</p> <p>9 MS. PARFITT: Objection. Form.</p> <p>10 THE WITNESS: A significant study.</p> <p>11 It -- in my view there are flaws with that study,</p> <p>12 but there are flaws with many epidemiologic</p> <p>13 studies. It's not -- that's not a reason to</p> <p>14 exclude them. I would include it but take note of</p> <p>15 the flaws, including the fact that their reference</p> <p>16 category for their odds ratios for their relative</p> <p>17 risk estimates was not an unexposed group, but it</p> <p>18 was a group that combined women who had never used</p> <p>19 talc with women who had used it occasionally.</p> <p>20 BY MS. BRANSCOME:</p> <p>21 Q Are there any other errors in the Gates</p> <p>22 2010 study? And if you'd like to refer to it --</p> <p>23 MS. PARFITT: Thank you.</p> <p>24 THE WITNESS: Okay. Let me find my copy</p> <p>25 of -- yeah, here we are -- Gates 2010.</p>

57 (Pages 222 to 225)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 226</p> <p>1 Well, yes, there are some flaws with it, 2 but they're related to the fact that this builds 3 on the Nurses' Health Study, which is a good and 4 well deservedly recognized, good prospective 5 cohort study which focused on many factors in 6 women's lives, including predominantly nutritional 7 reproductive, hormonal factors, and all kinds of 8 diseases, all heart disease, diabetes, et cetera, 9 et cetera. There have been hundreds and hundreds 10 of publications that have come out of it. 11 Their collect- -- the collection of talc 12 information in the Nurses' Health Study was very 13 weak. The questionnaire was conducted in 1982. 14 It was part of a biannual follow-up mailed 15 questionnaire. The question itself and the 16 structure of the question itself I find very weak 17 from the point of view of designing questions for 18 questionnaires. I mean, I -- I could read it into 19 the record, but it's in the -- it's in the -- it's 20 quoted in the Gertig paper, and it's actually -- 21 I've seen that page of the questionnaire, and 22 it's -- I find it ambiguous as to how women would 23 answer that question. 24 And it's only one question for that 25 point in time. There was never any follow-up. So</p>	<p style="text-align: right;">Page 228</p> <p>1 authors of the Penninkilampi 2018 publication? 2 A No, I don't. 3 Q Do you know or have any information 4 about the source or sources of funding for the 5 Penninkilampi article? 6 A No, I don't, no. I -- I would add, 7 though, that the inclusion or exclusion of Gates 8 2010 probably didn't affect the bottom line result 9 of their meta-analysis by more than 0.01 decimal 10 point of the odds ratio. 11 Q But did they publish any type of 12 sensitivity analysis that would let you 13 specifically draw that conclusion? 14 A Well, I -- I have done one myself where 15 I dropped each of the studies in order to see what 16 would be the impact if that study had been 17 dropped. And there's hardly -- no study has more 18 than a 1 decimal -- you know, 0.01 decimal point 19 on the odds ratio. 20 So we could argue about the merits of 21 any of these studies or demerits, but the impact 22 of including them or excluding an individual study 23 is pretty minimal. 24 Q Shushan 1996 is one of the studies you 25 did not include in your main meta-analysis,</p>
<p style="text-align: right;">Page 227</p> <p>1 between 1982 and 2007 or so, when the follow-up of 2 the -- for the Gates analysis ended, they had no 3 idea whether women were exposed -- whether women 4 who had been exposed in 1982 were in exactly the 5 same exposure category in 1990, in 2000, in 2005 6 and so on. They made the assumption that women's 7 exposure status was stable for 25 years. And so 8 that's a major weakness of the analysis of talc 9 and ovarian cancer in -- from this study. 10 BY MS. BRANSCOME: 11 Q So in your view, was it proper for the 12 Penninkilampi authors to leave Gates 2010 out of 13 their meta-analysis? 14 A That's not what I said. That's not what 15 I said. 16 I -- I think to go down the road of 17 making value judgments about each of these studies 18 and including them or not including them would end 19 up in the need for many days of deposition and 20 cross-examination, because each of those -- any 21 decision about any study can be argued umpteen 22 ways. And that's why I took the decision early on 23 not to make exclusions based on my judgment of the 24 quality of the study. 25 Q Do you personally know any of the</p>	<p style="text-align: right;">Page 229</p> <p>1 correct? 2 A Correct. 3 Q And you reported that you did not 4 include it because the report was quite cryptic 5 regarding the data collection and the talc 6 exposure variable, correct? 7 A That's correct. 8 Q What did you mean by the report was 9 quite cryptic regarding the data collection? 10 A So I have to take a couple of minutes to 11 review that -- to look at that paper to answer 12 your question. 13 Well, so the first thing that strikes 14 me -- and I haven't read the description of how 15 they collected the data. The first thing that 16 strikes me is they have a table, Table 2 on 17 page 15, with some information about these various 18 variables, including talc exposure. And the two 19 categories of talc exposure that they describe in 20 this table, one is called "Never - seldom," and 21 the other one is called "Moderate - a lot." I 22 don't know what that means. So that's one 23 element -- how they present it and how they 24 analyze the data. 25 But I think actually how they collected</p>

58 (Pages 226 to 229)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 230</p> <p>1 the data also led me to describe the -- the</p> <p>2 information on exposure as being cryptic.</p> <p>3 Q Okay. Are you familiar with the 2018</p> <p>4 paper by Mohamed Taher and others entitled "The</p> <p>5 systematic review and meta-analysis: The</p> <p>6 association between perineal use of talc and risk</p> <p>7 of ovarian cancer"?</p> <p>8 A Yes, I am.</p> <p>9 Q Okay. Have you read the Taher 2018</p> <p>10 manuscript?</p> <p>11 A Yes. I haven't read all the appendices,</p> <p>12 but I basically read enough that I know what's in</p> <p>13 it.</p> <p>14 Q Did you have access to the Taher 2018</p> <p>15 article before it was published?</p> <p>16 A I don't think it's been published.</p> <p>17 Q How did you get access to the Taher</p> <p>18 manuscript and the appendices?</p> <p>19 A I heard about -- I first heard about the</p> <p>20 Canadian Department of Health advisory, or</p> <p>21 whatever the word is, about talc and ovarian</p> <p>22 cancer in the public media. And I -- I think in</p> <p>23 the news report that I saw, there was a reference</p> <p>24 to Taher -- the Taher paper. That's how I first</p> <p>25 learned about something by them.</p>	<p style="text-align: right;">Page 232</p> <p>1 Q Which author do you know?</p> <p>2 A Daniel Krewski.</p> <p>3 Q You have published many papers with, is</p> <p>4 it, Dr. Krewski?</p> <p>5 A Yes.</p> <p>6 Q Is that correct?</p> <p>7 A Yes. Yes, it is.</p> <p>8 Q How many papers have you published with</p> <p>9 him?</p> <p>10 A I'll look at my CV and count.</p> <p>11 Q Would it be fair to say over 20?</p> <p>12 A Oh, I would be surprised if it was that</p> <p>13 high. But if you've counted, I won't contradict</p> <p>14 what you -- what you say.</p> <p>15 Q Let's do it this way: Would all of the</p> <p>16 papers that you have coauthored with Dr. Krewski</p> <p>17 be listed on your CV?</p> <p>18 A Yes.</p> <p>19 Q Have you discussed your opinion on talc</p> <p>20 and ovary -- ovarian cancer with Dr. Krewski?</p> <p>21 A No.</p> <p>22 Q Have you discussed your opinion on talc</p> <p>23 and ovarian cancer with any of the authors of the</p> <p>24 Taher manuscript?</p> <p>25 A No.</p>
<p style="text-align: right;">Page 231</p> <p>1 And I wrote to Ms. Parfitt -- I sent a</p> <p>2 message to Ms. Parfitt asking her if she knows</p> <p>3 anything about this and has that information, and</p> <p>4 she wrote back, I think, and said, No, I thought</p> <p>5 you might have -- know something about it and have</p> <p>6 information.</p> <p>7 MS. PARFITT: And -- and,</p> <p>8 Dr. Siemiatycki, you're not to discuss --</p> <p>9 THE WITNESS: Okay.</p> <p>10 MS. PARFITT: -- discuss our</p> <p>11 communications.</p> <p>12 THE WITNESS: Okay.</p> <p>13 Subsequently, Ms. Parfitt sent me the</p> <p>14 Taher paper.</p> <p>15 BY MS. BRANSCOME:</p> <p>16 Q And when -- when did you first request</p> <p>17 the Taher paper and appendices from Ms. Parfitt?</p> <p>18 A I think in December 2018.</p> <p>19 Q When were you provided with the Taher</p> <p>20 manuscript and the appendices and supplemental</p> <p>21 tables?</p> <p>22 A Within a few days after that.</p> <p>23 Q Do you know personally any of the</p> <p>24 authors on the Taher manuscript?</p> <p>25 A I know one of them.</p>	<p style="text-align: right;">Page 233</p> <p>1 Q Have you spoken to or otherwise</p> <p>2 communicated with Dr. Krewski about your</p> <p>3 involvement as an expert in this litigation?</p> <p>4 A No, I haven't.</p> <p>5 Q Do you know if the Taher manuscript has</p> <p>6 been accepted for publication?</p> <p>7 A I don't know if it's been submitted for</p> <p>8 publication.</p> <p>9 Q Do you know anything about the source or</p> <p>10 sources of funding for the Taher 2018 manuscript?</p> <p>11 A I don't have any privileged information</p> <p>12 about that, but I seem to recall in the manuscript</p> <p>13 they're saying something about funding from Health</p> <p>14 Canada.</p> <p>15 Q Is it fair to say that your knowledge</p> <p>16 with respect to the source or sources of funding</p> <p>17 of the Taher manuscript is limited to what is</p> <p>18 written in the manuscript itself?</p> <p>19 A Yes.</p> <p>20 Q Did you attend the National Cancer</p> <p>21 Institute directors meeting held in Lyon, France,</p> <p>22 on July 11th through 13th, 2018?</p> <p>23 A No, I did not.</p> <p>24 Q Now, the Taher 2018 manuscript contains</p> <p>25 a meta-analysis, correct?</p>

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 234</p> <p>1 A Correct.</p> <p>2 Q And Taher 2018 calculates an overall</p> <p>3 relative risk of 1.28, correct?</p> <p>4 MS. PARFITT: If we could just get that</p> <p>5 in front of him.</p> <p>6 MS. BRANSCOME: Oh, of course.</p> <p>7 MS. PARFITT: Do you have your copy? I</p> <p>8 appreciate that.</p> <p>9 MS. BRANSCOME: It is tab --</p> <p>10 MS. PARFITT: I think he may have it as</p> <p>11 well and --</p> <p>12 THE WITNESS: I have it --</p> <p>13 MS. PARFITT: Make that a little easier</p> <p>14 and more quicker.</p> <p>15 MR. TISI: Do you want to mark it?</p> <p>16 MS. BRANSCOME: We have already marked</p> <p>17 Dr. Siemiatycki's binder.</p> <p>18 MR. TISI: Okay. We can --</p> <p>19 MS. BRANSCOME: I believe that contains</p> <p>20 the -- the manuscript and the exhibits.</p> <p>21 MS. PARFITT: And that is binder 6,</p> <p>22 Exhibit 6.</p> <p>23 MR. TISI: You said binder, going with</p> <p>24 his or the one --</p> <p>25 MS. PARFITT: Exhibit 6.</p>	<p style="text-align: right;">Page 236</p> <p>1 one in the binders you gave him? That may help.</p> <p>2 MS. BRANSCOME: It's tab 31.</p> <p>3 MS. PARFITT: Thank you.</p> <p>4 Tab 31. I appreciate that.</p> <p>5 No, you can keep yours.</p> <p>6 THE WITNESS: Okay.</p> <p>7 MS. PARFITT: There you go, just for the</p> <p>8 record. Okay. Thank you.</p> <p>9 BY MS. BRANSCOME:</p> <p>10 Q So my question to you, Dr. Siemiatycki,</p> <p>11 is Taher 2018 calculates an overall relative risk</p> <p>12 of 1.28. Is that correct?</p> <p>13 A That's what it says in the abstract,</p> <p>14 yes.</p> <p>15 Q And the confidence interval that they</p> <p>16 report is 1.2 to 1.37, correct?</p> <p>17 A Yes.</p> <p>18 Q So the overall relative risk as well as</p> <p>19 the confidence interval reported in the Taher 2018</p> <p>20 paper is very similar to the overall relative risk</p> <p>21 and confidence interval that you report in your</p> <p>22 analysis for the MDL, correct?</p> <p>23 A That's correct. Which is not</p> <p>24 surprising.</p> <p>25 Q And if you could turn to page 49 of the</p>
<p style="text-align: right;">Page 235</p> <p>1 MS. BRANSCOME: Exhibit 6 is</p> <p>2 Dr. Siemiatycki's copy of the Taher manuscript</p> <p>3 with the appendices and supplemental tables.</p> <p>4 BY MS. BRANSCOME:</p> <p>5 Q Is that correct?</p> <p>6 A That's correct.</p> <p>7 MR. TISI: And that's in his binder,</p> <p>8 Exhibit 6.</p> <p>9 THE WITNESS: I don't -- I didn't bring</p> <p>10 the supplemental tables and appendices with me.</p> <p>11 BY MS. BRANSCOME:</p> <p>12 Q Okay. So could you just describe for</p> <p>13 the record the contents of Exhibit 6. It is</p> <p>14 marked, but just so that I can follow along.</p> <p>15 A This document?</p> <p>16 MR. TISI: No, the whole thing.</p> <p>17 THE WITNESS: Oh, the whole -- the whole</p> <p>18 thing. It contains various meta-analyses, so the</p> <p>19 Berge, Penninkilampi, Huncharek, just the meta --</p> <p>20 main meta-analyses that have been done.</p> <p>21 MS. PARFITT: And, Counsel --</p> <p>22 THE WITNESS: Langseth.</p> <p>23 MS. PARFITT: Right.</p> <p>24 -- in light of the fact he has his in</p> <p>25 front of him, Exhibit 6, is there a corresponding</p>	<p style="text-align: right;">Page 237</p> <p>1 Taher paper. You see the Conclusion section?</p> <p>2 A Yes.</p> <p>3 Q The authors of the Taher paper state in</p> <p>4 the Conclusion section: "Consistent with previous</p> <p>5 evaluations, the IARC in 2010 and subsequent</p> <p>6 evaluations by individual investigators, the</p> <p>7 present comprehensive evaluation of all currently</p> <p>8 available relevant data indicates that perineal</p> <p>9 exposure to talc powder is a possible cause of</p> <p>10 ovarian cancer in humans."</p> <p>11 First, did I read that correctly?</p> <p>12 A Yes.</p> <p>13 Q Okay. Do you agree first that the Taher</p> <p>14 2018 paper represents a comprehensive evaluation</p> <p>15 of all currently available relevant data?</p> <p>16 A Yes. I haven't -- I haven't done the</p> <p>17 same comparison between which studies and which</p> <p>18 data points from each study they used compared to</p> <p>19 the ones that I've used. I did that for the Berge</p> <p>20 and for the Penninkilampi, comparing theirs with</p> <p>21 mine. I haven't done that for theirs. So I -- I</p> <p>22 assume that they used basically the same studies</p> <p>23 and the same results from each study.</p> <p>24 But, you know, to answer -- I'm quite</p> <p>25 sure that they did this comprehensive evaluation</p>

60 (Pages 234 to 237)

Jack Siemiatycki, Ph.D.

Page 238	Page 240
<p>1 of all currently available, but to answer that</p> <p>2 strictly, I would want to do a comparison of the</p> <p>3 two. But I'm willing to accept.</p> <p>4 Q Okay. And we see here even in this</p> <p>5 sentence that we just read that there's a</p> <p>6 reference there to the IARC publication in 2010.</p> <p>7 We've already discussed that, correct?</p> <p>8 A Yes.</p> <p>9 Q And then there's a reference to</p> <p>10 subsequent evaluations by individual</p> <p>11 investigators, and there's a reference there to</p> <p>12 articles or studies 3, 5 and 69. Do you see that?</p> <p>13 A I see that.</p> <p>14 Q And looking at the reference pages,</p> <p>15 beginning on page 51, would you agree that</p> <p>16 reference 3 is the Berge analysis, this citation</p> <p>17 is to 2017, correct?</p> <p>18 A Correct.</p> <p>19 Q Five is Penninkilampi, correct?</p> <p>20 A Correct.</p> <p>21 Q And the last reference, which is 69, is</p> <p>22 to the Terry meta-analysis. Do you see that?</p> <p>23 A Terry is not a meta-analysis. It's a</p> <p>24 pooled analysis. But I see that, yes.</p> <p>25 Q Okay. So the reference in the Taher</p>	<p>1 Q And that they examined those studies</p> <p>2 closely enough at least to reach the conclusion in</p> <p>3 their own mind that their results were consistent</p> <p>4 with those findings.</p> <p>5 MS. PARFITT: Objection. Form.</p> <p>6 THE WITNESS: Yes.</p> <p>7 BY MS. BRANSCOME:</p> <p>8 Q Are there any scientific publications</p> <p>9 that were available to you during your review in</p> <p>10 connection with your formation of opinions in the</p> <p>11 MDL that were not available to the authors of the</p> <p>12 Taher manuscript?</p> <p>13 MS. PARFITT: Objection. Form.</p> <p>14 THE WITNESS: So are you talking about</p> <p>15 the meta-analysis that -- are you talking about</p> <p>16 studies that went into meta-analysis or are you</p> <p>17 talking about the, you know, 200 or 300 references</p> <p>18 in my bibliography?</p> <p>19 BY MS. BRANSCOME:</p> <p>20 Q Fair enough.</p> <p>21 Are there any studies that you included</p> <p>22 in your meta-analysis that, at least to your</p> <p>23 knowledge, were available to you and were not</p> <p>24 available to the Taher authors?</p> <p>25 MS. PARFITT: Objection. Form.</p>
Page 239	Page 241
<p>1 manuscript to reference 69 is to the Terry pooled</p> <p>2 analysis from 2013, correct?</p> <p>3 A Correct.</p> <p>4 Q And so you agree that at least the Taher</p> <p>5 authors considered the Berge, Penninkilampi, and</p> <p>6 Terry studies.</p> <p>7 MS. PARFITT: Objection. Form.</p> <p>8 THE WITNESS: Were aware of. I'm not</p> <p>9 sure what you mean by considered. They -- they</p> <p>10 referenced it. I don't know that they considered</p> <p>11 it in their -- I don't imagine that there's any</p> <p>12 place in their statistical analysis where they</p> <p>13 introduced data from any of those papers. They're</p> <p>14 just acknowledging that those other meta-analyses</p> <p>15 found the same thing that they found.</p> <p>16 BY MS. BRANSCOME:</p> <p>17 Q So perhaps we have a different</p> <p>18 understanding of the word "considered."</p> <p>19 A Okay.</p> <p>20 Q Would you agree that a fair reading of</p> <p>21 their Conclusion paragraph would indicate that the</p> <p>22 Taher authors were first aware --</p> <p>23 A Yes.</p> <p>24 Q -- of Terry, Berge and Penninkilampi?</p> <p>25 A Yes.</p>	<p>1 THE WITNESS: Oh, they would have been</p> <p>2 available because all of my -- the studies I used</p> <p>3 are in publicly available literature, and I'm sure</p> <p>4 they were available.</p> <p>5 BY MS. BRANSCOME:</p> <p>6 Q Okay. Do you have any criticisms of the</p> <p>7 Taher 2018 meta-analysis?</p> <p>8 A I haven't evaluated it closely enough</p> <p>9 to -- to formulate criticisms or praise or --</p> <p>10 Q Now, you testified earlier that there</p> <p>11 was a flurry of activity in December surrounding</p> <p>12 the information from Health Canada and the Taher</p> <p>13 manuscript.</p> <p>14 Is there a reason why you have not</p> <p>15 reviewed the Taher manuscript in detail and formed</p> <p>16 an opinion about whether you agree or disagree</p> <p>17 with its analysis?</p> <p>18 MS. PARFITT: Objection. Fully</p> <p>19 misstates his testimony. Form.</p> <p>20 THE WITNESS: I -- I thought that it</p> <p>21 would have absolutely no bearing on the results</p> <p>22 and the opinions that I expressed in my report,</p> <p>23 plus I didn't have time to do such a review. And</p> <p>24 so the combination of those two things made it a</p> <p>25 simple decision not to devote precious time and</p>

61 (Pages 238 to 241)

Jack Siemiatycki, Ph.D.

Page 242	Page 244
<p>1 effort to a -- a futile activity.</p> <p>2 I'm not uninterested in what they did or</p> <p>3 what they found, but I can predict pretty quickly</p> <p>4 what they did and what they found, and I -- I know</p> <p>5 the studies that they reviewed, that they had</p> <p>6 access to. There's nothing that they would find</p> <p>7 that I wouldn't be able to predict.</p> <p>8 MS. BRANSCOME: Okay.</p> <p>9 Now may be a good time to take a break.</p> <p>10 MS. PARFITT: Sure. Okay. Very good.</p> <p>11 MS. BRANSCOME: Let's go off the record.</p> <p>12 MR. TISI: Are we switching examiners</p> <p>13 too?</p> <p>14 MS. BRANSCOME: I don't know. That's</p> <p>15 why --</p> <p>16 MS. PARFITT: Oh, fair enough. Fair</p> <p>17 enough.</p> <p>18 THE VIDEOGRAPHER: We're going off the</p> <p>19 record at 6:22 p.m.</p> <p>20 (Recess.)</p> <p>21 THE VIDEOGRAPHER: This begins disc</p> <p>22 number 5 in the deposition of Jack Siemiatycki.</p> <p>23 We are going back on the record at 6:40 p.m.</p> <p>24 BY MS. BRANSCOME:</p> <p>25 Q So, Dr. Siemiatycki, if you could open</p>	<p>1 criteria, but which are not criteria and shouldn't</p> <p>2 be called criteria.</p> <p>3 Q Understanding that you have specific</p> <p>4 views about the appropriateness and application of</p> <p>5 it, you are at least familiar with what is</p> <p>6 sometimes referred to as a Bradford Hill analysis</p> <p>7 or the Hill criteria, correct?</p> <p>8 A I don't -- again, the phrase "Bradford</p> <p>9 Hill analysis" doesn't mean anything. I don't</p> <p>10 think you would find that phrase in any</p> <p>11 epidemiology or statistics textbook.</p> <p>12 Q Are you saying as you sit here today,</p> <p>13 Dr. Siemiatycki, you've never heard of the Hill</p> <p>14 criteria?</p> <p>15 MS. PARFITT: Objection. Misstates his</p> <p>16 testimony.</p> <p>17 THE WITNESS: No, I've heard of it, and</p> <p>18 I'm saying that it's a misnomer. And so I'd</p> <p>19 prefer if the correct terminology is used when --</p> <p>20 if you're asking me questions about it.</p> <p>21 BY MS. BRANSCOME:</p> <p>22 Q The authors of the Taher manuscript use</p> <p>23 the term "Hill criteria" --</p> <p>24 A Yes.</p> <p>25 Q -- in their Table 2, correct?</p>
Page 243	Page 245
<p>1 back up to the Taher manuscript again. I believe</p> <p>2 it's in your binder that's been marked as</p> <p>3 Exhibit 6, and specifically, if you could go to</p> <p>4 Figure 3 on page 39.</p> <p>5 Have you looked at Figure 3 from the</p> <p>6 Taher 2018 manuscript before now?</p> <p>7 A No, I haven't. I may have glanced at it</p> <p>8 going through it, but I haven't examined it.</p> <p>9 Q Did you look at anything in the Taher</p> <p>10 manuscript to support your opinion that there is</p> <p>11 at least evidence compatible with the dose-</p> <p>12 response relationship between perineal use of talc</p> <p>13 and ovarian cancer?</p> <p>14 A I didn't look for that in this paper.</p> <p>15 Q If you could look at page 25 of the</p> <p>16 Taher paper.</p> <p>17 Do you see here that the authors of the</p> <p>18 Taher manuscript describe the summary of evidence</p> <p>19 for each of the Hill criteria of causation? Do</p> <p>20 you see that?</p> <p>21 A I see that.</p> <p>22 Q And you are familiar with the Hill --</p> <p>23 the Hill criteria of causation, correct?</p> <p>24 A I'm familiar with what they call the</p> <p>25 Hill criteria and what some people call the Hill</p>	<p>1 A Yes, they do.</p> <p>2 Q And there is a discussion under the --</p> <p>3 what they refer to as a criterion for strength of</p> <p>4 association, correct?</p> <p>5 A Yes.</p> <p>6 Q And the Taher authors report that out of</p> <p>7 30 epidemi- -- epidil- -- epidemiological studies --</p> <p>8 it's late in the day -- six reported positive</p> <p>9 association of statistical significance with a</p> <p>10 risk value, relative risk or odds ratio of 1.5 or</p> <p>11 greater.</p> <p>12 Is that description of the</p> <p>13 epidemiological studies accurate?</p> <p>14 A I don't know. I haven't counted. I</p> <p>15 haven't done that kind of counting, which is</p> <p>16 irrelevant and wrong from a statistical and</p> <p>17 epidemiological point of view to do it. So I</p> <p>18 haven't done it, and I can't confirm that there</p> <p>19 are six that report odds ratios greater than 1.5.</p> <p>20 I could do that if you want me to. I can look</p> <p>21 through studies and see.</p> <p>22 But there's no -- there's no scientific</p> <p>23 purpose in doing that. It's a meaningless piece</p> <p>24 of information.</p> <p>25 Q Would you criticize the Taher authors</p>

62 (Pages 242 to 245)

Jack Siemiatycki, Ph.D.

Page 246	Page 248
<p>1 for their discussion of the Hill criteria?</p> <p>2 A Yes.</p> <p>3 Q And you have explained your criticisms</p> <p>4 about the Hill criteria in both your trial</p> <p>5 testimony and in your prior deposition testimony,</p> <p>6 correct?</p> <p>7 A I can't remember the details, but I -- I</p> <p>8 guess if I was asked about it, I explained what I</p> <p>9 thought about it.</p> <p>10 My criticism -- I'm not sure what you</p> <p>11 mean by my criticisms of the term or of the</p> <p>12 concepts that the paper that Hill wrote in 1965,</p> <p>13 the ways -- the umpteen different ways that other</p> <p>14 people have interpreted it. What -- what are you</p> <p>15 referring to when you say I criticized? What did</p> <p>16 I criticize?</p> <p>17 Q Have your views with respect to the use</p> <p>18 and application of the so-called Hill criterion</p> <p>19 changed since you testified in the Echeverria</p> <p>20 trial?</p> <p>21 MS. PARFITT: Objection. Form.</p> <p>22 THE WITNESS: They -- they haven't</p> <p>23 changed in 40 years.</p> <p>24 BY MS. BRANSCOME:</p> <p>25 Q Okay. Thank you.</p>	<p>1 Q 48 in my binder, but I don't know if you</p> <p>2 have a copy in yours, which might be faster.</p> <p>3 A No, this -- I have the -- I have the</p> <p>4 current Berge paper. So...</p> <p>5 Q At page 9, I believe.</p> <p>6 Well, that's confusing to say page 9.</p> <p>7 A Okay, I see that.</p> <p>8 Q Okay. In reviewing the conclusion that</p> <p>9 the Berge authors reached, would -- did the Berge</p> <p>10 authors conclude that genital talc use was a</p> <p>11 probable cause of ovarian cancer?</p> <p>12 A They did not indicate that they</p> <p>13 concluded that.</p> <p>14 Q Okay. And same for the Penninkilampi</p> <p>15 study.</p> <p>16 MS. PARFITT: Had you finished? Had you</p> <p>17 finished your statement.</p> <p>18 THE WITNESS: Not quite.</p> <p>19 There's a difference between the</p> <p>20 findings of a study and the inferences that are</p> <p>21 drawn from those findings. So the findings of</p> <p>22 their meta-analyses and the findings of the</p> <p>23 Penninkilampi meta-analyses and findings of the</p> <p>24 Taher meta-analyses are the same as my findings.</p> <p>25 All four agree on the findings.</p>
Page 247	Page 249
<p>1 Now, we have just discussed three</p> <p>2 meta-analyses: The Berge meta-analyses, the</p> <p>3 Penninkilampi meta-analyses, and the Taher</p> <p>4 meta-analyses. Correct?</p> <p>5 A Yes.</p> <p>6 Q Would you agree that none of the authors</p> <p>7 of those three meta-analyses concluded that talc</p> <p>8 was a probable cause of ovarian cancer?</p> <p>9 MS. PARFITT: Objection. Form.</p> <p>10 THE WITNESS: The purpose of those</p> <p>11 meta-analyses was to estimate the meta-estimate of</p> <p>12 relative risk. In terms of the conclusion about</p> <p>13 probable causation, I think they all commented on</p> <p>14 it in their discussions.</p> <p>15 And can you specify your question again,</p> <p>16 whether they concluded that it was a probable</p> <p>17 cause?</p> <p>18 BY MS. BRANSCOME:</p> <p>19 Q Correct.</p> <p>20 A I'd have to look at the way they -- what</p> <p>21 conclusions they drew, I'd have to look at that.</p> <p>22 Q Okay. If we could look at the Berge</p> <p>23 paper, which should be tab --</p> <p>24 A Let me see, I think I have the latest</p> <p>25 issue of the Berge paper.</p>	<p>1 Interpreting and making inferences is a</p> <p>2 whole other bailiwick, a whole other activity, and</p> <p>3 they don't -- didn't conclude in this section that</p> <p>4 it's a probable cause. From the same evidence, I</p> <p>5 do conclude that it's a probable cause.</p> <p>6 BY MS. BRANSCOME:</p> <p>7 Q Right. And the same is true for the</p> <p>8 Penninkilampi officer -- authors, correct?</p> <p>9 A Sorry, I have to go through it.</p> <p>10 (Peruses document.)</p> <p>11 I don't really agree with your</p> <p>12 statement. I don't think they conclude that it's</p> <p>13 probable or not probable. I don't see -- can you</p> <p>14 point me to a statement that would imply that it's</p> <p>15 not -- that they think it's not probable?</p> <p>16 Q Do the authors of the Penninkilampi</p> <p>17 paper use the phrase, quote, suggestive of a</p> <p>18 causal association, in the Conclusion section?</p> <p>19 A Yes, they do.</p> <p>20 Q Okay. Would you say that "suggestive of</p> <p>21 a causal association" is equivalent to probable</p> <p>22 causation?</p> <p>23 MS. PARFITT: Objection. Form.</p> <p>24 THE WITNESS: That's a semantic</p> <p>25 question, and how different people and different</p>

63 (Pages 246 to 249)

Jack Siemiatycki, Ph.D.

Page 250	Page 252
<p>1 cultures -- and I think these people are</p> <p>2 Australians -- how Australians tend to use the</p> <p>3 word "suggestive." I -- I don't read this in a</p> <p>4 way as to suggest that they don't think it's</p> <p>5 probable.</p> <p>6 BY MS. BRANSCOME:</p> <p>7 Q So you don't know from reviewing the</p> <p>8 Conclusion section one way or the other whether</p> <p>9 the Penninkilampi authors view perineal use of</p> <p>10 talc as a probable cause of ovarian cancer.</p> <p>11 MS. PARFITT: Objection. Form,</p> <p>12 misstates his testimony.</p> <p>13 Just answer the question.</p> <p>14 THE WITNESS: Yes, that's right, I -- I</p> <p>15 don't.</p> <p>16 BY MS. BRANSCOME:</p> <p>17 Q Okay. And as we just looked at in the</p> <p>18 Taher manuscript, the Taher authors describe that</p> <p>19 the data indicates perineal exposure to talc</p> <p>20 powder is a possible cause of ovarian cancer in</p> <p>21 humans, correct?</p> <p>22 And if you need the reference, it's</p> <p>23 page 49.</p> <p>24 A That's correct.</p> <p>25 Possible does not preclude probable, by</p>	<p>1 "possible" here can cover a range of possibilities</p> <p>2 that includes probable.</p> <p>3 So if something is possible, that means</p> <p>4 it could happen, and in their view or in some of</p> <p>5 their -- those authors' view, the possibility or</p> <p>6 the probability of -- of such a thing happening</p> <p>7 might be greater than 50 percent, and they might</p> <p>8 still describe it as a possible cause of ovarian</p> <p>9 cancer.</p> <p>10 Q You would be --</p> <p>11 MR. KLATT: Object. Nonresponsive.</p> <p>12 Sorry.</p> <p>13 BY MS. BRANSCOME:</p> <p>14 Q You would be purely speculating to opine</p> <p>15 that the Taher authors, for example, when they</p> <p>16 used the term "possible" to describe the</p> <p>17 association, they actually meant probable,</p> <p>18 correct?</p> <p>19 MS. PARFITT: Objection. Form.</p> <p>20 THE WITNESS: I didn't say they -- they</p> <p>21 actually -- I meant -- I said that it could</p> <p>22 include probable.</p> <p>23 And so you are -- the sense of your</p> <p>24 question is to suppose or assume that their use of</p> <p>25 the word "possible" excludes the concept of</p>
Page 251	Page 253
<p>1 the way. I'm not -- I'm not assume- -- are you</p> <p>2 assuming that they had in mind the IARC</p> <p>3 classification system and that these two</p> <p>4 categories are mutually exclusive?</p> <p>5 Q My question to you, Dr. Siemiatycki, is</p> <p>6 did any of the authors of the three other</p> <p>7 meta-analyses, Berge, Penninkilampi or Taher,</p> <p>8 conclude in their papers that perineal talc use is</p> <p>9 a probable cause of ovarian cancer?</p> <p>10 MS. PARFITT: Objection. Form. Asked</p> <p>11 and answered.</p> <p>12 THE WITNESS: They did not use that</p> <p>13 word. But I would not infer that they don't think</p> <p>14 it's a probable cause from the write-up of</p> <p>15 their -- from their write-up. It is possible that</p> <p>16 they consider the description of this as a --</p> <p>17 where is the word "possible"? Is that in the</p> <p>18 Conclusion?</p> <p>19 BY MS. BRANSCOME:</p> <p>20 Q It is.</p> <p>21 A Oh, yeah, possible cause.</p> <p>22 You know, they are -- I mean, I can't</p> <p>23 speak for them because I haven't spoken to any of</p> <p>24 them about this, but I don't think they're</p> <p>25 speaking to a legal audience. And the word</p>	<p>1 probable, that they did not think it's -- because</p> <p>2 they used the word "possible," they absolutely</p> <p>3 denied that it's probable. And I -- that's what</p> <p>4 I'm disagreeing with.</p> <p>5 BY MS. BRANSCOME:</p> <p>6 Q Where I'm coming from is not relevant to</p> <p>7 the question that I'm asking, Dr. Siemiatycki.</p> <p>8 The question that I'm asking you is, do any of the</p> <p>9 authors of the three meta-analyses that we just</p> <p>10 reviewed, Berge, Penninkilampi, and Taher,</p> <p>11 describe in their papers the association between</p> <p>12 perineal use of talc and ovarian cancer as a</p> <p>13 probable causal association?</p> <p>14 MS. PARFITT: Objection. Form.</p> <p>15 BY MS. BRANSCOME:</p> <p>16 Q Do any of them use that term?</p> <p>17 MS. PARFITT: Objection. Form.</p> <p>18 THE WITNESS: None of them use that</p> <p>19 term, but that doesn't preclude that they -- some</p> <p>20 of them believe it is probable.</p> <p>21 MR. KLATT: Object. Nonresponsive.</p> <p>22 BY MS. BRANSCOME:</p> <p>23 Q You have no basis for concluding or even</p> <p>24 suggesting that any of these authors have the</p> <p>25 opinion that it is a probable causal association</p>

64 (Pages 250 to 253)

Jack Siemiatycki, Ph.D.

Page 254	Page 256
<p>1 other than speculating based off of what you're</p> <p>2 reading on the page, correct?</p> <p>3 MS. PARFITT: Objection. Form.</p> <p>4 THE WITNESS: Correct. Nor do I have</p> <p>5 any basis for assuming that they don't think it's</p> <p>6 probable on the basis of what I read.</p> <p>7 BY MS. BRANSCOME:</p> <p>8 Q When you write scientific manuscripts,</p> <p>9 Dr. Siemiatycki, are you careful about your word</p> <p>10 choice, particularly in your conclusion section?</p> <p>11 MS. PARFITT: Objection. Form.</p> <p>12 THE WITNESS: I try to be. I try to be.</p> <p>13 BY MS. BRANSCOME:</p> <p>14 Q Okay. If you could turn to tab 33 in</p> <p>15 your binder.</p> <p>16 Are you familiar with the document that</p> <p>17 is located behind tab 33 in your binder there?</p> <p>18 A I -- I think so. I -- mine had a</p> <p>19 different cover page when I printed it off, but</p> <p>20 that's fine. I'm -- I assume it's the same one</p> <p>21 I -- I had.</p> <p>22 MR. TISI: It's not. It's not.</p> <p>23 MS. PARFITT: What are you referring to?</p> <p>24 MR. TISI: The draft article is not --</p> <p>25 MS. PARFITT: Yeah, I know that.</p>	<p>1 bureau or division. I'm not quite sure.</p> <p>2 Q Okay. And the document that you're</p> <p>3 looking at there is contained within a binder that</p> <p>4 we have previously marked as Exhibit 4, correct?</p> <p>5 A Correct.</p> <p>6 Q All right. Is this an item -- is this</p> <p>7 an item.</p> <p>8 Is this Draft Screening Assessment a</p> <p>9 document that you considered in forming your</p> <p>10 opinions in this case?</p> <p>11 A No, it isn't.</p> <p>12 Q Why not?</p> <p>13 A Because I was only aware of it a month</p> <p>14 or -- a month and a half or two months after I</p> <p>15 completed my report, and two years after I formed</p> <p>16 the main part of my opinion.</p> <p>17 Q How did you obtain a copy of the Draft</p> <p>18 Screening Assessment by Health Canada?</p> <p>19 A I think that this was on the internet.</p> <p>20 I think I --</p> <p>21 THE WITNESS: Yeah, some other -- there</p> <p>22 should be a light button that we can press.</p> <p>23 Excuse me. Excuse me, just maybe off</p> <p>24 the record for a second.</p> <p>25 (A discussion was held off the record.)</p>
Page 255	Page 257
<p>1 THE WITNESS: Is it the Draft Screening</p> <p>2 Assessment?</p> <p>3 MR. TISI: No, that's not the same.</p> <p>4 THE WITNESS: No?</p> <p>5 MR. TISI: It's not.</p> <p>6 MS. PARFITT: Do you have a copy of</p> <p>7 yours?</p> <p>8 THE WITNESS: Yeah.</p> <p>9 MS. BRANSCOME: Can we go off the record</p> <p>10 while we figure this out?</p> <p>11 MS. PARFITT: Sure, that would be fine.</p> <p>12 THE VIDEOGRAPHER: We're going off the</p> <p>13 record at 6:58 p.m.</p> <p>14 (Pause in the proceedings.)</p> <p>15 THE VIDEOGRAPHER: We're back on the</p> <p>16 record at 7:01 p.m.</p> <p>17 BY MS. BRANSCOME:</p> <p>18 Q Dr. Siemiatycki, you have a document in</p> <p>19 front of you that is labeled a "Draft Screening</p> <p>20 Assessment" dated December 2018; is that correct?</p> <p>21 A Yes, I do.</p> <p>22 Q And this is a screening assessment by</p> <p>23 the Environment and Climate Change Canada, Health</p> <p>24 Canada, correct?</p> <p>25 A It's a branch of Health Canada or a</p>	<p>1 THE VIDEOGRAPHER: We are going off the</p> <p>2 record at 7:03 p.m.</p> <p>3 (Pause in the proceedings.)</p> <p>4 THE VIDEOGRAPHER: We are back on the</p> <p>5 record at 7:03 p.m.</p> <p>6 BY MS. BRANSCOME:</p> <p>7 Q Dr. Siemiatycki, we paused because the</p> <p>8 lights turned off, but my question to you is, how</p> <p>9 did you obtain a copy of the Draft Screening</p> <p>10 Assessment by Health Canada?</p> <p>11 A Either it was sent to me by Ms. Parfitt</p> <p>12 or her staff, or I found it on the internet. And</p> <p>13 I can't quite remember now.</p> <p>14 Q Do you remember when you first obtained</p> <p>15 a copy of the Draft Screening Assessment?</p> <p>16 A My guess is just before I went on</p> <p>17 vacation for Christmas and New Years. So it would</p> <p>18 have been mid -- mid to -- mid-December, I guess,</p> <p>19 something like that.</p> <p>20 Q Are you familiar with the process by</p> <p>21 which draft screening assessments are generated by</p> <p>22 Health Canada?</p> <p>23 A No, not really. I was involved with</p> <p>24 this department of Health Canada 30 years ago, and</p> <p>25 I haven't been involved since. I don't know how</p>

65 (Pages 254 to 257)

Jack Siemiatycki, Ph.D.

Page 258	Page 260
<p>1 they function really to produce these evaluations</p> <p>2 and reports.</p> <p>3 Q Did you have any involvement, even</p> <p>4 tangentially, in the development of the Draft</p> <p>5 Screening Assessment by Health Canada?</p> <p>6 A No.</p> <p>7 Q Were you ever asked to consult on any of</p> <p>8 the content that ultimately ended up in the Draft</p> <p>9 Screening Assessment?</p> <p>10 A No, I wasn't.</p> <p>11 Q Were you ever contacted about</p> <p>12 potentially being involved in a Draft Screening</p> <p>13 Assessment of talc for Health Canada?</p> <p>14 A No. Never.</p> <p>15 Q You are aware that this is in fact a</p> <p>16 draft assessment by Health Canada, correct?</p> <p>17 MS. PARFITT: Objection. Form.</p> <p>18 THE WITNESS: I see that's what it says</p> <p>19 on the cover page.</p> <p>20 BY MS. BRANSCOME:</p> <p>21 Q Are you aware of what further steps in</p> <p>22 the process must be taken before the draft</p> <p>23 assessment is potentially accepted or modified?</p> <p>24 MS. PARFITT: Objection. Form.</p> <p>25 THE WITNESS: I'm not familiar with the</p>	<p>1 A Yes.</p> <p>2 Q Do you believe --</p> <p>3 A If I make such a submission, yes.</p> <p>4 Q Why -- well, first of all, do you think</p> <p>5 it's important to disclose your involvement in the</p> <p>6 litigation if you were to submit something for</p> <p>7 public comment?</p> <p>8 A Yes, I think it is.</p> <p>9 Q And why is that?</p> <p>10 A Because there's a potential conflict of</p> <p>11 interest, and they should know about it.</p> <p>12 Q Would you also notify IARC of your role</p> <p>13 in litigation involving talcum powder products if</p> <p>14 you submitted something to them to suggest that a</p> <p>15 formal evaluation of talc be conducted?</p> <p>16 A Yes, I would.</p> <p>17 Q Is that for the same reason?</p> <p>18 A Yes, it is.</p> <p>19 Q Is the Draft Screening Assessment the</p> <p>20 type of material that you think it is reliable to</p> <p>21 base an expert opinion on?</p> <p>22 MS. PARFITT: Objection. Form.</p> <p>23 THE WITNESS: An expert opinion about</p> <p>24 what?</p> <p>25 BY MS. BRANSCOME:</p>
Page 259	Page 261
<p>1 details, no.</p> <p>2 BY MS. BRANSCOME:</p> <p>3 Q What are you familiar with, if not the</p> <p>4 details?</p> <p>5 A I remember seeing that there's a public</p> <p>6 consultation opportunity, and -- so I guess there</p> <p>7 will be a period of time during which they will</p> <p>8 accept public recommendations and comments. And I</p> <p>9 don't know if it's the same committee that will</p> <p>10 then review all of that or a committee that's</p> <p>11 higher up on the administrative pecking order. I</p> <p>12 don't -- I don't know what happens internally.</p> <p>13 Q Do you intend to submit anything for</p> <p>14 the -- during the public comment period?</p> <p>15 A I -- yeah, I hope to do so. I hope to</p> <p>16 do so.</p> <p>17 Q What specifically do you intend to</p> <p>18 submit?</p> <p>19 A I'm not sure yet. I -- I would probably</p> <p>20 submit an opinion supporting the notion that</p> <p>21 perineal use of talc is more likely than not</p> <p>22 related to ovarian cancer.</p> <p>23 Q In your submission, do you intend to</p> <p>24 disclose your role in litigation involving talcum</p> <p>25 powder products?</p>	<p>1 Q About the potential relationship between</p> <p>2 talc and ovarian cancer.</p> <p>3 MS. PARFITT: Objection. Form.</p> <p>4 THE WITNESS: Are you asking if it would</p> <p>5 influence my opinion on the issue or --</p> <p>6 BY MS. BRANSCOME:</p> <p>7 Q So under- -- understanding that the</p> <p>8 Draft Screening Assessment came out after you had</p> <p>9 formed your opinion, I'm asking you that if that</p> <p>10 had not been the case, if it had come out while</p> <p>11 you were still forming your expert opinion, is</p> <p>12 this something that you would rely on?</p> <p>13 A I would take cognizance of it, and I'm</p> <p>14 not sure whether it would persuade me in one</p> <p>15 direction or another on the strength of the</p> <p>16 evidence, but it -- it would certainly give me --</p> <p>17 increase my comfort level to draw inferences to</p> <p>18 see what inferences other people draw. I won't</p> <p>19 necessarily follow their opinions, but I find it</p> <p>20 useful to know what inferences they would draw</p> <p>21 from it.</p> <p>22 Q Is a Draft Screening Assessment the type</p> <p>23 of report or publication that you see cited in</p> <p>24 published scientific literature?</p> <p>25 MS. PARFITT: Objection. Form.</p>

66 (Pages 258 to 261)

Jack Siemiatycki, Ph.D.

Page 262	Page 264
<p>1 THE WITNESS: Not -- not -- in 2 scientific literature, not so much, no. 3 BY MS. BRANSCOME: 4 Q The draft assessment -- first of all, 5 are you familiar with the proposal with respect to 6 talc that's contained in the draft assessment? 7 A Which proposal are you referring to? 8 Q I could refer you specifically to 9 page -- 10 MR. TISI: I spilled coffee on it too. 11 Sorry. You get what you get. 12 BY MS. BRANSCOME: 13 Q -- on page 29. 14 A The Conclusion section? 15 Q Yes. Have you reviewed this before? 16 A I -- I might have looked at it quickly. 17 But let me -- let me review it -- let me read it 18 now. (Peruses document.) 19 You know, it refers to the fit of the -- 20 their findings and conclusions with various 21 articles of law in the Canadian Environmental 22 Protection Act. I would have to know what those 23 articles of law are that this conforms to, that 24 these sentences purportedly conform to. I -- I 25 have no reason to doubt what they say, but I -- I</p>	<p>1 describing the conclusion as a proposal? Or -- 2 yeah. 3 BY MS. BRANSCOME: 4 Q Focusing specifically on the second 5 paragraph where it says: "It is proposed to 6 conclude that talc meets the criteria under 7 paragraph 64(c) of CEPA as it is entering or may 8 enter the environment in a quantity or 9 concentration or under conditions that constitute 10 or may constitute a danger in Canada to human life 11 or health." 12 MS. PARFITT: Objection. Form. 13 THE WITNESS: It's not a way of 14 describing scientific evidence that I'm intimately 15 familiar with. So I would need to review this 16 document in more detail and be aware of the 17 paragraph 64(c) of the CEPA. 18 BY MS. BRANSCOME: 19 Q And that is not something you -- 20 A So I'm not -- 21 Q -- have done as of today? 22 A It's not something I base -- today I 23 couldn't say I agree with this or I don't agree 24 with this. 25 Q Okay. And so this is not -- the Draft</p>
Page 263	Page 265
<p>1 can't confirm. 2 Q So as you sit here today, are you 3 capable or prepared to offer an opinion as to how 4 the conclusions in the Draft Screening Assessment 5 relate to other pieces of literature that we've 6 discussed today? 7 MS. PARFITT: Objection. Form. 8 THE WITNESS: How they relate to -- or 9 whether they're concordant with other pieces? 10 It's difficult for me to say without studying this 11 document more and seeing what the conformity is 12 with the Canadian pieces of legislation that they 13 refer to. So I -- I can't -- I can't give you 14 much more than that. 15 BY MS. BRANSCOME: 16 Q So as you sit here today, could you -- 17 do you have an opinion as to how the proposal in 18 the Draft Screening Assessment with respect to 19 talc relates to the current IARC classification of 20 talc? 21 MS. PARFITT: Objection. Form. 22 THE WITNESS: By proposal, you mean the 23 conclusion? 24 MS. PARFITT: The entire document. 25 THE WITNESS: You're -- you're</p>	<p>1 Screening Assessment by Health Canada is not 2 something that you are relying upon in any way in 3 offering your expert opinions in this case; is 4 that correct? 5 MS. PARFITT: Objection. Form, 6 misstates his testimony. 7 THE WITNESS: No. As I said, I didn't 8 rely on this to form my opinion. 9 BY MS. BRANSCOME: 10 Q Okay. 11 MS. BRANSCOME: Could we go off the 12 record just briefly? 13 MS. PARFITT: Of course. 14 THE VIDEOGRAPHER: We're going off the 15 record at 7:15 p.m. 16 (Pause in the proceedings.) 17 THE VIDEOGRAPHER: We're back on the 18 record at 7:16 p.m. 19 BY MS. BRANSCOME: 20 Q Dr. Siemiatycki, can you describe -- can 21 you identify for me specifically the pieces of 22 evidence that you would cite to in support of your 23 opinion that there is evidence consistent with a 24 dose-response relationship that was not considered 25 by the IARC 2006 working group?</p>

67 (Pages 262 to 265)

Jack Siemiatycki, Ph.D.

Page 266	Page 268
<p>1 A Can --</p> <p>2 Q And I'm just looking for an</p> <p>3 identification of the papers.</p> <p>4 A Let me just dig out -- I keep hiding</p> <p>5 things from myself.</p> <p>6 MS. PARFITT: Okay.</p> <p>7 THE WITNESS: Oh, there.</p> <p>8 The primary pieces of evidence -- the</p> <p>9 primary piece of evidence is the analysis carried</p> <p>10 out in the Terry, et al., paper where they</p> <p>11 combined ten different studies from eight</p> <p>12 different research teams. They had by far the</p> <p>13 largest sample size of any conglomeration of</p> <p>14 studies ever conducted, enough to properly</p> <p>15 evaluate dose-response. And that's one of them.</p> <p>16 The second one is the Schildkraut study,</p> <p>17 which is much smaller than the Terry study in</p> <p>18 terms of numbers.</p> <p>19 And the third -- a third one, which was</p> <p>20 not part of the evidence that influenced my</p> <p>21 evaluation, is the latest version of the Berge</p> <p>22 paper which has some dose-response results in a</p> <p>23 table whose origin I don't completely understand,</p> <p>24 but ostensibly it gives dose-response trends that</p> <p>25 are significant and meaningful for duration and</p>	<p>1 use your own copy if that's more convenient.</p> <p>2 A Yep. There we go. Okay.</p> <p>3 Q Did the authors of the Terry 2013 paper,</p> <p>4 did they conclude in their manuscript that they</p> <p>5 had observed a statistically significant dose-</p> <p>6 response relationship between the perineal use of</p> <p>7 talc and ovarian cancer?</p> <p>8 A They reported two different ways of</p> <p>9 calculating the statistical significance of a</p> <p>10 trend. One of them was significant, and the other</p> <p>11 was formal, in terms of the conventional 0.05</p> <p>12 statistical significance level, was not</p> <p>13 significant at that level.</p> <p>14 Q And in fact in the abstract, the authors</p> <p>15 of the Terry paper state that: "Among genital</p> <p>16 powder users, we observed no significant trend,</p> <p>17 p equals 0.17, in risk with increasing number of</p> <p>18 lifetime applications," in parentheses, "assessed</p> <p>19 in quartiles."</p> <p>20 Did I read that correctly?</p> <p>21 A That's correct.</p> <p>22 Q Okay. Now, in your 2016 report --</p> <p>23 A Yeah.</p> <p>24 Q -- you had the statement that: "The</p> <p>25 appropriate statistical test for trend is one that</p>
Page 267	Page 269
<p>1 frequency of exposure. But I would put less</p> <p>2 weight on that until I fully understand what --</p> <p>3 how they derived those estimates.</p> <p>4 BY MS. BRANSCOME:</p> <p>5 Q Okay. So the pieces of evidence that</p> <p>6 you would cite to in support of the idea that</p> <p>7 there has been a development that is supportive of</p> <p>8 a dose-response relationship between perineal talc</p> <p>9 and ovarian cancer since the IARC classification</p> <p>10 of talc as a 2B would be the Terry, the</p> <p>11 Schildkraut, and potentially the Berge analysis;</p> <p>12 is that correct?</p> <p>13 MS. PARFITT: Objection --</p> <p>14 THE WITNESS: Yes.</p> <p>15 MS. PARFITT: -- to the reference of</p> <p>16 "potentially the Berge." Form.</p> <p>17 BY MS. BRANSCOME:</p> <p>18 Q You did not rely in any way on the</p> <p>19 analysis in the Berge 2018 paper for your</p> <p>20 conclusion that there is evidence compatible with</p> <p>21 a dose-response relationship between perineal talc</p> <p>22 use and ovarian cancer, correct?</p> <p>23 A That's correct.</p> <p>24 Q Okay. So looking first at the Terry</p> <p>25 2013 paper. This is tab 14 or you're welcome to</p>	<p>1 excludes the baseline unexposed category."</p> <p>2 Do you remember having that sentence in</p> <p>3 your 2016 report?</p> <p>4 A I remember the -- the idea being there,</p> <p>5 yes.</p> <p>6 Q Okay. And you would agree that if you</p> <p>7 apply that statistical test for trend, meaning you</p> <p>8 exclude the baseline unexposed category, the Terry</p> <p>9 2013 paper does not demonstrate a dose-response</p> <p>10 relationship, correct?</p> <p>11 MS. PARFITT: Objection.</p> <p>12 THE WITNESS: No.</p> <p>13 MS. PARFITT: Misstates testimony.</p> <p>14 THE WITNESS: So I would not conclude --</p> <p>15 I would say that it demonstrates dose-response,</p> <p>16 but not at a statistical -- at a 0.05 statistical</p> <p>17 significance level.</p> <p>18 And I would also -- I can't remember the</p> <p>19 wording and the context in the 2016 report that</p> <p>20 you're referring to, but I would imagine that I</p> <p>21 preceded that statement with some mention of the</p> <p>22 fact that it depends if you are using the overall</p> <p>23 risk among all exposed people compared to</p> <p>24 unexposed people as a complementary piece of</p> <p>25 information.</p>

68 (Pages 266 to 269)

Jack Siemiatycki, Ph.D.

Page 270	Page 272
<p>1 And it's only in the context when you 2 are using the -- all the exposed compared to all 3 the unexposed, and at the same time carrying out 4 an analysis of the different levels of exposure, 5 that including the unexposed among the -- in that 6 trend analysis becomes overlapping information 7 with the overall -- the significance of the 8 overall estimate. 9 BY MS. BRANSCOME: 10 Q Okay. 11 A This -- I'm not quite finished. Sorry. 12 So -- and because I don't want you to 13 think that I believe or believed that on its own 14 there is no evidence of dose-response. There is 15 evidence of dose-response in the Terry analysis. 16 The choice of which p-value to report on the trend 17 analysis depends completely on how one combines 18 that information with the ever exposed/never 19 exposed information and the p-value for that. 20 That when we want completely independent and 21 separate strands of evidence to corroborate each 22 other, then it's appropriate to exclude the 23 unexposed from the p-value computation. 24 When you are using -- when you are not 25 using the binary exposed/unexposed as part of the</p>	<p>1 are you positing? 2 BY MS. BRANSCOME: 3 Q Of those ten studies, which, if any of 4 them, postdate 2006? Do you know? 5 A Most of them do. I would say -- I think 6 the only one -- ones that were published before 7 2006 were a study by Chang and one or two of the 8 components of Cramer's studies. I think the rest 9 were all published post-2006. 10 Q Okay. Did you independently do an 11 analysis of the potential dose-response 12 relationship of perineal talc use and ovarian 13 cancer? 14 MS. PARFITT: Objection. Form. 15 THE WITNESS: By "independently," you 16 mean trying to replicate the Terry analysis? No. 17 I don't see why I would be motivated to do 18 something that someone else has already done. 19 BY MS. BRANSCOME: 20 Q Okay. So you are relying on the data as 21 reported by Terry 2013 that you consider to be 22 evidence in support of a dose-response 23 relationship, correct? 24 A That's correct. 25 Q Okay. But the authors themselves do not</p>
Page 271	Page 273
<p>1 package of information to demonstrate causation, 2 then the correct p-value is the one that includes 3 the unexposed. So it depends how you use these 4 things. 5 If I didn't qualify that statement that 6 you read before, then I was in error. 7 Q If you did not have the Terry 2013 8 study -- 9 A Yes. 10 Q -- set that aside for a moment, you did 11 not have that data, would it still be your opinion 12 that the perineal use of talc probably causes 13 ovarian cancer? 14 A So -- 15 MS. PARFITT: Objection. Form. 16 THE WITNESS: So just to be clear what 17 the hypothetical supposition is, so the Terry 18 paper doesn't exist, but the studies underlying 19 the Terry paper still do exist, correct? Or they 20 don't exist either? 21 So there are ten studies underlying the 22 Terry reanalysis. Is your hypothetical question 23 about the possibility that none of those studies 24 existed or that they existed, but nobody actually 25 put them together to combine an analysis? What</p>	<p>1 conclude that there has been a statistically 2 significant dose-response relationship established 3 for the perineal use of talc and ovarian cancer, 4 correct? 5 MS. PARFITT: Objection. Form, 6 misstates the evidence. 7 THE WITNESS: I -- I didn't review what 8 they concluded in the Discussion section. If you 9 want, I could review that. And I -- I don't 10 remember what -- what kind of narrative inferences 11 they made about it. 12 BY MS. BRANSCOME: 13 Q Okay. 14 A You're asking me to confirm that they 15 didn't conclude, so I would want -- their data in 16 my mind indicates dose-response. How they 17 interpret it -- as I said before, they're two 18 separate things, the production of findings from 19 research and the interpretation of those findings. 20 I am as capable of interpreting -- they 21 aren't as capable of interpreting my findings from 22 my studies as I am or they are as capable -- they 23 have the right to. I have the right to interpret 24 their findings. It's a different activity 25 producing findings and then interpreting them. So</p>

69 (Pages 270 to 273)

Jack Siemiatycki, Ph.D.

Page 274	Page 276
<p>1 how they interpreted their findings, I don't quite 2 remember exactly what they said about it. 3 Q Okay. 4 MS. BRANSCOME: I am going to pass to 5 counsel for Imerys at this time. 6 MR. KLATT: Can we go off the record for 7 just a couple of minutes? Let me get organized. 8 THE VIDEOGRAPHER: We are going off the 9 record at 7:31 p.m. 10 (Pause in the proceedings.) 11 THE VIDEOGRAPHER: We are going back on 12 the record at 7:32 p.m. 13 DIRECT EXAMINATION 14 BY MR. KLATT: 15 Q Good afternoon -- good evening, 16 Dr. Siemiatycki. 17 A Good evening. How are you? 18 Q I'm Mike Klatt. I represent Imerys Talc 19 America in this case. 20 I don't know if you recall or not, but 21 you and I had met about two years ago when you 22 were giving a deposition in the Oules and Swan 23 cases. Do you recall that? 24 A I do recall that. 25 Q Okay.</p>	<p>1 people at IARC and the public generally to know 2 that you had been a retained and paid expert by 3 plaintiffs' counsel in the talc ovarian cancer 4 litigation; is that correct? 5 A Sir, can you -- I think I already said 6 that, but could you repeat? Maybe I'm 7 misunderstanding. 8 Q Yes. I'm just saying such a conflict of 9 interest disclosure on your part, it would be 10 important to disclose not merely that you had been 11 a consultant or merely that you had been involved 12 in litigation involving ovarian cancer, but it 13 would be important to specifically disclose that 14 you had been a retained and paid expert by 15 plaintiffs' counsel in the talc/ovarian cancer 16 litigation. Correct? 17 MS. PARFITT: Objection. Form, asked 18 and answered. 19 THE WITNESS: I -- I'm not sure I 20 understand the distinction between this last 21 affirmation and the one before. I -- yes, it -- 22 BY MR. KLATT: 23 Q Well, we've had -- we've had other 24 conflict of interest disclosures, and I put that 25 in quotes, where people said that they had been a</p>
Page 275	Page 277
<p>1 A Very fondly. 2 Q Thank you. 3 I just have a few questions for you, and 4 I want to go back and just make sure the record is 5 clear on something. 6 Your testimony is you've had no contact 7 or communications whatsoever with anyone with 8 Health Canada regarding talc; is that correct? 9 A That's correct. 10 Q And you've had no contact or 11 communications whatsoever with Dr. Krewski or 12 anyone else who's an author of the Taher 13 meta-analysis regarding talc? 14 A That's correct. 15 Q That's correct. Okay. 16 A minute ago I believe you told 17 Ms. Branscome that if you continued to interact 18 with IARC or have contact with Health Canada 19 regarding the issue of talc and ovarian cancer, 20 it's incumbent upon you to have a conflict of 21 interest disclosure, correct? 22 A Yes. I said that. 23 Q And you would agree with me it would be 24 important in evaluating any potential bias you 25 have for the people at Health Canada and the</p>	<p>1 consultant, period. That wouldn't be sufficient, 2 would it? 3 A I would -- 4 MS. PARFITT: Objection. Form. 5 THE WITNESS: I would not do that. 6 BY MR. KLATT: 7 Q And we've had people say, I've been 8 involved as an expert in ovarian cancer 9 litigation. That wouldn't be sufficient either, 10 correct? 11 MS. PARFITT: Objection. Form. 12 THE WITNESS: I would not do that. 13 BY MR. KLATT: 14 Q What you would do is you would say, I 15 have been a retained and paid expert by 16 plaintiffs' counsel in the talc/ovarian cancer 17 lawsuits, or something essentially equivalent to 18 that. 19 A I -- I would say something essentially 20 equivalent. It's quite possible that if there was 21 a submission to a journal, for example, or a 22 manuscript, the journal may have a formulaic way 23 of expressing that. So... 24 Q But wouldn't it be important to the 25 readers to know which side of the litigation you</p>

70 (Pages 274 to 277)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 278</p> <p>1 had been on in evaluating your bias?</p> <p>2 MS. PARFITT: Objection. Form, asked</p> <p>3 and answered.</p> <p>4 THE WITNESS: I -- I would -- I would</p> <p>5 disclose the nature of my involvement.</p> <p>6 BY MR. KLATT:</p> <p>7 Q Including which side?</p> <p>8 A Including which side I was consulting</p> <p>9 for.</p> <p>10 Q Okay.</p> <p>11 MR. KLATT: Can we mark this as the next</p> <p>12 exhibit?</p> <p>13 MS. PARFITT: 14.</p> <p>14 (Exhibit No. 14 was marked for</p> <p>15 identification.)</p> <p>16 BY MR. KLATT:</p> <p>17 Q Dr. Siemiatycki, you said earlier that</p> <p>18 you worked with Dr. Koushik; is that correct?</p> <p>19 A Yes.</p> <p>20 Q And what is your professional</p> <p>21 relationship with Dr. Koushik?</p> <p>22 A We are members of the same academic</p> <p>23 department. We are down the hall from each other.</p> <p>24 Our offices are nearby each other. We have worked</p> <p>25 together on various projects.</p>	<p style="text-align: right;">Page 280</p> <p>1 PROVAQ study, correct?</p> <p>2 A Correct.</p> <p>3 Q And that's the study she is working on</p> <p>4 with you, correct?</p> <p>5 A More I'm working on with her, but she's</p> <p>6 the lead on that.</p> <p>7 Q And with the help of others in your</p> <p>8 group as well --</p> <p>9 A With the help of others, yes.</p> <p>10 Q -- correct?</p> <p>11 And what I've handed you --</p> <p>12 MR. KLATT: And what was the exhibit</p> <p>13 number?</p> <p>14 MR. TISI: 14.</p> <p>15 BY MR. KLATT:</p> <p>16 Q Exhibit 14 is Dr. Koushik's web pages</p> <p>17 from the Environ Epi website. You're familiar</p> <p>18 with that website, correct?</p> <p>19 A Yes, I am.</p> <p>20 Q And you'll turn to the back page of the</p> <p>21 exhibit, the final page, and you will see it's</p> <p>22 copyrighted 2019, correct?</p> <p>23 A Correct.</p> <p>24 Q And let's just see what Dr. Koushik says</p> <p>25 about her research on the first page. She says:</p>
<p style="text-align: right;">Page 279</p> <p>1 Q For how long?</p> <p>2 A Ten -- 10 or 12 years now.</p> <p>3 Q And she's very well educated, correct?</p> <p>4 MS. PARFITT: Objection.</p> <p>5 THE WITNESS: I'm not sure what you mean</p> <p>6 by that. She has a --</p> <p>7 BY MR. KLATT:</p> <p>8 Q Well, she has a Bachelor --</p> <p>9 A She has a --</p> <p>10 Q -- of Science in pharmacology from the</p> <p>11 University of Alberta.</p> <p>12 A Correct.</p> <p>13 Q She has a Master's in community health</p> <p>14 and epidemiological from Queen's University in</p> <p>15 Kingston, Ontario?</p> <p>16 A Uh-huh.</p> <p>17 Q She has a Ph.D. in epidemiology from --</p> <p>18 in epidemiology and biostatistics from McGill</p> <p>19 University here in Montreal, correct?</p> <p>20 A Correct.</p> <p>21 Q And she's had a postdoctoral fellowship</p> <p>22 at Harvard in the U.S., correct?</p> <p>23 A Correct.</p> <p>24 Q And she is the principal investigator of</p> <p>25 the Prevention of Ovarian Cancer in Quebec, the</p>	<p style="text-align: right;">Page 281</p> <p>1 "My research program focuses on the epidemiology</p> <p>2 of ovarian and lung cancers." Correct?</p> <p>3 A Mm-hmm, yes.</p> <p>4 Q "Ovarian cancer is by far the most</p> <p>5 deadly of all gynecologic cancer. Most patients</p> <p>6 are diagnosed at advanced stages, leading to the</p> <p>7 poor prognosis, and we are currently limited in</p> <p>8 our ability to detect disease early." Correct?</p> <p>9 A Correct.</p> <p>10 Q She says: "There is overwhelming</p> <p>11 evidence that healthy lifestyle choices can reduce</p> <p>12 the risk of several cancers. However, we do not</p> <p>13 yet know of any effective ways to prevent the</p> <p>14 onset of ovarian cancer."</p> <p>15 Would you agree with that?</p> <p>16 MS. PARFITT: Objection. Form.</p> <p>17 THE WITNESS: I'm sorry, I'm trying to</p> <p>18 think of what this sentence really means. It's</p> <p>19 kind of a -- it's kind of a stock sentence that is</p> <p>20 used in -- by epidemiologists when they're looking</p> <p>21 for funding and trying to convince funders that</p> <p>22 we don't know a lot, and therefore they need to</p> <p>23 give us money. So I can imagine part of this is</p> <p>24 cut-and-pasted from that sort of document.</p> <p>25 BY MR. KLATT:</p>

71 (Pages 278 to 281)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 282</p> <p>1 Q Well, what it means is --</p> <p>2 MS. PARFITT: Wait, wait. Please let</p> <p>3 him finish.</p> <p>4 BY MR. KLATT:</p> <p>5 Q Go ahead.</p> <p>6 MS. PARFITT: Thanks, Mike.</p> <p>7 THE WITNESS: There are some risk</p> <p>8 factors that are well established for -- for</p> <p>9 ovarian cancer, which Anita is very well aware of,</p> <p>10 genetic and certain reproductive and hormonal</p> <p>11 factors.</p> <p>12 The evidence on talc is accumulating,</p> <p>13 and in my view is sufficient. Anita has not</p> <p>14 reviewed that evidence. And --</p> <p>15 BY MR. KLATT:</p> <p>16 Q Have you talked to Dr. Koushik at all</p> <p>17 about your involvement in the talc ovarian cancer</p> <p>18 litigation?</p> <p>19 A She's aware that I'm involved in this.</p> <p>20 Q Well, let's go on to see what she says</p> <p>21 here.</p> <p>22 After saying: "However, we do not yet</p> <p>23 know of any effective ways to prevent the onset of</p> <p>24 ovarian cancer," she says, "the evidence on some</p> <p>25 lifestyle factors, such as alcohol intake,</p>	<p style="text-align: right;">Page 284</p> <p>1 intake, and recreational physical activity."</p> <p>2 Correct?</p> <p>3 A Correct.</p> <p>4 Q She doesn't say a word about talc there,</p> <p>5 does she?</p> <p>6 MS. PARFITT: Objection. Form.</p> <p>7 THE WITNESS: She doesn't there because</p> <p>8 she hasn't started those analyses yet. She has</p> <p>9 started analyses -- or her -- with students on</p> <p>10 those other factors.</p> <p>11 BY MR. KLATT:</p> <p>12 Q And then flipping over to the next page,</p> <p>13 Dr. Koushik says: "Healthy lifestyle choices may</p> <p>14 also positively impact the health of ovarian</p> <p>15 cancer survivors. Indeed, until we know how to</p> <p>16 prevent ovarian cancers from occurring in the</p> <p>17 first place, cancer control through tertiary</p> <p>18 prevention aimed at improving prognosis and</p> <p>19 quality of life among those diagnosed is</p> <p>20 critical." Correct?</p> <p>21 A Correct.</p> <p>22 Q And again, no mention at all of talc,</p> <p>23 correct?</p> <p>24 MS. PARFITT: Objection. Form.</p> <p>25 THE WITNESS: Correct.</p>
<p style="text-align: right;">Page 283</p> <p>1 physical activity, and smoking, is suggestive but</p> <p>2 currently remains unclear." Correct?</p> <p>3 A Correct.</p> <p>4 Q She doesn't say one word about talc,</p> <p>5 does she?</p> <p>6 A No.</p> <p>7 MS. PARFITT: Objection. Form.</p> <p>8 THE WITNESS: Not here, no.</p> <p>9 BY MR. KLATT:</p> <p>10 Q And then she goes on to say: "More</p> <p>11 research is greatly needed, especially in light of</p> <p>12 recent discoveries that demonstrate that ovarian</p> <p>13 cancer is a heterogeneous disease." She says: "I</p> <p>14 am the principal investigator of the Prevention of</p> <p>15 Ovarian Cancer in Quebec, PROVAQ study, a</p> <p>16 population-based case-control study conducted in</p> <p>17 2011, 2016."</p> <p>18 And one of the things she's evaluating</p> <p>19 in that study is talc, correct?</p> <p>20 A Correct.</p> <p>21 Q "This study provides" -- and I'm reading</p> <p>22 on -- "This study provides a rich data source for</p> <p>23 the study of multiple hypotheses on lifestyle</p> <p>24 factors and ovarian cancer. Current projects</p> <p>25 focus on associations with shift work, caffeine</p>	<p style="text-align: right;">Page 285</p> <p>1 MR. KLATT: Let's mark that.</p> <p>2 MS. PARFITT: This is now 15.</p> <p>3 MR. KLATT: Have we marked that?</p> <p>4 MS. PARFITT: I just now did. I was</p> <p>5 looking for the stickers. I'm going to get one --</p> <p>6 here they are.</p> <p>7 THE WITNESS: I have a different cover.</p> <p>8 MS. PARFITT: It's a different one.</p> <p>9 That's yours.</p> <p>10 THE WITNESS: Oh.</p> <p>11 MS. PARFITT: This is different, this is</p> <p>12 a new item. PARFITT: Okay, that would be great.</p> <p>24 I will give him that one. Thank you very much.</p> <p>25 BY MR. KLATT:</p>

72 (Pages 282 to 285)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 286</p> <p>1 Q So, Dr. Siemiatycki, I'm now showing you 2 what we marked as exhibit -- what? 3 MS. PARFITT: 15. 4 MR. KLATT: 15? 5 MS. PARFITT: Yes. 6 BY MR. KLATT: 7 Q And it's from the Environ Epi website, 8 your website, and it's the web pages discussing 9 group research topics, correct? 10 A I -- I have to tell you I don't look at 11 this website, and I haven't actually constituted 12 it. It's my secretary or my assistant who does 13 this. So I'm looking at it afresh to see what's 14 there. Yeah. 15 Q Okay. Let's -- let's turn to the very 16 back page, and again the copyright is 2019. 17 That's this year, correct? 18 A Yeah. Yes. 19 Q And then if you will flip over to -- 20 let's see. Well, let's start -- let's see. 21 Go first page, second page, third 22 page -- the fourth page, there's a discussion 23 there of the PROVAQ study of Dr. Koushik that we 24 just talked about, correct? 25 A Yes.</p>	<p style="text-align: right;">Page 288</p> <p>1 reproductive factors is limited. There is 2 suggestive evidence that modifiable factors in the 3 vitamin D pathway, (sun exposure, diet), and 4 inflammation pathway (antiinflammatory medication 5 use, talc use for feminine hygiene) may play a 6 role in ovarian cancer risk, though this research 7 has been limited by small sample sizes, crude 8 exposure measurement and lack of control for 9 important confounders." Correct? 10 A That's what it says. 11 Q Did I read that correctly? 12 A Yes, you did. 13 Q So on this public website, your 14 Environmental Epi website, Dr. Jack Siemiatycki 15 doesn't say talc use causes ovarian cancer, 16 correct? 17 MS. PARFITT: Objection. Form. 18 THE WITNESS: I don't say anything on 19 that website. 20 BY MR. KLATT: 21 Q Well, you -- your group doesn't say talc 22 causes ovarian cancer, does it? 23 MR. TISI: Objection. Form. 24 THE WITNESS: In my opinion, this was 25 created somewhere around 2009, 2010, 2012, in that</p>
<p style="text-align: right;">Page 287</p> <p>1 Q And the topic says: "Prevention of 2 Ovarian Cancer in Quebec, the PROVAQ study, a 3 case-control study of modifiable and genetic 4 factors associated with the risk of ovarian 5 cancer." Correct? 6 A I see that. 7 Q And it says Anita Koushik, that's 8 Dr. Koushik, who we've just been talking about, 9 and it says Jack Siemiatycki. That's you, 10 correct? 11 A That's right. 12 Q And then it goes on to describe what the 13 PROVAQ study is, and it says -- and I'll skip the 14 first few sentences -- it says: "Primary 15 prevention thus offers the most promising approach 16 to reducing the morbidity and mortality associated 17 with this deadly disease. Established preventive 18 factors for ovarian cancer include high parity, 19 long duration of lactation, oral contraceptive 20 use, and tubal ligation." Correct? 21 A That's what it says. 22 Q Talc is not included in that list of 23 established preventive factors, is it? 24 A It's not listed there, no. 25 Q "However, the ability to modify these</p>	<p style="text-align: right;">Page 289</p> <p>1 ballpark. This feels to me like a cut and paste 2 from the grant application of 2009 or 2010 that 3 hasn't been changed. 4 There's not really a lot of motivation 5 for us to -- besides just sort of putting our 6 names and faces up there, our institution asks us 7 to put something on this institutional website 8 for a researcher. I haven't -- I've never looked 9 at this. 10 BY MR. KLATT: 11 Q You or your organization -- 12 MS. PARFITT: Wait. Mike -- Mike, 13 excuse me, I think we're done. 14 THE WITNESS: I've never contributed to 15 this or looked at it. 16 MS. PARFITT: No, no, Mike, 17 unfortunately, your time is up. 18 MR. KLATT: You've -- 19 MS. PARFITT: Mike, no more questions. 20 I have a few questions. I think we're -- 21 MR. KLATT: Are we -- are we done? 22 THE VIDEOGRAPHER: Yes. 23 MR. KLATT: All right. 24 MS. PARFITT: Thank you. I do have a 25 few.</p>

73 (Pages 286 to 289)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 290</p> <p>1 Dr. Siemiatycki, I'm going to stay right 2 over here for a moment, okay? And we can get 3 through this. Okay? 4 MR. KLATT: Here, I'll give this back to 5 you. 6 THE WITNESS: Hi. 7 MS. PARFITT: Tell me when you are 8 ready. 9 THE WITNESS: Who are you? 10 MS. PARFITT: I know. 11 MR. TISI: Are we back on? Are we back 12 on? 13 THE VIDEOGRAPHER: I didn't stop. 14 Sorry, I -- 15 MR. TISI: Oh, I thought we were off. 16 MS. PARFITT: Okay. We didn't -- we 17 didn't know that. 18 CROSS-EXAMINATION 19 BY MS. PARFITT: 20 Q Dr. Siemiatycki, good evening -- 21 Okay. Dr. Siemiatycki, good evening. I 22 know it's been a long day, and I have a few 23 questions, and I will be wrapping -- or jumping 24 around a bit, so hopefully try and keep pace with 25 me, and I'll try and speak slowly and -- so that</p>	<p style="text-align: right;">Page 292</p> <p>1 MS. BRANSCOME: Objection. 2 THE WITNESS: I think it was ordered -- 3 it was contracted in order to underpin the Health 4 Canada evaluation. That's my -- 5 BY MS. PARFITT: 6 Q All right. Now, it was not the only 7 study or research that was conducted by Health 8 Canada; is that correct? It was the meta-analysis 9 that was conducted by them. 10 MS. BRANSCOME: Objection. 11 THE WITNESS: Sorry, I -- what -- 12 BY MS. PARFITT: 13 Q The Taher study -- 14 A Study. 15 Q -- is a meta-analysis; is that correct? 16 A Yes. Yes. 17 Q All right. And the Taher meta-analysis 18 was one part of the information that formulated 19 part of the Health Canada draft assessment? 20 A That's my understanding, yes. 21 Q All right. Now, Daniel Krewski, you 22 indicated, was one of the authors of the Taher 23 paper. 24 A Yes. He's listed. 25 Q And I believe you testified that you</p>
<p style="text-align: right;">Page 291</p> <p>1 we can move through the remainder of your 2 deposition. 3 Dr. Siemiatycki, do you have an opinion 4 as to whether the elimination of talcum powder use 5 in the genital area is a lifestyle activity that 6 is modifiable? 7 If you need me to ask the question 8 again, I'm happy to. 9 A Yeah, I'm trying to think of how the 10 word "modifiable" is used. 11 Q Is it preventable? Is the use of talcum 12 powder products in the genital area a preventable 13 activity? 14 A Yes. 15 MS. BRANSCOME: Objection. 16 BY MS. PARFITT: 17 Q All right. Thank you. 18 All right. You were asked some 19 questions about the Taher article. You remember 20 that? 21 A Yes. 22 Q All right. And is it your understanding 23 that the Taher article is a meta-analysis that was 24 formed as part of the Health Canada 25 recommendation?</p>	<p style="text-align: right;">Page 293</p> <p>1 know Daniel Krewski. 2 A Yes, I do. 3 Q And I believe Mr. Klatt asked you 4 whether or not you had reached out or perhaps 5 Ms. Branscome asked you whether or not you have 6 had any communication with anyone, verbal, oral, 7 written, that had anything to do with Health 8 Canada. Do you remember that? 9 A Yes, I do remember. 10 Q All right. And it's been many hours, 11 but it was my understanding in response to that 12 question, you did indicate that you had sent an 13 e-mail to Daniel Krewski; is that correct? 14 MS. BRANSCOME: Objection. 15 THE WITNESS: I don't remember saying 16 that. 17 BY MS. PARFITT: 18 Q Okay, let me ask you. Have you ever 19 reached out to any member or author of the Taher 20 meta-analysis? 21 A I -- when I learned about it, I sent an 22 e-mail to Dan Krewski asking if this report was 23 intended for publication; and if so, when it would 24 appear, and I haven't -- I didn't have any 25 response.</p>

74 (Pages 290 to 293)

Jack Siemiatycki, Ph.D.

Page 294	Page 296
<p>1 Q All right. So you have had no 2 communication with any of the authors of the Taher 3 study or any of the members of Health Canada? 4 A No. 5 Q Okay. Now, you were asked some 6 questions with regard to the Schildkraut study in 7 particular. Now, what I'd like you to do is, if 8 you can get that in front of you, and I believe 9 it's part of the documentation in your binder, 10 number 4. 11 And what I'd ask you to also do, if you 12 will, is pull out your paper, your Terry paper -- 13 your copy of the Terry paper, and maybe we'll go 14 there first. 15 A Terry? 16 Q If you get the Terry. Do you have the 17 Terry in front of you? 18 A Yeah, I've got it in front of me, yes. 19 Q Okay. Now, Ms. Branscome asked you and 20 referred you to the abstract of the Terry paper. 21 Do you recall that -- 22 A Yes. 23 Q -- examination? 24 A Yes. 25 Q And I believe she focused your attention</p>	<p>1 you? 2 A Yes, I do. 3 Q And I believe it's a continuation of the 4 Results section -- 5 A Yes. 6 Q -- which starts on 815 and continues all 7 the way over to the end of the document. Do you 8 see that? 9 A I do. 10 Q All right. And specifically about 11 halfway down on page 817 of the Results section of 12 the Terry paper, what did the authors find as it 13 pertains to whether or not there is evidence 14 demonstrating dose-response as it relates to 15 genital powder use and ovarian cancer? 16 A So are you referring to the sentence 17 that begins "Although a significant increase"? 18 Q Correct. 19 A Or before that? 20 Q Whatever you need to read, but I was 21 specifically -- 22 A Okay. 23 Q -- referring to the "although." And you 24 can read that paragraph, please. 25 A Okay. So I'll start at the beginning of</p>
Page 295	Page 297
<p>1 on the very last sentence of the Terry paper, the 2 next to last sentence which started with "Among 3 genital powder users." 4 Do you see that? 5 A I see that. 6 Q All right. And she asked you whether or 7 not indeed the abstract section of the Terry paper 8 said: "Among genital powder users, we observed no 9 significant trend, p equals 0.17, in risk with 10 increasing numbers of lifetime applications 11 (assessed in quartiles)." 12 A I see that. 13 Q All right. You've had an opportunity to 14 read this -- 15 A I've read it -- 16 Q -- article? 17 A -- several times over the last three 18 years. 19 Q All right. Let me direct your attention 20 to the actual paper, and specifically to -- not 21 the abstract of the paper but to the section 22 that's entitled -- I believe it's the Discussion 23 section and it's over on page 817. 24 A Yes. 25 Q All right. Do you have that in front of</p>	<p>1 that paragraph. 2 Q Please, if you will. 3 A Read out loud? 4 Q If you will. 5 A "We evaluated cumulative genital powder 6 exposure as a composite variable of frequency and 7 duration of use. We have observed similar 8 increased risks of all nonmucinous subtypes of 9 epithelial ovarian cancer combined across 10 quartiles of genital powder compared with nonuse." 11 The OR in the first quartile is 1.18 with 12 confidence intervals. In the second quartile, it 13 was 1.22. In the third quartile, it's 1.22. And 14 the fourth quartile it's 1.37. 15 I didn't read the confidence intervals. 16 Q Are the confidence intervals for the 17 quartiles you just discussed all statistically 18 significant? 19 A Yes, they are. 20 Q All right. Please continue. 21 A "Although a significant increase in risk 22 with an increasing number of genital powder 23 applications was found for nonmucinous epithelial 24 ovarian cancer when nonusers were included in the 25 analysis with a p-value that's extremely small,"</p>

75 (Pages 294 to 297)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 298</p> <p>1 highly significant, "no trend in cumulative use 2 was evident in analyses restricted to ever users 3 of genital powder for trend .17. Taken together, 4 these observations suggest that the significant 5 trend test largely reflects the comparison of ever 6 regular use with never use." 7 Q Okay, and if you would stop there. 8 What is the significance of the findings 9 of the authors in that paragraph you just read as 10 it pertains to whether or not this study shows a 11 dose-response increase? 12 A Well, so my interpretation is that 13 overall there is, for users compared to nonusers, 14 a highly significant trend, and four -- among the 15 four - there are four quartiles, and there is a 16 fifth group called nonusers -- they have a 17 relative risk of 1.0. And in those five groups, 18 the relative risk -- the relative risk estimates 19 go from 1.0 to 1.18 to 1.22, 1.22, 1.3, 20 something, 7. Those five values indicate to me a 21 tendency of increasing risk with increasing 22 exposure. Whether it is -- whether there's formal 23 proof of that in a -- from a statistical 24 significance point of view is a secondary issue as 25 to compared with whether the data are compatible</p>	<p style="text-align: right;">Page 300</p> <p>1 Q The Draft Screening Assessment, right. 2 A Yes. 3 Q Okay. And specifically, let me direct 4 your attention to Roman number -- Roman numeral 5 III of that document. 6 A Yes. 7 Q Okay. 8 MS. BRANSCOME: Michelle, would you mind 9 helping me follow along? 10 MS. PARFITT: Oh, I'm sure. 11 MR. TISI: I can give you my copy. 12 MS. PARFITT: Sure. Absolutely. 13 MR. KLATT: You may want those. 14 MS. BRANSCOME: Thank you. What page 15 are we on? 16 MS. PARFITT: Counsel, I'm on Roman 17 numeral III. 18 MS. BRANSCOME: Oh, the page -- I had a 19 section number that I couldn't find -- 20 MS. PARFITT: No. At the bottom it has 21 a Roman numeral III. 22 BY MS. PARFITT: 23 Q Dr. Siemiatycki, referring you to the -- 24 first, second, third -- fourth full paragraph of 25 the Draft Screening Assessment, the fourth full --</p>
<p style="text-align: right;">Page 299</p> <p>1 with dose-response. 2 So as you may recall, in the IARC 2006 3 evaluation and in -- I guess in the Langseth 4 paper, I think we indicated that we were very 5 concerned about the consistency of increased 6 risks, but found no evidence of dose-response, and 7 that held back any inference that the 8 categorization should be greater than a 2B. 9 The findings from Terry turn on its head 10 the assumptions that were made at IARC that there 11 was no evidence of dose-response. Now there is 12 evidence of dose-response, whether or not it's 13 significant by one test or another test. 14 Q All right. Thank you. 15 All right. Let me direct your 16 attention, if I may, to the Health Canada 17 document, specifically the Draft Screening 18 Assessment dated December 2018. Again, I believe 19 it's in your notebook 4. 20 A 6 -- yeah. Yes. 21 Q All right. 22 A Okay, I have it. 23 Q Now -- now -- 24 A Sorry, the Taher or the Draft Screening 25 Assessment?</p>	<p style="text-align: right;">Page 301</p> <p>1 A Begins with "full"? 2 Q No, it begins with "The meta-analysis." 3 A "The meta-analysis." Yep. 4 Q Correct. 5 Would you please -- does it state: "The 6 meta-analysis of the" -- am I reading this 7 correctly? 8 "The meta-analysis of the available 9 human studies in the peer-reviewed literature 10 indicate a consistent and statistically 11 significant positive association between perineal 12 exposure to talc and ovarian cancer." 13 Did I read that correctly? 14 A Yes, you did. 15 Q All right. Is that your opinion, 16 Dr. Siemiatycki, based upon your review of the 17 totality of the literature on talc powder -- 18 talcum powder use and ovarian cancer in the 19 genital area? 20 A Yes, it is. 21 Q All right. It goes on to say: "Further 22 available data are indicative of a causal effect." 23 Did I read that correctly? 24 A Yes, you did. 25 Q All right. Is it your opinion based</p>

76 (Pages 298 to 301)

Jack Siemiatycki, Ph.D.

<p>Page 302</p> <p>1 upon the totality of not only the epidemiological 2 data and findings but mechanistic data, animal and 3 in vivo data, that indeed the data is indicative 4 of a causal effect? 5 MS. BRANSCOME: Objection. 6 MR. KLATT: Objection. Form. 7 THE WITNESS: I believe it is more 8 likely than not that there is a causal 9 relationship between exposure to talc powder and 10 ovarian cancer. And if those two sentences are 11 taken to be equivalent, then I agree with the 12 sentence. 13 BY MS. PARFITT: 14 Q Well, let me ask you this, 15 Dr. Siemiatycki: You've read the draft 16 assessment, and do you have -- is it fair to say 17 that the methodology that the authors performed 18 throughout the course of this particular draft 19 assessment is the same type of methodology that 20 you have performed for purposes of preparing your 21 report and offering the opinions that you have and 22 will continue to offer the court in -- in the 23 litigation involving talcum powder use and ovarian 24 cancer? 25 MS. BRANSCOME: Objection.</p>	<p>Page 304</p> <p>1 assessment? 2 MS. BRANSCOME: Objection. 3 THE WITNESS: When you say 4 "methodology" -- 5 BY MS. PARFITT: 6 Q Mm-hmm. 7 A -- I'm not sure if you're referring to 8 sort of high level methodology like collecting 9 original data, evaluating it, weighing it, and 10 making inferences on the basis of that data. 11 BY MS. PARFITT: 12 Q What I'm asking is, did the authors 13 perform a Bradford Hill-like causality assessment 14 in the performance of their study entitled Draft 15 Screening Assessment? 16 MR. KLATT: Objection. Form. 17 THE WITNESS: You're saying in the pages 18 between 15 and -- 19 BY MS. PARFITT: 20 Q Correct. I'll shorten it by -- 21 A -- 21? 22 Q Correct. Correct. 23 And if I can refer your attention to or 24 direct you to page 20. 25 A They commented on various considerations</p>
<p>Page 303</p> <p>1 THE WITNESS: The authors of this report 2 I think include a group -- a multidisciplinary 3 group, including toxicologists and possibly 4 environmental scientists. I'm not familiar with 5 them, so I can't say for sure. And in that sense, 6 they cover a broader disciplinary background than 7 I cover myself. So in that sense, they have a 8 broader scope to evaluate the totality of the 9 evidence than I have. 10 Their evaluation of the epidemiologic 11 evidence seems in line with my own, and I have no 12 reason to doubt the validity of their toxicologic 13 analyses of the evidence. 14 BY MS. PARFITT: 15 Q All right. Dr. Siemiatycki, 16 specifically let me refer you to page 15, and it's 17 entitled "Perineal Exposure to Talc." And let me 18 know when you get there. 19 A Yes, I'm there. 20 Q All right. Based upon your review of 21 that section beginning on page 15, and I believe 22 it goes all the way through page 21, are you able 23 to -- do you have a sense as to the methodology 24 again that the authors of the draft assessment 25 employed in order to arrive at their causal</p>	<p>Page 305</p> <p>1 that Bradford Hill mentioned in his article. 2 Q And which ones did they provide 3 information and findings on? 4 A They commented on the strength of the 5 association, on consistency, specificity, 6 temporality, biological gradient, biological 7 plausibility, and coherence. 8 Q And what did the authors conclude -- 9 after looking at the various Bradford Hill 10 factors, what did they conclude in that last 11 paragraph of their Bradford Hill assessment? 12 A "Suggests a small but consistent 13 statistically significant positive association 14 between ovarian cancer and perineal exposure to 15 talc. Further available data are indicative of a 16 causal effect." 17 Is it -- is that what you're referring 18 to? 19 Q Yes. And do you agree with the authors 20 of the draft report of December 2018, when they 21 conclude that: "The most recent meta-analysis 22 detailed, Taher 2018, and consistent with the Hill 23 criteria suggest a small but consistent 24 statistically significant positive association 25 between ovarian cancer and perineal exposure to</p>

77 (Pages 302 to 305)

Jack Siemiatycki, Ph.D.

Page 306	Page 308
<p>1 talc. Further available data are indicative of a 2 causal effect"? 3 A Yes. 4 MR. KLATT: Objection to form. 5 BY MS. PARFITT: 6 Q Thank you. All right. 7 Let me ask a couple other questions, and 8 I need you -- if you will, can you reach over 9 there, I believe it was exhibit number -- do you 10 see your book on occupational diseases? I think 11 it's under -- there you go. Okay. 12 Okay. Now, you were asked many hours 13 ago some questions regarding the book Risk Factors 14 for Cancer in the Workplace. 15 Do you recall that? 16 A Yes, I do. 17 Q All right. And that is indeed a book 18 that was authored by you, Jack Siemiatycki, 19 correct? 20 A Correct. 21 Q All right. And I believe you were asked 22 whether there was anything in your book that 23 described the methodology that you have employed 24 over the course, and I believe you said the last 25 four decades or almost four decades.</p>	<p>1 you have copies in that binder that you had 2 printed out. 3 MS. BRANSCOME: May I have a copy if he 4 is going to read from it? 5 MS. PARFITT: Absolutely. And I thought 6 we had -- do you have any copies in there? 7 THE WITNESS: Oh, for this -- 8 MS. PARFITT: No. 9 MR. TISI: It wasn't marked. It was in 10 the stuff you printed out. 11 MS. PARFITT: I think I've got one here. 12 (A discussion was held off the record.) 13 MS. PARFITT: Ms. Branscome, here you 14 go. Here's copies. 15 And let's have this marked as now 16 exhibit -- I'm not sure what we're up to. 17 MR. TISI: We're up to 18. 18. 18 MS. PARFITT: 18. Okay. 19 And for the record, we are marking the 20 face sheet of the book Risk Factors for Cancer in 21 the Workplace by Jack Siemiatycki, and 22 specifically the table -- 23 MS. BRENNAN: I have 16. 24 MR. TISI: No, because he marked -- 25 MS. BRENNAN: Yeah, 14 --</p>
Page 307	Page 309
<p>1 Do you recall those questions? 2 A Yes, I do. 3 MS. BRANSCOME: Objection. 4 BY MS. PARFITT: 5 Q All right. Where in that book, if there 6 is something in that book, does it describe the 7 methodology that you have employed over the course 8 of the last four decades that you still employ 9 today in your analysis and opinions and findings 10 in the talcum powder product litigation and 11 ovarian cancer? 12 MS. BRANSCOME: Object to form. 13 THE WITNESS: I'm looking for -- well, I 14 guess the main thing I would -- I would summarize 15 that -- 16 BY MS. PARFITT: 17 Q And could you tell us for the record -- 18 A Yes. 19 Q -- Dr. Siemiatycki, where you are? 20 A Where I'm reading? 21 Q Yes, please. 22 A Thank you. I'm looking at page 298 in 23 this book, and I -- did you provide a copy of that 24 chapter? 25 MR. TISI: Doctor, you have copies --</p>	<p>1 MR. KLATT: Actually, it should be 16. 2 MS. PARFITT: 16? Thank you. 16. 3 All right. We are now marking as 4 Exhibit 16 the book entitled Risk Factors for 5 Cancer in the Workplace by Dr. Jack Siemiatycki, 6 which specifically includes the table of contents, 7 Chapter 7, "Interpretation of Findings," pages 297 8 through 308. 9 MR. DONATH: Is that an excerpt, not the 10 whole thing? 11 MS. PARFITT: It is -- it is not. We'll 12 make the book available, but it's just the 13 excerpt. 14 (Exhibit No. 16 was marked for 15 identification.) 16 MS. BRANSCOME: Did someone just join 17 the line? 18 THE REPORTER: They hung up. 19 THE WITNESS: Shall I read a couple of 20 paragraphs from this? 21 BY MS. PARFITT: 22 Q Well, the question was -- the question 23 was whether or not there was any bases or writings 24 that discussed the methodology that you've 25 employed over the last four decades, and you</p>

78 (Pages 306 to 309)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 310</p> <p>1 commented that it was in your book. 2 MS. BRANSCOME: Object -- 3 BY MS. PARFITT: 4 Q So please tell us what's in your book. 5 MS. BRANSCOME: Object to form. 6 THE WITNESS: Well, I -- I won't read 7 the whole book. 8 BY MS. PARFITT: 9 Q I appreciate that. We all -- 10 A I have a phone book downstairs that I 11 could -- no, I will just read a couple of 12 paragraphs that talk about interpreting and 13 conducting epidemiologic research in general, not 14 specifically related to this particular study -- 15 set of studies that I describe in the book. 16 "The main purpose of epidemiology is to 17 find the cause of disease. Despite some 18 controversy concerning the validity of drawing 19 causal inferences in epidemiology. There is a 20 consensus that sanctions and provides guidelines 21 for the practice. The evaluation of causality 22 between a putative risk factor and disease is a 23 complex and subjective process. Equally competent 24 scientists examining the same information can 25 arrive at different conclusions. However, as</p>	<p style="text-align: right;">Page 312</p> <p>1 Is that what you were -- 2 Q That's what I wanted to know. 3 A -- asking? 4 Q Thank you. All right. 5 Now, do you recall, Dr. Siemiatycki, 6 that you were asked some questions about the 7 mechanism underlying exposure to talc and genital 8 use of talcum powder products and ovarian cancer? 9 Do you remember Ms. Branscome asked you some 10 questions about that? 11 A The mechanism of exposure or the 12 mechanism of carcinogenesis? 13 Q The mechanism of exposure -- 14 A Okay. 15 Q -- between talcum powder products and 16 ovarian cancer. Do you remember there were a 17 series of questions that were asked about that? 18 MS. BRANSCOME: Object to form. 19 THE WITNESS: I'm -- I'm not -- 20 BY MS. PARFITT: 21 Q Okay. Let me -- okay. Let me -- let me 22 do this. Let me refer you to your report, if you 23 will, and I believe it's been marked as -- I think 24 this is 10 -- as 10. 25 Do you have your report in front of you?</p>
<p style="text-align: right;">Page 311</p> <p>1 additional evidence is accumulated, beliefs and 2 consensuses may change. The criteria that are 3 most relevant to the problem of evaluating 4 causality between cancer and an antecedent 5 occupational exposure may be paraphrased as 6 follows: 7 Number 1: "Is sampling variability a 8 plausible explanation for the observed 9 association?" 10 Number 2: "How strong is the 11 association and is there a dose-response 12 relationship?" 13 Number 3: "Is bias or confounding a 14 plausible explanation for the observed 15 association?" 16 Number 4: "Is the association 17 biologically plausible?" 18 Number 5: "Is there relevant supporting 19 evidence from other epidemiologic studies or from 20 non-human test systems, such as animal 21 experimentation or tests of mutagenicity?" 22 I'll stop there. But in answer to your 23 question, this text, published 30 years ago now, 24 encapsulates my approach to how to interpret and 25 use epidemiologic evidence in assessing causality.</p>	<p style="text-align: right;">Page 313</p> <p>1 A Yes. 2 Q Very good. Okay. 3 All right. And specifically I'm 4 referring to page 64 and 65. 5 A So I'm one or two pages off, so just 6 tell me which section. 7 Q Okay. I believe it's -- it's under 8 "Biological Plausibility." Do you see that in the 9 lower part? Let's see. 10 A "Biological Plausibility" -- (reading to 11 himself.) Strength. Okay. I've got it 12 somewhere -- consistency. Here. 13 Q Okay. 14 A "Biological Plausibility," yes. 15 Q Now, I specific -- I believe 16 specifically the question that you were asked is 17 whether or not you will be testifying with regard 18 to the mechanism and the biological mechanism for 19 causing cancer with genital use of talcum powder 20 products. Do you remember that? 21 A Yes. 22 Q Okay. Now, in the course of your 23 analysis and in looking at that issue of 24 biological mechanism for causing cancer, what did 25 you consult and review and assess for purposes of</p>

79 (Pages 310 to 313)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 314</p> <p>1 formulating your opinions on that topic? 2 MS. BRANSCOME: Objection. 3 THE WITNESS: I actually started with 4 the IARC 2006 report where there was a high level 5 subgroup of toxicologists and basic scientists who 6 reviewed the evidence. So I read that material. 7 I've read various articles concerning 8 migration of particles, articles about 9 inflammation as a carcinogenic process, oxidative 10 stress as part of the carcinogenic process. And 11 towards the end, started looking at articles about 12 asbestos in talc as filling in some of the 13 information about what the content of talcum 14 powder products were. I at one point was looking 15 at company documents to try to figure out what 16 were the time relationships of using talc versus 17 using substitutes for talc. So all of those kinds 18 of things I was looking for. 19 BY MS. PARFITT: 20 Q So for purposes of evaluating the 21 evidence and opining on the issue of talcum powder 22 products and ovarian cancer, did you consider the 23 issue of biological plausibility? 24 MS. BRANSCOME: Objection. 25 THE WITNESS: Yes, I considered it.</p>	<p style="text-align: right;">Page 316</p> <p>1 causality. 2 So the bar for establishing plausibility 3 for me is, are there credible scientists who are 4 persuaded or have reasonable confidence that there 5 is a mechanism that can explain the observation. 6 And if so, I would defer to that point of view as 7 being plausible. 8 I would not accept that one or more 9 scientists developing a mechanistic theory are 10 definitely proven, but if there is a credible 11 point of view in the scientific community about 12 the mechanism, I would call that plausible. It 13 doesn't mean it's proven. It's plausible. 14 And to my satisfaction, when I looked at 15 the different reports, including reports of 16 experts in the litigations, I was reasonably 17 assured that there are plausible theories and 18 plausible hypotheses. 19 Q All right. In your section of your 20 expert report on page 64 through 66, did the 21 factors you identify under the subtitle 22 "Biological Plausibility" provide support for your 23 opinions that indeed there is biological 24 plausibility between the use of genital use of 25 talcum powder products and ovarian cancer?</p>
<p style="text-align: right;">Page 315</p> <p>1 BY MS. PARFITT: 2 Q All right. And what was the basis of 3 your opinion as to whether or not there was 4 biological plausibility between talcum powder 5 product use in the genital area and ovarian 6 cancer? 7 MS. BRANSCOME: Objection. Assumes he 8 formed an opinion. 9 THE WITNESS: Well, my -- 10 BY MS. PARFITT: 11 Q Dr. Siemiatycki, did you formulate an 12 opinion with regard to whether there was 13 biological plausibility between the use of talcum 14 powder products and ovarian cancer? 15 A Yes, I did. 16 Q Okay. 17 A And the first part of the discussion is 18 what one means by "plausibility." And so one 19 issue that I took off the table quite soon is the 20 notion that biological plausibility is synonymous 21 with biological proof. Neither Bradford Hill nor 22 anyone else who has described the use of 23 biological plausibility as a criterion has ever 24 claimed that biological proof of a mechanism is 25 necessary before you can opine about the -- about</p>	<p style="text-align: right;">Page 317</p> <p>1 A I think they provide evidence of 2 plausibility for those theories. 3 Q And did you consider those for purposes 4 of opining that talcum powder products in the 5 genital area, used, can cause ovarian cancer? 6 A Yes, I considered them. 7 Q All right. Dr. Siemiatycki, I'm not 8 sure of the -- I don't think we marked it as an 9 exhibit, so let me do that now. I believe we're 10 up to 17. 11 (A discussion was held off the record.) 12 (Exhibit No. 17 was marked for 13 identification.) 14 BY MS. PARFITT: 15 Q All right. Dr. Siemiatycki, do you 16 recall the discussion you had with Ms. Branscome, 17 again several hours ago, on the issue of 18 confounding and how that can impact study designs? 19 A Oh, yes. 20 Q All right. Let me show you a document 21 we have marked as Exhibit No. 17, and it's 22 entitled "Degree of confounding bias related to 23 smoking ethnic group, and socioeconomic status and 24 estimates of the association between occupation 25 and cancer," and I believe that's an article that</p>

80 (Pages 314 to 317)

Jack Siemiatycki, Ph.D.

Page 318	Page 320
<p>1 you were an author, correct?</p> <p>2 A That's correct, yes.</p> <p>3 Q All right. What, if any, support did</p> <p>4 that particular article that you wrote, I guess</p> <p>5 back in 1988, provide, if any, for the opinions</p> <p>6 that you've rendered in this case on the topic of</p> <p>7 confounding and bias?</p> <p>8 A In this study we evaluated 75</p> <p>9 associations, 25 occupations in relation to lung</p> <p>10 cancer, to bladder cancer and to stomach cancer,</p> <p>11 each of them. And we looked at the association</p> <p>12 between each occupation and each of the three</p> <p>13 types of cancer, adjusting for the smoking history</p> <p>14 of the patients and the subjects. But another set</p> <p>15 of analyses not adjusting for their smoking</p> <p>16 histories, and their socioeconomic status and</p> <p>17 their ethnic group. These are factors that are</p> <p>18 strongly associated with cancer and with different</p> <p>19 occupations. We wanted to see how large a</p> <p>20 confounding bias could be generated by not having</p> <p>21 proper confounder information.</p> <p>22 And so I will just read a couple of</p> <p>23 sentences from the abstract of this article.</p> <p>24 "Of the 75 associations studied, only</p> <p>25 one OR was distorted by more than 40 percent. A</p>	<p>1 low probability.</p> <p>2 And this is part of what leads me and</p> <p>3 what led me in my report to opine that confounding</p> <p>4 is unlikely to be the explanation for the observed</p> <p>5 relative risks.</p> <p>6 Q Thank you. All right.</p> <p>7 THE VIDEOGRAPHER: Excuse me, Counsel.</p> <p>8 MS. PARFITT: Off the record, yes.</p> <p>9 THE VIDEOGRAPHER: Off the record?</p> <p>10 MS. PARFITT: Yeah, it's a good time,</p> <p>11 because you're running out of tape. I could tell.</p> <p>12 THE VIDEOGRAPHER: Going off the record</p> <p>13 at 8:27 p.m.</p> <p>14 (Recess.)</p> <p>15 THE VIDEOGRAPHER: We're going back on</p> <p>16 the record at 8:31 p.m.</p> <p>17 MS. PARFITT: Thank you.</p> <p>18 BY MS. PARFITT:</p> <p>19 Q Dr. Siemiatycki, just one last question.</p> <p>20 Let me direct your attention to again</p> <p>21 the documents in your Exhibit No. 4, specifically</p> <p>22 the "Weight of Evidence: General Principles and</p> <p>23 Current Applications at Health Canada," which</p> <p>24 formed part of the Health Canada recommendation.</p> <p>25 All right?</p>
Page 319	Page 321
<p>1 40 percent distortion would correspond to an odds</p> <p>2 ratio of 1.4 when comparing unadjusted with</p> <p>3 adjusted estimates. Three were distorted by</p> <p>4 between 30 percent and 40 percent, and four others</p> <p>5 by between 20 percent and 30 percent."</p> <p>6 So of these 75 associations, not taking</p> <p>7 account of very powerful confounders -- smoking is</p> <p>8 the most powerful confounder we know. Ethnicity</p> <p>9 and socioeconomic status are important</p> <p>10 confounders. They have strong relative risks with</p> <p>11 these different cancers. Not taking them into</p> <p>12 account could create artifactual odds ratios,</p> <p>13 maximum of 1.4, even though the original odds</p> <p>14 ratios of the confounders with these cancers could</p> <p>15 be as high as 10.</p> <p>16 So there's a very -- the confounding</p> <p>17 effect, at most, would be 10 percent or 20</p> <p>18 percent, but the likelihood that there is some</p> <p>19 unknown confounder with -- with ovarian cancer</p> <p>20 that is artifactually creating across the board,</p> <p>21 across all these studies, an artifactual relative</p> <p>22 risk of around 1.3 would require some -- that</p> <p>23 unknown confounder to have an extremely high</p> <p>24 relative risk, certainly higher than 2, maybe</p> <p>25 higher than 3 or 4, which is not inconceivable but</p>	<p>1 A I'm not sure if it formed part of the</p> <p>2 recommendation or if it's a background document.</p> <p>3 Q Very good. I think you're probably</p> <p>4 right.</p> <p>5 All right. And you have -- you have had</p> <p>6 a chance to review that, correct?</p> <p>7 A Yes.</p> <p>8 Q All right. Specifically let me direct</p> <p>9 your attention to page 7 of that document. And</p> <p>10 I'm going to go down to the very last paragraph,</p> <p>11 and it starts with: "The majority of risk</p> <p>12 assessment reports, however, provide a logical</p> <p>13 narrative description of the relative strengths or</p> <p>14 weakness of various lines of evidence considered.</p> <p>15 For most risk assessments, individual lines of</p> <p>16 evidence are polled and integrated into a final</p> <p>17 conclusion based on best professional judgment and</p> <p>18 not mathematical formula."</p> <p>19 Did I read that correctly?</p> <p>20 A Yes, you did.</p> <p>21 Q Do you agree with the statement by</p> <p>22 Health Canada in their "Weight of Evidence:</p> <p>23 General Principles"?</p> <p>24 A Yes, I do.</p> <p>25 MS. PARFITT: All right. I have no</p>

81 (Pages 318 to 321)

Jack Siemiatycki, Ph.D.

Page 322	Page 324
<p>1 further questions. Thank you.</p> <p>2 THE WITNESS: This is also in conformity</p> <p>3 with all guidelines from agencies and experts who</p> <p>4 understand science.</p> <p>5 MS. PARFITT: Very good.</p> <p>6 THE WITNESS: The best data is</p> <p>7 collected, compiled, and then interpreted by human</p> <p>8 expert judgment.</p> <p>9 MS. PARFITT: Thank you very much,</p> <p>10 Dr. Siemiatycki. I believe counsel has some</p> <p>11 follow-up.</p> <p>12 MS. BRANSCOME: I do, but I think I need</p> <p>13 to take a break to confer amongst ourselves.</p> <p>14 MS. PARFITT: Go ahead.</p> <p>15 THE VIDEOGRAPHER: We're going off the</p> <p>16 record at 8:33 p.m.</p> <p>17 (Recess.)</p> <p>18 THE VIDEOGRAPHER: We are going back on</p> <p>19 the record at 8:46 p.m.</p> <p>20 REDIRECT EXAMINATION</p> <p>21 BY MS. BRANSCOME:</p> <p>22 Q Good evening, Dr. Siemiatycki.</p> <p>23 I have some follow-up questions to the</p> <p>24 questions that were just asked to you by</p> <p>25 plaintiffs' counsel.</p>	<p>1 gist of it was whether the paper has been or will</p> <p>2 be submitted for publication. I don't recall if</p> <p>3 there were other important components. It was a</p> <p>4 brief message, besides pleasantries of people</p> <p>5 who've known each other for 30 years.</p> <p>6 But, you know, I said I -- I've learned</p> <p>7 about this work that you were involved with. I</p> <p>8 can't remember what else I said.</p> <p>9 Q In your e-mail communication to</p> <p>10 Dr. Krewski, did you alert him to the fact that</p> <p>11 you were serving as a -- an expert on behalf of</p> <p>12 plaintiffs' counsel in litigation involving talcum</p> <p>13 powder?</p> <p>14 A I don't recall. Your question used the</p> <p>15 plural, and in my -- you said "in your</p> <p>16 communications." That's what I heard. No? Okay.</p> <p>17 Q I meant it in the singular.</p> <p>18 A You meant it in the singular, so I guess</p> <p>19 the record will reflect.</p> <p>20 In my one message to Dr. Krewski -- let</p> <p>21 me -- if I may.</p> <p>22 Q My question again, Dr. Siemiatycki --</p> <p>23 A Yeah, please.</p> <p>24 Q -- is in your e-mail to Dr. Krewski with</p> <p>25 respect to the Taher paper, did you notify him in</p>
Page 323	Page 325
<p>1 Both myself and counsel for Imerys asked</p> <p>2 you very specifically if you had had contact with</p> <p>3 any of the authors in connection with the Taher</p> <p>4 paper or the Health Canada paper. Do you recall</p> <p>5 the questions that we asked you?</p> <p>6 A I -- I recall that you asked questions</p> <p>7 about it, yes.</p> <p>8 Q Yeah. Is there a reason why during my</p> <p>9 questioning and questioning by counsel for Imerys</p> <p>10 you did not recall having sent an e-mail to</p> <p>11 Dr. Krewski with respect to the potential</p> <p>12 publication of the Taher paper?</p> <p>13 A I -- I guess I consider -- well, two</p> <p>14 parts. I consider a contact sort of a two-way</p> <p>15 process, and there was no two-way process. I sent</p> <p>16 him a message. He never responded.</p> <p>17 And number two, it -- it dropped off of</p> <p>18 my memory screen. I -- I just forgot about it</p> <p>19 until she asked.</p> <p>20 Q When did you contact Dr. Krewski about</p> <p>21 the Taher paper?</p> <p>22 A In December, when I first learned about</p> <p>23 it.</p> <p>24 Q What specifically did you ask him?</p> <p>25 A My recollection, I asked him if -- the</p>	<p>1 that e-mail that you were serving as an expert</p> <p>2 witness retained on behalf of plaintiffs' counsel</p> <p>3 in litigation involving talcum powder?</p> <p>4 A I -- I -- I don't recall if I did or</p> <p>5 not. I -- I wouldn't have thought it was a</p> <p>6 crucial thing to indicate in this first message</p> <p>7 asking him if his paper was in press or in</p> <p>8 publication or something like that.</p> <p>9 Q Why did you want to know whether it had</p> <p>10 been submitted for publication?</p> <p>11 A I wanted to know what the status of that</p> <p>12 report was. I had no -- I didn't follow up my --</p> <p>13 it wasn't an important issue for me. I was -- it</p> <p>14 was kind of an idle gesture of, you know, Hi, I</p> <p>15 haven't heard from you for a while. I see that</p> <p>16 you have this thing. Are you sending it for</p> <p>17 publication? Something like that.</p> <p>18 And I -- the motivation, was there a</p> <p>19 specific ulterior motive? No, there was no --</p> <p>20 there was nothing I would have done differently.</p> <p>21 I guess if he had told me, yes, it's about to be</p> <p>22 submitted, I would have wanted to see the final</p> <p>23 version, because the version that I saw was</p> <p>24 obviously an early manuscript. It was much too</p> <p>25 long for a -- for a publication submission. But</p>

82 (Pages 322 to 325)

Jack Siemiatycki, Ph.D.

Page 326	Page 328
<p>1 it wasn't a big deal for me to -- to have 2 information about that manuscript. 3 Q Including communications in which you 4 unilaterally reached out to individuals but may 5 not have received a response, have you 6 communicated in any form with any of the 7 participants in the development of the Health 8 Canada Draft Screening Assessment or the Taher 9 paper, other than what we have discussed with 10 respect to Dr. Krewski? 11 A No. 12 Q The Health Canada Draft Screening 13 Assessment, you were asked a number of questions 14 about that by counsel for plaintiffs. Is that a 15 document that you have reviewed closely in forming 16 your opinions in this case? 17 MS. PARFITT: Objection. Form. 18 THE WITNESS: I wouldn't say that I 19 reviewed it closely the way I've reviewed the 20 evidence before submitting my report. No. 21 BY MS. BRANSCOME: 22 Q All right. I want to talk to you about 23 Exhibit 17. You have that over there. It's the 24 "Degree of confounding bias related to smoking." 25 A Oh, yeah.</p>	<p>1 Did I read that correctly? 2 MS. PARFITT: Counsel, just with one 3 correction. It came out as "estimates." The 4 article says "estimates," and it came out on the 5 transcript as "assessments." 6 MS. BRANSCOME: Okay. 7 THE WITNESS: That -- do you understand 8 what she's indicated? 9 BY MS. BRANSCOME: 10 Q Yes. Did I read it correctly? 11 A You misread one word. 12 Q Okay. 13 A But it's not important, but if you want 14 to have it for the record. 15 Q Well, we can continue on. 16 A Yes. 17 Q "This consideration follows from the 18 recognition that some degree of bias is quite 19 likely in any non-experimental study." 20 Did I read that correctly? 21 A Yes. 22 Q "Small excess relative risks, even if 23 they are statistically significant, are often 24 interpreted with great caution, if not 25 skepticism."</p>
Page 327	Page 329
<p>1 Q All right. Dr. Siemiatycki, is 2 Exhibit 17 an article that you identified to 3 address the likelihood that a confounding variable 4 could explain the increased risk that you have 5 found in your meta-analysis with respect to the 6 use of talc? 7 A Yes. 8 Q Okay. So I just want to direct you to 9 page 623. In the right-hand column, do you see a 10 paragraph that begins "One of the criteria"? 11 A Yes. 12 Q Does it state: "One of the criteria 13 used by epidemiologists to distinguish true from 14 false associations is the strength of the 15 association"? Did I read that correctly? 16 A Yes, you did. 17 Q And again, this is an article on which 18 you are the lead author, correct? 19 A Correct. 20 Q It continues on: "That is, among two 21 relative risk assessments which have equal levels 22 of statistical significance but one of which is 23 much greater than 1, while the other is closer 24 to 1, the larger one is considered more likely to 25 reflect a true association than the smaller one."</p>	<p>1 Did I read that correctly? 2 A Yes. 3 Q "Although there has been no explicit 4 consensus on what level of excess relative risk 5 should be considered too small to be taken 6 seriously, we believe that many epidemiologists 7 use a cut point in the range of 1.2 to 1.5 for 8 this purpose. Our results indicate that a cut 9 point in this range is reasonable for studies of 10 cancer occupation associations." 11 Did I read that correctly? 12 A Yes, you did. 13 Q And the references in those sentences to 14 the words "we" and "our" would include you, 15 Dr. Siemiatycki, correct? 16 A Correct. 17 Q And then if we could turn the page to 18 page 624, the paragraph at the top on the 19 left-hand column, I direct your attention to the 20 last complete sentence of that paragraph. 21 "On the other hand, our results also 22 imply that relative risk estimates as low as 1.2 23 for lung cancer associations or 1.1 for bladder or 24 stomach cancer associations run a fair chance of 25 being attributable to confounding bias, even if</p>

83 (Pages 326 to 329)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 330</p> <p>1 they are," quote, "statistically significant." 2 Did I read that correctly? 3 A Yes, you did. 4 Q Is that a conclusion that you and your 5 authors reached in the paper that's been 6 identified as Exhibit 17? 7 A Yes, it was. 8 Q Your opinion with respect to the 9 existence of biological plausibility of the 10 perineal use of talc and ovarian cancer is limited 11 to the evaluation of whether or not there are 12 credible scientists who are persuaded that there 13 is a mechanism; is that correct? 14 MS. PARFITT: Objection. Form. 15 THE WITNESS: Can you repeat that? I'm 16 sorry. 17 BY MS. BRANSCOME: 18 Q Your opinion with respect to the 19 existence of biological plausibility of the 20 perineal use of talc and its potential to cause 21 ovarian cancer is limited to an evaluation of 22 whether or not there are credible scientists who 23 are persuaded that there is a mechanism, correct? 24 MS. PARFITT: Objection. Form. 25 Misstates his testimony.</p>	<p style="text-align: right;">Page 332</p> <p>1 MS. PARFITT: Object to form. 2 THE WITNESS: Correct. 3 BY MS. BRANSCOME: 4 Q You indicated in response to questions 5 by plaintiffs' counsel that you were persuaded by 6 the opinions of other experts in the litigation 7 with respect to biological plausibility. Who are 8 those experts? 9 A I -- I think I indicated that such 10 experts contributed to the information that I had, 11 not that they were the only ones who persuaded me. 12 So there was literature and there were depositions 13 and reports. 14 So -- I'm trying to remember the names 15 of the various expert reports that I have read and 16 depositions. I do -- there's the Plunkett, the 17 Saed papers, but I don't know if there was a 18 report by Saed. There was -- let me look in my 19 list of references. (Peruses document.) 20 I'm sorry, I'm drawing a blank on the 21 names of the people whose reports and testimonies 22 I've read in the last month or two. 23 Q When were you provided with copies of 24 these expert reports? 25 A In the fall. Some before November 15th</p>
<p style="text-align: right;">Page 331</p> <p>1 THE WITNESS: I would say is based on, 2 rather than is limited to. 3 BY MS. BRANSCOME: 4 Q Do you have expertise that would allow 5 you to determine what the most likely biological 6 mechanism is, if there is one, for perineal use of 7 talc to cause ovarian cancer? 8 A No, I wouldn't pretend to -- to have 9 that kind of expertise. 10 Q Okay. Is it also true that you are not 11 qualified to opine on the ability or not of talc 12 particles to migrate to the ovaries from the use, 13 the perineal application of talc? 14 MS. PARFITT: Objection. Form. 15 THE WITNESS: Not on the basis of my 16 research, not on the basis of my training, but on 17 the basis of my reading of literature concerning 18 that issue, I have an opinion based on what I've 19 read from experts in the -- that field. 20 BY MS. BRANSCOME: 21 Q But in forming that opinion, you are 22 relying on -- 23 A Yes. 24 Q -- the expertise of others, correct? 25 A Yes.</p>	<p style="text-align: right;">Page 333</p> <p>1 and some after November 15th. And -- but also 2 I'm -- I'm reflecting on the various reports and 3 testimonies from the earlier trial, and I read 4 various expert reports from that time. 5 Q Did you draft the section in your MDL 6 expert report related to biologic plausibility? 7 A Yes, I did. 8 Q You personally summarized each of the 9 various studies that you refer to in that section? 10 A What do you mean by summarized the 11 studies? I -- I summarized the evidence that's 12 captured there, and I provided references for 13 those statements, yes. 14 Q You're the original author of the 15 language in that section is my question. 16 A Yes. Yes. 17 Q Can you identify for me which expert 18 reports related to biological plausibility you had 19 reviewed before forming your opinion as 20 represented in the MDL report? 21 A As I said, it's partly a number of 22 reports that I had seen in the previous trial, and 23 I -- I'm drawing a blank on the names of -- of the 24 people. 25 Q You understand that there will be</p>

84 (Pages 330 to 333)

Jack Siemiatycki, Ph.D.

Page 334	Page 336
<p>1 experts retained by defense counsel who will 2 provide reports addressing biological 3 plausibility, correct? 4 A I assume so, yeah. 5 Q Okay. Are you qualified to evaluate 6 between competing expert reports who is correct 7 about the biological mechanism? 8 MS. PARFITT: Objection. Form. 9 BY MS. BRANSCOME: 10 Q To the extent one exists. 11 MS. PARFITT: Objection. Form. 12 THE WITNESS: No -- no, I wouldn't be. 13 I mean I -- I can read reports from people outside 14 my area and form an opinion about the general 15 coherence and -- and form an initial sense of the 16 credibility of the various reports. And I'd be 17 happy to review the reports of the experts for the 18 defense on these issues. 19 BY MS. BRANSCOME: 20 Q But to the extent, for example, that 21 there are credible experts on both sides of the 22 debate, whether or not there has been an 23 established biological mechanism and whether or 24 not there have not been, you are not qualified to 25 evaluate between the two credible experts?</p>	<p>1 THE VIDEOGRAPHER: We are going off the 2 record at 9:05 p.m. 3 (Pause in the proceedings.) 4 THE VIDEOGRAPHER: We're back on the 5 record at 9:06 p.m. 6 MS. BRANSCOME: At this time I will pass 7 questioning to counsel for Imerys. 8 MS. PARFITT: Thank you. 9 REDIRECT EXAMINATION 10 BY MR. KLATT: 11 Q Dr. Siemiatycki, a few more questions, 12 sir. 13 I'm going to read a statement and ask if 14 you agree with it. Okay? 15 A Yes. 16 Q "When a pronounced binary association is 17 present, use of the never or no category in 18 assessing trend can induce a trend where none 19 exists." 20 A Okay. Can you -- yeah, thank you. 21 Q And my question is, do you agree or 22 disagree with that statement? 23 A Yes, I agree it can -- I agree with it. 24 There are some qualifiers that I would add to that 25 sentence, but I agree with it.</p>
Page 335	Page 337
<p>1 MS. PARFITT: Objection. Form. 2 THE WITNESS: That's correct. And I've 3 never pretended that -- make -- that it is 4 necessary for me to establish the correct 5 biological mechanism before drawing inferences 6 about causality. 7 BY MS. BRANSCOME: 8 Q It is your conclusion that more likely 9 than not perineal use of talc can cause ovarian 10 cancer is based on the epidemiological evidence, 11 correct? 12 MS. PARFITT: Objection. Misstates his 13 evidence and testimony today. 14 THE WITNESS: In part -- in large part. 15 Yes. 16 BY MS. BRANSCOME: 17 Q Okay. Well, my question now is about 18 the, in small part, the evidence in addition to 19 that. What evidence are you considering that you 20 are qualified to independently evaluate? 21 A I am qualified to evaluate whether there 22 is a plausible theory about it. Not to establish 23 whether that theory is correct or not. 24 MS. BRANSCOME: Okay. All right. If we 25 could just go off the record very briefly.</p>	<p>1 Q Could you look at your report, please, 2 sir, in the case on page 65, the discussion of 3 biologic plausibility. 4 A Yes. 5 Q And actually I think your biologic 6 plausibility discussion actually begins near the 7 bottom of the previous page, 64, and there's a 8 general discussion on the rest of 64 and the first 9 paragraph or two of 65. Is that correct? 10 A I -- I believe it's correct. The 11 version I have in front of me is that version that 12 has a slightly different formatting, so -- but I'm 13 with you. 14 Q Okay. 15 MS. PARFITT: And I believe, just for 16 completeness, it starts on 60 -- 17 THE WITNESS: Mine starts on -- 18 MS. PARFITT: His document starts on 65, 19 goes all the way over to 66. Mike, yours probably 20 starts on the bottom of 64, goes all the way over 21 to the top of 66. 22 BY MR. KLATT: 23 Q And what I'm focusing on is the 24 paragraph that you wrote that begins with 25 "Insofar" --</p>

85 (Pages 334 to 337)

Jack Siemiatycki, Ph.D.

<p style="text-align: right;">Page 338</p> <p>1 A Yes.</p> <p>2 Q -- which is where your specific</p> <p>3 discussion of biologic plausibility regarding</p> <p>4 talcum powder products begins.</p> <p>5 A Yes.</p> <p>6 Q Do you -- do you see that paragraph,</p> <p>7 sir?</p> <p>8 A Yes, I do.</p> <p>9 Q And moving down, did you read the</p> <p>10 articles that you cited here carefully?</p> <p>11 A I read them. I'm not capable of fully</p> <p>12 understanding articles in areas that are outside</p> <p>13 my area of -- of expertise. But to the --</p> <p>14 Q Well --</p> <p>15 MS. PARFITT: Wait, let him finish.</p> <p>16 THE WITNESS: To the extent that I was</p> <p>17 able to understand them, I read these articles.</p> <p>18 BY MR. KLATT:</p> <p>19 Q I'm focusing on the sentence that you</p> <p>20 wrote in your report saying: "First of all, there</p> <p>21 are two possible routes that talcum powder</p> <p>22 products can take to reach the ovaries."</p> <p>23 Do you see where I am?</p> <p>24 A Yes, I do.</p> <p>25 Q The next sentence says: "There is</p>	<p style="text-align: right;">Page 340</p> <p>1 A I think so. Is this --</p> <p>2 Q And the --</p> <p>3 A Is this the South African study?</p> <p>4 Q I believe you're right.</p> <p>5 A Okay.</p> <p>6 Q And the women were not women using</p> <p>7 perineal talc. They were women who were being</p> <p>8 prepared to undergo gynecologic surgery, correct?</p> <p>9 A Correct.</p> <p>10 Q And after this solution of albumin</p> <p>11 microspheres was injected at the top of the</p> <p>12 vaginal vault, the women were tilted in a head</p> <p>13 down/pelvis up position for two hours beforehand,</p> <p>14 correct?</p> <p>15 A Correct.</p> <p>16 Q So --</p> <p>17 A Now I'm saying correct, but I don't</p> <p>18 remember the details that you're quoting. I</p> <p>19 remember the article. I'm -- I -- it doesn't --</p> <p>20 my recollection doesn't contradict anything you're</p> <p>21 saying.</p> <p>22 Q So Venter doesn't tell us anything at</p> <p>23 all about dry talc particles applied externally to</p> <p>24 the genital area being able to migrate up the</p> <p>25 vagina, across the cervix, up the uterus, up the</p>
<p style="text-align: right;">Page 339</p> <p>1 published evidence that talcum powder products and</p> <p>2 its constituents and contaminants that are applied</p> <p>3 to the vaginal area can migrate from there to the</p> <p>4 fallopian tubes and ovaries," citing Venter 1979,</p> <p>5 Henderson 1986, Heller 1996, "or to pelvic lymph</p> <p>6 nodes," citing Cramer 2007.</p> <p>7 Is that correct?</p> <p>8 A Yes, that's correct.</p> <p>9 Q Do you recall, Dr. Siemiatycki, that the</p> <p>10 Venter 1979 article has nothing to do with talc at</p> <p>11 all?</p> <p>12 MS. PARFITT: Objection. Form.</p> <p>13 THE WITNESS: Is that the article about</p> <p>14 asbestos?</p> <p>15 BY MR. KLATT:</p> <p>16 Q Venter 1979 is the article about albumin</p> <p>17 microspheres.</p> <p>18 A Oh, yeah. Yes.</p> <p>19 Q Do you recall that article?</p> <p>20 A I do. Well, I don't recall it well, but</p> <p>21 I recall reading it a year or two ago.</p> <p>22 Q And in Venter, nothing was applied to</p> <p>23 the perineal area, correct? These albumin</p> <p>24 microspheres were actually injected at the top of</p> <p>25 the vaginal vault, correct?</p>	<p style="text-align: right;">Page 341</p> <p>1 fallopian tubes to the ovaries, correct?</p> <p>2 MS. PARFITT: Objection. Form.</p> <p>3 THE WITNESS: I guess I use this as a</p> <p>4 reference because some other experts used it as a</p> <p>5 reference for such a statement. And I read the</p> <p>6 article, and it sounded plausible.</p> <p>7 BY MR. KLATT:</p> <p>8 Q But you'd agree with me that the Venter</p> <p>9 1979 article doesn't involve talc particles,</p> <p>10 doesn't involve external application, and is a</p> <p>11 very artificial situation compared to the</p> <p>12 situation of women applying talc to the --</p> <p>13 MS. PARFITT: Objection.</p> <p>14 BY MR. KLATT:</p> <p>15 Q -- external genital area?</p> <p>16 MS. PARFITT: I'm sorry, Michael.</p> <p>17 Objection. Form.</p> <p>18 THE WITNESS: I -- I -- I don't disagree</p> <p>19 with what you said.</p> <p>20 BY MR. KLATT:</p> <p>21 Q And then the other two articles you</p> <p>22 cite, Henderson 1986 and Heller 1996, say nothing</p> <p>23 at all about migration of talc particles. They</p> <p>24 simply observe talc particles in tissue already</p> <p>25 without any reference to how they got there,</p>

86 (Pages 338 to 341)

Jack Siemiatycki, Ph.D.

Page 342	Page 344
<p>1 correct?</p> <p>2 MS. PARFITT: Do you need to see the</p> <p>3 articles?</p> <p>4 THE WITNESS: Yes, I think I need to see</p> <p>5 those articles.</p> <p>6 MS. PARFITT: Do we have Henderson or</p> <p>7 Heller?</p> <p>8 MR. KLATT: I'm sorry, I don't have them</p> <p>9 with me.</p> <p>10 MS. PARFITT: Okay. Let's see. In your</p> <p>11 report -- they're in your report.</p> <p>12 BY MR. KLATT:</p> <p>13 Q And you might want to pull Cramer 2007</p> <p>14 while you're at it, because again my question is</p> <p>15 the same, it doesn't say anything at all about</p> <p>16 migration. It simply identifies particles already</p> <p>17 in tissue without saying how they got there.</p> <p>18 MS. PARFITT: Okay. Well, let's wait</p> <p>19 for a question and let's get the articles. Let's</p> <p>20 see. It would be tab -- it's a big binder.</p> <p>21 BY MR. KLATT:</p> <p>22 Q Can I -- can I --</p> <p>23 THE WITNESS: I have it in my office.</p> <p>24 BY MR. KLATT:</p> <p>25 Q Can I short-circuit this?</p>	<p>1 MS. PARFITT: Objection. Form.</p> <p>2 Make sure you've read the article.</p> <p>3 THE WITNESS: (Peruses document.) So</p> <p>4 I -- I've skimmed it quickly. I haven't read</p> <p>5 everything, but I don't see that it -- sorry, are</p> <p>6 we on?</p> <p>7 MS. PARFITT: Yes.</p> <p>8 THE VIDEOGRAPHER: We're on the record.</p> <p>9 THE WITNESS: I don't see that it</p> <p>10 directly addresses talc moving from the vagina</p> <p>11 into pelvic lymph nodes, but it certainly concerns</p> <p>12 the detection of talc in pelvic lymph nodes.</p> <p>13 BY MR. KLATT:</p> <p>14 Q But it says nothing in the article</p> <p>15 itself about establishing migration, correct?</p> <p>16 MS. PARFITT: Objection. Misstates his</p> <p>17 testimony.</p> <p>18 BY MR. KLATT:</p> <p>19 Q That you -- that you see.</p> <p>20 MS. PARFITT: Objection. Form,</p> <p>21 misstates his testimony.</p> <p>22 THE WITNESS: I -- I guess, you know --</p> <p>23 the question I would have is if it gets to the</p> <p>24 pelvic lymph nodes, it has to migrate there from</p> <p>25 somewhere. It's not deposited there deliberately.</p>
Page 343	Page 345
<p>1 A Yes.</p> <p>2 Q I think this -- I can short-circuit</p> <p>3 this. If you just look at Cramer 2007. Do you</p> <p>4 have that handy?</p> <p>5 MS. PARFITT: Cramer 2007. Do you have</p> <p>6 it? I don't, Michael.</p> <p>7 THE WITNESS: It would be in my office.</p> <p>8 MR. KLATT: Could we go off for a second</p> <p>9 while you are looking?</p> <p>10 THE VIDEOGRAPHER: We're going off the</p> <p>11 record at 9:15 p.m.</p> <p>12 (Pause in the proceedings.)</p> <p>13 THE VIDEOGRAPHER: We are back on the</p> <p>14 record at 9:17 p.m.</p> <p>15 BY MR. KLATT:</p> <p>16 Q So, Dr. Siemiatycki, at my request,</p> <p>17 you've pulled the 2007 article, first author</p> <p>18 Cramer, called "Presence of talc in pelvic lymph</p> <p>19 nodes of a woman with ovarian cancer and long-term</p> <p>20 genital exposure to cosmetic talc," correct?</p> <p>21 A That's correct.</p> <p>22 Q And my question was simply, this -- this</p> <p>23 article says nothing about talc migrating. It</p> <p>24 simply observes that talc was found in a lymph</p> <p>25 node. Is that correct?</p>	<p>1 BY MR. KLATT:</p> <p>2 Q Well --</p> <p>3 A That was my interpretation of -- of</p> <p>4 this.</p> <p>5 Q Well, look at the very first page of</p> <p>6 this article, Cramer. You see at the very top</p> <p>7 under where the authors are listed?</p> <p>8 A Yes, I do.</p> <p>9 Q It says "Background"?</p> <p>10 A Yeah.</p> <p>11 Q "Although epidemiologic studies suggest</p> <p>12 talc use may increase ovarian cancer risk, there</p> <p>13 is no proof that talc used externally reaches the</p> <p>14 pelvis." Correct?</p> <p>15 MS. PARFITT: Objection. Form.</p> <p>16 BY MR. KLATT:</p> <p>17 Q That's what it says.</p> <p>18 A That's the background to this study.</p> <p>19 That's not --</p> <p>20 Q And it's 2007, correct?</p> <p>21 A Correct.</p> <p>22 Q Which is after the Henderson study that</p> <p>23 you cite. Correct?</p> <p>24 A Correct.</p> <p>25 Q And so after -- and what -- so we have</p>

87 (Pages 342 to 345)

Jack Siemiatycki, Ph.D.

Page 346	Page 348
<p>1 Venter that you cited and Henderson, and what 2 else? 3 A Heller -- Heller? 4 Q What was the third? Heller, yes. Thank 5 you. 1995. And here is -- 6 MS. PARFITT: No, excuse me. 1996, I 7 believe. 8 BY MR. KLATT: 9 Q Excuse me, 1996. 10 And here in 2007, we have Dr. Cramer 11 saying that there's no proof that externally 12 applied talc reaches the ovaries, correct? 13 MS. PARFITT: Objection. Misstates the 14 science and the article and his testimony. Form. 15 BY MR. KLATT: 16 Q I'm just asking what the article -- what 17 Dr. Cramer and Dr. Godleski said in the Background 18 section to this article that you cite in 2007. 19 MS. PARFITT: Objection. Form. 20 THE WITNESS: You want me to comment on 21 whether their background -- the Background section 22 of this abstract contradicts the thesis that there 23 was evidence of migration before 2007? Is that 24 correct? 25 BY MR. KLATT:</p>	<p>1 proof. They haven't -- they didn't say there is 2 no evidence. They said, There is no proof. 3 BY MR. KLATT: 4 Q Do you understand -- my question, 5 Dr. Siemiatycki, was simply, did Dr. Cramer say 6 there was no proof? Correct? 7 MS. PARFITT: Objection. 8 THE WITNESS: He said there was no 9 proof. 10 MS. PARFITT: Asked and answered. 11 THE WITNESS: He didn't say there was no 12 evidence. 13 BY MR. KLATT: 14 Q Okay. Can you go back -- let's see, 15 let's go back to your expert report on biologic 16 plausibility. 17 MS. PARFITT: Right here. 18 BY MR. KLATT: 19 Q Oh, one other thing. When you were just 20 scanning Cramer 2007, I saw you were looking on 21 the page where he discussed the Heller paper. Did 22 you see that? 23 MS. PARFITT: Just give him a moment to 24 get that again. I think it was 17. 25 THE WITNESS: Sorry. No. 17?</p>
Page 347	Page 349
<p>1 Q I'm -- my question is, you cited Venter 2 and Henderson and Heller for evidence of 3 migration, correct? 4 A Right. Right. 5 Q And those all predate well before 2007, 6 correct? 7 A Correct. 8 Q And here we have Dr. Cramer saying in 9 2007 there is no proof that talc used externally 10 reaches the pelvis, correct? 11 MS. PARFITT: Objection. Form, 12 misstates the article. 13 BY MR. KLATT: 14 Q Is that what he said? 15 A That's what it says. 16 Q And you -- 17 MS. PARFITT: Wait. Wait. Wait. Wait, 18 you let him finish. He said, That's what he said 19 -- finish, please. Thank you, Michael. 20 THE WITNESS: The -- the word "proof" in 21 that sentence is a red flag. I'm not sure what 22 they mean -- they meant by proof. They might 23 have -- well have said, There is evidence that, 24 but it is not yet conclusive. That is one 25 interpretation of a sentence like, There is no</p>	<p>1 MS. PARFITT: Yeah. 2 THE WITNESS: You have very good eyes if 3 you saw me looking at the Heller. I actually 4 wasn't, but -- 5 BY MR. KLATT: 6 Q I thought you were on that page. 7 A Well, I was -- I scanned each of the 8 four pages. There aren't that many pages. The -- 9 I see mention of the Heller article. 10 Q On page 500? 11 A Yes, I do see that. 12 Q Do you see where Dr. Cramer in 2007 is 13 suggesting that the explanation for the Heller 14 study may be contamination that was introduced 15 during the processing of the tissue specimens? 16 A So I see that he says it might have been 17 introduced during processing, and it's a potential 18 weakness. He doesn't affirm that it is. He says 19 it might be. 20 Q So contamination is another explanation 21 potentially for why you might find talc in ovarian 22 or gynecologic tissues? 23 MS. PARFITT: Objection. Form. 24 THE WITNESS: I -- I guess so. Not 25 being an expert in pathology and physiology, I --</p>

Jack Siemiatycki, Ph.D.

Page 350	Page 352
<p>1 that seems like a plausible -- seems to me like a</p> <p>2 plausible alternative explanation.</p> <p>3 BY MR. KLATT:</p> <p>4 Q You go on and comment in the next</p> <p>5 paragraph of your biologic plausibility on two</p> <p>6 trace heavy metals, chromium and nickel compounds,</p> <p>7 correct?</p> <p>8 A So where are we -- oh, yeah. Yes.</p> <p>9 Q You're aware that IARC has made</p> <p>10 determinations regarding chromium and nickel</p> <p>11 compounds, correct?</p> <p>12 A Yes, correct.</p> <p>13 Q And neither one of the determinations</p> <p>14 found they were linked to ovarian cancer at all,</p> <p>15 correct?</p> <p>16 A That's correct.</p> <p>17 Q They found they were related to nasal,</p> <p>18 sinus and lung cancers in people, primarily</p> <p>19 workers, who had breathed the fumes, correct?</p> <p>20 A That's correct.</p> <p>21 Q So that's no way analogous to any trace</p> <p>22 heavy metals in talc, correct?</p> <p>23 MS. PARFITT: Objection. Form.</p> <p>24 THE WITNESS: It's -- it's not directly</p> <p>25 relevant. It may be indirectly relevant. The</p>	<p>1 THE VIDEOGRAPHER: This ends -- this</p> <p>2 ends the deposition of Jack Siemiatycki.</p> <p>3 We are going off the record at 9:28 p.m.</p> <p>4 (Whereupon, the deposition</p> <p>5 of JACK SIEMIATYCKI, Ph.D. was</p> <p>6 concluded at 9:28 p.m.)</p> <p>7</p> <p>8</p> <p>9</p> <p>10</p> <p>11</p> <p>12</p> <p>13</p> <p>14</p> <p>15</p> <p>16</p> <p>17</p> <p>18</p> <p>19</p> <p>20</p> <p>21</p> <p>22</p> <p>23</p> <p>24</p> <p>25</p>
Page 351	Page 353
<p>1 evidence that allowed IARC to make determinations</p> <p>2 about lung cancer risks is evidence from</p> <p>3 industrial cohorts of males.</p> <p>4 And so there has never been an</p> <p>5 evaluation of ovarian cancer risks in relation to</p> <p>6 exposed women to chromium and nickel. It's terra</p> <p>7 incognita basically.</p> <p>8 BY MR. KLATT:</p> <p>9 Q And so following up on that, you're not</p> <p>10 aware of any evidence at all that women who have</p> <p>11 used externally applied talcum powder to the</p> <p>12 genital area have higher blood or tissue levels of</p> <p>13 chromium or nickel compounds than women who've</p> <p>14 never ever used talc at all, correct?</p> <p>15 MS. PARFITT: Objection. Form.</p> <p>16 THE WITNESS: I've -- I'm not aware of</p> <p>17 any evidence.</p> <p>18 MR. KLATT: I think that's all the</p> <p>19 questions I have.</p> <p>20 MS. PARFITT: I have no further</p> <p>21 questions.</p> <p>22 Dr. Siemiatycki, you are done. We will</p> <p>23 read and sign.</p> <p>24 Thank you, Leslie.</p> <p>25 Thank you all.</p>	<p>1 CERTIFICATE OF CERTIFIED SHORTHAND REPORTER</p> <p>2 The undersigned Certified Shorthand Reporter</p> <p>3 does hereby certify:</p> <p>4 That the foregoing proceeding was taken before</p> <p>5 me at the time and place therein set forth, at</p> <p>6 which time the witness was duly sworn; That the</p> <p>7 testimony of the witness and all objections made</p> <p>8 at the time of the examination were recorded</p> <p>9 stenographically by me and were thereafter</p> <p>10 transcribed, said transcript being a true and</p> <p>11 correct copy of my shorthand notes thereof; That</p> <p>12 the dismantling of the original transcript will</p> <p>13 void the reporter's certificate.</p> <p>14 In witness thereof, I have subscribed my name</p> <p>15 this date: February 4, 2019.</p> <p>16</p> <p>17</p> <p>18 _____</p> <p>19 LESLIE A. TODD, CSR, RPR</p> <p>20 Certificate No. 5129</p> <p>21 (The foregoing certification of</p> <p>22 this transcript does not apply to any</p> <p>23 reproduction of the same by any means,</p> <p>24 unless under the direct control and/or</p> <p>25 supervision of the certifying reporter.)</p>
